Mr. Speaker and colleagues, does this little story not give us some hint of the suicidal nature of nuclear war and the futility of so-called civil defense? If the effect of a full-scale nuclear exchange would be to render huge areas of North America uninhabitable for 75 to 100 years and parts of it for upwards of 24,000 years, how can we or any other nation seriously pursue a strategy that includes nuclear war? The sad reality is that many nations are pursuing such a strategy.

It was possible to evacuate Bikini. For the world as a whole, that alternative does not exist.

Certainly the answer must be to press ahead with negotiations toward President Carter's proclaimed goal of a reduction and eventually the elimination of all nuclear weapons from the Earth.

The full text of the Washington Post article follows these remarks:

PACIFIC EXPERIENCE SHOWS DIFFICULTY OF CLEANING UP RADIATION

(By Walter Pincus)

The federal government has found it much more difficult than expected to decontaminate sites of nuclear weapons explosions and to make them safe for habitation under U.S. radiation standards.

A three-year, $80 million cleanup program is under way on Enewetak Atoll in the Pacific but it will not make safe for thousands of years the radiation-contaminated northern islands. The islands 20 years ago were the site of U.S. nuclear weapons tests.

The Pacific islands have a special problem: there are only six or seven inches of topsoil over the coral reefs, so deep earth removal of radioactive soil is not feasible.

But, according to some Department of Energy officials, contamination cleanup after a nuclear attack in the continental U.S. "may be more of a problem."

In the Pacific, the islands are porous and water washed the radioactive elements straight into the soil and down to the water table below.

On the U.S. mainland, rain would carry radioactive material left by a nuclear explosion down streams and into rivers, spreading it rapidly over a broad area.

"I'm not sure we could do surgical removal" in the United States, an Energy Department official said yesterday.

The Enewetak cleanup, directed by the Defense Nuclear Agency wih DOE assistance, is "technologically the most complex ever undertaken on earth," Vice Adm. Robert Monroe, DNA's director, said last week.

Energy Department officials said last week they were "surprised at the amount of plutonium fallout" still in the soil, particularly on Enjebi, once the residential island of the northern Enewetak people.

Enjebi, less than a mile square, had been the site of three nuclear test explosions.

Before the cleanup attempt began last May, scientists had expected radioactive strontium and cesium contamination in Enjebi's soil would make it unsafe for living for 25 to 50 years longer.

But they had hoped to be able to locate and remove the longer-lived (half-decay in 24,000 years) plutonium and americium, heavy radioactive elements created by the nuclear explosions.

These heavy elements emit dangerous alpha rays and if inhaled or swallowed can, over time, cause cancer of the lungs or bones.

An Energy Department official said yesterday he did not believe that Enjebi soil could be cleaned up through soil removal or deep plowing to reach the point of being considered safe by new Environment Protection Agency standards.

He thought a program of soil removal and plowing could cut down the danger of inhalation of radioactive plutonium. But the elements would remain in the soil and be taken up by plants to be later eaten by the natives if they were living on the island.

Natives who returned to Bikini Island, once the site of fallout from U.S. nuclear weapons test, are going to be removed from that island shortly because they are absorbing strontium from food grown in the contaminated soil.

Bikini was declared safe for habitation in 1969 by the Atomic Energy Commission after a $5 million cleanup that consisted primarily of plowing the island, removing all vegetation and planting new cocoanut and other trees and bushes.

Those new trees and bushes produced crops last year that turned out to be contaminated with strontium and cesium.

DNA's Monroe said the government had "learned from Bikini."

Enewetok, however, presented a different situation. The atoll's southern islands were untouched by nuclear shots and got only minor fallout. Test devices were exploded on northern islands or on barges anchored nearby.

The three former residential islands in the south were safely occupied during the tests and for the 20 years since testing stopped.

Thus, it is on the two-dozen northern Enewetok Island that the radiation cleanup has been focused.

Two of these islands, Enjebi and Runit, may provide the basic information on how large-scale nuclear cleanup can be done.

In 1958, an 18-kiloton device exploded on Runit but failed to chain react, spreading plutonium all over the island.

Officials decided the island could never be decontaminated and instead should be used as the burying ground for radioactive material and soil removed from other islands in the atoll.

Mixed with concrete, the radioactive waste is being buried in Runit's crater. Eventually it will be covered over with an 18-inch thick concrete cap, fenced off and put off-limits for 24,000 years.

Scientists had wanted to make Enjebi habitable once the strontium and cesium in the soil had decayed in 25 years or more.

IMPORTANCE OF SUBSISTENCE PROTECTION IN ALASKA NATIONAL INTEREST LANDS CONSERVATION ACT

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. SEIBERLING. Mr. Speaker, the Alaska National Interest Lands Conservation Act (H.R. 39) as revised by the Committee on Interior and Insular Affairs is now being reviewed by the Committee on Merchant Marine and Fisheries, as to those portions within that committee's jurisdiction. It will soon be brought before the entire House.

During the Interior Committee's work on this bill, sponsored by Chairman UDALL and many others, we were greatly impressed with the importance of acting wisely to protect the options of those rural Alaskans—Natives and others—who are dependent upon subsistence uses of the renewable resources of the public lands in that State. Indeed Congress, in the 1971 Alaska Native Claims Settlement Act morally committed itself to protect these uses.

Throughout the rural areas of Alaska, in town meeting after town meeting, the residents lost no opportunity to stress the

importance of Federal action to guard against pressures now being brought upon those resources, pressures which directly threaten the continuation of subsistence uses which are vital to the economic and cultural well-being of tens of thousands of these people. Out of these hearings and town meetings, and through long and intricate negotiations involving the State of Alaska, the rural Alaskan community, the Department of Interior, and the conservation community, the Interior Committee fashioned a careful, balanced compromise which is contained in title VII of the bill as reported. That title provides for State regulation of the taking of fish and game for subsistence uses on all the public lands in Alaska, subject to necessary Federal oversight, and for the establishing of priorities which would insure that if it is necessary to restrict such taking, subsistence-dependent rural residents would be protected.

Mr. Speaker, I believe that our committee, in thus furthering the aims and policies of the Alaska Native Claims Settlement Act, has acted wisely and well. Therefore, I was gratified to note that the St. Louis Post-Dispatch (which has been following the progress of this legislation with a thoroughness not often displayed by other newspapers) supports what we have done. In an editorial in its editions of April 15, the Post-Dispatch points out that:

One of the issues that Congress must not lose sight of as it divides Alaskan lands is how subsistence hunting and trapping can continue while wildlife conservation is practiced. The legislation as reported strikes a delicate balance between these legitimate needs and animal protection.

The editorial notes that:

In many cases where jobs are scarce and commercial food is always expensive and not always available subsistence hunting is as much a necessity as it is a component of an old culture.

Mr. Speaker, for the benefit of all our colleagues who will soon have an opportunity to act on this important issue of human needs and human rights, I am offering for printing in full the editorial from the St. Louis Post-Dispatch following these remarks:

PRESERVING CULTURE

One of the issues that Congress must not lose sight of as it divides Alaskan lands is how subsistence hunting and trapping can continue while wildlife conservation is practiced. The Alaskan parks legislation, so far, recognizes that the use of game is essential to native Alaskan culture and to survival in remote areas. It strikes a delicate balance between these legitimate needs and animal protection.

The Aleuts and Eskimos are trying to maintain portions of their traditional way of life. This effort should be respected by the U.S. government, which has sometimes been destructive of native cultures. In many cases, where jobs are scarce and commercial food is always expensive and not always available, subsistence hunting is as much a necessity as it is a component of an old culture. So long as subsistence hunting does not threaten already endangered species, it should be given the protection that the parks bill would now provide.●

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for this week, on account of a necessary absence.

Mr. GILMAN (at the request of Mr. RHODES), for Monday, April 24, on account of official business.

Mr. GAMMAGE (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. WHITLEY (st the request of Mr. WRIGHT), for this week, on account of medical reasons.

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MOORE) and to revise and extend their remarks and include extraneous matter:)

Mr. BOB WILSON, for 5 minutes, today.
Mr. GREEN, for 5 minutes, today.
Mr. HAGEDORN, for 5 minutes, today.

(The following Members (at the request of Mr. WATKINS) and to revise and extend their remarks and include extraneous matter:)

Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. VANIK, for 5 minutes, today.
Mr. DANIELSON, for 60 minutes, today.
Mrs. COLLINS of Illinois, for 5 minutes, today.
Mr. PEPPER, for 5 minutes, today.
Mr. STAGGERS, for 5 minutes, today.
Mr. LAFALCE, for 5 minutes, today.
Mr. SIKES, for 10 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BRADEMAS, in three instances, and to include extraneous matter in two instances.

(The following Members (at the request of Mr. MOORE) and to include extraneous matter:)

Mr. CRANE in five instances.
Mr. BROWN of Ohio in two instances.
Mr. CORCORAN of Illinois.
Mr. GUYER.
Mr. TAYLOR.
Mr. PURSELL in three instances.
Mr. MCCLORY.
Mr. RUDD in two instances.
Mr. EDWARDS of Oklahoma.
Mr. BOB WILSON in two instances.
Mr. DICKINSON.
Mr. HYDE.
Mr. HANSEN.

(The following Members (at the request of Mr. WATKINS) and to include extraneous matter:)

Mr. ANNUNZIO in six instances.
Mr. GONZALEZ in three instances.
Mr. ANDERSON of California in three instances.
Mr. BROWN of California in 10 instances.
Mr. HAMILTON.
Mr. WAXMAN.
Mr. FRASER in five instances.
Mr. MOSS.
Mr. ENGLISH.
Mr. CARNEY in two instances.
Mr. KILDEE.
Mr. MAZZOLI.
Mr. DOWNEY.
Mr. FOLEY.
Mr. MURTHA.
Mr. NOLAN.
Mr. TUCKER.
Mr. VANIK.
Mr. BLANCHARD.
Mr. HARRIS in two instances.
Mr. FOUNTAIN.
Mr. MILLER of California.
Mr. TEAGUE.
Mr. PEPPER.
Mr. CONYERS.
Mr. EILBERG.
Mr. BONKER in two instances.
Mr. EDWARDS of California.
Mr. LEVITAS.
Mr. WALGREN.
Mrs. SCHROEDER.
Mr. MITCHELL of Maryland in two instances.
Mr. LONG of Maryland in two instances.
Mr. MAGUIRE.
Mrs. SPELLMAN.

SENATE BILL AND JOINT RESOLUTION REFERRED

A bill and joint resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 1566. An act to amend title 18, United States Code, to authorize applications for a court order approving the use of electronic surveillance to obtain foreign intelligence information; to the Committee on the Judiciary; and

S.J. Res. 128. Joint resolution designating July 1, 1978, as "Free Enterprise Day"; to the Committee on Post Office and Civil Service.

JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on April 21, 1978, present to the President, for his approval, a joint resolution of the House of the following title:

H.J. Res. 649. To authorize the President to call a White House Conference on the Arts, and to authorize the President to call a White House Conference on the Humanities.

ADJOURNMENT

Mr. SEIBERLING. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 5 minutes p.m.) the House adjourned until tomorrow, Tuesday, April 25, 1978, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3921. A letter from the Secretary of Agriculture, transmitting the report on the activities of the Rural Electrification Administration for fiscal year 1977, pursuant to 49 Stat. 1366; to the Committee on Agriculture.

3922. A letter from the Assistant Secretary of Defense (Comptroller), transmitting notice of the proposed obligation of funds available in the Marine Corps Stock Fund for war reserve stocks, pursuant to section 835 of Public Law 95–111; to the Committee on Appropriations.

3923. A letter from the Assistant Secretary of Defense (Manpower, Reserve Affairs and Logistics), transmitting a report on the adequacy of pays and allowances of the uniformed services assigned overseas; to the (a); to the Committee on Armed Services.

3924. A letter from the Deputy Assistant Secretary of Defense (Military Personnel Policy), transmitting a report that no use was made of the authority to make payments to officers holding positions of a critical nature during calendar year 1977, pursuant to 37 U.S.C. 306(f); to the Committee on Armed Services.

3925. A letter from the Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to provide for the advance payment of station housing allowances for members the uniformed services assigned overseas; to the Committee on Armed Services.

3926. A letter from the Acting Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to modernize the permanent faculty structure of the U.S. Military Academy; to the Committee on Armed Services.

3927. A letter from the Acting Director, Defense Security Assistance Agency, transmitting a report on the impact on U.S. readiness of the Navy's proposal to sell certain defense equipment to the Federal Republic of Germany, pursuant to section 813 of Public Law 94–106; to the Committee on Armed Services.

3928. A letter from the Secretary of Housing and Urban Development, transmitting a draft of proposed legislation to authorize appropriations for fiscal years 1979 and 1980 for the section 312 rehabilitation loan program; to the Committee on Banking, Finance, and Urban Affairs.

3929. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–177, "To amend the District of Columbia Teachers' Salary Act of 1955, and for other purposes," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

3930. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–178, "To require, by statute, the installation of smoke detectors in dwelling units, hotels, motels, hospitals, nursing homes, jails, prisons and residential-custodial care facilities in the District of Columbia; to provide regulations for installation of smoke detectors, and for other purposes," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

3931. A letter from the Commissioner of Education, Department of Health, Education, and Welfare, transmitting a report on the Office's efforts to promote establishment of a guaranteed student loan insurance program and an updated summary of each State's activties in the program, pursuant to section 421(c)(3) of the Higher Education Act of 1965, as amended (90 Stat. 2100); to the Committee on Education and Labor.

3932. A letter from the Comptroller General of the United States, transmitting a report on the examination of financial statements of the Commodity Credit Corporation for the fiscal year 1977, pursuant to 31 U.S.C. 851 (H. Doc. No. 95–235); to the Committee on Government Operations and ordered to be printed.

3933. A letter from the Acting Chairman, United States Nuclear Regulatory Commission, transmitting a report on the Commission's activities under the Government in the Sunshine Act from March 12, 1977 through March 12, 1978, pursuant to 5 U.S.C. 552b(j); to the Committee on Government Operations.

3934. A letter from the Deputy Under Secretary of State for Management, trasmitting a report on the Department's actions to facilitate the employment of Foreign Service spouses, pursuant to section 413 of Public Law 95–105; to the Committee on International Relations.

3935. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the intention of the Department of the Navy to offer to sell certain defense articles and services to the Federal Republic of Germany (transmittal No. 78–31), pursuant to section 36(b) of the Foreign Military Sales Act, as amended; to the Committee on International Relations.

3936. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the intention of the Department of State to consent to the request of the Government of the Federal Republic of Germany for permission to transfer certain U.S.-origin defense articles to the Government of the Netherlands, pursuant to section 3(a) of the Foreign Military Sales Act, as amended; to the Committee on International Relations.

3937. A letter from the Administrator, Agency for International Development, Department of State, transmitting comparison tables of fiscal years 1977 and 1978 Agency for International Development programs with actual and revised programs, pursuant to section 634(d) of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

3938. A letter from the Vice President, Government Affairs, National Railroad Passenger Corporation, transmitting the financial report of the Corporation for December, 1977, pursuant to section 308(a)(1) of the Rail Pasesnger Service Act of 1970, as amended; to the Committee on Interstate and Foreign Commerce.

3939. A letter from the Vice President for Government Affairs, National Railroad Passenger Corporation, transmitting a report covering the month of December 1977 on the average number of passengers per day on board each train operated, and the on-time performance at the final destination of each train operated, by route and by railroad, pursuant to section 308(a)(2) of the Rail Passenger Service Act of 1970, as amended; to the Committee on Interstate and Foreign Commerce.

3940. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation to amend chapter 87 of title 5, United States Code, to increase the amounts of regular and optional group life insurance available to Federal employees and provide optional life insurance on family members; to the Committee on Post Office and Civil Service.

3941. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 38 of the United States Code to require that veterans receiving hospital, nursing home, or outpatient medical care from the Veterans' Administration for nonservice-connected disabilities be charged for such care to the extent that they have health insurance or similar contracts or rights with respect to such care, or have entitlement to private medical care under workers' compensation or automobile accident reparation statutes of any State, and for other purposes; to the Committee on Veterans' Affairs.

3942. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a draft of proposed legislation providing for the designation of chairmen and vice chairmen of the U.S. International Trade Commission; to the Committee on Ways and Means.

3943. A letter from the Secretary of the Treasury, transmitting the ninth and tenth quarterly reports of the East-West Foreign Trade Board, pursuant to section 411(c) of the Trade Act of 1974; to the Committee on Ways and Means.

3944. A letter from the Secretary, Department of Energy, transmittiing a draft of proposed legislation to amend the Tariff Schedules of the United States in order to exempt the strategic petroleum reserve from payment of customs duties; to the Committee on Ways and Means.

3945. A letter from the Deputy Secretary of the Treasury, transmitting a draft of proposed legislation to implement the Customs Convention on Containers, 1972; to the Committee on Ways and means.

3946. A letter from the Comptroller General of the United States, transmitting a report on the needs to improve the management of overseas military security assistance programs (ID–78–27, April 21, 1978); jointly, to the Committees on Government Operations, and International Relations.

3947. A letter from the Administrator of Veterans' Affairs, transmitting a report on specific methods to assist homeowners to apply residential energy conservation measures, pursuant to section 311 of Public Law 95–202; jointly, to the Committees on Veterans' Affairs, and Banking, Finance and Urban Affairs.

3948. A letter from the Comptroller General of the United States, transmitting a report on evacuation of U.S. civilians from selected areas (LCD–77–436, April 20, 1978); jointly, to the Committees on Government Operations, Armed Services, and International Relations.

3949. A communication from the President of the United States, transmitting proposed amendments to the request for fiscal year 1979 appropriations for the Department of Health, Education, and Welfare (student assistance and student loan insurance fund programs) (H. Doc. No. 95–326); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[*Pursuant to the order of the House on April 20, 1978, the following reports were filed April 21, 1978*]

Mr. TEAGUE: Committee on Science and Technology. H.R. 11192. A bill to extend for 2 years the scope of the containment requirements and the requirements of the experimental guidelines of the National Institutes of Health respecting recombinant DNA research to include all public and private recombinant DNA activities and to provide for a study respecting research and technology involving genetic manipulation; with amendment (Rept. No. 95–1005, pt. II). Referred to the Committee of the Whole House on the State of the Union.

Mr. MURPHY of New York: Committee on Merchant Marine and Fisheries. H.R. 11657. A bill to authorize appropriations to carry

out the Central, Western, and South Pacific Fisheries Development Act until the close of fiscal year 1983; with amendment (Rept. No. 95–1079). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted April 24, 1978*]

Mr. STOKES: Select Committee on Assassinations. A report recommending that the case of Claude Powell, Jr., be certified to the U.S. Attorney for contempt of Congress; (Rept. No. 95–1080). Referred to the House Calendar.

Mr. ULLMAN: Committee on Ways and Means. H.R. 6853. A bill to amend the Internal Revenue Code to change the period for the payment of certain taxes; with amendment (Rept. No. 95–1081). Referred to the Committee of the Whole House on the State of the Union.

Mr. ULLMAN: Committee on Ways and Means. H.R. 11986. A bill to amend the Internal Revenue Code of 1954 to make certain changes in the taxes on transportation by air and to provide credits or refunds of a certain portion of such taxes for expenditures to retrofit and replace noisy aircraft; with amendment (Rept. No. 95–1082). Referred to the Committee of the Whole House on the State of the Union.

REPORTED BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X, bills and reports were delivered to the Clerk for printing, and bills referred as follows:

Mr. TEAGUE: Committee on Science and Technology. H.R. 12163. A bill to authorize appropriations to the Department of Energy in accordance with section 261 of the Atomic Energy Act of 1954, section 305 of the Energy Reorganization Act of 1974, section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and section 660 of the Department of Energy Reorganization Act, for energy research and development, and for other purposes; with amendment (Rept. No. 95–1078, Pt. I). Referred concurrently to the Committee on Interior and Insular Affairs and to the Committee on Interstate and Foreign Commerce for a period ending not later than May 15, 1978, for consideration of such provisions in title IV and in the remainder of the bill as fall within the jurisdictions of those committees under rule X, clause 1(j) and clause 1(l) respectively, and ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BAUCUS:

H.R. 12285. A bill to amend the act entitled "An act to provide for certain payments to be made to local governments by the Secretary of the Interior based upon the amount of certain public lands within the boundaries of such locality", approved October 20, 1976; to the Committee on Interior and Insular Affairs.

By Mr. BINGHAM (for himself and Mr. WHALEN):

H.R. 12286. A bill to amend the International Investment Survey Act of 1976, and for other purposes; to the Committee on International Relations.

By Mrs. BOGGS (for herself, Mr. BAUCUS, Mr. CLAY, Mr. DIGGS, Mr. DODD, Mr. FORD of Michigan and Mr. RICHMOND):

H.R. 12287. A bill to authorize the Smithsonian Institution to acquire the Museum of African Art, and for other purposes; to the Committee on House Administration.

By Mr. BRADEMAS (for himself, Mr. PEPPER, Mr. MOTTL, Mr. MICHAEL O. MYERS, Mr. MURPHY of Pennsylvania, Mr. LE FANTE, Mr. WEISS, Mr. CORRADA, Mr. ROYBAL, Mr. WAMPLER, Mr. ROONEY, Mr. HAMMERSCHMIDT, and Mr. COHEN):

H.R. 12288. A bill to amend the Older Americans Act of 1965 to provide for improved programs for older persons, and for other purposes; to the Committee on Education and Labor.

By Mr. CONABLE (for himself, Mr. LUKEN, and Mr. QUIE):

H.R. 12289. A bill to amend chapters 2 and 21 of the Internal Revenue Code of 1954 and title II of the Social Security Act to improve the financing of the social security programs by adjusting old-age, survivors, and disability insurance and hospital insurance tax rates, increasing the allocations for disability insurance purposes, repealing the recently enacted statutory increases in the contribution and benefit base, and permitting the two Old-Age, Survivors, and Disability Insurance Trust Funds to borrow from each other when necessary to make benefit payments and continue full operation; to the Committee on Ways and Means.

By Mr. DANIELSON:

H.R. 12290. A bill to enable the Department of Justice and the Administrative Office of the U.S. Courts to provide services and special supervision to drug dependent Federal offenders in an efficient and effective manner; to the Committee on the Judiciary.

By Mr. FISHER (for himself, Mr. CONABLE, Mr. BUCHANAN, and Mr. SHARP):

H.R. 12291. A bill to amend the Internal Revenue Code of 1954 to allow the charitable deduction to taxpayers whether or not they itemize their personal deductions; to the Committee on Ways and Means.

By Mr. GORE:

H.R. 12292. A bill to amend section 330 of the Public Health Service Act to provide grants for developmental and demonstration projects relating to the provision of health services to medically underserved populations; to the Committee on Interstate and Foreign Commerce.

By Mr. FOUNTAIN:

H.R. 12293. A bill to authorize a supplementary fiscal assistance program of payments to local governments, and for other purposes; to the Committee on Government Operations.

By Mr. GLICKMAN (for himself, Mr. NOLAN, Mr. AMMERMAN, Mr. HANNAFORD, Mr. HUGHES, and Mr. STOKES):

H.R. 12294. A bill to encourage the use of alcohol in motor vehicle fuels by requiring certain retailers to make alcohol-blended fuels available for sale, by allowing the rapid amortization of facilities producing alcohol for use in motor vehicle fuels, and by exempting alcohol-blended fuels from certain requirements of the Clean Air Act; jointly, to the Committees on Interstate and Foreign Commerce, and Ways and Means.

By Mr. HILLIS (for himself, Mr. BENJAMIN, Mr. QUAYLE, Mr. JOHN T. MYERS, Mr. CORNWELL, and Mr. HAMILTON):

H.R. 12295. A bill to name the Veterans' Administration hospital located at 1481 West Tenth Street, Indianapolis, Ind., the "Richard L. Roudebush Veterans' Hospital"; to the Committee on Veterans Affairs.

By Mr. KASTENMEIER (for himself, Mr. BALDUS, Mr. AMMERMAN, Mr. BONIOR, Mr. CORNELL, Mr. D'AMOURS, Mr. DOWNEY, Mr. ERTEL, Mr. FITHIAN, Mr. GOLDWATER, Mr. HARKIN, Mr. LLOYD of California, Mr. MCHUGH, Mr. MIKVA, Mr. MURPHY of Pennsylvania, Mr. OTTINGER, Mr. PATTISON of New York, Mr. RAILSBACK, Mr. RANGEL, Mr. VOLKMER, Mr. WHITEHURST, Mr. YOUNG of Alaska, and Mr. ZABLOCKI):

H.R. 12296. A bill to amend section 553 of title 5, United States Code, to improve Federal rulemaking practice by creating procedures for regulatory issuance in two or more parts; to the Committee on the Judiciary.

By Mr. MAHON:

H.R. 12297. A bill to amend the Comprehensive Employment and Training Act of 1973; to the Committee on Education and Labor.

By Mr. MATTOX (for himself, Mr. MIKVA, Mr. MITCHELL of Maryland, Mr. MINETA, Mr. D'AMOURS, Mr. JENRETTE, Mr. CHARLES WILSON of Texas, Mr. RISENHOOVER, Mr. WEISS, Mr. ERTEL, Mr. MURPHY of Pennsylvania, Mr. LAFALCE, Mr. MATHIS, and Mr. PATTERSON of California):

H.R. 12298. A bill to amend the Social Security Act and the Internal Revenue Code of 1954 to provide for the financing of the hospital insurance program from general revenues rather than through the imposition of medicare taxes as at present and to eliminate the recently enacted special increases in the earnings base; to the Committee on Ways and Means.

By Mr. MILLER of California (for himself, Mrs. BOGGS, Ms. MIKULSKI, and Mr. STEERS):

H.R. 12299. A bill to establish a Federal Office on Domestic Violence, and a Federal Council on Domestic Violence, to provide grants for the assistance of victims of domestic violence and for training programs, and for other purposes; to the Committee on Education and Labor.

By Mr. MURPHY of New York (for himself, Mr. LEGGETT, and Mr. FORSYTHE):

H.R. 12300. A bill to amend the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands; to the Committee on Merchant Marine and Fisheries.

By Mr. PERKINS:

H.R. 12301. A bill to authorize the construction of certain flood control facilities on the Tug Fork of the Big Sandy River, Kentucky and West Virginia; to the Committee on Public Works and Transportation.

By Mr. ROE (for himself, Mr. MOSS, Mr. DINGELL, Mr. STRATTON, Mr. ADDABBO, Mr. LEGGETT, Mr. BINGHAM, Mr. DE LA GARZA, Mr. WOLFF, Mr. RUPPE, Mr. ALEXANDER, Mr. DE LUGO, Mr. SOLARZ, Mr. BRODHEAD, Mr. DICKS and Mr. WATKINS):

H.R. 12302. A bill to increase the authorization for the Local Public Works Capital Development and Investment Act of 1976; to the Committee on Public Works and Transportation.

H.R. 11901

By Mr. WEISS:

Page 10, after line 2, insert the following new section (and redesignate the succeeding sections accordingly):

SEC. 5. No part of any funds available to the Administrator pursuant to this Act may be used for any research or development activity relating to civilian Advanced Supersonic Transports, or for the preparation of an overall program plan or any other study, analysis, or planning relating to technology for such transports.

H. CON. RES. 559

By Mr. MATTOX:

In the matter relating to the appropriate level of total new budget authority reduce the amount by $255 million;

In the matter relating to the appropriate level of total budget outlays reduce the amount by $255 million;

In the matter relating to the amount of the deficit reduce the amount by $255 million;

In the matter relating to the appropriate level of the public debt reduce the amount by $255 million;

In the matter relating to the amount by which the statutory limit on the public debt should accordingly be increased, reduce the amount by $255 million.

In the matter relating to Function 050 reduce the amount for budget authority by $175 million; and reduce the amount for outlays by $175 million.

In the matter relating to Function 920 reduce the amount for budget authority by $80 million; and reduce the amount for outlays by $80 million.

SENATE—*Monday, April 24, 1978*

The Senate met at 11:30 a.m., on the expiration of the recess, and was called to order by Hon. ROBERT MORGAN, a Senator from the State of North Carolina.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, we thank Thee for the gift of this new day with its many opportunities for growth in character, in nobility, and service. Old problems unsolved and vexing new ones press their claims upon us. We know who we are, by ourselves weak and human. But we know who Thou art, the mighty God, powerful and wise beyond our grasp, speaking through Thy word, saying to us: "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." (James 1: 5) Then awaken us to that higher wisdom which comes from beyond ourselves to the here and now of daily toil, and give us joy and victory in our work until evening comes and the shadows flee away and we are at peace.

Through Him who went about doing good. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 24, 1978.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable ROBERT MORGAN, a Senator from the State of North Carolina, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. MORGAN thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia (Mr. ROBERT C. BYRD) is recognized.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the legislative Journal of the proceedings be approved to date.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand adjourned for 5 seconds.

There being no objection, at 11:33 a.m. on Monday, April 24, 1978, the Senate adjourned for 5 seconds.

AFTER ADJOURNMENT

MONDAY, APRIL 24, 1978

The Senate met at 11:33 a.m., pursuant to adjournment, and was called to order by Hon. ROBERT MORGAN, a Senator from the State of North Carolina, the Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, for the purpose only of statements, petitions, memorials, and introduction of bills and resolutions, for not to exceed 15 minutes, with statements therein limited to 5 minutes each.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WAIVER OF CALL OF THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the call of the calendar under rule VII may be waived.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

S. 1537 INDEFINITELY POSTPONED

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Calendar No. 182. S. 1537, be indefinitely postponed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MEASURES PLACED ON CALENDAR FOR SUBJECTS ON THE TABLE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Calendar No. 520, Senate Concurrent Resolution 60, and Calendar No. 521, House Concurrent Resolution 388, be placed on the calendar for "Subjects on the Table."

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of calendars Nos. 683 and 684.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

VOTING RIGHTS IN MAJOR CORPORATIONS

The resolution (S. Res. 421) authorizing the printing of the committee print entitled "Voting Rights in Major Corporations" as a Senate document, was considered and agreed to, as follows:

Resolved, That the committee print of the Committee on Governmental Affairs entitled "Voting Rights in Major Corporations" be printed as a Senate document, and that there be printed five hundred additional copies of such document for the use of that committee.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–748), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The Committee on Rules and Administration, to which was referred the resolution (S. Res. 421) authorizing the printing of the committee print entitled "Voting Rights in Major Corporations" as a Senate document, having considered the same, reports favorably thereon without amendment and recommends that the resolution be agreed to.

Senate Resolution 421 would provide (1) that the committee print of the Committee on Governmental Affairs entitled "Voting Rights in Major Corporations" be printed as a Senate document, and (2) that there be printed 500 additional copies of such document for the use of that committee.

The printing-cost estimate, supplied by the Public Printer, is as follows:

Printing-cost estimate

To print as a document (1,500 copies)	$10,531.09
500 additional copies, at $2,105.14 per thousand	1,052.57
Total estimated cost, S. Res. 321	11,583.66

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

KRISTIN T. ATKINSON

The resolution (S. Res. 437) to pay a gratuity to Kristin T. Atkinson, was considered and agreed to as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Kristin T. Atkinson, widow of Marshall L. Atkinson III, an employee of the Senate at the time of his death, a sum equal to five months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, are there any orders for the recognition of Senators today?

The ACTING PRESIDENT pro tempore. There are not.

Mr. ROBERT C. BYRD. I thank the Chair.

NEW YORK CITY AND PUBLIC EMPLOYEE UNIONS

Mr. BARTLETT. Mr. President, during a statement I made last week concerning the problems that face our cities, I referred to the increased blurring of the separation of powers that the prospect of a Federal bailout of our cities has caused. This blurring of the areas of constitutional jurisdiction is occurring not only between the Federal, State, and local levels of government, but is also occurring between the even more fundamental divisions—between the legislature, the executive and the judiciary. I think New York City and its relationship to its public employee unions is the best example of this blurring of how power is to be exercised in our system.

I believe that the excessive power, both political and economic, that the New York City municipal employee unions exercise in local affairs raises serious questions as to whether or not the Federal Government should perpetuate the present system by any kind of outright loans or loan guarantees to insure the city's continued solvency.

But even if I believed that New York City's political system was the most perfect one in America, I would still ask, as Senator LUGAR did on March 16, 1978, in a major urban policy statement, "Who in America should pay for wage and pension settlements which are clearly excessive, however understandable the motive of the mayors who agree to them, as they attempt to preserve a degree of public safety in a complex and vulnerable urban society?"

Public employee unionism is about two decades old but public employee membership organizations go back many more years than that, particularly in the uniformed services. The formalization of municipal employee unions and their recognition as the bargaining agents for public employees, coupled with State and local legislation recognizing the process and attempting to tailor bargaining procedures somewhat in line with private sector bargaining procedures has created a new and different aspect in local government. For example, collective-bargaining agreements in New York City are made between the mayor and the union representatives. The city's elected governing body, the city council, has no voice in the process. Any agreement negotiated, however, is not final until the members of the union have approved it, whereas there is absolutely no requirement that the body which must appropriate the funds and which represents the general public also ratify it.

Furthermore, local unions are not subject to Federal legislation governing the range and manner of their State and local political activity. Provisions under the Federal Corrupt Practices Act which bar both unions and business firms from providing financial assistance to candidates for office do not apply to State and local offices. It strikes me that there may be real questions of national policy as to whether the Federal Government should be putting money into a local government that operates under these standards of political participation different than those mandated for the Federal level.

Another point is the degree of sheer economic power that municipal employee labor unions exercise in the affairs of New York City. In the case of the New York City municipal unions there is such a degree of monopoly power in many service areas that the unions can, and do, hold the entire city ransom before their demands. Given a coalition of unions bargaining together, there is a real potential for a complete shutdown of all city operations.

As in all cases of the exercise of excessive economic power, the New York City unions have been able to bargain for far more than just pay levels. Their ability to force public employees to pay union dues whether they are union members or not, the so-called agency shop policy, the unions' ability to require the city to contribute directly to the unions to purchase packages of fringe benefits for their members, to bargain on work rules, pensions, and other benefits, has a major impact on the city's financial position. In effect, the New York City unions handle, annually, $150 million channeled into their coffers directly by the city. And the unions' ability to contract out many of their benefit packages and to purchase a wide variety of services adds to their economic influence in New York City. With such access to taxpayers' money to pay for their employee benefits, the unions are left with $36 million collected in dues every year to dispose of as they see fit—for such purposes as organizing, public relations, and political action.

Public employee unions in New York City have developed such political and economic power that few elected officials dare to oppose them. Prohibitions that were originally a part of the city charter, for example, barring political activity by public employee groups, have been discarded. Political participation of city unions is readily sought and readily given at election time.

As a measure of union influence, the current attitude to the use of municipal pension funds to help the city out of its current crisis is germane. Every one of these funds was established long before there were any municipal unions in New York City, and are still trust funds of the taxpayers for city employee pensions. Yet the unions have been able to infiltrate the management of the funds and have created the attitude that these are their funds, using their ability in influencing investment decisions to influence decisions of the city administration. Even the media has fallen into the trap of referring to the funds as union pension funds.

The underlying question that all of this raises is whether our traditional concepts of a democratic government can survive under the pressures created by such developments. Where does the primary propriety interest in local government lie—in the general taxpaying public or in some loose coalition of governmental employees, via their union representatives, and the elected officials whom they support? What happens to the two-party political system and the concept of "checks and balances" when public employees become a dominant factor in the election of public officials?

Can this one-sided growth of political and economic power in New York City be reversed or even slowed? So far it has not been.

Should non-New York City residents be called on to support such a trend? I think not.

During his election campaign Mayor Edward Koch promised to get tough with New York City's unions, but the nearly $100 million—incidentally, some people refer to it as $300 million—settlement that he has just made with the city's 33,000 transit workers, and his $600 million offer to the 225,000 workers in the other municipal unions whose contracts expire at the end of June, appears to be New York City politics as usual.

I intend to watch closely the progress of New York City union labor negotiations. And because I do not believe that under our system of government the Federal Government should force a change in political systems down New York City's throat, I believe that New York City residents must solve their own problem and face their own responsibilities. New York City citizens must themselves grapple with the problem of how to restrain their public employee labor unions. Citizens of the rest of the country should not be called upon to support a system which they feel is basically corrupt and not subject to the normal processes of a democratic government. I certainly will not vote to support New York City's profligate ways.

Mr. President, I thank the Chair, and I thank the minority leader.

PRIVILEGES OF THE FLOOR—SENATE CONCURRENT RESOLUTION 80

Mr. STEVENS. Mr. President, I ask unanimous consent that Skip Priest and Steven Welkins of Senator PACKWOOD's staff be accorded the privilege of the floor during consideration of Senate Concurrent Resolution 80.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. PROXMIRE addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senator from Wisconsin, Mr. PROXMIRE.

Mr. PROXMIRE. Mr. President, are we in the morning hour?

The ACTING PRESIDENT pro tempore. The Senate is transacting routine morning business.

CONGRESSIONAL BUDGET, 1979—SENATE CONCURRENT RESOLUTION 80

AMENDMENT NO. 1799

(Ordered to be printed and to lie on the table.)

Mr. PROXMIRE. Mr. President, I am today submitting an amendment to the budget resolution, Senate Concurrent Resolution 80, to decrease the appropriate level of total budget authority to $540 billion. This represents a decrease of $26 billion from the $566 billion level proposed by the committee and somewhat more than that from the original budget authority request of $569 billion of the President.

In round numbers it represents a $26 billion or about a 5-percent decrease in Federal Government budget authority for fiscal year 1979.

While the Budget Committee deserves great credit in not increasing the estimates and in not giving in to the pressures to spend more, I believe that $499 or $500 billion in outlays and $566 billion budget authority are too high and should be cut.

It represents an enormous burden on the hard-pressed taxpayers of the United States.

EVERY GENERAL FUNCTION COULD BE CUT 5 PERCENT

As one who has served on the Senate Appropriations Committee for about 15 years and who has examined the budgets of at least 40 agencies, I can say without fear of contradiction that there is not a

single agency in the Government which could not absorb a 5-percent decrease in its funds and actually increase the efficiency of its programs if it were determined to do so. This is true of defense, foreign aid, welfare, housing, education, law enforcement, public works, highways, reclamation, sugar subsidies, mineral subsidies, or even heatlh.

Not every function could be cut an equal amount, especially in the short run, but over time many of them could absorb a cut as small as 5 percent. Because of this fact, I am leaving the determination of the specific cuts in the specific aggregates this year to the Budget Committee.

I am aware that in any 1 year more than one-half of Federal spending is considered to be relatively uncontrollable. Too much of today's spending is determined by existing laws and contracts. That is, in fact, why I am proposing this amendment to budget authority because that affects the future.

Some of the so-called uncontrollables could be reduced or eliminated. Some of them cannot be cut and should not be cut.

Among the first, those that could be cut, an HEW audit report found at least $6.4 billion in waste, mismanagement or fraud in some HEW programs, some of which, like medicaid, are said to be uncontrollable. Obviously that should be "controlled." We could reduce net interest by cutting spending and lowering the deficit. This would bring lower interest rates and a smaller debt and less inflation. I personally would eliminate the general revenue sharing program. Some disagree with that, but it could be done.

On the other hand we could not and should not reduce social security or railroad retirement or Federal employees retirement or veterans benefits which have all been established under law and for which people have both qualified and have every proper reason to expect to receive. As I say, my amendment would not cut those or similar items.

If we say that about one-half of the $566 billion is controllable either in the short run or changes in the law which could be enacted shortly, my cuts would mean that the cuts in the controllable would amount to about 10 percent.

WOULD HELP FIGHT INFLATION

A cut of $26 billion in budget authority could also have a salutary effect on the economy and on our central problem of inflation. It could have this effect without harming employment and, indeed it could actually improve the employment picture and reduce unemployment.

How could this be done? Let me explain.

A reduction in budget authority and spending could reduce the Federal deficit. This, in turn, would allow us to do two things. First, we could return the funds to the people through tax cuts without adding to the deficit. Second, it would allow the Federal Reserve Board to have an easier monetary policy without adding to inflation.

Through such policies there would be additional funds in the private sector from both the reduction in spending and a reduction in taxes. Second, easier monetary policies should reduce interest rates, spur private spending and investment, and produce more jobs, greater economic growth and a healthier economy.

Meanwhile, the reduced borrowing of the Federal Government to finance the deficit should reduce inflationary pressures. All of this would add to growth, to jobs, and to the reduction of inflation.

THE WAY TO SOLVE STAG-FLATION

It is the one prescription to stop "stagflation" and to bring relatively full employment and stable prices which has not been tried.

FIVE PERCENT IS AN ACHIEVABLE CUT

I believe a 5-percent or a $26 billion cut is achievable. What we need to do in the Senate is to set such a ceiling and then demand that the various agencies stay under it.

The only way Government or business can actually keep spending down is to set such ceilings. If done the other way around—first asking everyone what they are going to spend and adding up the totals—the totals will go higher and higher and higher.

Therefore I believe that we should first set such a reduced ceiling in order to force Government agencies to cut back on waste, ferret out their marginal programs, and establish stricter priorities. I want to make it clear that I am not calling for an arbitrary 5 percent across the board cut. I am calling for a 5-percent cut in the totals but some programs, as determined by the Budget Committees and the Congress, can take larger cuts and some, in the short run and without legislation, would be difficult to cut that much immediately.

TOO MUCH MACROECONOMICS

Modern economists for too long have merely looked at the "macro" or overall effects of spending. Very little attention has been paid to the genuine benefits of the proposed increase in outlays.

They are justified on such spurious grounds as necessary to "keep even" with inflation or to stimulate the economy to offset fiscal drags.

The general has overcome the specific. Spending is justified for these general purposes without any or few arguments justifying their specific benefits.

We are urged to keep wasteful military projects going to avoid cuts in jobs, to continue pork barrel public works programs because local communities want them, and to universalize spending because if all 50 States are not cut in on the proposal, it will fail of passage.

WE DO NOT NEED A BLOATED CIVILIZATION

It is true as Justice Holmes remarked that with taxes we buy civilization. But we are not required to buy a wasteful or bloated supercivilization.

Further, the totals proposed by the President this year are essentially unprecedented. As the distinguished financial analyst Henry Kaufman testified before the House Budget Committee the fiscal 1978 outlays represent a record postwar high of 22.6 percent of the gross national product. The 1979 outlays proposed by the President would decline to 22 percent, but this would still be the fourth highest in terms of the percentage of the GNP in the last 25 years.

We have to face the hard tough facts and start to live within our means. We must use public funds wisely. The Government should not be required to subsidize almost everybody everywhere.

FOLLOW LINCOLN'S PRESCRIPTION

I believe we should carry out Lincoln's definition of the legitimate objects of government as doing for the people "whatever they need to have done, but cannot do at all or cannot so well do for themselves in their separate and individual capacities."

Even a generous interpretation of that sentiment would allow us to reduce Government spending by more than the $25 billion I have proposed.

THE RIGHT WAY TO PRESERVE NEIGHBORHOODS

Mr. PROXMIRE. Mr. President, the movement to save our neighborhoods has now come of age. For years the Federal Government, through its mindless policies, did more to destroy than to save neighborhoods.

The highway departments pushed their wide, concrete ribbons through neighborhoods all over the country. Public demolitions destroyed housing. Urban renewal projects used the bulldozers to push down the slums, but then built luxury apartments or shopping centers on the sites while those who had been displaced had to fend for themselves to get almost nonexistent public housing.

Meantime, the Federal Housing Administration pursued policies to promote suburbs and to abandon the central cities, forming a white noose around black central cities, reducing or destroying the tax base of the cities, and breaking up traditional neighborhoods.

Most of this is in the past. But now citizens, working with only marginal Government help, are learning to save their neighborhoods by their own actions. One such example is in Baltimore where in the Patterson Park area the local citizens have organized themselves to save their neighborhood. And they have largely succeeded.

This story is told by Neal R. Peirce in a Washington Post article of Friday, April 21, 1978. I ask unanimous consent that this success story of private initiative be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMALL NEIGHBORHOOD MIRACLES

(By Neal R. Peirce)

BALTIMORE.—After more than 30 years in a row house in southeast Baltimore's Patterson Park area, Matilda Koval was set to move out. The neighborhood was on the slippery slope to slumdom: There was a fire a week; rats were everywhere; the alleys were so strewn with debris that sanitation trucks couldn't get through. European ethnic families like her own were leaving in droves. In her immediate neighborhood alone, 40 to 60 houses were abandoned and boarded up.

That was four years ago. "But nothing can make me move now," says Koval, a local legend for her Ukrainian pastries and her organizing talents. The reason: Local residents, led by Koval and others, were able to

make common cause with Baltimore's banks and savings and loans and city government in a Neighborhood Housing Services organization.

Since January 1975, when the NHS opened its doors, the rate of home ownership in many blocks of Patterson Park has risen from as low as 20 percent to as high as 75 percent. Residents have gone on a paint-up, fix-up spree. Loans totaling $4 million have been secured for people to purchase and rehabilitate their homes.

A fresh confidence in the neighborhood has stopped the outward flow of residents; and new people, including many young professionals, are moving in. But by channeling the newcomers into larger homes needing major investment, the NHS has been able to keep smaller units for poorer residents and prevent their displacement.

The Baltimore NHS is not alone. The same concept, pioneered in Pittsburgh in the late 1960s, is being tried in 52 neighborhoods in 46 cities around the nation. Twenty-nine new NHSs are now in development. Under a bill passed by the Senate and now awaiting House action, the total would be raised to some 200 by 1981.

But except for technical advice and a minimum of start-up funding, the NHSs have not depended heavily on federal support. On the contrary, the programs have succeeded because the "feds" are only peripherally involved. The programs are grass-roots based and free of the layers of bureaucracy and regulations that plague so many government housing efforts.

Up to now federal guidance has come from the Urban Reinvestment Task Force, a joint effort of the federal financial regulatory agencies and the Department of Housing and Urban Development. The pending legislation would create a permanent Neighborhood Reinvestment Corporation. But it, too, would be a very independent, quasi-public organization.

The NHS idea has been guided from coast to coast by William Whiteside, a genial, bearded Californian. Local NHSs succeed because they are based on a partnership between groups often at loggerheads. The citizens of a neighborhood agree, at least within NHS, to forsake rough confrontation tactics; the city government to provide essential services; the lending institutions to make reasonable-risk loans in an area they may have redlined before.

In Baltimore, it was Matilda Koval's block club, working with Baltimore's Southeast Community Organization, one of the country's most broad-gauged and activist local citizens' groups, that formed the nucleus of resident participation. Robert Embry, then Baltimore's housing commissioner (and now an assistant secretary of HUD), pledged the city's cooperation for necessary improvements sanitation, lighting and code enforcement. The lenders, originally skeptical were brought into camp by Howard Scaggs, president of Baltimore's American National Building and Loan Association.

But before the Baltimore NHS was launched, 40 community residents, lenders and city officials held a two-day workshop on neutral turf—in Easton, Md. There, says Scaggs, they let out their antagonisms, identified Patterson Park's problems and finally determined "we should collectively attack the problems instead of each other."

After that the Ford Foundation donated $100,000. Scaggs and his savings and loan associates raised $200,000. The Urban Reinvestment Task Force lent staff support. Koval and her friends kept the heat on the city government—and on any laggard neighbors to fix up their properties.

The NHS operates as a friendly all-round broker. Recognizing that many lower-income people don't know how to approach a banker about a loan, it counsels them on how to do that, helps them apply for urban homesteading or government-sponsored low-interest loans or, where all else fails, offers them inexpensive loans from its own high-risk revolving loan fund.

How widely can NHS projects be extended around America? Scaggs believes all of Baltimore, even its most devastated neighborhoods, could one day be covered. Whiteside, more conservatively, says NHS would need much larger high-risk loan funds to reach such areas.

What is clear is that race doesn't make much difference to the programs" success. Patterson Park is overwhelmingly white and Catholic—Polish, Ukrainian, Greek, German and Irish, plus a sprinkling of Orientals and Lumbee Indians, and only 10 percent blacks. But nationwide, 52 percent of NHS neighborhoods have more than 50 percent black or Hispanic residents, some close to 100 percent.

Whiteside has repeatedly warned that the NHS concept shouldn't be expanded too rapidly lest the quality of staff work and sensitivity in stimulating local initiatives be lost—a rare modesty and aversion to empire building among bureaucrats.

But he is eager to experiment more with fresh strategies to preserve neighborhoods. Five efforts in neighborhood commercial revitalization have been started. An apartment-improvement program, begun in Yonkers, and soon to be tried in Hartford, enlists lenders, property owners and tenants in a partnership to upgrade deteriorated multi-unit buildings. In the embryonic stage are plants to manage and market vacant buildings, to cope with neighborhood crime and to bring the schools into a closer partnership in community revival.

With the average big federal department, one would have to shudder at such an ambitious agenda. But so long as Whiteside and his colleagues can grow slowly and remain insulated from the Washington bureaucracy, acting simply as catalysts for actions that local people themselves must launch and maintain, the dangers may be minimal. Indeed, this may be one of the very few federally inspired efforts in which more—not less—is better.

HOUSING AND COMMUNITY DEVELOPMENT AMENDMENTS OF 1978—S. 2637

AMENDMENT NO. 1800

(Ordered to be printed and referred to the Committee on Banking, Housing, and Urban Affairs.)

Mr. PROXMIRE. Mr. President, I am submitting, at the request of the administration, an amendment to S. 2637, the Housing and Community Development Amendments of 1978. This amendment, which would authorize an additional $150 million for rehabilitation loans under the section 312 program during fiscal years 1979 and 1980, is one of the President's recently announced urban initiatives. Mr. President, I ask unanimous consent that the amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

On page 2, line 1–7, insert the following:

(b) Section 312(d) of the Housing Act of 1964 is amended by striking out "and not to exceed $60,000,000 for the fiscal year beginning on October 1, 1977" and inserting in lieu thereof "not to exceed $60,000,000 for the fiscal year beginning on October 1, 1977, not to exceed $245,000,000 for the fiscal year beginning on October 1, 1978, and not to exceed $245,000,000 for the fiscal year beginning on October 1, 1979".

"HOLOCAUST"—A PORTRAYAL OF GENOCIDE

Mr. PROXMIRE. Mr. President, last week, like millions of other Americans, I made it a point to watch the moving television production "Holocaust." I believe that this show succeeded in giving an idea of what life for Jews in Germany was like during the Hitler genocide. It did by focusing on a Berlin family named Weiss. Take one of many moving episodes—there were a number of very moving episodes.

Carl Weiss and his wife were both at Auschwitz, housed in separate barracks, and kept from each other by stringent concentration camp rules. They had been respectable, upper class German citizens. But to the Nazi regime, they were incorrigible criminals because they were Jews. The conditions at those prison camps were unspeakable. Disease was rampant, the living conditions were inhuman, and death was always imminent.

Those who saw the show will no doubt remember the time when Carl returned from his work detail, and tried to visit the barracks where his wife had been kept. He entered the barracks, which had been filled with Jewish women but a few hours before. The barracks were empty; all of its occupants had made the march to the gas chambers, and none had returned.

As Carl sat beside his wife's bunk, he picked up the few effects his wife had left behind. There were photos of their children, who were scattered now through Europe, and fading sheets of her piano music. His own life was in ruins and, indeed, he himself was gassed a few days later.

Scenes like that speak for the urgency of the Genocide Convention.

I understand some 120 million Americans viewed this dramatization of the terrible plight of the Jews in Hitler's Germany.

Mr. President, I hope that Senators who have had an opportunity to watch any part of this will recognize that this certainly should be the basis for our calling up and passing the Genocide Convention.

The convention was drafted over 30 years ago, in hopes that nations could come together to prevent recurrence of the premeditated murder of an entire people.

President Truman signed the treaty in 1948, and it has been awaiting the action of the Senate ever since then.

I hope Senators will listen to their hearts and their consciences and ratify the Genocide Convention as soon as possible.

BEDFORD-STUYVESANT

Mr. PROXMIRE. Mr. President, I have spoken critically of New York at some times. I speak in praise today of an accomplishment for which they deserve great credit and for which the Federal Government's assistance has helped; to wit, Bedford-Stuyvesant.

Bedford-Stuyvesant has the largest concentration of black American citizens in the country outside of Chicago's South

Side; 270,000 people live there. It covers 653 city blocks, and it is perfectly enormous. Forty percent of work-age people are out of work, but it has had some real success. There have been $130 million in mortgage funds from 80 banks and 9 insurance companies, and with some assistance from the Federal Government less than 1 percent, I should say, of foreclosure of those mortgages.

IBM has moved in and provided 420 jobs, is staying, and finds it profitable.

There has been no corruption in this project. And during New York City's blackout last July no damage was done to the restoration centers or other restoration properties. Fires that destroyed city blocks were elsewhere. This indicates a great pride that the people in Bedford-Stuyvesant have in their community.

Mr. President, I ask unanimous consent that an article from the Washington Post, dated Saturday, April 22, 1978, by Lee Lescaze, entitled "The Success of Bed-Stuy" and an article by Neal R. Peirce entitled "Small Neighborhood Miracles" be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE SUCCESS OF BED-STUY

(By Lee Lescaze)

NEW YORK.—The effort to aid Bedford-Stuyvesant, born of a walking trip through the large, desperately poor section of Brooklyn by then Sen. Robert F. Kennedy, is now the grandfather of community development programs.

That it is called a grandfather at age 11 reflects on the transitory nature of programs in the business of fighting poverty.

The pressure to kill off a program mounts with each failure—and the landscape is littered with failures—while public officials and philanthropic foundations have always been on the lookout for new approaches.

"There has been an insistence and a persistent need to try something new without giving a fair chance to fragile experiments that have been launched out of great expectations and great hopes," Ron Gault of the Ford Foundation remarked of the phenomenon.

Community development like the Bedford-Stuyvesant Restoration Corp. means minority development and its first decade has been a process of trial and error.

"Black people," Gault said, "have not had the privilege of trying something and not succeeding."

Even for those community development corporations like Bedford-Stuyvesant that have shown achievements, it is a time of uncertainty.

The Carter administration's urban policy has not been announced; the Community Services Administration has been raked over the coals for management weaknesses by the House Government Operations Committee, and the projected federal budget figures for fiscal 1979 community development corporations are sharply lower than in the past.

The House committee wants several of the community development corporations canceled. "These are the ones that better pull off some spectacular plays or get off the team," a congressional staffer said. "There's money going out every damn day."

Of 36 existing community development corporations, the CSA lists six as "probationary"—in danger of losing federal funding.

If the projected fiscal 1979 budget for the community agencies remains at the present $21 million, down from a present $35 million, there won't be any new ones begun, a CSA official said.

Bedford-Stuyvesant is not in danger of losing its federal funding, but the prodigal reputations of some of its brother community development corporations don't help. "It's the best of the bunch," Gault said. Federal officials agree that Bed-Stuy's performance has been impressive.

Any reduction would be a blow to an organization that in its 11 years has established a presence and accomplished some impressive construction and rehabilitation projects in the nation's second largest concentration of blacks. Only Chicago's South Side is larger.

If Bed-Stuy were a city it would be the 29th largest in the country. More than 270,000 people live in an area of about 5½ square miles, or 653 city blocks.

It is a long ride on the train from Manhattan and when Robert Kennedy saw it in 1966, Bed-Stuy was a place to get out of, if you had any place to go.

What had been a white, middle-class community at the turn of the century had been deserted by white citizens and white businessmen, and federal urban renewal funds of the 1950s and early '60s had been spent elsewhere.

The federal program that became the community development corporation plan was an initiative of Kennedy and Sen. Jacob K. Javits (R-N.Y.) and in 1967, the Bedford-Stuyvesant effort began.

Bed-Stuy has received more than $56 million in federal funds and about $75 million from other sources, including $20 million that has been committed from a $65 million mortgage pool formed by 80 banks and nine insurance companies.

The foreclosure rate is less than 1 percent on these mortgages, and they have been given Veterans Administration- and Federal Housing Administration-insured status.

"Fifty million, considering the needs of that community, is really a pittance," a CSA official who oversees community development corporations said.

Bernard McDonald, a vice president of Bedford-Stuyvesant Restoration, says "this project has been underfunded for some time."

The Nixon administration housing freeze in 1972–73 paralyzed plans in Bed-Stuy for a time. "We viewed that as a period of harassment," McDonald said.

The highest national one-year level of appropriations for community development was $48 million. "How many airplane wings can you buy for that?" McDonald asked.

The legislation governing community development corporations requires that they have "an appreciable impact" in their community. Impact in a community as large as Bed-Stuy is difficult to measure.

If a walking tour of Bed-Stuy began today at the $6 million Commercial Center designed by Washington architect Arthur Cotton Moore and visited the rehabilitated shop fronts and new apartment buildings in the area, the walkers could only call the impact impressive.

The Commercial Center contains Bedford Stuyvesant Restoration Corp. offices and a number of paying tenants. It resembles Georgetown's Canal Square, which Moore designed.

One tenant is Plaza Exchange, a small discount department store which the corporation started after six department store chains refused to come into the area. It marks up goods about 22 percent, roughly half the usual increase.

A joint venture with Supermarkets General Corp. is under construction at one end of the center. It will be a 30,000 square-foot supermarket, the first to be built in Bedford-Stuyvesant in years.

The Commercial Center itself is built around one of the largest buildings in Bed-Stuy, one that was a milk bottling plant until its owner, Sheffield, moved to Long Island in the 1950s. Sheffield's cows are still on the facade.

In all, homes on 106 blocks of Bedford-Stuyvesant have had their facades renovated under the corporation's improvement program.

Owners are charged $50 for painting, patching masonry, fixing glass and ironwork that actually costs from $800 to $1,200 a house. Block associations apply for the program and the winners are chosen by lot.

The work is done in large part by teenagers who earn summer money and pick up a skill under the supervision of experienced workers. They do about 10 blocks each summer.

After years during which banks refused mortgage loans in Bed-Stuy, conventional mortgage money is now available for the kind of renovation of houses that goes on in many Washington neighborhoods.

Redlining (the refusal by lending institutions to lend in an area) is easing, McDonald said, but he calls it "a glacial process."

As a result of Bedford-Stuyvesant Restoration projects, the area is dotted with new apartment projects with rents held within reach of local residents.

"Nothing they've done has fallen apart," said one outside admirer. "It's quality work."

There are still about 2,000 vacant lots and 2,000 abandoned buildings in Bed-Stuy. About 40 percent of all working-age people are not employed, according to McDonald's estimate, and median family income is still about $6,300 for a family of four.

About 6,000 jobs in some 1,235 businesses left Bed-Stuy between 1969 and 1974. The most notable success in attracting outside business was IBM's 1968 move to a Bed-Stuy site that brought 420 jobs. IBM is now moving to another location, but still in Bed-Stuy.

The impact on Bed-Stuy's spirit is hardest of all to measure, but there are some clues. When the corporation held its 10th birthday party last summer, 15,000 people came. While poverty officials in other parts of Brooklyn have been indicted with appalling frequency for mishandling funds, the restoration corporation has never been accused of any corruption.

"You will find truly in that community a respect for restoration," a federal official said. "They've had a lot of problems, but they wouldn't wither away tomorrow if we pulled out our support."

During New York's blackout last July, there was no damage to the Commercial Center or other restoration corporation properties. The fires that destroyed city blocks were elsewhere.

SMALL NEIGHBORHOOD MIRACLES

(By Neal R. Peirce)

BALTIMORE.—After more than 30 years in a row house in southeast Baltimore's Patterson Park area, Matilda Koval was set to move out. The neighborhood was on the slippery slope to slumdom: There was a fire a week; rats were everywhere; the alleys were so strewn with debris that sanitation trucks couldn't get through. European ethnic families like her own were leaving in droves. In her immediate neighborhood alone, 40 to 60 houses were abandoned and boarded up.

That was four years ago. "But nothing can make me move now," says Koval, a local legend for her Ukrainian pastries and her organizing talents. The reason: Local residents, led by Koval and others, were able to make common cause with Baltimore's banks and savings and loans and city government in a Neighborhood Housing Services organization.

Since January 1975, when the NHS opened its doors, the rate of home ownership in many blocks of Patterson Park has risen from as low as 20 percent to as high as 75 percent. Residents have gone on a paint-up, fix-up spree. Loans totaling $4 million have been secured for people to purchase and rehabilitate their homes.

A fresh confidence in the neighborhood has stopped the outward flow of residents; and new people; including many young professionals, are moving in. But by channeling the newcomers into larger homes needing major investment, the NHS has been able to keep smaller units for poorer residents and prevent their displacement.

The Baltimore NHS is not alone. The same concept, pioneered in Pittsburgh in the late 1960s, is being tried in 52 neighborhoods in 46 cities around the nation. Twenty-nine new NHSs are now in development. Under a bill passed by the Senate and now awaiting House action, the total would be raised to some 200 by 1981.

But except for technical advice and a minimum of start-up funding, the NHSs have not depended heavily on federal support. On the contrary, the programs have succeeded because the "feds" are only peripherally involved. The programs are grassroots based and free of the layers of bureaucracy and regulations that plague so many government housing efforts.

The NHS operates as a friendly all-round broker. Recognizing that many lower-income people don't know how to approach a banker about a loan, it counsels them on how to do that, helps them apply for urban homesteading or government-sponsored low-interest loans or, where all else fails, offers them inexpensive loans from its own high-risk-revolving loan fund.

The citizens of a neighborhood agree, at least within NHS, to forsake rough confrontation tactics; the city government to provide essential services; the lending institutions to make reasonable-risk loans in an area they may have redlined before.

What is clear is that race doesn't make much difference to the programs' success. Patterson Park is overwhelmingly white and Catholic—Polish, Ukrainian, Greek, German and Irish, plus a sprinkling of Orientals and Lumbee Indians, and only 10 percent blacks. But nationwide, 52 percent of NHS neighborhoods have more than 50 percent black or Hispanic residents, some close to 100 percent.

The NHS concept shouldn't be expanded too rapidly lest the quality of staff work and sensitivity in stimulating local initiatives be lost—a rare modesty and aversion to empire-building among bureaucrats.

But he is eager to experiment more with fresh strategies to preserve neighborhoods. Five efforts in neighborhood commercial revitalization have been started. An apartment-improvement program, begun in Yonkers, and soon to be tried in Hartford, enlists lenders, property owners and tenants in a partnership to upgrade deteriorated multi-unit buildings. In the embryonic stage are plans to manage and market vacant buildings, to cope with neighborhood crime and to bring the schools into a closer partnership in community revival.

ECONOMIC PROGRESS IN NEW YORK

Mr. PROXMIRE. Finally, Mr. President, I would like to call the attention of the Senate to an article in Thursday's New York Times which reported on the progress New York is making economically, and the outlook which has been improving steadily for New York, and indicating that they can make a go of it in coming years.

Mr. President, I ask unanimous consent that this article by James P. Sterba be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PANEL REPORTS NEW YORK GAINED IN 1977 AS A GOOD CITY FOR BUSINESS

(By James P. Sterba)

It is still an expensive city, but New York's competitiveness as a place to do business improved slightly in the last year and the improvement is likely to continue, a panel of public and private economic analysts reported yesterday.

Ironically, they said, the city's high unemployment rate and the dollar's plunge on world money markets appear to have helped.

The analysts told businessmen at the 11th annual forum at Pace University on the city's economy that wages and prices were continuing to rise more slowly here than in most large American cities and many foreign business capitals.

For example, the Consumer Price Index, averaged for 1977, for urban wage-earners and clerical workers stood at 181.5 for the country as a whole and 185.5 for New York City. But the local inflation rate last year was 1.3 percentage points lower than the national rate of 6.5 percent. In February there was a 1.6-point difference—the local rate was 4.8 percent and the national 6.4.

Thus, the panel said, the expense gap for business is narrowing.

And with inflation for several years running at double-digit levels in many foreign cities, some foreign companies are already finding New York to be a bargain business town.

Economists at the forum, which was sponsored by the New York City Council on Economic Education, reported evidence of economic buoyancy here that they said was unexpected a few years ago. But they cautioned against interpreting recent recovery trends as anything more than anemic in comparison with national growth.

"Altogether, the near-term outlook for New York City is brighter than it has been for many years," said Karen N. Gerard, a vice president of the Chase Manhattan Bank and its chief analyst of the New York economy. But she tempered her optimism by cautioning that continued improvement depended on an ongoing expansion nationally, a municipal wage package negotiated with "a degree of sanity" and "reasonable" Federal actions on the city's financing woes.

"The next real test for New York will be over the next two or three years," Mrs. Gerard said. "There will be a U.S. slowdown some time during this period, and the question is whether the city will lead the nation into the next slowdown, as it did in 1969 and 1973, or whether we've moved to a firmer base."

Significantly, she found in a computer analysis of the city's wage and price trends that their smaller increases were not the result of differences from the rest of the country in buying patterns.

Even increases in pay for clerical workers, which exceeded those in other cities through 1974, have been lower in the last two years as other cities have caught up, according to Herbert Bienstock, regional commissioner of the Federal Bureau of Labor Statistics.

Enormous energy costs, crime and deteriorating buildings, roads and other physical elements remain major disadvantages in doing business here. But the panelists noted that the recent gain in business activity took place despite those conditions.

Rosemary Scanlon, chief of the regional-studies section of the Port Authority of New York and New Jersey, reported in a survey of the regional economy last year that despite the severe winter and some extreme summer weather, as well as the dislocations caused by the July blackout, job levels were beginning to recover, the unemployment rate was easing, construction awards were expanding sharply and inflation was abating.

"The New York-New Jersey region ended 1977 with evident signs that the long economic slide which began with the 1969 recession is finally over," she reported.

But instead of a resumed growth like that in the late 1960's, she said, "it appears that the overall regional economy has approached stability, punctuated by pockets of recovery as well as continued trouble spots."

Mr. Bienstock said that some "structural trends" toward increased local competitiveness had continued in the right direction for two years or more.

Between 1972 and 1976 the annual rate of increase in consumer prices turned around from being higher in the New York area to being higher in the rest of the country. The region's Consumer Price Index, once the country's highest, has been surpassed in the last two years by Houston, Baltimore and Minneapolis-St. Paul, he said.

Mr. PROXMIRE. I yield the floor.

Mr. MOYNIHAN. Mr. President, I would like to take the occasion to express my appreciation to the Senator from Wisconsin for his generous remarks about the Bedford-Stuyvesant restoration project which, indeed, has been very much a success. It was, of course, an enterprise which my, our, dear friend and my precedessor in the Senate, Robert F. Kennedy, began, and it clearly marks one of those partnerships which works.

These are necessarily rare events in experiments. One of the large points about the efforts of the 1960s in social programs that seems to be overlooked is that new ideas in social programs are not likely to have any higher rate of success than new ideas in business enterprises. I mean, most corporations founded in the United States fail within the first 2 or 3 years of incorporation. The number that finally succeed is very small, but out of the process of innovation experimentation eventually you find things that work.

If you hold onto them and learn from them, you learn something. That is how knowledge advances.

There are other areas in New York City which are especially attractive for this kind of enterprise and effort. The one that interests me most at this moment is the area of Jamaica, which is the center of Queens County, has been since the 17th century, not a suburb, but it has been a city there. The first U.S. Senator, Rufus King, was buried in Jamaica in the Episcopal Church there.

That is the same kind of effort, with possibly greater reward, if we put it together.

RICHARD STROUT

Mr. MOYNIHAN. Mr. President, I would like to take this happy occasion to speak to the special Pulitzer Prize citation which has been given to Richard Strout, of the New Republic, and for the distinguished political commentary for which he has been responsible for over six decades in the practice of journalism, two of these as the famous "TRB" of the distinguished political weekly, the New Republic.

His columns over these years form a coherent body of work, incisive, principled, memorable, influential. An explanation for such achievement is not easily

forthcoming. But, as the junior Senator from New York, I should like to offer one. In fact, Mr. Strout speaks well for our State. He is a resident, a summer resident, of the town of Davenport, in which I live myself, and his home is not far from mine.

There, in the Valley of the Susquehanna River, in the foothills of the Catskill Mountains, one can hope that time spent in that magnificent and historic area will sharpen one's powers of analysis and observation, and, let us hope, add to one's capacity for forgiveness of the weakness of others, a generosity so much a part of Richard Strout's life.

True, he would have brought such powers to his work perhaps no matter the surrounding geography. But cannot his neighbors be excused for claiming him for their part of the world, just as we claim the genius of James Fennimore Cooper from neighboring Cooperstown?

We do this not to share the honor, for it is he who honors us, but rather to express our genuine delight in what has happened.

In honoring Richard Strout, the Pulitzer Committee honors as well a tradition of plain speaking in American journalism, a tradition which has served us well, and which is still much needed.

Richard Strout remains an outstanding example for today's political commentators, and I rise to express what would be the hope of every Member of the Senate, that he shall continue into his ninth decade to be such an example for the commentators of tomorrow.

May I close by recalling that wonderful line of Yeats from "The Land of Heart's Desire." He spoke of a land where "even the old are fair and even the wise are merry of tongue," and few lines there are that more evoke the spirit in the life and the works of Richard Strout of the Christian Science Monitor and the New Republic.

I thank the Chair.

Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MORGAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MOYNIHAN). Without objection, it is so ordered.

The Senator from North Carolina.

FUNDING THE NATIONAL EFFORT TO DEVELOP A SAFER CIGARETTE

Mr. MORGAN. Mr. President, last week I had the privilege to appear before the Subcommittee on Agriculture and Related Agencies, chaired by the distinguished Senator from Missouri (Mr. EAGLETON), to discuss the importance of agriculture research to the welfare of this great Nation. In my comments to the subcommittee, I discussed the continuing contribution of the Oxford Tobacco Research Station to agriculture research and to the Nation's effort to develop a safer cigarette.

In the President's budget request the funding for this research center was cut. I am convinced this is a serious mistake, a mistake which I hope the Congress will see fit to correct. The recommendation to close this center fails to realize the intimate link between tobacco production research and tobacco health research. The Oxford Center is at the forefront of research efforts to isolate and eliminate those components of tobacco that may pose a health hazard. At a time when the administration has launched an all-out attack on unsafe cigarettes, it makes no sense to stop development of a safer cigarette.

I would like to share my comments with the Members of the Senate. I ask unanimous consent that the text of my remarks be printed in full in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ROBERT MORGAN

I come before this subcommittee today to lend a strong vote of support to the efforts to restore the agricultural research money cut from the President's budget request. Before focusing on the Oxford Tobacco Research Center at Oxford, North Carolina, and its role in our effort to make a safer cigarette, I would like to make a few brief remarks on the central role of agriculture in our economy, and the contribution tobacco makes to agriculture.

Today, American agriculture is in a period of great uncertainty. But there is an underlying strength to American agriculture that continues to make American agriculture preeminent in the world. American agriculture has achieved its leadership role in the world economy for many reasons, but if one had to single out any one factor, it would have to be the great productivity of the American farmer. This productivity is the product of the great strides made by agricultural research. It is my view that the continued preeminence of American agriculture is directly dependent upon a vigorous agricultural research program. We would be "penny wise and pound foolish" to cut the modest sums necessary to fund this research. At a time when greater demands are being placed on American agriculture, it just doesn't make sense to cut agricultural research. Agricultural research has improved the productivity of the American farmer to the point where agricultural exports provide a sizeable share of our foreign earnings. Preserving and increasing the productivity of American agriculture should be a major national priority.

There is one sector of American agriculture whose contribution to our national economy has been underestimated in some quarters during recent years, and that is tobacco. Tobacco plays a vital role in our nation's economic life. Last year alone tobacco earned the United States well in excess of a billion dollars in desperately needed foreign exchange. At home, tobacco generated some $17 billion in retail sales. The federal and state governments raised some $6 billion in revenue from tobacco taxes.

In some regions of our country, the importance of tobacco is even larger. In the tobacco producing states roughly half a million families are involved in tobacco production alone. In my home state of North Carolina, the well-being of the rural population is directly dependent on tobacco. Quite simply, tobacco is the foundation of our economy.

Compared to the $6 billion in tax revenues generated by tobacco last year, the entire tobacco research budget is a mere $5.1 million. To put these sums in perspective, only one out of every five hundred federal tax dollars generated by tobacco is returned for research. Considering the contribution to the total national economy by tobacco products, only one dollar out of forty-six hundred is returned for tobacco research. On top of this record of under-funding, the Administration now wants to cut all tobacco research. How many $17 billion industries, upon whom millions depend for a livelihood, are having their search funding cut back to zero? This question brings me to the focus of my concern today, the Administration's proposal to close the tobacco research Center at Oxford, North Carolina. Since it was opened in 1912, the Oxford Research station has made many important contributions to improving tobacco cultivation. And yet this center costs the federal government only $900,000 a year to operate.

Over the years this center has been directly responsible for scientific advances that have produced billions of dollars worth of added tobacco production. The people of North Carolina, hundreds of thousands of tobacco farmers, and millions of cigarette smokers have been immeasureably benefited by the work of this one small center.

Since opening over half a century ago, the Oxford Center has been a leader in finding creative and positive solutions to the problems of tobacco farmers. For many years the greatest problems confronting the tobacco farmers of America were pests, blights and rots that ruined crops. Such long forgotten and exotic sounding menaces as Granville Wilt, blank shank, and root knot nematodes were conquered by Oxford research scientists. The productivity of the American tobacco farmer is thus to a large degree dependent upon the work of this one small laboratory.

Today, of course, the greatest threat to the tobacco farmer is the concern over the health hazards of smoking. Even root knot nematodes seem tame by comparison with this threat. In recent years the Oxford Center has concentrated its efforts on conquering the health problems associated with smoking. The Oxford Center Station has already achieved impressive health related scientific breakthroughs.

While the nation has poured billions of dollars into finding cures for the diseases supposedly caused by smoking, the Oxford Center has focused its limited resources on finding, isolating, and eliminating those components of tobacco that pose a possible health hazard.

Already this laboratory has developed tobacco that is low in nicotine. Low nicotine tobaccos developed by this center have found widespread use in health research all over the world.

Given this Administration's widely publicized campaign against the alleged harms of tobacco, it is particularly paradoxical that OMB would propose closing a research center at the forefront of our efforts to develop a safe cigarette. What accounts for these efforts at such cross purposes? Why is OMB closing a research center dedicated to developing a safe cigarette, while HEW is embarking upon a major, all-out campaign against unsafe cigarettes?

The reason for this error is relatively simple: OMB did not realize that tobacco production research is inseparably connected with tobacco health research. I cannot emphasize this point enough: the success of our tobacco health research efforts will depend upon our ability to manipulate the components of tobacco.

Let me sketch in some detail the current work of this facility. A brief look at the work of this center should explain OMB's mistake and at the same time dispel any doubts about how vital this center is.

The core of the Oxford Tobacco Research Station is one of the world's largest collections of tobacco germ. The diverse genetic resources of this gene bank are being used to produce types of tobacco which have never been produced before. These efforts hold the possibility that we will be able to develop

tobacco without many of the substances suspected of causing harm.

The center is also involved in harvesting and curing research, but here too the aim is health related. One promising development is "homogenized leaf curing". Using this process, chemicals can be added to or taken out of cured tobacco leaves. This process may offer the key to the whole smoking problem.

Also under active study is a process for extracting pure protein from tobacco leaves. Protein—a potentially harmful component of tobacco—could be extracted and used for food without reducing the flavor of tobacco. In our protein short world this could be a great advance.

Another effort at Oxford involves the biological control of diseases and insects without the use of pesticides. By breeding pest resistent strains of tobacco and using natural enemies of the pest, reliance upon pesticides can be minimized. I needn't even comment on the possible health pay-off from reducing pesticide use on tobacco.

The work of this center—tobacco breeding, tobacco curing, and tobacco pest control—on first glance seem to have little to do with health research. But—as I hope my detailed description has made clear—these tobacco production efforts are absolutely central to some of our most promising health research.

For only $900,000 we are funding research that could well eliminate the health threat of smoking and reinvigorate a major sector of our economy.

Given the staggering potential of these research efforts, it's really beyond belief that we're even thinking of closing this center down. I can only conclude that someone in OMB didn't look closely at what the center is doing. At a time when the Administration has embarked upon an all-out war against cigarette smoking, it makes no sense whatsoever to close the Oxford Research Center.

This center has a vital role to play in our efforts to develop a safer cigarette.

I hope this subcommittee will see fit to provide the modest sum necessary to fund this vital work.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. The time for morning business has expired, and morning business is closed.

CONGRESSIONAL REPRESENTATION FOR THE DISTRICT OF COLUMBIA

The PRESIDING OFFICER. The Senate having adjourned, House Joint Resolution 554 will now receive its second reading.

The legislative clerk read as follows:

A joint resolution (H.J. Res. 554) proposing an amendment to the Constitution to provide for representation of the District of Columbia in Congress.

Mr. ROBERT C. BYRD. Mr. President, I object to any further proceedings with respect to House Joint Resolution 554.

The PRESIDING OFFICER, Further proceedings having been objected to, under the precedents, the joint resolution will go to the calendar.

CONGRESSIONAL BUDGET, 1979

The PRESIDING OFFICER. Under the previous order, the hour of 12 noon having arrived, the Senate will now proceed to the consideration of Senate Concurrent Resolution 80, which the clerk will state.

The legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 80) setting forth the congressional budget for the United States Government for the fiscal year 1979.

The concurrent resolution is as follows:

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby determines and declares, pursuant to section 301(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1978—

(1) the recommended level of Federal revenues is $443,300,000,000 and the amount by which the aggregate level of Federal revenues should be decreased is $29,200,000,000;

(2) the appropriate level of total new budget authority is $566,100,000,000;

(3) the appropriate level of total budget outlays is $498,900,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $55,600,000,000; and

(5) the appropriate level of the public debt is $853,800,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $101,800,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 301(a)(2) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1978, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $129,800,000,000;
(B) Outlays, $116,600,000,000.
(2) International Affairs (150):
(A) New budget authority, $12,800,000,000;
(B) Outlays, $7,200,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $5,200,000,000;
(B) Outlays, $5,000,000,000.
(4) Energy (270):
(A) New budget authority, $10,200,000,000;
(B) Outlays, $10,100,000,000.
(5) Natural Resources and Environment (300):
(A) New budget authority, $13,700,000,000;
(B) Outlays, $12,500,000,000.
(6) Agriculture (350):
(A) New budget authority, $12,400,000,000;
(B) Outlays, $7,800,000,000.
(7) Commerce and Housing Credit (370):
(A) New budget authority, $5,900,000,000;
(B) Outlays, $3,600,000,000.
(8) Transportation (400):
(A) New budget authority, $19,500,000,000;
(B) Outlays, $17,500,000,000.
(9) Community and Regional Development (450):
(A) New budget authority, $10,400,000,000;
(B) Outlays, $9,000,000,000.
(10 Education, Training, Employment, and Social Services (500):
(A) New budget authority, $31,600,000,000;
(B) Outlays, $31,200,000,000.
(11) Health (550):
(A) New budget authority, $52,700,000,000;
(B) Outlays, $49,500,000,000.
(12) Income Security (600):
(A) New budget authority, $192,500,000,000;
(B) Outlays, $159,900,000,000.
(13) Veterans Benefits and Services (700):
(A) New budget authority, $21,000,000,000;

The ACTING PRESIDENT pro tempore. Under the law, the time for debate on this concurrent resolution is 50 hours, to be equally divided and controlled by the majority and minority leaders or their designees, with 2 hours on any amendment in the first degree, and with 1 hour on any amendment in the second degree, debatable motion, or appeal, with all time on any amendments, debatable motions, or appeals to come out of the 50 hours on the concurrent resolution. Motions or requests to further limit debate are not debatable.

Mr. MOYNIHAN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the following members of the staff of the Committee on the Budget be allowed to remain on the floor during consideration of and votes on Senate Concurrent Resolution 80:

John McEvoy, Karen Williams, Sid Brown, Van Ooms, George Merrill, Dan Twomey, Tom Dine, Ira Tannenbaum, Jacques Cook, Elizabeth Tankersley, Bob Sneed, Barbara Levering, Charles Flickner, Terry Finn, John Giles, Rodger Schlickeisen, Don Campbell, Tony Carnevale, Rob Fersh, Gail Picker, Ann Lockwood, and Brenda Tremper.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the presence and use of small electronic calculators be permitted on the floor of the Senate during the consideration of Senate Concurrent Resolution 80, the first concurrent resolution on the budget.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, Senate Concurrent Resolution 80, the first concurrent resolution on the budget for fiscal year 1979, is a moderate budget. This budget has been carefully crafted to sup-

port continued national economic recovery at the lowest possible risk of inflation.

The deficit this budget contains is lower than the deficit in the President's budget and lower than this year's deficit.

Before discussing the particular features of this budget resolution, I am compelled to make certain observations about the state of the congressional budget reform process itself.

Congress has begun the fourth cycle of the budget control reform we enacted in 1974. Many of the features of that reform which were considered radical or unrealistic when we enacted it have become commonplace since in both the Senate and the House.

Every Senate committee except one makes meaningful March 15 reports about its legislative plans and the Budget Committee bases its budget resolution on those reports.

Almost all new authorizing legislation is reported by May 15 to facilitate a very tight Appropriations Committee schedule.

The Appropriations Committee has admirably succeeded each year in enacting almost every appropriations bill before the second budget resolution in September. The only exceptions have occurred in a few cases where legislative matters have deadlocked the conference process.

The Budget Act mandated all these reforms and more. Ironically, while the procedural reforms it contained continue to prosper, budget control itself has begun to falter.

The Senate must recognize that we cannot take for granted that this try at budget reform will survive to achieve its principal objective of budget control and an orderly priority setting process.

THREATS TO THE BUDGET PROCESS

As this fourth year of the budget process begins, we confront two critical threats to budget reform.

First, we confront a resurgence of a free spending mentality, even in the face of our worst peacetime deficits.

Some Senators apparently believe that there is no harm in exceeding the budget resolution, when the politics of the moment move them.

They seem to believe that a little excess is not a dangerous thing. That we can afford to have everything that attracts us, all of the time.

A congressional budget process reduced to an accounting system for what Congress would do anyway is not a reform. It is a hoax.

Second, we face a growing resentment—even contempt—on the part of certain committees and some members toward the clear requirements of the budget act itself.

This scorn of the budget process threatens to bring down the entire structure of the budget reform that we have worked so hard to achieve.

We intended the budget reform process to help us get real congressional control over the budget—with all the hard and painful choices that responsibility implies.

But recently some Members have replaced support for the Budget Act with disdain and rejection of the discipline which is the very heart of budget reform.

Some Senators—and some committees—seem to view the budget process simply as a series of roadblocks to evade rather than guideposts to replace the bankruptcy of the free spending mentality which prevailed before the Budget Act.

We need to go back no further than a month ago when the Senate—with full knowledge of its action—chose to violate the second concurrent resolution for 1978. The Senate voted for a multibillion-dollar agriculture bill in a legislative stampede at the expense of the public and the budget process.

Two weeks later, the Agriculture Committee trampled the clear and easily-complied-with requirements of the budget act regarding its conference report. That committee successfully moved to suspend the Budget Act itself, and the Senate passed the multibillion-dollar conference report over the broken remnants of the budget process.

Fortunately, the House acted responsibly and overwhelmingly rejected the bill.

Last year's farm bill—which, incidentally, was given no chance to work before this new one was rammed through the Senate—presents another painful case in point.

In fact, it illustrates two of the most dismaying trends we confront in the budget process. First is the spectacle of Senators who vote for budget resolutions with apparent intention to violate them later.

Even more discouraging is the apparent cynicism of those who vote against budget resolutions as being too extravagant and then vote for bills which exceed them.

These Senators's votes on budget resolutions seem to be infected by mental reservation and purpose of evasion.

Their effect is to prevent us from bringing spending under control.

They threaten to carry us back to the free spending chaos of the pre-Budget Act period.

Two bills—one a small agriculture bill; the other a major tax bill—dramatically demonstrate these trends.

In setting the agriculture limits in the second resolution last fall, the Budget Committee raised the first resolution targets by more than a billion dollars—to $5.6 billion—to accommodate the full cost of the Senate-passed agriculture bill.

And we included a "reconciliation instruction," as required by the Budget Act, to reduce any conference agreement which exceeded the $5.6 billion figure.

The very day after the Budget Committee went along with the $5.6 billion cost of the Senate-passed bill, the agriculture conference committee reported a conference report costing $6.3 billion.

And the Senate supported that conference bill and defeated the Budget Committee recommendation. By a vote of 64 to 27, the Senate voted to raise the second budget resolution—and the deficit it contained—to pay for this new agriculture bill. Then, just 3 weeks later the Senate voted to break this new ceiling the Agriculture Committee had added to the budget resolution.

The Agriculture Committee reported another bill which breached the ceiling Congress had just adopted. This new bill provided a new and unanticipated $29 million payment program for some of the wealthiest, largest farmers in the United States. It gave them money to cut their crop losses from this year's drought, even though loan programs are available from the Government for the same purpose.

When Senator BELLMON and I took the floor against this budget-busting bill, we were defeated by a vote of 61 to 26.

And—mark my words—10 Senators who had voted against the budget resolution only weeks before because it was too high, voted for this new agriculture bill which broke that very budget.

What happened to the fiscal responsibility these Senators claimed in voting against the budget resolution when it came time to hold the line on the budget which was adopted? But the worst was yet to come.

During the debate last year on the energy tax bill we witnessed again this eagerness to sacrifice budget reform in favor of spending proposals when political opportunity becomes more attractive for the moment.

As they were reported, the provisions of the Senate energy tax bill would have violated the revenue floor of the second concurrent resolution by more than $1 billion.

They would have cut taxes by more than $1 billion in excess of what the congressional budget would allow. Under the rules of the Budget Act that legislation should have been subject to a point of order.

But the Committee on Finance included a gimmick in its bill to create a new loophole in the discipline of the budget process. The bill contained a provision that the Secretary of the Treasury could delay the implementation of the tax-losing features of the legislation long enough to postpone for 1 year the revenue loss which would violate the budget resolution.

The bill created an actual $47 billion, 8 year revenue loss. But the Finance Committee instructed the Secretary of the Treasury to change the law after it was enacted so it would lose no more the first year than the $1 billion the budget resolution allowed.

By delaying these huge revenue losses for 1 year, the Finance Committee intended to evade the congressional budget, which is written on a 1-year basis.

No matter about the huge revenue losses which mortgaged the future.

The future—and the congressional budget—be damned.

Clearly, acceptance of this kind of procedure by the Senate or the House means the end of the budget process.

If the rules of the Budget Act, designed as guideposts for spending and tax discipline, are treated as mere parliamen-

tary roadblocks to be gotten around by such raw gimmicks, there is nothing left of the Budget Act.

THE SENATE'S CHOICE: BUDGET REFORM OR BUDGET CHAOS

The Senate must decide whether to choose the side of those who are more comfortable with the chaos of the pre-Budget Act period.

I hope the Senate will accept the harder discipline of the budget reform and fiscal responsibility, even at the expense of temporary parochial political advantage.

Those who would treat the Budget Act as a burden to be dropped whenever it interferes with personal or committee advantage surely are saboteurs of fiscal responsibility.

If Senators wish the Budget Act to be trampled by one committee, or for a few votes on a pet project, then let us be frank and open about it.

I for one am prepared to accept the Senate's judgment on this issue.

This year's budget resolution presents a critical test case of the Senate's willingness to accept budget reform as more than political propaganda.

It contains very significant reductions in the spending and tax cut plans recommended by other committees. Without these adjustments, the deficit could exceed ninety billion dollars this year alone.

Let those who disagree with our recommendations debate them here on the floor. Let those who would raise the budget or cut it offer amendments to that budget and get rollcall votes on those amendments.

Then let us all be bound by the result.

Let none who vote for the budget resolution vote later to violate it.

Let none who vote against it as being too extravagant vote later for bills which exceed it.

Let us clearly face the choices the budget puts before us.

Let us be judged by the result.

Let us see if we are really equal to the budget reform we have enacted.

MAJOR FEATURES OF THIS YEAR'S BUDGET

Now, Mr. President, let me discuss some of the most significant parts of the budget resolution the Budget Committee recommended.

The budget contains the following overall totals:

Total budget authority of $566.1 billion;

Total budget outlays of $498.9 billion;

Total revenues of $443.3 billion;

A deficit of $55.6 billion, and a public debt level of $853.8 billion.

The committee's recommendations for fiscal year 1979 include the following major highlights:

A substantial income tax reduction of $19.4 billion to become effective January 1, 1979.

Continued real growth in spending for national defense, particulary in support of our commitment to NATO.

Continued strong emphasis on energy programs, reflecting the Budget Committee's belief that these programs are an important national priority.

Substantial support for the Nation's farmers and increased agricultural research.

Major new efforts to assist the Nation's distressed cities.

A college tuition tax credit.

Continuation and improvement of efforts to provide jobs for the structurally unemployed, including youth, unskilled workers, and welfare recipients.

Continued efforts to control health costs as part of the fight to reduce inflation.

Limitations on Federal pay increases for civilian and military personnel in recognition of the need for Federal leadership in the anti-inflation fight.

No reduction of social security taxes in 1979 and no financing of social security benefits through appropriated general revenues.

THE BUDGET DEFICIT AND PROSPECTS FOR BALANCE

This is a moderate budget designed to promote continued expansion of our national economy and reduction in unemployment at the lowest possible risk of inflation.

Although the economic recovery has not reached a point where the budget can be balanced this year, the deficit which will result from this budget is lower than of the current year or the deficit contemplated by the President in his budget submitted in January.

This budget substantially reduces the spending increases and tax cuts recommended by the other committees in their March 15 reports.

The $55.6 billion deficit which will result from adhering to this budget is $36 billion less than the deficit which would result from the recommendations made to the Budget Committee by the other standing committees.

It reflects a $9 billion reduction in outlays compared to the request of the Appropriations Committee alone. It recommends $15 billion less in tax reductions than were suggested by the Finance Committee.

Notwithstanding these reductions, Mr. President, this budget is not unduly restrictive. It provides for a real increase in budget authority of $18.2 billion, and allows for major new initiatives in fiscal year 1979 in the areas of energy, urban initiatives, the national defense, and agriculture.

In order to allow room for the continued growth of these new fiscal year 1979 initiatives, the Budget Committee believes that agencies should absorb some inflation costs and maintain program levels through increased efficiency rather than enlarged budget requests.

The simple fact is that we cannot fight inflation or balance the budget if we start with the premise that every Federal program will always be increased to match the rate of inflation in the private economy.

We cannot fight inflation or balance the budget if we take a $50 or $60 billion deficit as the starting point for adding to the budget.

The Federal deficit projected in these recommendations, as were the deficits of the three preceding fiscal years, is largely a result of a recession-plagued economy operating below its full capacity. A weak economy shrinks Government revenues at the same time that it raises costs of unemployment compensation and other income support programs. This budget is designed to provide sufficient economic support to achieve sufficient recovery in the private economy to reach a balanced budget by 1983. Deeper deficits stemming from spending increases or tax cuts greater than proposed in this budget threaten to ignore significantly increased inflation and to shatter any hope for budget balance in the next 6 years.

BUDGET CONTROL

Mr. President, I have described some of the main features of the 1979 budget resolution.

But the Budget Committee has learned during its first 3 years of activity that control over the budget cannot be accomplished if budgets are planned 1 year at a time.

In a 1-year time frame, it is almost impossible to influence future directions and costs of spending or tax legislation. I have already illustrated those points by a couple of dramatic examples of the last year. In truth, 1 year budgeting has become obsolete.

More than 75 percent of this year's budget is required to pay the costs of legislation enacted in prior years. Only the remaining 25 percent is "controllable" this year. And much of that 25 percent left over after we pay the bills for previous legislation goes for a few major programs, like national defense and education.

In the same way, much of the cost of legislation Congress enacts in 1979 will not be felt until future fiscal years. It is not reflected in this budget.

It has become popular to describe these mortgages on future spending as "uncontrollable spending," because you cannot reduce it in any particular year except by repealing a prior year's laws.

It is also popular to complain about uncontrollable expenditures but to do nothing about them.

The simple fact is that we probably cannot save much money this year by repealing laws we have already enacted.

Sunset legislation, such as I have proposed, will help us weed out existing programs which have lost their utility or efficiency. Not even sunset, however, will reduce the percent of the budget in any particular year which results from laws still on the books.

But if we cannot gain greater control of this year's budget by repealing last

year's laws, surely we can gain greater control of next year's budget and the years after that by carefully reviewing the future-year impact of this year's spending decisions.

Realizing this fact, the committee this year has adopted a major innovation aimed at more nearly achieving the broad goals of the congressional budget process.

The committee has built a 5-year Federal budget. By examining the future year implications of it's revenue and spending decisions for fiscal year 1979, the committee has projected the costs of those decisions over the period fiscal years 1979–83. Moreover, it has related those decisions to future year budget margins in the light of the longer run outlook for the economy.

Let me say, Mr. President, that most of the standing committees of the Senate have provided excellent cooperation and supplied 5-year data on the programs within their jurisdiction to assist the Budget Committee in this effort.

Incidentally, Mr. President, no attempt has ever been made in the Federal Government to get control of Federal spending by viewing our budget commitments 5 years in advance.

Until now.

By looking forward 5 years and outlining the budget framework for fiscal year 1983, Congress can regain substantial control of today's uncontrollables.

Now the assertion has been made that 5-year budget numbers are "meaningless," that they are mere guesses about the unknown. A charge of this kind ignores the fact that if we do not try to look ahead, recognizing that there are uncertainties, we will quite simply never gain control over the budget.

The projections we have used in building the 5-year budget have been developed by the Congressional Budget Office based on the best-cost estimating techniques available.

Dr. Alice Rivlin and her staff are to be commended for their cooperation and hard work on this project.

By looking at what future year budgets could realistically look like, the committee was able, I believe, to make more rational and orderly budget choices for fiscal year 1979.

In other words, looking ahead 5 years helped to discipline our choices for fiscal year 1979.

Mr. President, the message is clear. Only by being aware of the future implications of present budget choices can we ever hope to regain control of the congressional budget.

To disregard these cost projections is to prefer the chaos of ignorance over rational decisionmaking that can bring the budget under control.

So Mr. President, we will be making frequent reference to the 5-year projections of the cost of this year's legislation as each major bill is considered. And I hope other committees will do so too.

For the plain fact is that if we are to have a chance to balance the budget during the next 5 years, we can enact only a relatively small amount of new tax cuts or spending beyond the commitments contemplated by this budget—less than $90 billion, as a matter of fact, Mr. President, during the entire next 5 years.

And let no one doubt that we already face planty of demands to spend this fiscal margin. During the committee's markup of this budget resolution, we also took note of some of the major spending decisions we will face in the next 5 years, quite apart from this year's budget. These possible future spending demands are itemized in a table appearing on page 31 of the committee's report.

These future year choices could range from $74 billion up to $416 billion, during the next 5 years alone, compared to the $86 billion total we now can project may be available to meet them during that period.

I am talking about numbers in addition to the projected future cost of the current budget. And if we use all of this fiscal margin for spending increases, we will have no room for additional tax cuts during the same period.

Mr. President, I ask unanimous consent that the table setting forth these amounts be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

MAJOR FUTURE-YEAR BUDGET CHOICES

[In billions of dollars]

Function/issue	Total fiscal year 1980–83: change from current law		First full-year cost: change from current law	
	Budget authority	Outlays	Budget authority	Outlays

[1] This listing of possible choices and the dollar amounts involved have been compiled by Senate Budget Committee staff. Due to the many uncertainties involved, the listing and the dollar amounts should be considered approximate and indicative only of a possible order of magnitude. The dollar amounts are frequently expressed in ranges since there is often more than one option possible.

[2] Less than $500 million.

Mr. MUSKIE. Mr. President, so the challenge is clear. Either we clear some of the deadwood through sunset and comparable efforts or we must simply forego most attractive new additions to spending for the foreseeable future.

To spend more than this fiscal margin may force us to pay twice for those new programs—once in legislation and again in inflation.

INFLATION

Mr. President, inflation is a critical and increasing concern for all Americans.

Our present inflation results primarily from inflationary momentum that has been incorporated into the system. Wage demands reflect previous increases in prices, and prices are increased to cover higher wages.

What sustains inflation, Mr. President, is the determination of every individual in our economy, every group in our economy, to catch up, refusing to recognize that that catchup effort is itself inflationary.

This underlying inflation should decline gradually over time. However, price and wage changes also respond to inflationary expectations. This makes it especially necessary to follow steady fiscal and monetary policies.

The committee's recommendations embody two principles that must be followed if Congress is to act responsibly to help reduce inflation.

First, Congress must start to exert stricter control over spending today if it is to prevent the budget from overstimulating the economy late in 1979 and in 1980 as we approach full employment.

The budget deficits resulting from the successful congressional fiscal policy which produced recovery from the deep recession have not been a significant source of inflation. Testimony before the committee was very clear on this point. In the early stages of the recovery deficits provided jobs programs and tax cuts to support private consumption, employment, income, and investment.

But we cannot continue similarly large deficits as expansion proceeds in the future. That would be inflationary.

Large budget deficits as the economy nears full employment will stimulate the demand for goods and services beyond the economy's capacity to produce them. The result will be an acceleration of inflation.

If we are to trim the size of the budget deficit in the future, we must get a firm grip on Federal spending now.

Let me sound a clear warning: Congress must resist the unending pressures for additional spending.

Each committee must closely examine each new policy proposal and exercise considerable self-restraint as it reports new legislation to the floor.

Moreover, each committee must diligently evaluate ongoing programs and consider discontinuation of programs which—even though they may have merit—are of lower priority. This process of continual reevaluation is central in the sunset legislation now being considered by the Congress.

Congressional budget discipline is vital to a successful fight against inflation.

The second principle Congress must adopt is careful consideration of the inflationary impact not only of individual tax and spending bills, but also bills that cause inflation by restricting supply and directly raising costs even though they do not add significantly to Federal expenditures.

For example, just 2 weeks ago this body passed a farm bill which, together with the administration's recent actions, would have added another half of a percent to consumer prices.

Fortunately, I sense a growing awareness that we cannot afford to continue to legislate inflation.

The committee's recommendations include a 5-percent cost-of-living pay raise for white collar employees, one-half percent deeper than the President's recommended pay cap. This action indicates the committee's determination to signal the private sector that the Federal Government will attempt to hold down price and wage increases.

Mr. President, before I leave the topic of inflation, I would like to state my concern over a very disturbing tendency I have noticed in the Congress and elsewhere in the Federal Government—the tendency to disregard the inflationary impact of a bill if it is "only" a few tenths of a percent.

Mr. President, I would like to illustrate how serious a "few" tenths of a percent of inflation is.

Consider the Nation's consumers: Two-tenths of a percent of additional inflation cuts $2.5 billion from the purchasing power of their incomes. It cuts another $1 billion from the purchasing power of their savings.

Furthermore, this two-tenths of a percent inflation leads to cost-of-living adjustments, higher wages, and a second round of higher prices. Even consumers fortunate enough to get pay increases to recover their lost purchasing power end up worst off, because they find themselves in higher tax brackets.

Two-tenths of a percent of inflation means a lot to consumers.

Consider the Nation's businesses. The expectation of more rapid inflation is quickly reflected in higher interest rates, greater uncertainty in investment decisions, and a weaker stock market. The inflation itself leads to greater tax burdens, because it artificially inflates taxable business profits. The result is less business investment.

Two-tenths of a percent of inflation means a lot to the Nation's businesses.

Consider foreign exchange markets. More rapid inflation will be partly reflected in a future depreciation of the dollar. The status of the dollar as a reserve currency will be weakened, import prices will increase, and the inflationary spiral will go on.

But perhaps the most serious danger in ignoring a "little inflation" is that a little inflation "here" and a little inflation there add quickly up to a full percentage point or more of inflation here and a full percentage point or more there.

Last year in Congress, we ignored a few tenths on the inflation rate on numerous occasions, and we added a full percent or more to inflation, as a result, through such bills as minimum wage, farm price supports, and increased payroll taxes.

Congress must begin to examine the inflationary impact of proposed legislation. The Budget Committee will explore mechanisms for doing so, with the assistance of the Congressional Budget Office.

CONGRESSIONAL FISCAL POLICY

Mr. President, over the past 3 years, Congress has adopted a moderately expansive fiscal policy in order to promote economic recovery.

It has also been a bipartisan fiscal policy. That policy has been strikingly successful in maintaining growth and reducing unemployment. The economic expansion it fostered has already continued for over 3 years, longer than the average postwar peacetime expansion.

The unemployment rate has fallen from 9 percent in 1975 to 6.2 percent today. While this unemployment rate is still unacceptably high, it has been consistently reduced in line with the goals established by the committee fully 2 years ago in the early stages of recovery.

In drafting the Federal budget for fiscal year 1979, the Budget Committee has had to consider new and difficult economic circumstances.

Full employment remains a major concern. With the decline of cyclical unemployment, structural unemployment has become a major focus of employment policy.

As I have mentioned, inflation has now emerged as a paramount economic concern of most Americans.

In addition, Mr. President, we now face a complex international situation involving slow economic growth abroad, huge trade deficits, and dangers from a declining dollar.

The budget resolution we put before the Senate today reflects our response to this changing economic environment.

The levels of revenue and spending in the proposed budget support a policy of moderate growth consistent with further reductions in unemployment, but not so rapid as to require larger budget deficits or to accelerate inflation.

Mr. President, the committee's fiscal policy recommendations are consistent with the economic forecasts of the Congressional Budget Office, the Joint Economic Committee, and the administration. All these forecasts projected sharply lower growth and rising unemployment by the end of 1979 in the absence of tax reductions. This slowdown would result in part from increasing tax burdens on individuals and businesses, from higher payroll taxes, and the fiscal drag caused by inflation and growth.

To achieve continued expansion, the committee has recommended that the revenue floor in the first concurrent resolution be reduced to accommodate general income tax reductions of $25 billion on a full-year basis.

With the fiscal policy recommended by the committee, the economy should grow at about a 4½-percent rate in both 1978 and 1979. With this continued economic

expansion, unemployment will fall to about 5.7 percent by the end of 1979, and about 4¾ million jobs will be created by the expansion of the economy during the 2-year period. This moderate growth is not expected to add significantly to inflationary pressures.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table which shows the economic objectives and assumptions underlying the committee's recommendations and compares them to those of the President.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

ECONOMIC OBJECTIVES AND ASSUMPTIONS COMPARED WITH THOSE OF THE ADMINISTRATION

[Calendar years: dollar amounts in billions]

	Actual	Committee assumptions		Administration assumptions	
	1977	1978	1979	1978	1979
GNP (current dollars)	1,890	2,098	2,329	2,099	2,335
Real GNP (1972 dollars)	1,337	1,399	1,462	1,400	1,467
Percent change	4.9	4.6	4.5	4.7	4.8
Unemployment rate (percent):					
Yearly average	7.0	6.3	5.9	6.3	5.9
4th quarter	6.6	6.2	5.7	6.2	5.8
Consumer Price Index (percent change)	6.5	5.9	6.0	5.9	6.1
Interest rate 91-day Treasury bills (percent)[1]	5.3	6.6	6.4	6.1	6.1

[1] The administration forecast assumes continuation of market rates at the time the estimates were made.

COORDINATION OF FISCAL AND MONETARY POLICY

Mr. MUSKIE. Mr. President, the committee's fiscal targets are consistent with real economic growth in the gross national product of about 4½ percent through the end of 1979. This growth rate assumes moderate growth in investment, expanded foreign markets for U.S. exports, and monetary growth at the upper end of the ranges projected by the Federal Reserve.

Federal Reserve Chairman Miller appeared before the committee a month ago and offered his views on monetary policy, fiscal policy, and inflation. He assured the committee that the Federal Reserve would maintain a flexible approach, putting the long-run performance of the economy above the pursuit of any fixed monetary target.

Chairman Miller and the committee share the belief that monetary and fiscal policy must work together to reduce both unemployment and inflation.

He has made it clear that coordination of fiscal and monetary policy is a two-way street.

I find this flexible approach reassuring.

Responsible fiscal policy must not be aborted by excessive monetary restriction. At the same time, Congress cannot—and should not—expect the Federal Reserve to compensate with excessive monetary growth a loss of fiscal discipline by Congress. That could only lead to accelerating inflation and eventually to credit restriction, high interest rates, and recession.

Policy coordination can work in the present economic environment only if fiscal and monetary policies are moderate and responsible. That is why the Congress must exercise great fiscal restraint in its budget for fiscal year 1979.

The recommendations of the Budget Committee reflect prudence and fiscal restraint. I am confident that if we hold to these recommendations Federal Reserve monetary policy will complement congressional fiscal policy.

I am confident that the terrible costs of the excessive monetary restraint which was applied a few years ago are as apparent to the Federal Reserve as to Congress.

SPENDING RECOMMENDATIONS

Mr. President, let me now turn to an explanation of some of the committee's major spending recommendations for fiscal year 1979.

But before I do, let me describe another major innovation in this year's budget which will make it both more meaningful and understandable.

The Budget Act mandates that Congress should determine our national priorities. To provide a coherent framework within which to determine those priorities, the Budget Act requires that, beginning this year, the budget must be presented in mission terms, meaning that each function is subdivided into the major "missions" that the Federal Government is pursuing in order to meet the major national need addressed by the function itself.

By examining each mission within each function, the Congress can decide which missions should be encouraged and which might be cut back, without deciding the amount to be allocated to individual programs within the missions.

In the past, Mr. President, we have been frustrated by consideration of bill after bill, with no real notion of how that bill relates to any coherent effort to address any of our national needs.

Each bill was considered in isolation from most others. Scores of bills designed to provide relief or promote activity in the same area are passed without comparison of their relative efficiency or their relationship to existing law.

The mission budget concept permits Federal budgets to be built on an understanding of just how Federal spending is addressing and meeting the needs of our Nation.

It is the committee's hope that through the innovations of the mission concept and 5-year economic, spending, and revenue projections in its report. The Senate will be better able to understand and debate the committee recommendations for fiscal year 1979.

In drafting this budget, the Budget Committee examined each spending category on both the mission and 5-year bases. Let me detail some of our major recommendations in that context.

NATIONAL DEFENSE

In the national defense field, the committee has tried to bridge two conflicting problems.

First is the committee's deep concern about the steady strategic and tactical arms build-up by the Soviet Union. This is particularly manifested among Warsaw Pact nations which confront NATO forces and challenge the security of Western Europe.

Second is the high cost of defense and the effect this price tag has on America's fight against inflation.

The Budget Committee, beginning in fiscal year 1976 and continuing through fiscal year 1979, has voted for real growth in the defense budget. But while spending more, we also must keep in mind the burden of restraint which defense and every other category of the Federal budget must bear.

It is in this context, Mr. President, that the committee arrived at its recommendation for national defense in fiscal year 1979.

The committee recommends $129.8 billion in budget authority and $116.6 billion in outlays for fiscal year 1979. It is anticipated that these amounts will total $782.2 billion in budget authority and $720.5 billion in outlays over the fiscal year 1979–83 period.

The committee believes that the strategic and tactical warfare missions warrant top priority in determining the level of defense funding.

In the strategic mission, the committee's recommendation for fiscal years 1979–83 exceeds the President's projections, because of two basic concerns:

First. The vulnerability of U.S. ICBM forces in the early 1980's due to improved Soviet accuracy on its ICBM's, and

Second. The delay of Trident submarines into the force at a time when the Polaris and Poseidon submarines are being phased out of the fleet.

The committee determined that the funding levels in the President's budget request did not provide the quick fiscal response required to alleviate these two problem areas. The committee has recommended, therefore, a level of real growth in strategic spending that is intended to overcome potential force deficiencies.

In the tactical mission, the committee believes that it is essential for the United States to meet the pledge made by each NATO government in May 1977. Each member nation pledged to plan an increase of about 3 percent in total defense expenditures over the several years.

To insure that the United States will meet its pledge in fiscal year 1979 and throughout the 5-year period, the committee has recommended spending totals that would provide funds for land, air, sea, and mobility force modernizations. In addition, the committee's recommendation is intended to provide a decent standard of living for our forces abroad, particularly in geographic areas where the U.S. dollar is declining in value.

As part of its anti-inflation effort, the committee recognizes the need for the Federal Government to exercise fiscal responsibility. The committee's recommendation assumes a 5-percent "pay cap" on the anticipated October 1978 pay raise, along with a 20-percent absorption of the cost of the pay raise. The cap and absorption are to be applied equally to civilian and military

employees of all agencies of the Federal Government.

INTERNATIONAL AFFAIRS

Mr. President, let me now turn briefly to the international affairs budget.

Mr. President, the committee's recommendation is $12.8 billion in budget authority and $7.2 billion in outlays for fiscal year 1979. The committee anticipates that these figures will total $71.2 billion in budget authority and $42.1 billion in outlays for the fiscal year 1979–83 period.

The committee's recommendation allows for 5-percent real growth in most foreign economic assistance programs to help the world's poor and to facilitate long-term capital flows for development.

Much of this economic assistance will be used to purchase American goods and services. The committee recommendation allows for appropriations of up to 90 percent of the President's request for these banks in fiscal year 1979. The remainder can be funded in fiscal year 1980 when U.S. commitments would otherwise be smaller than this year's request.

Two other areas of the international affairs function should be mentioned: The International Monetary Fund's Witteveen Facility and security supporting assistance. The committee's recommendation allows for full appropriation in fiscal year 1979 of the $1.8 billion U.S. share of the Witteveen Facility. This balance-of-payments facility was originally proposed as a fiscal year 1978 off-budget item. The legislation is expected to come before the Senate this spring or summer.

For security supporting assistance, the committee recommends an allowance of about $100 million in both budget authority and outlays for an increase later this year in the President's request for base agreements with several NATO members.

HUMAN RESOURCES

Mr. President, the committee's recommendation for human resources programs is $297.8 billion in budget authority and $261.4 billion in outlays for fiscal year 1979. The committee anticipates that these figures will total $1,851.6 billion in budget authority and $1,557.0 billion in outlays for the fiscal year 1979–83 period.

In the human resources area, the budget resolution as reported to the Senate makes room for additional Federal efforts in several high priority programs serving the human needs of citizens.

The Budget Committee recommended substantial funding increases in several critical areas:

Improvements in elementary and secondary education programs;

Improvements in the provision of health care and nutritional services to low-income pregnant women and young children;

Improvements in veteran's income security programs and the veteran's medical care system;

Improvements in health care services and research for the general population; and

Increased social services grants to help the neediest and most vulnerable groups in our society.

Mr. President, the first budget resolution for fiscal year 1979 will continue the strong congressional commitment to put unemployed Americans to work. The Budget Committee recognizes that, as the economic recovery continues and the inflation threat looms large, the focus of Federal employment efforts should shift from the cyclically unemployed to the structurally unemployed.

Thus, while the committee assumes that the funding which is now spent on the provision of public service jobs will be continued at a constant level over the next 5 years, the committee recommends that half of that funding be directed toward employment and training services for the structurally unemployed.

The committee's recommendations will also allow full funding for youth employment initiatives as well as new initiatives designed to help move CETA workers to private sector employment.

The committee also recommends increases for the WIN program, as part of an effort to move AFDC recipients off the welfare rolls and into jobs.

Further, the committee's resolution recommends that the Federal, State, and local welfare system be reformed. As part of this effort, the committee recommends that the earned income tax credit be expanded in fiscal year 1979, with subsequent changes becoming effective in future years.

The committee expects that such reform will provide fiscal relief to State and local governments against the cost of welfare. The committee's recommendation rejects the notion of fiscal relief in isolation from overall reform. Such a measure would fail to address the most glaring shortcomings in the welfare system.

The committee believes that increased Federal efforts to put the structurally unemployed to work will result in reductions in expenditures for welfare programs.

The committee continues to be concerned over the rapid escalation in health care costs that has occurred in recent years.

The committee is gratified by the voluntary efforts initiated by the hospital industry to curb hospital costs. The committee believes these efforts will be successful during fiscal year 1979, producing substantial savings in Federal programs which finance the cost of health care.

The committee recognizes, however, that these private efforts may not be fully adequate to stem the rise in hospital costs in future years. As a result, Federal cost control efforts may be necessary in the future.

The committee recommends that the Congress enact legislation providing such fallback controls in the event the private efforts should fail.

Finally, the committee has identified programs, such as medicaid, veterans' readjustment benefits, child nutrition programs, and health professions education grants programs, in which savings can occur due to administrative or legislative reform. We urge the authorizing committees and the President to adopt such reforms.

PHYSICAL BESOURCES AND GENERAL GOVERNMENT

Mr. President, the committee's recommendation for physical resources and general Government programs is $95.4 billion in budget authority and $83.4 billion in outlays for fiscal year 1979. The committee anticipates that these figures will total $477.3 billion in budget authority and $450.4 billion in outlays for the fiscal year 1979–83 period.

In the physical resources area, the committee recommends continuing the major increases of recent years for energy supply research and development and for the strategic petroleum reserves. It also recommends moderate increases to levels of support for natural resources and environment programs.

For agriculture, the committee's recommendations would permit a major increase above current law funding for farm income support programs (including the latest administration actions), as well as increased support for agricultural research.

The committee's recommendation would permit funding for Federal disaster assistance for the average level of disasters of recent years, but would require tighter administration to target benefits better on those truly in need in all sectors of the economy, including America's farmers.

The committee's recommendations continue Federal budget support for the Postal Service at the level recommended by the Postal Service itself, which will need to improve its operations to achieve financial viability.

For transportation, the committee's recommendation would accommodate increased funding for highways, including funding for bridge repair and replacement. The levels recommended are the maximum that can be accommodated by the highway trust fund without future increases to gasoline and other highway taxes.

The committee's recommendation would also accommodate further funding for the financially troubled ConRail. For mass transit, the committee's recommendation would accommodate approximately the current activity levels, but with the revised funding mechanism proposed by the President.

With respect to the President's urban initiative, the committee's recommendations would accommodate significant expansion in economic development activities for existing and new major grant programs and labor-intensive public works proposals. In addition, the committee recommended targets that are adequate to increase support to fiscally distressed areas through increased direct Federal aid and through the State incentive program designed to increase State assistance to such areas. However, legislative details of the credit-related components of the National Development Bank were considered to be too unclear to merit increases to the budget totals at this time.

REVENUES

Mr. President, much further detail regarding each of these individual functions in the budget resolution can be

found in the committee's report. I ask unanimous consent that portions of that report detailing the specific recommendations of the committee by function be included at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CHAPTER V. THE BUDGET BY FUNCTION AND MISSION

INTRODUCTION

This chapter provides details on the Committee's spending recommendations for each of the 19 functional areas of the budget.

This information differs from that presented in prior years in two major respects:

Much greater emphasis has been placed on the five-year (FY 1979–83) outlook for the budget in recognition of the fact that effective budget choices cannot be made in a one year context;

A new focus has been provided on the major missions within each functional area of the budget as a result of the Committee's efforts over the past year to develop and improve this aspect of budget presentation.

The discussion of each functional area of the budget is divided into the following parts:

A narrative statement sets forth the major national need addressed by the program in the function, the major missions in the function under which individual programs are grouped, the results expected by 1983 from Federal program efforts, and possible future year choices. Against this background, the details of the Committee's recommendations for the function and each major mission in the function are explained.

Each functional section also contains tables providing numerial information on current trends in the function and compares the Committee's recommendations with those recommended by President Carter or suggested by other Senate committees. These recommendations and suggestions were considered by the Committee in arriving at the recommended First Budget Resolution targets.

The "current law" and "current policy" estimates used in this chapter have been prepared by the Congressional Budget Office on the basis of the program detail contained in the FY 1978 estimate, which represents action to date by the Congress plus likely requirements that remain to be acted upon. The "current law" estimates reflects program and caseload changes and adjustments for inflation that are required by law. The "current policy" estimate is the current law estimate plus a further adjustment for inflation which, though not required by law, would be necessary to keep all programs constant in real terms. Both the current law and current policy estimates assume extension of established programs for which authorizations expire in the FY 1979–83 period; this is consistent with long-standing Office of Management and Budget and Congressional practice.

The "President's budget request" figures used in this chapter include the estimates transmitted in the President's original budget request in January, as well as an update of the President's original budget request submitted by OMB to the Congress on March 13 and the President's urban policy proposals submitted on March 27.

The "Senate authorizing committees" estimates in this chapter represent the information received in the March 15 reports to the Budget Committee pursuant to Section 301(c) of the Congressional Budget Act. As requested, most committees furnished budget estimates for FY 1979 and the five-year period, FY 1979–83, for all programs under their jurisdiction. It has been necessary, however, in some cases, for the Budget Committee staff to calculate FY 1979 or future year estimates where the data submitted were insufficient. These Senate Budget Committee staff estimates were made in consultation with the staff of the relevant authorizing committees, the CBO, and Executive departments, where appropriate. This information represents the policies recommended by the authorizing committees and is intended to provide the Senate with the best possible set of FY 1979–83 estimates based on those recommended policies.

In the case of all tabular material in this chapter, details may not add to totals due to rounding.

[1] The mission numbers agree with those used in other tables in this chapter: functions and missions not listed do not include any programs that provide direct assistance to State and local governments.

[2] Less than $50,000,000.

(050) NATIONAL DEFENSE

National need and missions

The national need addressed by National Defense is the protection of America's people, society, territory, and allies from attack by potential adversaries. Defense programs address this need by: preservation of an overall military balance in total force capabilities between the United States and its allies and the Soviet Union and its allies that is at least as favorable as the present balance; maintenance of essential equivalence in strategic nuclear deterrence with the Soviet Union, including the preservation of the capability to launch a retaliatory second strike that would inflict unacceptable damage; maintenance of sufficient forces, together with our allies, to deter or counter aggression at levels below strategic nuclear conflict; and negotiation of international agreements which limit and reduce armaments as well as strengthen international stability.

The major mission areas in National Defense are: (1) strategic warfare forces, (2) tactical warfare forces, (3) defense-wide forces and support, and (4) other national defense programs.

Current trends

The following table shows the Committee recommendations for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years]

	Budget authority	Outlays
1977 actual	110.4	97.5
1978 estimate	118.2	105.4
1979:		
Current law	121.8	113.0
Current policy	126.6	114.9
President's budget request	128.4	117.8
Appropriations Committee	130.1	118.5
Authorizing	130.1	118.5
Budget Committee recommendation	129.8	116.6

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $654.2 billion in budget authority and $627.6 billion in outlays for *National Defense*, while *current policy* would cost a total of $654.2 billion in budget authority and $50.5 billion in outlays. The implications of current trends in the four major mission areas are:

(1) *Strategic Warfare Forces.—Current law* would cost a total of $80.9 billion in budget authority and $77.3 billion in outlays over the FY 1979–83 period. This would provide for selective continuation of the air-, land-, and sea-based elements of the TRIAD, but might force a choice between maintaining force levels and upgrading the quality of our strategic systems. *Current policy* would cost an additional $10.9 billion in budget authority and $7.1 billion in outlays, and would sustain all elements of the TRIAD, provide growth in Trident and cruise missile capabilities, and provide for development of the MX missile system.

(2) *Tactical Warfare Forces.—Current law* would cost an additional $10.9 billion in authority and $368.0 billion in outlays over the FY 1979–83 period. This would provide for limited force modernization, particularly for improvements in NATO force capabilities, and selective modernization of sea control forces, but would not simultaneously permit upgrading of naval force projection capabilities. *Current policy* would cost an additional $51.2 billion in budget authority and $33.0 billion in outlays. This would permit more rapid force modernization, with emphasis on upgrading NATO forces and sea control force capabilities, but permit very limited upgrading of naval force projection capabilities unless force level tradeoffs occurred in the sea control area.

(3) *Defense-Wide Forces and Support.—Current law* would cost a total of $114.9 billion in budget authority and $109.1 billion in outlays over the FY 1979–83 period. This would allow gradually declining funding levels for research and development, intelligence and telecommunications, defense agencies and other support programs and effort. *Current policy* would cost an additional $13.0 billion in budget authority and

$8.4 billion in outlays, and would protect these programs from degradation due to price rises.

(4) *Other National Defense Programs.*—*Current law* would cost a total of $73.3 billion in budget authority and $72.8 billion in outlays over the FY 1979–83 period. This would provide military retirement benefits for military retirees, but would force a cutback in the defense-related activities of the Department of Energy. *Current policy* would cost an additional $3.1 billion in budget authority and $2.3 billion in outlays, and would permit the continuation of the DOE defense-related activities at current levels of effort.

Future-year choices

(1) *Strategic Warfare Forces: Outcome of SALT II.*—The failure to achieve a satisfactory arms limitation agreement with the Soviet Union would force some difficult strategic policy choices as to proper responses and levels of capability. The failure to achieve an arms agreement could drive costs up by as much as $70 billion (in constant FY 1979 dollars) over the next 15 years under an option that includes 300 MX ICBM's 32 Tridents, 75 cruise missile carriers, and other systems.

Multi-Mission: Reform of the Military Retirement System.—The President's Commission on Military Compensation has recommended far-reaching reform of the military retirement system to bring it more closely into alignment with the civil service retirement system. The budgetary impact of these reforms is uncertain, although savings almost certainly would result. The reforms might also have a significant impact on military service career patterns.

COMMITTEE RECOMMENDATIONS

The Committee recommends $129.8 billion in budget authority and $116.6 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $782.2 billion in budget authority and $720.5 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	121.8	126.3	130.8	135.3	140.0
Outlays	113.0	119.2	125.7	131.7	138.1
Current policy:					
Budget authority	126.6	136.0	146.0	156.3	167.4
Outlays	114.9	124.5	135.1	145.9	157.7
Authorizing committees:					
Budget authority	130.1	143.4	158.0	174.0	191.2
Outlays	118.5	132.1	147.4	163.8	182.0
Budget Committee recommendation:					
Budget authority	129.8	143.3	155.9	169.3	183.8
Outlays	116.6	132.2	144.4	156.6	170.6

For the missions in this function, the Committee makes the following recommendations:

(1) *Strategic Warfare Forces.*—The Committee recommends $14.3 billion in budget authority and $13.7 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $91.3 billion in budget authority and $84.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation would permit maintaining the current TRIAD force levels with continuing modernization focusing on the strategic cruise missile, MX, and Trident systems. The recommended funding levels would accommodate the following potential actions: (a) deferral of the planned FY 1979 appropriation of the Trident submarine with no effect on the overall Trident force level; (b) possible start-up of a second source for production of the Trident submarine; and (c) increased R&D activity on alternative ICBM technology associated with a hard target kill capability.

Over the five-year period, this level of funding can be expected to permit the continuation of the TRIAD and provide significant real growth in spending for strategic force modernizations and enhancement of U.S. strategic capabilities.

MISSION 1: STRATEGIC WARFARE FORCES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	15.2	15.6	16.2	16.7	17.2
Outlays	14.0	14.6	15.5	16.2	17.0
Current policy:					
Budget authority	15.9	17.0	18.3	19.6	21.0
Outlays	14.3	15.4	16.8	18.2	19.7
Authorizing committees:					
Budget authority	15.0	16.6	18.4	20.5	22.5
Outlays	13.6	15.3	17.1	19.2	21.5
Budget Committee recommendations:					
Budget authority	14.3	16.8	18.4	20.0	21.8
Outlays	13.7	15.3	16.8	18.3	19.9

(2) *Tactical Warfare Forces.*—The Committee recommends $80.2 billion in budget authority and $70.5 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $478.1 billion in budget authority and $439.7 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit a considerable increase in modernization of U.S. tactical land, air, sea, and mobility forces. The Committee is concerned that the United States met its NATO pledge that each member country aim at an increase in the region of three percent real growth in defense expenditures over the next several years. The Committee's recommendations also permit funding for enhancement of U.S. sea warfare forces, including potential actions associated with AEGIS ships and mid-sized carriers.

Over the five-year period, this level of funding can be expected to permit the United States to meet its three percent pledge to NATO, as the alliance moves to counterbalance the growth in Warsaw Pact military strength.

MISSION 2: TACTICAL WARFARE FORCES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	72.7	74.3	77.0	79.2	81.7
Outlays	66.9	69.9	73.7	77.0	80.5
Current policy:					
Budget authority	75.8	80.8	86.9	93.0	99.6
Outlays	68.2	73.4	79.8	86.3	93.3
Authorizing committees:					
Budget authority	78.5	86.6	95.7	105.8	116.5
Outlays	71.2	79.7	88.9	99.4	110.7
Budget Committee recommendation:					
Budget authority	80.2	87.4	95.2	103.3	112.0
Outlays	70.5	81.2	88.3	95.6	104.1

(3) *Defense-Wide Forces and Support.*—The Committee recommends $23.3 billion in budget authority and $20.7 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $139.9 billion in budget authority and $125.3 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit a broad range of program enhancements and program growth for such efforts as basic technology R&D, intelligence and telecommunication, and essential support activities.

Over the five-year period, this level of funding can be expected to permit three percent annual real growth for these activities.

MISSION 3: DEFENSE-WIDE FORCES AND SUPPORT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	21.2	22.7	22.9	23.6	24.5
Outlays	19.4	21.1	21.9	22.8	23.9
Current policy:					
Budget authority	22.0	24.1	25.5	27.2	29.1
Outlays	19.7	21.9	23.5	25.2	27.2
Authorizing committees:					
Budget authority	23.4	26.2	28.9	31.9	35.6
Outlays	20.8	23.0	26.3	29.4	33.2
Budget Committee recommendation:					
Budget authority	23.3	25.7	27.8	30.2	32.9
Outlays	20.7	22.6	25.0	27.2	29.

(4) *Other National Defense Programs.*—The Committee recommends $13.0 billion in budget authority and $12.7 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $76.6 billion in budget authority and $75.2 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit the government to meet its obligations to retired military personnel as well as to provide adequate funding for those Department of Energy activities related to U.S. defense programs.

Over the five-year period, this level of funding can be expected to permit the government to meet its military retired pay obligations and allow for energy-related research and production efforts to keep pace with anticipated U.S. nuclear force modernizations.

MISSION 4: OTHER NATIONAL DEFENSE PROGRAMS

[In billions of dollars: fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	12.8	13.7	14.6	15.6	16.7
Outlays	12.6	13.5	14.5	15.5	16.6
Current policy:					
Budget authority	12.9	14.1	15.2	16.5	17.8
Outlays	12.7	13.8	15.0	16.2	17.5
Authorizing committee:					
Budget authority	13.2	14.0	15.0	15.8	16.6
Outlays	12.9	14.1	15.1	15.8	16.6
Budget Committee recommendation:					
Budget authority	13.0	14.1	15.2	16.5	17.8
Outlays	12.7	13.8	15.0	16.2	17.5

Multi-Mission Issues.—The Committee recommends savings of $1.0 billion in both budget authority and outlays for FY 1979 based upon expected limitations on the October 1978 pay raise. The Committee anticipates that these figures will total $3.7 billion in savings in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation assumes that a five percent limit will be placed on the October 1978 pay raise for Federal civilian and military employees. The Committee also recommends that the Department of Defense be required to absorb, through savings in other activities, 20 percent of the costs of the October 1978 pay raise and each succeeding fiscal year's pay raise required by law during the five-year period. The Committee's recommendation does not assume Congressional enactment of wage board pay reform or the requested level of new stockpile disposals above the level of stockpile acquisitions in FY 1979.

MULTIMISSION ISSUES

[In billions of dollars, fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	(1)	(1)	(1)	(1)	(1)
Outlays	(1)	(1)	(1)	(1)	(1)
Current policy:					
Budget authority	(1)	(1)	(1)	(1)	(1)
Outlays	(1)	(1)	(1)	(1)	(1)
Authorizing committees:					
Budget authority	(1)	(1)	(1)	(1)	(1)
Outlays	(1)	(1)	(1)	(1)	(1)
Budget Committee recommendation:					
Budget authority	−1.0	−0.7	−0.7	−0.7	−0.7
Outlays	−1.0	−0.7	−0.7	−0.7	−0.7

[1] Amounts are included in Missions 1–4.

Intelligence Spending.—The Committee recognizes that, in the past, Congress has reduced the President's request for funding for national foreign intelligence and defense-related intelligence. This part of the budget will likely be subject to similar reductions this year. In the future, it will be necessary for the Committee to review intelligence spending and its five-year implications as carefully as any other area of the Federal budget.

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Exclusion of benefits and allowances to Armed Forces personnel:						
Individuals	1,260	1,370	1,470	1,585	1,715	1,850
Corporations						
Exclusion of military disability pensions:						
Individuals	115	120	130	135	145	150
Corporations						
Total	1,375	1,490	1,600	1,720	1,860	2,000

Note: All estimates are rounded to the nearest $5,000,000.

(150) INTERNATIONAL AFFAIRS

National need and missions

The national need addressed by *International Affairs* is the advancement of U.S. political and economic interests abroad. Federal programs meet this need through: political, economic, and cultural relations with foreign nations; economic and security support for allies and friendly governments; maintenance of a healthy international economic system and promotion of U.S. exports; efforts to improve the quality of life in the developing world; and the furtherance of respect for human rights throughout the world.

The major mission areas in *International Affairs* are: (1) foreign economic assistance and financial programs; (2) foreign military assistance and sales; and (3) other international affairs programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	6.6	4.8
Fiscal year 1978 estimate	9.5	6.0
Fiscal year 1979:		
Current law	9.7	6.9
Current policy	10.1	7.1
President's budget request	13.1	7.2
Appropriations Committee	13.8	8.6
Authorizing committees	13.6	7.2
Budget Committee recommendation	12.8	7.2

Current law and current policy for fiscal year 1979–83

Over the next five years, *current law* would cost a total of $58.5 billion in budget authority and $38.0 billion in outlays for *International Affairs*, while *current policy* would cost an additional $9.0 billion in budget authority and $5.3 billion in outlays. The implications of current trends in the three major mission areas are:

(1) *Foreign Economic Assistance and Financial Programs.—Current law* would cost a total of $37.7 billion in budget authority and $28.3 billion in outlays over the FY 1979–83 period. This would permit the continuation of existing bilateral, multilateral, and financial programs, but would force cutbacks in several areas. Reductions in financial programs might force poor countries to rely more heavily on short-term commercial loans, which could retard their long-term growth and development. The promotion of U.S. exports through the Export-Import Bank and the Food for Peace programs also would decline. *Current policy* would cost an additional $7.0 billion in budget authority and $3.7 billion in outlays. This would avoid these cutbacks, and facilitate agreements among OECD and OPEC countries to further assist developing countries.

(2) *Foreign Military Assistance and Sales.—Current law* would cost a total of $13.4 billion in budget authority and $2.3 billion in outlays over the FY 1979–83 period. This would allow the U.S. to meet most security requirements of allies and friendly governments, but grants and credit sales of arms and supporting equipment would be reduced. While such a development is consistent with efforts to restrain arms sales, current law would not provide for possible security requirements of African countries that are threatened by forces inimical to the U.S., but are unable to afford the cash purchases of defense materials. Should these countries turn to alternative sources of supply, the U.S. share of security-related exports would decline. *Current policy* would cost an additional $0.9 billion in budget authority and $0.6 billion in outlays. This would provide for a fairly extensive global military assistance and sales program, and for additional base agreements between the U.S. and foreign countries.

(3) *Other International Affairs Programs.—Current law* would cost a total of $7.4 billion in both budget authority and outlays over the FY 1979–83 period, providing for a declining level of diplomatic and informational activities. *Current policy* would cost an additional $1.1 billion in budget authority and $1.0 billion in outlays, and would permit continuation of current program levels.

Future-year choices

(1) *Foreign Economic Assistance and Financial Programs:* (a) *Development Assistance.*—Administration officials and some members of Congress are giving serious consideration to a Brookings Institution recommendation that foreign economic development assistance be doubled by FY 1983, an increase over current policy of $2.6 billion in budget authority and $1.4 billion in outlays. No specific Administration proposals have yet been offered.

(b) *IMF Quota Increase.*—The next regular increase in funds committed to the International Monetary Fund (IMF) for balance-of-payments loans is due by FY 1981. The U.S. share of this increase is expected to be in the range of $3 to $5 billion.

Committee recommendations

The Committee recommends $12.8 billion in budget authority and $7.2 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $71.2 billion in budget authority and $42.1 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	9.7	11.7	12.3	12.4	12.4
Outlays	6.9	7.6	7.7	7.8	7.9
Current policy:					
Budget authority	10.1	12.6	14.1	15.0	15.7
Outlays	7.1	8.2	8.7	9.3	10.0
Authorizing committees:					
Budget authority	13.6	14.7	15.2	15.6	15.8
Outlays	7.2	8.8	9.6	10.3	10.5
Budget Committee recommendation:					
Budget authority	12.8	13.1	14.4	15.1	15.8
Outlays	7.2	8.0	8.4	8.9	9.5

For the missions in this function, the Committee makes the following recommendations:

(1) *Foreign Economic Assistance and Financial Programs.*—The Committee recommends $9.0 billion in budget authority and $5.1 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $49.1 billion in budget authority and $31.0 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit, at a minimum, discretionary inflation adjustments to keep all programs in the mission, other than security supporting assistance, constant in real terms. The targets take into account some of the President's reductions from FY 1978 levels in supporting assistance. The Committee assumes that in FY 1979 the U.S. contributions to the multilateral development banks will not exceed ninety percent of the President's request and that real growth for other economic development assistance and contributions to international organizations will be no more than five percent. The recommended targets also permit full appropriation of the U.S. share of the proposed Witteveen Facility of the International Monetary Fund.

Over the five-year period, this level of funding can be expected to permit expanded bilateral and multilateral efforts to reduce poverty in the poorest areas of the world. Funds provided through the International Monetary Fund and U.S.-backed multilateral development bank borrowing in private money markets will facilitate the flow of capital to middle income developing countries to help strengthen the international economic system. Growth in the middle income developing countries and U.S. export promotion programs together can be expected to assist American agricultural and industrial exports.

MISSION 1: FOREIGN ECONOMIC ASSISTANCE AND FINANCIAL PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	6.0	7.8	8.1	8.0	7.8
Outlays	5.1	5.7	5.7	5.8	5.9
Current policy:					
Budget authority	6.3	8.5	9.5	10.0	10.4
Outlays	5.2	6.1	6.4	6.9	7.4
Authorizing committees:					
Budget authority	8.2	9.6	10.4	11.2	11.8
Outlays	4.7	6.1	6.7	7.3	7.8
Budget Committee recommendation:					
Budget authority	9.0	9.0	9.9	10.3	10.9
Outlays	5.1	5.9	6.2	6.6	7.2

(2) *Foreign Military Assistance and Sales.*—The Committee recommends $2.4 billion in budget authority and $0.6 billion in outlays for this mission in FY 1979. The Committee

anticipates that these figures will total $13.5 billion in budget authority and $2.6 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit foreign military sales to continue at FY 1978 levels. An increment above current levels in grant military assistance for possible base agreements with Greece and Turkey is included.

Over the five-year period, this level of funding can be expected to permit the U.S. to meet most presently identified security requirements of allies and friendly governments, but grants and credit sales of arms and supporting equipment would be available to fewer countries than at present as military assistance declines in real terms due to a Congressionally mandated phaseout of the Military Assistance Program.

MISSION 2: FOREIGN MILITARY ASSISTANCE AND SALES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.3	2.5	2.7	2.9	3.0
Outlays	.5	.5	.5	.5	.5
Current policy:					
Budget authority	2.4	2.6	2.9	3.2	3.3
Outlays	.5	.5	.6	.6	.7
Authorizing committees:					
Budget authority	3.7	3.3	2.9	2.4	1.9
Outlays	.9	.9	1.0	.9	.6
Budget Committee recommendation:					
Budget authority	2.4	2.6	2.7	2.9	3.0
Outlays	.6	.6	.5	.5	.4

(3) *Other International Affairs Programs.*—The Committee recommends $1.5 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $8.6 billion in budget authority and $8.5 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit the current level of diplomatic activities in support of U.S. political and economic interests abroad to continue in real terms. A small allowance for the effects of dollar depreciation will enable information and cultural activities abroad to escape the effects of sharply escalating dollar costs needed to meet contracts for goods and services denominated in foreign currencies.

Over the five-year period, this level of funding can be expected to permit the diplomatic service, arms control endeavors, people-to-people activities, and Radio Free Europe/Radio Liberty, and the Voice of America to continue at present levels.

MISSION 3: OTHER INTERNATIONAL AFFAIRS PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.4	1.4	1.5	1.5	1.6
Outlays	1.4	1.5	1.5	1.5	1.6
Current policy:					
Budget authority	1.5	1.6	1.7	1.8	2.0
Outlays	1.4	1.6	1.7	1.8	1.9
Authorizing committees:					
Budget authority	1.6	1.7	1.8	2.0	2.1
Outlays	1.6	1.7	1.8	2.0	2.1
Budget Committee recommendation:					
Budget authority	1.5	1.6	1.7	18.	2.0
Outlays	1.5	1.6	1.7	1.8	1.9

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Exclusion of income earned abroad by U.S. citizens:						
Individuals	360	385	415	475	510	550
Corporations						
Deferral of income of domestic international sales corporations (DISC):						
Individuals						
Corporations	1,135	1,335	1,525	1,630	1,700	1,830
Deferral of income of controlled foreign corporations:						
Individuals						
Corporations	615	665	720	775	835	905
Special rate for Western Hemisphere trade corporations:						
Individuals						
Corporations	25	15	5			
Total	2,135	2,400	2,665	2,880	3,045	3,285

Note: All estimates are rounded to the nearest $5,000,000.

(250) GENERAL SCIENCE, SPACE, AND TECHNOLOGY

National need and missions

The national need addressed by *General Science, Space, and Technology* is the advancement of scientific knowledge and the exploration of space. Federal programs meet this need through support of basic research in all major disciplines and a civilian space program of manned and unmanned missions to earth orbit and beyond.

The major mission areas in *General Science, Space, and Technology* are: (1) science, and (2) civilian space program.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	4.6	4.7
Fiscal year 1978 estimate	4.8	4.7
Fiscal year 1979:		
Current law	4.9	4.8
Current policy	5.2	5.0
President's budget request	5.2	5.1
Appropriations Committee	5.2	5.1
Authorizing committees	5.3	5.2
Budget Committee recommendation	5.2	5.0

Current law and current policy for FY 1979–83

Over the next five years *current law* would cost a total of $24.9 billion in budget authority and $24.6 billion in outlays for *General Science, Space, and Technology*, while *current policy* would cost an additional $5.2 billion in budget authority and $4.3 billion in outlays. The implications of current trends in the two major mission areas are:

(1) *Science.—Current law* would cost a total of $6.4 billion in budget authority and $6.2 billion in outlays over the FY 1979–83 period. This would continue basic research in many disciplines such as physics and biology, but at gradually declining levels of support as price increases occurred. *Current policy* would cost an additional $1.5 billion in budget authority and $1.1 billion in outlays, and would prevent a decline in support levels due to inflation.

(2) *Civilian Space Program.—Current law* would cost a total of $18.5 billion in both budget authority and outlays over the FY 1979–83 period. This would provide for a four-orbiter Space Shuttle program, but would force NASA to reduce planned flight operations. *Current policy* would cost an additional $3.6 billion in budget authority and $3.2 billion in outlays. This would permit planned flight operations to be conducted, and would permit either a fifth Space Shuttle orbiter or additional space science missions.

Future-year choices

No new major policy choices are forthcoming over the FY 1980–83 period that can be expected to alter significantly the size of this function.

Committee recommendations

The Committee recommends $5.2 billion in budget authority and $5.0 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $29.2 billion in budget authority and $28.3 billion in outlays over the FY 1979–83 period.

The amounts recommended for FY 1979 will support the Federal role in sponsoring basic research and will continue the nation's civilian space program.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	4.9	4.9	5.0	5.0	5.1
Outlays	4.8	4.8	4.9	5.0	5.1
Current policy:					
Budget authority	5.2	5.6	6.0	6.4	6.9
Outlays	5.0	5.3	5.7	6.2	6.7
Authorizing committees:					
Budget authority	5.3	5.9	6.4	6.5	6.9
Outlays	5.2	5.7	6.1	6.4	6.8
Budget Committee recommendation:					
Budget authority	5.2	5.5	5.9	6.2	6.4
Outlays	5.0	5.3	5.7	6.1	6.2

For the missions in this function, the Committee makes the following recommendations:

(1) *Science.*—The Committee recommends $1.4 billion in budget authority and $1.3 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $7.5 billion in budget authority and $7.0 billion in outlays over the FY 1979–83 period.

The Committee's recommendation supports funding levels for basic research that will maintain current levels of effort with an allowance for inflation. The five-year totals, however, do not provide a full adjustment for inflation, and thus necessitate greater efficiencies to maintain current program levels.

MISSION 1: SCIENCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.3	1.3	1.3	1.3	1.3
Outlays	1.2	1.2	1.2	1.3	1.3
Current policy:					
Budget authority	1.4	1.5	1.6	1.7	1.8
Outlays	1.3	1.3	1.4	1.6	1.7
Authorizing committees:					
Budget authority	1.4	1.5	1.6	1.7	1.9
Outlays	1.4	1.5	1.6	1.7	1.8
Budget Committee recommendation:					
Budget authority	1.4	1.4	1.5	1.6	1.6
Outlays	1.3	1.3	1.4	1.5	1.5

(2) *Civilian Space Program.*—The Committee recommends $3.8 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $21.7 million in budget authority and $21.3 billion in outlays over the FY 1979–83 period.

The Committee's recommendation would continue the U.S. civilian presence in space. The amounts recommended for FY 1979 would accommodate procurement of long lead items in FY 1979 for a fifth Space Shuttle orbiter, should Congress direct the administration to include procurement of this orbiter as part of the overall U.S. effort in space. The five-year cumulative totals do not provide a full adjustment for inflation. Hence, procurement of a fifth orbiter would necessitate real reductions in other projected activities.

MISSION 2: CIVILIAN SPACE PROGRAM

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.6	3.7	3.7	3.7	3.8
Outlays	3.6	3.6	3.7	3.7	3.8
Current policy:					
Budget authority	3.8	4.1	4.4	4.7	5.1
Outlays	3.8	4.0	4.3	4.6	5.0
Authorizing committees:					
Budget authority	3.9	4.4	4.8	4.7	5.0
Outlays	3.8	4.2	4.5	4.7	5.0
Budget Committee recommendation:					
Budget authority	3.8	4.1	4.4	4.6	4.8
Outlays	3.8	4.0	4.3	4.5	4.7

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Expensing of research and development expenditures:						
Individuals	30	30	35	35	35	35
Corporations	1,450	1,520	1,610	1,695	1,715	1,635
Total	1,480	1,550	1,645	1,730	1,750	1,670

Note: All estimates are rounded to the nearest $5,000,000.

(270) ENERGY

National need and missions

The national need address by *Energy* is the provision of sufficient and secure energy resources. Federal programs meet this need through: development of supply-related technologies; conservation of energy; creation of a strategic petroleum reserve; development and dissemination of reliable data; and regulation of energy prices.

The major mission areas in *Energy* are: (1) energy supply, (2) energy conservation, (3) emergency energy preparedness, and (4) other energy programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years]

	Budget authority	Outlays
1977 actual	5.0	4.2
1978 estimate	8.6	6.1
1979:		
Current law	8.0	9.1
Current policy	8.4	9.2
President's budget request	9.5	9.9
Appropriations Committee	10.5	10.1
Authorizing committees	10.7	10.3
Budget Committee recommendation	10.2	10.1

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $31.5 billion in budget authority and $36.2 billion in outlays for Energy, while *current policy* would cost an additional $5.3 billion in budget authority and $4.0 billion in outlays. The implications of current trends in the four major mission areas are:

(1) *Energy Supply.—Current law* would cost a total of $18.4 billion in budget authority and $22.1 billion in outlays over the FY 1979–83 period. This would fund gradually declining levels of on-going research and development in such areas as solar energy, fossil fuels, and nuclear power. The gradual decline in real spending would lengthen the already-long process of commercializing fuel technologies. *Current policy* would cost an additional $3.9 billion in budget authority and $2.9 billion in outlays. These additional funds would permit more comprehensive solar energy research and development, increase the likelihood of constructing a commercial-sized demonstration plant for coal-derived fuels, and support greater research and development efforts on the thorium and plutonium nuclear fuel cycles.

(2) *Energy Conservation.—Current law* would cost a total of $6.0 billion in budget authority and $3.7 billion in outlays over the FY 1979–83 period. This would provide: Weatherization of about 310,000 low-income homes; commercialization of some energy-efficient-building standards; development of advanced electrical transmission systems; installation of cogeneration units; and insulation of schools and hospitals. *Current policy* would cost an additional $0.7 billion in budget authority and $0.5 billion in outlays, and would prevent program efforts from declining due to price inflation (for example, about 18,000 more low-income homes could be insulated).

(3) *Emergency Energy Preparedness.—Current law and current policy* are the same, and would cost a total of $3.4 billion in budget authority and $6.7 billion in outlays over the FY 1979–83 period. This would provide an oil reserve of 500 million barrels by the end of calendar year 1980, assuming no unforeseen developments.

(4) *Other Energy Programs.—Current law* would cost a total of $3.7 billion in both budget authority and outlays over the FY 1979–83 period. This would support declining levels in informational, administration, and regulatory programs of the Department of Energy, Federal Energy Regulatory Commission (formerly Federal Power Commission), and the Nuclear Regulatory Commission. *Current policy* would cost an additional $0.8 billion in budget authority and $0.6 billion in outlays, and would prevent a decline in real program levels due to rising costs.

Future-year choices

(3) *Emergency Energy Preparedness: Strategic Petroleum Reserve.*—The major decision affecting the *Energy* function is the decision as to whether the strategic petroleum reserve will be expanded beyond 500 million barrels, which is discussed in the next section.

Committee recommendations

The Committee recommends $10.2 billion in budget authority and $10.1 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $42.6 billion in budget authority and $47.1 billion in outlays over the FY 1979–83 period.

The amounts recommended reflect the Committee's strong belief that energy programs must continue to be treated within the budget as an important national priority. Together with appropriate energy price and regulatory policies, the programs in this function can accelerate the development of sufficient and secure domestic energy resources, which are essential to U.S. economic prosperity and national security.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	8.0	5.9	4.5	6.1	7.0
Outlays	9.1	9.4	5.4	6.2	6.1
Current policy:					
Budget authority	8.4	6.6	5.5	5.7	8.9
Outlays	9.2	9.8	6.2	7.4	7.6
Authorizing committees:					
Budget authority	10.7	6.4	6.1	8.6	9.8
Outlays	10.3	11.8	8.4	10.9	10.3
Budget Committee recommendation:					
Budget authority	10.2	6.3	6.7	9.0	10.4
Outlays	10.1	10.1	7.3	9.9	9.7

For the missions in this function, the Committee makes the following recommendations:

(1) *Energy Supply.*—The Committee recommends $3.9 billion in budget authority and $4.8 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $22.6 billion in budget authority and $25.3 billion in outlays over the FY 1979–83 period.

The Committee recommendations represent increases above the President's budget request and above current policy amounts, which the Committee believes would be insufficient levels of investment for stimulating additional energy supplies. The Committee's recommendation assumes no enactment of the legislation regarding commercial pricing of enriched uranium.

MISSION 1: ENERGY SUPPLY

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.4	3.5	2.5	4.1	5.0
Outlays	4.5	4.7	3.6	4.7	4.6
Current policy:					
Budget authority	3.6	3.9	3.2	5.2	6.4
Outlays	4.6	5.0	4.2	5.5	5.7
Authorizing committees:					
Budget authority	4.1	3.6	2.5	4.7	5.9
Outlays	5.0	6.8	5.4	6.9	6.5
Budget Committee recommendation:					
Budget authority	3.9	3.9	3.2	5.2	6.4
Outlays	4.8	5.1	4.2	5.5	5.7

(2) *Energy Conservation.*—The Committee recommends $1.2 billion in budget authority and $1.0 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $4.6 billion in budget authority and $4.5 billion in outlays over the FY 1979–83 period.

While the Committee recommendations appear to represent a decrease from the President's budget request, they in fact represent a slight increase as the President's request is artifically inflated by inclusion of a refund from the proposed tax on fuel inefficient automobiles, a refund that is not expected to be enacted. The Committee believes the traditional conservation spending programs are an important element in U.S. energy strategy and has recommended amounts that will support a wide variety of conservation activities.

MISSION 2: ENERGY CONSERVATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.2	1.2	1.2	1.2	1.2
Outlays	.7	.8	.7	.7	.7
Current policy:					
Budget authority	1.2	1.3	1.3	1.4	1.4
Outlays	.7	.8	.8	.9	.9
Authorizing committees:					
Budget authority	1.2	1.2	.9	.6	.6
Outlays	1.1	1.2	.9	.6	.6
Budget Committee recommendations:					
Budget authority	1.2	1.1	1.1	.6	.6
Outlays	1.0	1.1	.9	.9	.6

(3) *Emergency Energy Preparedness.*—The Committee recommends $4.3 billion in budget authority and $3.5 billion in outlays for this mission in FY 1970. The Committee anticipates that these figures will total $10.8 billion in budget authority and $12.7 billion in outlays over the FY 1979–83 period.

The Committee recommendations for FY 1979 will support initial expansion of reserve facilities above the currently planned 500 million barrel capacity as well as the purchase of oil in quantities that, together with funds already provided, will enable nearly 500 million barrels to be procured. The cumu-

lative five-year totals associated with the recommendation would complete the expansion of facilities and allow at least 250 million additional barrels of oil to be purchased. The remaining oil would be procured in FY 1984–85. The amounts assumed by the Committee are those requested by the President and recommended by the Committee on Energy and Natural Resources and include the OMB March 1978 estimate. The Budget Committee concurs with their view that our increasing dependence upon foreign oil necessitates a larger strategic petroleum reserve. The Committee regards its recommendations as a clear signal that the United States will protect itself against both the threat and actuality of another oil embargo.

MISSION 3: EMERGENCY ENERGY PREPAREDNESS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.8	0.5	(*)	(*)	(*)
Outlays	3.1	3.3	0.3	(*)	(*)
Current policy:					
Budget authority	2.8	.5	(*)	(*)	(*)
Outlays	3.1	3.3	.3	(*)	(*)
Authorizing committees:					
Budget authority	4.3	.5	1.5	2.2	2.3
Outlays	3.3	2.9	1.1	2.4	2.3
Budget Committee recommendation:					
Budget authority	4.3	.5	1.5	2.2	2.3
Outlays	3.5	3.1	1.2	2.5	2.4

*Less than $50,000,000.

(4) *Other Energy Programs.*—The Committee recommends $0.8 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $4.6 billion in both budget authority and outlays over the FY 1979–83 period

The Committee recommendations are sufficient to sustain the administrative, informational, and regulatory activities covered by this mission.

MISSION 4: OTHER ENERGY PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	198 1	1982	1983
Current law:					
Budget authority	0.7	0.7	0.7	0.8	0.8
Outlays	.7	.7	.7	.7	.8
Current policy:					
Budget authority	.8	.8	.9	1.0	1.0
Outlays	.8	.8	.9	.9	1.0
Authorizing committees:					
Budget authority	1.1	1.1	1.1	1.1	1.0
Outlays	1.0	1.0	1.0	1.0	.9
Budget Committee recommendation:					
Budget authority	.8	.8	.9	1.0	1.1
Outlays	.8	.8	1.0	1.0	1.0

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years; in millions of dollars]

	1978	1979	1980	1981	1982	1983
Expensing of exploration and development costs:						
Individuals	300	300	360	420	480	545
Corporations	885	965	1,185	1,185	1,265	1,360
Excess of percentage over cost depletion:						
Individuals	340	370	405	430	435	440
Corporations	1,120	1,210	1,310	1,400	1,485	1,570
Capital gains treatment of royalties on coal:						
Individuals	50	60	70	75	85	95
Corporations	15	15	20	20	20	20
Total	2,710	2,920	3,245	3,530	3,770	4,030

Note: All estimates are rounded to the nearest $5,000,000.

(300) NATURAL RESOURCES AND ENVIRONMENT

National need and missions

The national need addressed by *Natural Resources and Environment* is the preservation and utilization of the Nation's natural resources and the improvement of the environment. Federal programs meet this need through: development of water resources in ways that realize both economic benefits and environmental protection; conservation and management of Federal lands and the encouragement of conservation on private lands; provision of recreational opportunities in national parks, recreation areas, wild and scenic areas, and wildlife refuges, and assistance to States for recreation, fish and wildlife conservation, and historic preservation; control and abatement of pollution; and promotion of increased understanding of the earth's structure, environment, and atmosphere.

The major mission areas in *Natural Resources and Environment* are: (1) water resources, (2) conservation and land management, (3) recreational resources, (4) pollution control and abatement, and (5) other natural resources and environment programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee

[In billions of dollars; fiscal years]

	Budget authority	Outlays
1977 actual	9.5	10.0
1978 estimate	12.9	11.4
1979:		
Current law	12.9	11.9
Current policy	13.7	12.3
President's budget request	12.7	12.3
Appropriations Committee	14.0	13.0
Authorizing committees	14.4	13.2
Budget Committee recommendation	13.7	12.5

Current law and current policy for fiscal year 1979–83

Over the next five years, *current law* would cost a total of $66.4 billion in budget authority and $66.2 billion in outlays for *Natural Resources and Environment*, while *current policy* would cost an additional $10.5 billion in budget authority and $7.4 billion in outlays. The implications of current trends in the five major mission areas are:

(1) *Water Resources.—Current law* would cost a total of $19.5 billion in both budget authority and outlays over the FY 1979–83 period. This would continue programs for navigation, flood control and protection, irrigation, hydroelectric power generation, provision of municipal and industrial water supplies, soil conservation, and recreation at a rate that would maintain construction schedules and meet ongoing operation and maintenance requirements. A limited number of new planning and construction starts could be accommodated as ongoing projects were completed, although by FY 1983, only about 10 (instead of 20) new Corps of Engineers construction starts could be accommodated annually, out of a backlog of 200–300 active, authorized projects. The Soil Conservation Service (Department of Agriculture) could maintain 25 new construction starts annually on watershed and flood prevention projects, but construction schedules would have to be delayed. *Current policy* would cost an additional $3.6 billion in budget authority and $3.0 billion in outlays, and by FY 1983 would allow about 20 new Corps of Engineers construction starts annually, to address a wider variety of needs. Present construction schedules for the Soil Conservation Service could be maintained.

(2) *Conservation and Land Management.—Current law* would cost a total of $10.8 billion in budget authority and $10.5 billion in outlays over the FY 1979–83 period. This would provide for continued administration of the 760 million acres of Federal land, but would limit new data collection for land-use planning decisions. Department of Agriculture programs for maintaining the long-term productivity of agricultural lands would continue, but at declining levels of effort. The Forest Service could continue timber production and road construction activities on schedule, but would have to reduce from 15 percent to 10 percent the share of its funds devoted to future outputs such as reforestation and research. *Current policy* would cost an additional $1.4 billion in budget authority and $1.1 billion in outlays. This would maintain current levels of reforestation and research by the Forest Service, provide improved land management programs through increased data acquisition for management decisions, and maintain the current level of effort for conservation of topsoil on agricultural acreage.

(3) *Recreational Resources.—Current law* would cost a total of $8.6 billion in budget authority and $8.3 billion in outlays over the FY 1979–83 period. This would continue the Federal acquisition of lands for recreational use and preservation of natural and historic areas, but probably would not permit elimination of the land acquisition backlog by FY 1983. Assistance to States of up to 50 percent of the costs of planning, acquiring, and developing recreational resources also would be continued. *Current policy* would cost an additional $1.2 billion in budget authority and $0.8 billion in outlays. This would increase the probability of eliminating the existing land acquisition backlog by FY 1983, and provide a constant level of real assistance to States.

(4) *Pollution Control and Abatement.—Current law* would cost a total of $27.6 billion in budget authority and $28.2 billion in outlays over the FY 1979–83 period. This would maintain 75 percent assistance to States and municipalities in the form of EPA wastewater treatment construction grants. There currently are about 12,000 active projects, and by FY 1983, about 1,800 completions could be expected annually. The levels of effort would decline in EPA research and regulatory programs for development of environmental standards; pollution monitoring; grant support for State and local planning and enforcement programs; and research and development for regulating, preventing, and abating pollution. As a consequence, some environmental degradation and threats to public health and welfare could occur. *Current policy* would cost an additional $3.6 billion in budget authority and $1.9 billion in outlays, which could increase annual wastewater treatment project completions to about 2,000 annually by FY 1983 and prevent declines in research and regulatory programs.

(5) *Other Natural Resources and Environment Programs.—Current law* would result in net receipts, for a total of —$0.1 billion in budget authority and —$0.3 billion in outlays over the FY 1979–83 period. This would provide for declining levels of research and other services of the Geological Survey, National Oceanic and Atmospheric Administration, and Bureau of Mines, such as supervision of Federal mineral leasing, topographic surveys and mapping, water resources investigations, atmospheric environmental monitoring, protection of marine mammals and endangered species, and control of the adverse environmental impacts of mining. *Current policy* would cost an additional $0.7 billion in budget authority and $0.6 billion in outlays, and would prevent program declines due to inflation.

Future-year choices

(4) *Pollution Control and Abatement.*—Pursuant to the Safe Drinking Water Act of 1974, the EPA recently promulgated safe drinking water standards for major urban

areas. A grant program may be proposed to assist State and local governments in meeting these and related drinking water standards. Assuming a 50 percent Federal share of costs it is estimated that a $5 billion program would be adequate to assist all municipalities with public water systems serving a population of 50,000 or more.

Committee recommendations

The Committee recommends $13.7 billion in budget authority and $12.5 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $77.6 billion in budget authority and $75.8 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	12.9	13.2	13.3	13.5	13.6
Outlays	11.9	12.9	13.5	13.9	14.0
Current policy:					
Budget authority	13.7	14.7	15.3	16.0	17.2
Outlays	12.3	13.6	14.9	16.0	16.8
Authorizing committees:					
Budget authority	14.4	15.3	15.7	16.4	16.8
Outlays	13.2	14.9	15.7	16.3	16.5
Budget Committee recommendation:					
Budget authority	13.7	15.0	15.7	16.2	16.9
Outlays	12.5	14.2	15.4	16.3	17.2

For the missions in this function, the Committee makes the following recommendations:

(1) *Water Resources.*—The Committee recommends $3.6 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $22.2 billion in budget authority and $22.1 billion in outlays over the FY 1979–83 period.

The Committee recommendation would allow for maintenance of ongoing planning and construction schedules of the Corps of Engineers as well as for all new planning and construction starts recommended by that agency. Funding would be available for the continuation of construction on the Auburn Dam and the Garrison Diversion Project by the Bureau of Reclamation pending resolution of safety and legal questions. Acceleration of some ongoing construction activities of that agency would be possible.

MISSION 1: WATER RESOURCES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.7	3.9	3.9	4.0	4.0
Outlays	3.6	3.8	4.0	4.1	4.0
Cuurrent policy:					
Budget authority	3.9	4.4	4.6	4.9	5.3
Outlays	3.7	4.1	4.6	5.0	5.1
Authorizing committees:					
Budget authority	3.5	4.0	4.2	4.5	4.7
Outlays	3.5	4.0	4.2	4.5	4.7
Budget Committee recommendation:					
Budget authority	3.6	4.3	4.5	4.8	5.0
Outlays	3.6	4.2	4.5	4.8	5.0

(2) *Conservation and Land Management.*—The Committee recommends $2.4 billion in budget authority and $2.0 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $13.2 billion in budget authority and $12.4 billion in outlays over the FY 1979–83 period.

The Committee recommendation would continue ongoing programs for the conservation of agricultural lands at current levels in FY 1979, and would permit real growth in future years. A new agricultural cost sharing program to improve water quality through prevention of nonpoint source pollution could be funded at the level authorized in the Clean Water Act of 1977. Funding for Forest Service activities could be continued at a level that would allow the agency to meet 85 percent of its long-term renewable resources management goals as determined pursuant to the Forest and Rangelands Renewable Resources Planning Act of 1974. Increased funding for the Bureau of Land Management would allow greater emphasis on management of lands and resources.

MISSION 2: CONSERVATION AND LAND MANAGEMENT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.0	2.1	2.2	2.2	2.3
Outlays	1.8	2.1	2.2	2.2	2.3
Current policy:					
Budget authority	2.1	2.3	2.4	2.6	2.8
Outlays	1.8	2.2	2.4	2.5	2.7
Authorizing committees:					
Budget authority	2.4	2.5	2.6	2.8	3.0
Outlays	2.0	2.2	2.5	2.7	3.0
Budget Committee recommendation:					
Budget authority	2.4	2.5	2.6	2.7	3.0
Outlays	2.0	2.3	2.5	2.6	3.0

(3) *Recreational Resources.*—The Committee recommends $1.9 billion in budget authority and $1.6 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $10.3 billion in budget authority and $9.2 billion in outlays over the FY 1979–83 period.

The Committee recommendation would permit the programs in this mission to experience real growth beginning in FY 1979. The increases for the Land and Water Conservation Fund would provide for greater Federal and State land acquisition. Increased funding for the Fish and Wildlife Service would allow that agency to meet responsibilities resulting from new legislation. Increases for other mission elements would allow continuation of those programs at nearly constant levels.

MISSION 3: RECREATIONAL RESOURCES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.6	1.7	1.7	1.8	1.8
Outlays	1.5	1.6	1.7	1.7	1.8
Current policy:					
Budget authority	1.7	1.8	2.0	2.1	2.2
Outlays	1.5	1.7	1.8	2.0	2.1
Authorizing committees:					
Budget authority	2.5	2.3	2.2	2 3	2.2
Outlays	2.2	2.0	2.0	2.1	2.1
Budget Committee recommendation:					
Budget authority	1.9	2.0	2.1	2.1	2.2
Outlays	1.6	1.7	1.8	2.0	2.1

(4) *Pollution Control and Abatement.*—The Committee recommends $5.7 billion in budget authority and $5.4 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $31.3 billion in budget authority and $31.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation would maintain the programs in this mission at approximately constant real levels for the next five years. Increases over the President's recommendation for EPA research and regulatory programs would allow that agency to comply more closely with statutory requirements. The wastewater treatment construction grants program could be increased over current levels, though funding would remain below the authorized level.

MISSION 4: POLLUTION CONTROL AND ABATEMENT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	5.5	5.5	5.5	5.5	5.6
Outlays	5.1	5.5	5.7	5.9	6.0
Current policy:					
Budget authority	5.9	6.1	6.2	6.3	6.8
Outlays	5.2	5.6	6.0	6.5	6.7
Authorizing committees:					
Budget authority	5.8	6.4	6.7	6.8	6.9
Outlays	5.4	6.6	7.0	7.0	6.7
Budget Committee recommendation:					
Budget authority	5.7	6.1	6.4	6.5	6.6
Outlays	5.4	6.0	6.5	6.8	7.0

(5) *Other Natural Resources and Environment Programs.*—The Committee recommends $0.1 billion in budget authority and less than $0.05 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $0.6 billion in budget authority and $0.4 billion in outlays over the FY 1979–83 period.

The Committee recommendation would permit funding for programs in this mission to continue at approximately constant real levels through FY 1983. These include research and other services by the Geologic Survey, National Oceanic and Atmospheric Administration, and Bureau of Mines.

MISSION 5: OTHER NATURAL RESOURCES AND ENVIRONMENT PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:

Capital gains treatment of iron ore:						
Individuals	5	10	10	10	10	10
Corporations	5	10	10	10	10	10
Total	485	685	845	1,020	1,140	1,190

[1] Less than $2,500,000.

Note: All estimates are rounded to the nearest $5,000,000.

(350) AGRICULTURE

National need and missions

The national need addressed by *Agriculture* is the promotion of a healthy and efficient agricultural economy. Federal programs meet this need through: financial assistance to farmers, to ensure them a fair return on their production costs; maintenance of food and fiber supplies adequate to meet domestic and export needs; and support of research and other services to increase agricultural efficiency and output, improve health through better nutrition and food safety, and improve the efficiency and reliability of domestic and export marketing systems.

The major mission areas in *Agriculture* are: (1) farm income stabilization, and (2) agricultural research and services.

Current trends

The following table shows the Committee recommendations for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years]

	Budget authority	Outlays
1977 actual	2.4	5.5
1978 estimate	3.0	8.8
1979:		
Current law	7.3	6.6
Current policy	7.4	6.6
President's budget request	7.2	5.4
Appropriations Committee	12.3	5.5
Authorizing committees	7.3	12.0
Budget Committee recommendation	12.4	7.8

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $38.5 billion in budget authority and $37.5 billion in outlays for *Agriculture*, while *current policy* would cost an additional $0.8 billion in budget authority and $0.7 billion in outlays. The implications of current trends in the two major mission areas are:

(1) *Farm Income Stabilization.—Current law* would cost a total of $31.7 billion in budget authority and $30.9 billion in outlays over the FY 1979–83 period. This would provide farm price supports for increases in annual production from 2 billion to 2.8 billion bushels in food grains and from 8.3 billion to 8.8 billion bushels in feed grains, and for sustained annual production of 1.7 billion bushels in oil grains, assuming normal weather and the formulas set forth in the Food and Agriculture Act of 1977. Government-assisted agriculture loans would be sustained at the current $2.9 billion annual level, which would fall below expected demand. Administrative services for farm programs in the States and counties would decline in real terms, by about 12 percent in FY 1983. *Current policy* would cost an additional $0.2 billion in both budget authority and outlays, and would prevent declines in real program levels for loans and administrative services.

(2) *Agricultural Research and Services.—Current law* would cost a total of $6.8 billion in budget authority and $6.6 billion in outlays over the FY 1979–83 period. This would provide for declining levels of program activities for basic research and services in areas such as animal and plant production; human nutrition; conservation of soil, water, and energy; animal and plant pest management; animal and plant health inspection; Federal grain inspection; and economic, statistical and marketing services. *Current policy* would cost an additional $0.6 billion in budget authority and $0.5 billion in outlays, and would prevent program declines due to inflation.

Future-year choices

(1) *Farm Income Stabilization:* (a) *CCC Price Supports.*—Under the Food and Agriculture Act of 1977, the Secretary of Agriculture has broad discretionary authority to increase income assistance to farmers by establishing loan and target prices for major commodities and by diverting land from production. The exercise of this authority and the impact of variations in the weather could cause significant increases regardless of the FY 1979 decisions of the Congress with respect to farm income stabilization.

(b) *Direct Grant Disaster Assistance Payments.*—Authority for direct grant disaster assistance payments to producers of wheat, feed grains, cotton, and rice expires with the 1979 crops (FY 1980). Although an Administration proposal is expected shortly, neither the Administration nor the Agriculture Committees have made specific recommendations as to whether and in what form these payments should be reauthorized. The Congressional Budget Office has analyzed several options, including one which would eliminate direct grant payments and expand Federal Crop Insurance to a nationwide program with a 50 percent Federal subsidy for insurance premiums. This option would increase budget authority and outlays by $0.3 to $0.5 billion in FY 1983.

Committee recommendations

The Committee recommends $12.4 billion in budget authority and $7.8 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $44.9 billion in budget authority and $39.9 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	7.3	9.0	6.9	7.7	7.6
Outlays	6.6	7.4	7.4	7.8	8.3
Current policy:					
Budget authority	7.4	9.1	7.0	7.9	7.9
Outlays	6.6	7.5	7.5	8.0	8.5
Authorizing committees:					
Budget authority	7.3	4.5	4.6	4.7	4.8
Outlays	12.0	12.1	12.2	12.3	12.4
Budget Committee recommendation:					
Budget authority	12.4	9.2	7.1	7.9	8.2
Outlays	7.8	7.6	7.6	8.1	8.7

For the missions in this function, the Committee makes the following recommendations:

(1) *Farm Income Stabilization.*—The Committee recommends $11.0 billion in budget authority and $6.4 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $36.9 billion in budget authority and $32.1 billion in outlays over the FY 1979–83 period.

The Committee recommendation provides for CBO's April estimate of current law and current policy for CCC price supports, allows a full inflation adjustment for other programs in this mission, and would provide additional budget authority to increase CCC borrowing authority to $25 billion and CCC outlays by $1.0 billion. These increases would allow for some increased farm price supports, but would not accommodate the larger outlays that would occur in FY 1979 if H.R. 6782, the Emergency Agricultural Act of 1978, were enacted.

The Committee's five-year totals would generally allow the program activities announced by the Secretary of Agriculture under the 1977 Food and Agriculture Act to continue at current policy levels. They assume that the $1.0 billion increase in outlays in FY 1979 would not recur in future years, and that full inflation adjustments would be made in other programs in this mission through FY 1983.

MISSION 1: FARM INCOME STABILIZATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	6.1	7.7	5.5	6.3	6.2
Outlays	5.4	6.2	6.1	6.5	6.8
Current policy:					
Budget authority	6.1	7.8	5.6	6.3	6.2
Outlays	5.4	6.2	6.1	6.5	6.9
Authorizing committees:					
Budget authority	5.7	2.8	2.8	2.8	2.8
Outlays	10.5	10.5	10.5	10.5	10.5
Budget Committee recommendation:					
Budget authority	11.0	7.8	5.6	6.3	6.2
Outlays	6.4	6.2	6.1	6.5	6.9

(2) *Agricultural Research and Services.*—The Committee recommends $1.4 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $8.0 billion in budget authority and $7.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation for FY 1979 would generally support the same real level of basic agricultural research and services as now exists at universities, colleges, and other agriculture installations across the nation. It would also permit funding of some increases above current law recommended by the Senate Agriculture and Appropriations Committees for selected programs such as nutritional status monitoring and pest control research.

The Committee's five-year totals would generally allow for the continuation of the same real level of research and services as recommended for FY 1979.

MISSION 2: AGRICULTURAL RESEARCH AND SERVICES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.2	1.3	1.4	1.4	1.5
Outlays	1.2	1.3	1.3	1.4	1.4
Current policy:					
Budget authority	1.3	1.4	1.5	1.6	1.7
Outlays	1.2	1.3	1.4	1.5	1.6
Authorizing committees:					
Budget authority	1.6	1.7	1.8	1.9	2.0
Outlays	1.5	1.6	1.7	1.8	1.9
Budget Committee recommendation:					
Budget authority	1.4	1.5	1.6	1.7	1.9
Outlays	1.4	1.4	1.5	1.6	1.8

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Expensing of certain capital outlays:						
Individuals	445	460	480	495	515	530
Corporations	70	75	80	80	85	85
Capital gains treatment of certain ordinary income:						
Individuals	350	365	385	405	425	450
Corporations	10	10	10	15	15	15
Deductibility of noncash patronage dividends and certain other items of cooperatives:						
Individuals	−175	−185	−190	−200	−210	−220
Corporations	490	525	560	595	635	675
Total	1,190	1,250	1,325	1,390	1,465	1,535

Note: All estimates are rounded to the nearest $5,000,000.

(370) COMMERCE AND HOUSING CREDIT

National need and missions

The national need addressed by *Commerce and Housing Credit* is the advancement of commerce and housing, and support of postal operations. Federal programs meet this need through: mortgage market assistance to ensure an adequate supply of mortgage credit; financial assistance to assure the provision of adequate mail service; financial and technical assistance for the development of small business; and support of administrative and regulatory activities that maintain a competitive economy and protect the consumer.

The major mission areas in *Commerce and Housing Credit are:* (1) mortgage credit and thrift insurance, (2) Postal Service, and (3) other commerce and housing credit programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years]

	Budget authority	Outlays
1977 actual	5.5	—(*)
1978 estimate	5.5	3.2
1979:		
Current law	5.5	3.5
Current policy	5.7	3.5
President's budget request	6.6	3.0
Appropriations Committee	6.8	3.1
Authorizing committees	12.4	3.7
Budget Committee recommendation	5.9	3.6

*Less than $50,000,000.

Current law and current policy for FY 1979–83

Over the next five years, current law would cost a total of $29.8 billion in budget authority and $18.2 billion in outlays for Commerce and Housing Credit, while current policy would cost an additional $4.5 billion in budget authority and $1.8 billion in outlays. The implications of current trends in the three major mission areas are:

(1) *Mortgage Credit and Thrift Insurance.—Current law* would cost a total of $13.3 billion in budget authority and $1.9 billion in outlays over the FY 1979–83 period. This would provide for declining program levels to increase housing production and partially protect the housing industry from the effects of cyclical swings in the flow of deposits to thrift institutions. By FY 1983, assistance for construction of low-income housing would support only 75,000 annual starts, just over 40 percent of the annual goal of 180,000 new or substantially rehabilitated units stated in the President's budget for FY 1979.

Current policy would cost an additional $3.5 billion in budget authority and $1.1 billion in outlays. This would continue mortgage market assistance at current real levels, and would support a total of 95,000 annual starts in low-income housing.

(2) *Postal Service.—Current law and current policy* are the same, and would cost a total of $8.4 billion in both budget authority and outlays over the FY 1979–83 period. This would provide a decreasing "public service cost" payment, and put additional pressure on the Postal Service to raise postal rates and/or reduce services to live within its own resources. Since this payment currently is inadequate to cover operating losses and since it is unlikely that the Postal Service will be able to eliminate losses in the foreseeable future, the Service probably would exercise its existing authority to borrow up to $500 million annually from the off-budget Federal Financing Bank (FFB) to cover operating losses. It is unlikely that these loans could be repaid without supplementary Federal payments to the Postal Service for that purpose.

(3) *Other Commerce and Housing Credit Programs.—Current law* would cost a total of $8.1 billion in budget authority and $7.9 billion in outlays over the FY 1979–83 period. This would support decreasing levels of services by such agencies as the Department of Commerce, Small Business Administration, Federal Communications Commission, Federal Trade Commission, and Securities and Exchange Commission. *Current policy* would cost an additional $1.0 billion in budget authority and $0.7 billion in outlays. This would prevent program declines due to inflation, and permit the SBA to rely somewhat more on direct loans in lieu of loan guarantees than would current law.

Future-year choices

(1) *Mortgage Credit and Thrift Insurance: GNMA Assistance.*—It is possible that additional Government National Mortgage Association (GNMA) assistance may be recommended in support of low-income housing, should this housing continue to be heavily dependent on GNMA mortgage purchase assistance and the Congress decide to maintain current levels of new Section 8 construction. This could add $1 to $3 billion in budget authority in FY 1983, and about 10 percent of that amount in outlays.

(2) *Other Commerce and Housing Credit Programs: Federal Financing Bank.*—It is possible that a proposal will be offered to include the FFB, which is now off-budget, in budget totals. This change might have no programmatic effect, but would significantly increase budget totals, the amount depending on pending proposals such as energy financing. It is likely that FY 1983 totals would be increased by $25 to $30 billion in budget authority and $20 to $25 billion in outlays if FFB were brought on-budget.

Committee recommendations

The Committee recommends $5.9 billion in budget authority and $3.6 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $34.8 billion in budget authority and $19.7 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	5.5	6.9	6.3	5.6	5.6
Outlays	3.5	4.0	3.8	3.5	3.4
Current policy:					
Budget authority	5.7	7.6	7.3	6.8	7.0
Outlays	3.5	4.2	4.1	4.0	4.1
Authorizing committees:					
Budget authority	12.4	8.8	9.4	9.9	10.4
Outlays	3.7	5.4	4.8	5.1	5.5
Budget Committee recommendation:					
Budget authority	5.9	8.0	7.3	6.7	7.0
Outlays	3.6	4.4	4.0	3.8	3.9

For the missions in this function, the Committee makes the following recommendations:

(1) *Mortgage Credit and Thrift Insurance.*—The Committee recommends $2.4 billion in budget authority and $0.3 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $16.9 billion in budget authority and $3.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation would accommodate funding required to ensure an adequate supply of mortgage credit with Federal assistance maintained at current levels in real terms. The targets would allow GNMA mortgage purchase activities to provide below market interest rate mortgages at levels requested by the President to help finance new subsidized housing for low-income families and unsubsidized housing for moderate income families in distressed areas. The Committee recommendation also assumes funding at current policy levels of assistance for housing in rural areas and for elderly and handicapped people.

MISSION 1: MORTGAGE CREDIT AND THRIFT INSURANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.1	3.6	3.0	2.3	2.3
Outlays	.3	.7	.5	.3	.1
Current policy:					
Budget authority	2.3	4.2	3.8	3.3	3.4
Outlays	.3	.8	.7	.6	.5
Authorizing committees:					
Budget authority	8.2	4.2	4.5	4.7	5.0
Outlays	−0.3	1.1	0.3	0.3	.4
Budget Committee recommendation:					
Budget authority	2.4	4.2	3.8	3.3	3.4
Outlays	.3	.8	.7	.6	.5

(2) *Postal Service.*—The Committee recommends $1.8 billion in budget authority and $1.8 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $8.4 billion in budget authority and $8.4 billion in outlays over the FY 1979–83 period.

The Committee recommendation assumes a continuation of the Federal Payment to the Postal Service consistent with existing law, which anticipates that the Postal Service will make steady progress toward achieving financial self-sufficiency. During markup, the Committee was advised that Assistant Postmaster General Finch recommended against any increase in appropriations, apparently believing that the Postal Service will be able significantly to improve its financial situation if it is required to accommodate its operations to the decreasing level of financial assistance permitted under current law. Accordingly, the Committee has recommended mission targets which anticipate that appropriations will approximate $1.8 billion in FY 1979, and will decline steadily thereafter to $1.6 billion in FY 1983. The Senate should be aware, however, that if the Postal Service is not able to improve its performance as it expects, this decreasing funding level will exacerbate its financial problems, and further increase the pressure to raise postal rates and reduce delivery standards. Under these circumstances, the Postal Service also will be likely to return to its practice of financing up to $500 million of its annual operating losses by "borrowing" off budget from the Federal Financing Bank. As history has shown, such "borrowing" can-

not be repaid except with the assistance of emergency congressional appropriations.

MISSION 2: POSTAL SERVICE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.8	1.7	1.7	1.6	1.6
Outlays	1.8	1.7	1.7	1.6	1.6
Current policy:					
Budget authority	1.8	1.7	1.7	1.6	1.6
Outlays	1.8	1.7	1.7	1.6	1.6
Authorizing committees:					
Budget authority	2.6	2.7	2.8	2.9	3.0
Outlays	2.6	2.7	2.8	2.9	3.0
Budget Committee recommentation:					
Budget authority	1.8	1.7	1.7	1.6	1.6
Outlays	1.8	1.7	1.7	1.6	1.6

(3) *Other Commerce and Housing Credit Programs.*—The Committee recommends $1.6 billion in budget authority and $1.4 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $9.4 billion in budget authority and $8.4 billion in outlays over the FY 1979–83 period.

The Committee recommendation would generally allow for a continuation of the current level of activity in programs administered by agencies such as the Department of Commerce, FCC, FTC and SEC. For SBA's programs of credit assistance to small business, the recommended targets could accommodate the recommendation of the President and the Senate Select Committee on Small Business, that future assistance should place more emphasis on the use of loan guarantees, which require the participation of private lenders, in comparison with 100 percent direct Federal loans. The targets do not include allowances for the creation of new programs or agencies which would require substantial amounts of Federal funding.

MISSION 3: OTHER COMMERCE AND HOUSING CREDIT PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.5	1.6	1.6	1.7	1.7

Total	51,240	56,155	61,045	64,725	67,405	72,935

Note: All estimates are rounded to the nearest $5,000,000.

(400) TRANSPORTATION

National need and missions

The national need addressed by *Transportation* is satisfaction of the transportation needs of commerce and the public. Federal programs meet this need through development of the various modes of transportation and regulation of transportation activities.

The major mission areas in *Transportation* are: (1) highways, (2) railroads, (3) mass transit, (4) air transportation, and (5) water and other transportation.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	10.4	14.6
Fiscal year 1978 estimate	15.1	15.8
Fiscal year 1979:		
Current law	15.3	16.6
Current policy	15.9	16.7
President's budget request	18.6	17.4
Appropriations Committee	21.7	19.4
Authorizing committees	21.5	18.3
Budget Committee recommendation	19.5	17.5

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $86.0 billion in budget authority and $90.3 billion in outlays for *Transportation*, while *current policy* would cost an additional $11.7 billion in budget authority and $4.7 billion in outlays. The implications of current trends in the five major missions areas are:

(1) *Highways.—Current law* would cost a total of $38.0 billion in budget authority and $38.9 billion in outlays over the FY 1979–83 period. This would continue adequate construction funding for the Federal-aid highway system, predominantly for the 42,500-mile Interstate system, which now is about 92 percent (39,000 miles) constructed, a proportion which would reach almost 98 percent (41,500 miles) by the end of FY 1983. However, increasing costs could cause declines in real assistance for maintenance projects and for construction projects not on a Federal-aid system. *Current policy* would cost an additional $4.9 billion in budget authority and $1.2 billion in outlays, and would support increased highway and bridge rehabilitation. However, since rehabilitation expenses appear to be growing at a rate higher than the inflation rate, even these additional funds might not be enough to keep pace with requirements, which might necessitate an increase in highway taxes.

(2) *Railroads.—Current law* would cost a total of $7.1 billion in budget authority and $7.7 billion in outlays over the FY 1979–83 period. This would be adequate to fund completion of the high-speed Northeast Corridor Project by 1983, and to continue at current funding levels, the existing pilot rail rehabilitation programs to improve rail freight service and safety. However, current law levels would result in substantial cuts in Amtrak services and would provide for no additional assistance to Conrail, resulting in a serious funding shortage. *Current policy* would cost an additional $0.6 billion in budget authority and $0.4 billion in outlays. This should allow Amtrak to maintain its current route schedule, but provide no significant increase in Federal assistance to rail freight. This means that in the absence of substantial budget increases, rail rehabilitation investment may be restricted to private funding or to off-budget loans and/or loan guarantees.

(3) *Mass Transit.—Current law* would cost a total of $10.7 billion in budget authority and $13.8 billion in outlays over the FY 1979–83 period. This would continue funding of the currently approved new rail systems in six cities, but real levels of other capital assistance and operating subsidies

gradually would decline. Urban areas thus might, be pressured to increase the share of funds they provide by transit fares or local subsidies, or to cut back on equipment purchases and service standards. *Current policy* would cost an additional $3.4 billion in budget authority and $1.1 billion in outlays. This could permit construction starts on one or two additional new rail systems, although Federal grant assistance would continue to emphasize less capital-intensive projects such as rail rehabilitation and modernization, bus replacement, restricted traffic lanes, improved traffic management, and the like. Financial pressures on local transit systems would be eased somewhat, but it still would not be certain that Federal assistance would be adequate to both continue the current rate of bus fleet expansion and pay an average of 16 percent of transit operating expenses.

(4) *Air Transportation.—Current law* would cost a total of $18.3 billion in budget authority and $18.4 billion in outlays over the FY 1979–83 period. This probably would continue adequate operation of the air traffic control system and other administrative and technical functions of the Federal Aviation Administration (FAA), but would result in decreasing real levels of assistance for airport development and the purchase of supporting facilities and equipment. *Current policy* would cost an additional $1.5 billion in budget authority and $1.1 billion in outlays. Since Federal programs of assistance to air transportation are well established and experiencing no inherent pressures for expansion, this funding should be adequate to meet currently projected needs for the airport development and facilities and equipment programs.

(5) *Water and Other Transportation.—Current law* would cost a total of $11.9 billion in budget authority and $11.5 billion in outlays over the FY 1979–83 period, but would result in declining real levels of assistance. *Current policy* would cost an additional $1.2 billion in budget authority and $0.9 billion in outlays, and would prevent declines in assistance due to inflation.

Future-year choices

(2) *Railroads: Rail Rehabilitation.*—The Administration has indicated its intent to recommend next year a comprehensive program to assist national rail rehabilitation, which is expected to require elimination of duplicative freight lines in return for financial assistance in support of roadbed and other physical asset rehabilitation. Rehabilitation would increase the speed and reliability of rail freight transport, enhance the ability of railroads to transport coal as necessary to implement the energy conversion strategy, and reduce the probability of train derailments. In FY 1983, the program would cost from zero to about $1 billion in budget authority and zero to $0.8 billion in outlays, depending on whether direct loans or loan guarantees were used.

(4) *Air Transportation: Airport development.*—The Senate Commerce Committee indicates that an increase in the airport development grant program may be proposed when the current authorization expires in FY 1980, to reduce aircraft noise problems through the purchase of real estate adjoining airports. In FY 1983, this could add $0.2 to $9.4 billion in budget authority and $0.2 to $0.3 billion in outlays.

Committee recommendations

The Committee recommends $19.5 billion in budget authority and $17.5 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $103.1 billion in budget authority and $97.0 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	15.3	16.5	17.8	18.1	18.3
Outlays	16.6	17.3	18.2	18.8	19.4
Current policy:					
Budget authority	15.9	18.0	20.1	21.3	22.5
Outlays	16.7	17.8	19.1	20 2.	21.3
Authorizing committees:					
Budget authority	21.5	22.1	22.5	23.7	24.9
Outlays	18.3	19.9	20 9	22.4	23.8
Budget Committee recommendation:					
Budget authority	19.5	20.6	20.2	21.0	21.9
Outlays	17.5	18.7	19.2	20.3	21.3

For the missions in this function, the Committee makes the following recommendations:

(1) *Highways.*—The Committee recommends $8.2 billion in budget authority and $7.4 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $42.6 billion in budget authority and $41.2 billion in outlays over the FY 1979–83 period.

The Committee recommendation would accommodate the recommendation of the Senate Environment and Public Works Committee to increase funding slightly above the President's request in FY 1979, but to allow for only very moderate increases thereafter. As recommended by the authorizing committee, such funding in FY 1979 could allow acceleration of interstate construction and also permit a significant expansion in the level of assistance to help meet the priority need for highway bridge repair and replacement. The level of spending assumed for highways is consistent with the level of receipts projected for the Highway Trust Fund. Higher levels of highway spending would require increases in the gasoline and other excise taxes supporting the Trust Fund.

MISSION 1: HIGHWAYS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	7.6	7.6	7.6	7.6	7.6
Outlays	7.2	7.4	7.8	8.1	8.4
Current policy:					
Budget authority	7.9	8.2	8.5	8.9	9.3
Outlays	7.2	7.6	8.0	8.4	8.8
Authorizing committees:					
Budget authority	8.4	8.4	8.9	8.9	8.9
Outlays	7.5	8.1	8.4	8.8	9.1
Budget Committee recommendation:					
Budget authority	8.2	8.2	8.7	8.7	8.7
Outlays	7.4	8.0	8.2	8.6	8.9

(2) *Railroads.*—The Committee recommends $2.4 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $8.8 billion in budget authority and $9.3 billion in outlays over the FY 1979–83 period.

The Committee recommendation would support the continuation of current activity levels for the programs of the Federal Railroad Administration, and would accommodate additional on-budget investment in Conrail equal to that railroad's minimum needs estimate of $1.3 billion. The targets also assume that the "zero base" study of Amtrak's route structure currently being undertaken by DOT will result in implementation sometime next year of a more efficient rail passenger network, and that this will permit a reduction in the rate of growth of future Amtrak subsidies.

MISSION 2: RAILROADS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.8	1.6	1.2	1.2	1.3
Outlays	1.8	1.7	1.6	1.3	1.3
Current policy:					
Budget authority	1.9	1.7	1.3	1.4	1.5
Outlays	1.8	1.7	1.7	1.5	1.5
Authorizing committees:					
Budget authority	2.8	2.7	1.7	1.9	2.0
Outlays	2.7	2.7	2.0	1.9	1.9
Budget Committee recommendation:					
Budget authority	2.4	2.4	1.3	1.3	1.4
Outlays	2.4	4.4	1.7	1.4	1.4

(3) *Mass Transit.*—The Committee recommends $3.2 billion in budget authority and $2.3 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $18.7 billion in budget authority and $14.6 billion in outlays over the FY 1979–83 period.

The Committee recommendation would permit funding slightly in excess of the Prseident's January budget request, and thus would approximately maintain current activity levels for programs providing assistance for mass transit construction, extension and rehabilitation, bus purchases, other capital assistance, and operating subsidies. Without reductions in other programs, however, it is unlikely that the recommended targets would be adequate to fund construction of any major new rail systems or to implement any sizable new grant programs such as that recently proposed by the President for construction of multi-modal transportation terminals in central cities.

MISSION 3: MASS TRANSIT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.5	1.4	2.9	2.9	2.9
Outlays	2.3	2.5	2.8	3.1	3.1
Current policy:					
Budget authority	.5	1.9	3.6	3.9	4.1
Outlays	2.3	2.5	2.9	3.4	3.7
Authorizing committees:					
Budget authority	4.1	4.4	4.8	5.2	5.9
Outlays	2.5	2.9	3.6	4.4	4.9
Budget Committee recommendation:					
Budget authority	3.2	3.8	3.6	3.9	4.1
Outlays	2.3	2.5	2.8	3.3	3.7

(4) *Air Transportation* and (5) *Water and Other Transportation.*—The Committee recommends a total of $5.7 billion in budget authority and $5.3 billion in outlays for these missions in FY 1979. The Committee anticipates that these figures will total $33.0 billion in budget authority and $31.9 billion in outlays over the FY 1979–83 period.

The Committee recommendation would continue current real program levels for agencies such as the Federal Aviation Administration, National Aeronautics and Space Administration, Civil Aeronautics Board, Coast Guard, Maritime Administration, Federal Maritime Commission, and Interstate Commerce Commission. Funding would be likely to prove inadequate to accommodate any major new or significantly expanded programs without major reductions in other programs.

MISSION 4: AIR TRANSPORTATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.4	3.5	3.7	3.8	3.9
Outlays	3.3	3.5	3.7	3.9	4.0
Current policy:					
Budget authority	3.4	3.7	3.9	4.2	4.5
Outlays	3.3	3.6	3.9	4.2	4.4
Authorizing committees:					
Budget authority	3.7	3.9	4.3	4.6	4.9
Outlays	3.4	3.8	4.2	4.6	4.9
Budget Committee recommendation:					
Budget authority	3.5	3.7	3.9	4.2	4.5
Outlays	3.3	3.6	3.9	4.2	4.5

MISSION 5: WATER AND OTHER TRANSPORTATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.1	2.3	2.4	2.5	2.6
Outlays	2.0	2.2	2.3	2.5	2.5
Current policy:					
Budget authority	2.2	2.5	2.7	2.8	3.0
Outlays	2.0	2.3	2.5	2.7	2.9
Authorizing committees:					
Budget authority	2.4	2.6	2.8	3.0	3.2
Outlays	2.2	2.4	2.6	2.8	3.0
Budget Committee recommendation:					
Budget authority	2.2	2.5	2.7	2.8	3.0
Outlays	2.0	2.3	2.5	2.7	2.9

Tax expenditures related to this function

The estimated revenue losses from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Deductibility of nonbusiness State gasoline taxes:						
Individuals	760	840	935	1,035	1,150	1,275

Individuals						
Corporations	−40	−40	−40	−40	−40	−35
Deferral of tax on shipping companies:						
Individuals						
Corporations	105	85	70	60	55	45
Total	52,145	57,040	62,010	65,780	68,570	74,220

Note: All estimates are rounded to the nearest $5,000,000.

(450) COMMUNITY AND REGIONAL DEVELOPMENT

National need and missions

The national need addressed by *Community and Regional Development* is strengthening the economies and physical structure of urban and rural areas. Federal programs meet this need through: assistance to State and local governments in rehabilitating housing, constructing public facilities, and attracting job-producing private investment; investment in improved roads, water and waste treatment systems, health centers, and other facilities; and disaster assistance to State and local governments, private firms, and individuals to facilitate recovery from the effects of floods, drought, and other natural and economic disasters.

The major mission areas in *Community and Regional Development* are: (1) community development, (2) area and regional development, and (3) disaster relief and insurance.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years]

	Budget authority	Outlays
1977 actual	12.8	6.3
1978 estimate	9.4	10.9
1979:		
Current law	8.2	8.8
Current policy	8.7	8.9
President's budget request	11.4	9.0
Appropriations Committee	8.4	9.0
Authorizing committees	10.6	10.9
Budget Committee recommendation	10.4	9.0

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $40.3 billion in budget authority and $41.9 billion in outlays for *Community and Regional Development*, while *current policy* would cost an additional $8.7 billion in budget authority and $4.8 billion in outlays. The implications of current trends in the three major mission areas are:

(1) *Community Development.—Current law* would cost a total of $23.5 billion in budget authority and $23.0 billion in outlays over the FY 1979–83 period. This would provide grants-in-aid to almost all State and local governments at a level equal to about 2 percent of their total spending in FY 1979, but declining to about 1 percent by FY 1983. These grants and direct loans assist these governments in the repair and construction of public facilities such as parks, streets, and sewer lines; subsidize firms willing to relocate to or expand in economically distressed localities; and support State and local planning for the development of urban and rural areas. Recent revisions to distribution formulas and other changes would direct an increasing portion of this aid to high-need areas such as older cities, and to lower-income people within these areas. Some analysts suggest that an undetermined but growing number of distressed local governments depend on this Federal aid to avoid financial crisis, and that a decline in real levels of assistance might cause financial crises in a number of areas. *Current policy* would cost an additional $4.8 billion in budget authority and $2.4 billion in outlays, and would sustain Federal assistance at a level equal to about 2 percent of total State and local spending.

(2) *Area and Regional Development.—Current law* would cost a total of $11.9 billion in budget authority and $14.2 billion in outlays over the FY 1979–83 period, while *current policy* would cost an additional $2.6 billion in budget authority and $1.3 billion in outlays. Except for the fact that programs in this mission focus on broader geographic areas, the discussion under the preceding mission applies equally well to these programs.

(3) *Disaster Relief and Insurance.—Current law* would cost a total of $4.9 billion in budget authority and $4.8 billion in outlays over the FY 1979–83 period. If the occurrence of disasters is consistent with the experience of recent years, these amounts would not be adequate to sustain real levels of assistance, and could force such measures as increased interest rates charged to borrowers under the Small Business Administration (SBA) and Farmers Home Administration (FmHA) disaster loan programs. *Current policy* would cost an additional $1.3 billion in budget authority and $1.2 billion in outlays, and would provide adequate assistance for the average level of disasters experienced in recent years.

Future-year choices

Since Congressional action is expected in FY 1979 on disaster assistance and on the President's urban policy proposals, no major choices are now foreseen for the FY 1980–83 period.

Committee recommendations

The Committee recommends $10.4 billion in budget authority and $9.0 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $53.2 billion in budget authority and $50.8 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal year]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	8.2	8.0	8.0	8.0	8.0
Outlays	8.8	8.2	8.3	8.4	8.3
Current policy:					
Budget authority	8.7	9.2	9.8	10.4	11.0
Outlays	8.9	8.8	9.2	9.7	10.3
Authorizing committees:					
Budget authority	10.6	11.2	11.9	12.3	12.9
Outlays	10.9	11.4	11.3	10.6	10.9
Budget Committee recommendation:					
Budget authority	10.4	10.7	11.0	10.4	10.8
Outlays	9.0	9.9	10.5	10.9	10.5

For the missions in this function, the Committee makes the following recommendations:

(1) *Community Development.*—The Committee recommends $5.0 billion in budget authority and $4.0 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $27.0 billion in budget authority and $25.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation assumes an increase in rehabilitation loans to levels that would bring over 20,000 homes and commercial properties up to code standards. The Committee recommendation would accommodate moderate increases in the Community Development Block Grant program and other community development program over the next ve years.

MISSION 1: COMMUNITY DEVELOPMENT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Currant law:					
Budget authority	4.7	4.7	4.7	4.7	4.7
Outlays	3.9	4.3	4.8	5.0	4.9
Current policy:					
Budget authority	5.0	5.3	5.6	6.0	6.4
Outlays	4.0	4.5	5.2	5.7	6.0
Authorizing committees:					
Budget authority	5.4	5.6	5.8	5.9	6.1
Outlays	4.3	4.7	5.1	5.1	5.1
Budget Committee recommendation:					
Budget authority	5.0	5.2	5.4	5.6	5.8
Outlays	4.0	4.5	5.2	5.5	5.8

(2) *Area and Regional Development.*—The Committee recommends $3.7 billion in budget authority and $3.9 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $18.6 billion in budget authority and $19.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation assumes the levels of funding requested by the President for the Economic Development Administration's programs to aid local economies hurt by long term decline or shifts in foreign trade. The Committee recommendation would accommodate funding for the labor-intensive "soft public works" program proposed in the President's urban message. The recommended targets assume funding of other regional development programs at levels that would maintain current levels in real terms.

MISSION 2: AREA AND REGIONAL DEVELOPMENT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.4	2.3	2.4	2.4	2.5
Outlays	3.8	2.9	2.5	2.5	2.5
Current policy:					
Budget authority	2.5	2.7	2.9	3.1	3.4
Outlays	3.8	3.0	2.7	2.8	3.1
Authorizing committees:					
Budget authority	2.8	3.0	3.2	3.3	3.4
Outlays	4.5	4.6	3.9	3.0	3.1
Budget Committee recommendation:					
Budget authority	3.7	3.9	4.1	3.4	3.6
Outlays	3.9	4.0	3.8	3.9	3.4

(3) *Disaster Relief and Insurance.*—The Committee recommends $1.2 billion in budget authority and $1.0 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $4.9 billion in budget authority and $4.8 billion in outlays over the FY 1978–80 period.

The Committee recommendation would accommodate disaster loans and grants adequate for a level of disasters slightly below the average experienced in recent years. It is assumed that SBA disaster loans for crop damage would continue, but would be provided at the government's cost of capital, as current law will require beginning in FY 1979.

MISSION 3: DISASTER RELIEF AND INSURANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.2	1.1	1.0	0.9	0.8
Outlays	1.0	1.0	1.0	.9	.8
Current policy:					
Budget authority	1.3	1.3	1.2	1.2	1.2
Outlays	1.0	1.3	1.2	1.2	1.2
Authorizing committees:					
Budget authority	2.4	2.6	2.9	.1	3.4
Outlays	2.1	2.1	2.3	2.5	2.7
Budget Committee recommendation:					
Budget authority	1.2	1.1	1.0	.9	.8
Outlays	1.0	1.0	1.0	.9	.8

Multi-Mission Issue.—The Committee recommends $0.6 billion in budget authority and $0.1 billion in outlays for the National Development Bank programs in FY 1979. The Committee anticipates that these figures will total $2.8 billion in budget authority and $2.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation would accommodate funding of Federal grants the President has requested as part of his proposed National Development Bank. These grants would be provided through HUD and the Economic Development Administration to encourage private firms to locate or expand facilities in economically distressed areas. The Committee recommendation would not accommodate the President's recommended amounts for such other elements of the National Development Bank proposal as loan guarantee default reserves, interest rate subsidies and secondary market activities.

MULTIMISSION ISSUE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983

Corporations	5	5	5	(1)	(1)	−5
Total	15	10	10	(1)	(1)	−10

[1] Less than $2,500,000.

Note: All estimates are rounded to the nearest $5,000,000.

(500) EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

National need and missions

The national need addressed by *Education, Training, Employment, and Social Services* is the assurance of full and equal educational and employment opportunities for all Americans. Federal programs meet this need through: improvement of elementary and secondary education opportunities for students in need of financial assistance; support for educational and cultural institutions and activities; improvement of the understanding of the educational process through research; training and employment opportunities to promote sustained full employment; regulation of standards applicable to labor-management relationships; collection and dissemination of labor statistics; and supportive services to the poor, the aged, the handicapped, and other groups with special needs, to help them become self-sufficient.

The major mission areas in *Education, Training, Employment, and Social Services* are: (1) elementary, secondary, and vocational education; (2) higher education; (3) research and general education aids; (4) training and employment; (5) other labor services; and (6) social services.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years.

	Budget authority	Outlays
1977 actual	30.4	21.0
1978 estimate	24.6	27.0
1979:		
Current law	29.1	29.7
Current policy	30.6	30.2
President's budget request	35.5	31.3
Appropriations Committee	35.6	31.6
Authorizing committees	44.9	34.2
Budget Committee recommendation	31.6	31.2

Current law and current policy for fiscal year 1979–83

Over the next five years, *current law* would cost a total of $150.5 billion in budget authority and $152.1 billion in outlays for *Education, Training, Employment, and Social Services*, while *current policy* would cost an additional $26.9 billion in budget authority and $21.4 billion in outlays. The implications of current trends in the six major mission areas are:

(1) *Elementary, Secondary, and Vocational Education.—Current law* would cost a total of $34.0 billion in both budget authority and outlays over the FY 1979–83 period. The proportion of educationally handicapped children being served would decline from 62 percent to 40 percent, and the Federal share of the costs of educating the handicapped would drop from 8 percent to 5 percent. *Current policy* would cost an additional $9.0 billion in budget authority and $5.9 billion in outlays, and would maintain the current levels of 62 percent of educationally disadvantaged children served and 8 percent Federal share of costs educating the handicapped.

(2) *Higher Education.—Current law* would cost a total of $20.8 billion in budget authority and $20.7 billion in outlays over the FY 1979–83 period. The proportion of students receiving Federal higher education subsidies would decline from the current 27 percent to 14 percent in FY 1983, in part because of inflation, and in part because rising family incomes would reduce the eligible population. *Current policy* would cost an additional $2.6 billion in budget authority and $2.1 billion in outlays, and would provide higher education subsidies for about 21 percent of all students.

(3) *Research and General Education Aids.—Current law* would cost a total of $6.6 billion in budget authority and $6.5 billion in outlays over the FY 1979–83 period. This would maintain the current mix of assistance to cultural institutions and activities, educational and scientific research, and related projects, but at gradually declining levels. *Current policy* would cost an additional $1.1 billion in budget authority and $0.8 billion in outlays, and would prevent program declines due to inflation.

(4) *Training and Employment.—Current law* would cost a total of $61.3 billion in budget authority and $62.9 billion in outlays over the FY 1979–83 period. By FY 1983, the number of public service jobs and of training slots funded would decline by over 17 percent and over 27 percent to 600,000 and 717,800 respectively. *Current policy* would cost an additional $11.3 billion in budget authority and $9.2 billion in outlays, and would sustain the current levels of 725,000 public service jobs and 990,800 training slots.

(5) *Other Labor Services—Current law* would cost a total of $2.5 billion in budget authority and $2.4 billion in outlays over the FY 1979–83 period, and would result in declining levels of service in programs to establish and enforce employer-employee relationship standards and to collect and disseminate statistics on employment, wages, and prices. *Current policy* would cost an additional $0.2 billion in both budget authority and outlays, and would maintain current levels of service.

(6) *Social Services.—Current law* would cost a total of $25.5 billion in both budget authority and outlays over the FY 1979–83 period. This would result in substantial reductions in services, because the Title XX program of social services grants to States is "capped" and 47 of the 50 States currently are at their ceiling. *Current policy* would cost an additional $2.7 billion in budget authority and $2.2 billion in outlays. However, unless the "cap" on Title XX grants is raised, real levels of services still would decline.

Future year choices

(1) *Elementary, Secondary, and Vocational Education: Services to the Handicapped.*—The enactment of two recent laws may cause pressures to increase funding for services to the handicapped. The Education for All Handicapped Children Act of 1975 authorized Federal sharing of the costs of educating handicapped children, at a rate increasing by 10 percent per year from the FY 1978 level of 10 percent to 40 percent in FY 1981. Should the Congress decide to fund these increasing shares and extend the 40 percent share through FY 1983, the Federal share would rise to $1,023 per child in FY 1983 for a total cost of $4.2 billion, or $3.2 billion above the current policy estimate for that year (which assumed a 10 percent share). Section 504 of the Vocational Rehabilitation Act of 1973 requires that all public facilities and programs be open and accessible to handicapped citizens. Several bills have been introduced to provide Federal sharing of the costs of

removing architectural barriers, with cost estimates ranging from $0.5 to $1.5 billion.

(2) *Higher Education: Student Aid.*—The Congress currently is considering alternatives for tuition assistance for middle-income families, which will influence choices in reauthorizing the Higher Education Act next year. Whichever option is chosen by this Congress, direct grants or tuition tax credits, pressures for increased assistance are likely to arise.

The House Education and Labor Committee has suggested $1.2 billion for grants in FY 1979, and $2.0 billion in FY 1980. The Finance Committee has reported a bill that includes a tax credit for elementary and secondary school tuition, the enactment of which may accelerate pressures to provide general aid to public schools, in addition to the existing Federal aid for schools serving disadvantaged students. Additional Federal assistance could cost from $7 to $18 billion in FY 1983.

Committee recommendations

The Committee recommends $31.6 billion in budget authority and $31.2 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $177.2 billion in budget authority and $174.8 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	29.1	30.4	30.4	30.3	30.3
Outlays	29.7	31.1	30.5	30.5	30.4
Current policy:					
Budget authority	30.6	33.8	35.7	37.7	39.7
Outlays	30.2	33.6	34.6	36.5	38.5
Authorizing committees:					
Budget authority	44.9	39.6	41.9	44.1	46.4
Outlays	34.2	39.0	40.9	42.8	45.2
Budget Committee recommendation:					
Budget authority	31.6	34.0	35.7	37.2	38.8
Outlays	31.2	33.9	35.1	36.5	28.1

For the missions in this function, the Committee makes the following recommendations:

(1) *Elementary, Secondary, and Vocational Education.*—The Committee recommends $7.7 billion in budget authority and $6.6 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $43.0 billion in budget authority and $40.3 billion in outlays over the FY 1979–83 period.

The Committee recommendation permits sufficient funds to accommodate increases for Title I of the Elementary and Secondary Education Act to fund the Federal share of the excess cost of educating handicapped children at 12 percent, and to provide for increases in other elementary and secondary programs, such as Head Start and Emergency School Aid. The Committee assumes savings from inclusion of smaller programs for the disadvantaged and set-aside programs in Title I.

MISSION 1: ELEMENTARY, SECONDARY, AND VOCATIONAL EDUCATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	6.8	6.8	6.8	6.8	6.8
Outlays	6.5	6.9	6.9	6.9	6.9
Current policy:					
Budget authority	7.4	7.9	8.6	9.2	9.9
Outlays	6.6	7.5	8.0	8.6	9.2
Authorizing committees:					
Budget authority	8.9	9.5	10.2	11.0	11.8
Outlays	7.5	9.0	9.5	10.2	11.0
Budget Committee recommendation:					
Budget authority	7.7	8.0	8.6	9.1	9.6
Outlays	6.6	7.7	8.2	8.6	9.2

(2) *Higher Education.*—The Committee recommends $4.4 billion in budget authority and $4.2 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $22.7 billion in budget authority and $22.6 billion in outlays over the FY 1979–83 period.

The Committee recommendation would permit current law spending for programs in this mission, plus an amount for the refundable portion of a higher education tuition tax credit.

MISSION 2: HIGHER EDUCATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	4.3	4.3	4.2	4.1	4.0
Outlays	4.1	4.3	4.2	4.1	4.0
Current policy:					
Budget authority	4.4	4.6	4.7	4.8	4.8
Outlays	4.1	4.6	4.6	4.7	4.8
Authorizing committees:					
Budget authority	6.3	6.6	6.7	6.8	6.9
Outlays	4.2	6.5	6.6	6.7	6.8
Budget Committee recommendation:					
Budget authority	4.4	4.6	4.6	4.6	4.6
Outlays	4.2	4.5	4.6	4.6	4.7

(3) *Research and General Education Aids.*—The Committee recommends $1.2 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $7.2 billion in budget authority and $7.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation permits current law funding for all programs included in this function with some adjustment for inflation. The Committee expressed concern over the possible costs which could be involved in removing architectural barriers to the handicapped, but concluded that there was inadequate information available to assume any funds for this purpose at this time. The Committee expressed an interest in directing a portion of the EDA "soft public works" funding, assumed in function 450, for this purpose.

MISSION 3: RESEARCH AND GENERAL EDUCATION AIDS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.2	1.3	1.3	1.3	1.4
Outlays	1.2	1.3	1.3	1.3	1.4
Current policy:					
Budget authority	1.3	1.4	1.5	1.6	1.7
Outlays	1.2	1.4	1.5	1.6	1.7
Authorizing committees:					
Budget authority	1.7	1.8	2.0	2.1	2.3
Outlays	1.5	1.8	2.0	2.1	2.3
Budget Committee recommendation:					
Budget authority	1.2	1.3	1.4	1.6	1.7
Outlays	1.2	1.3	1.4	1.5	1.6

(4) *Training and Employment.*—The Committee recommends $12.0 billion in budget authority and $12.9 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $74.2 billion in budget authority and $75.0 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit the maintenance of current policy levels for employment and training programs. In view of changing economic conditions, the Committee recognizes the reduced need for countercyclical employment subsidies. The Committee therefore recommends that half the current spending effort for public service jobs be directed toward employment and training services for the structurally unemployed. The Committee assumed that increased efforts for youth initiatives, services to welfare recipients, and new private sector initiatives could be accommodated within the total funding assumed for comprehensive services to the structurally unemployed. The Committee mark includes sufficient funds to provide some increases for expansion in WIN services to AFDC recipients.

MISSION 4: TRAINING AND EMPLOYMENT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	11.3	12.5	12.5	12.5	12.5
Outlays	12.4	13.0	12.5	12.5	12.5
Current policy:					
Budget authority	11.7	13.8	14.7	15.7	16.6
Outlays	12.7	14.3	14.5	15.4	16.4
Authorizing committees:					
Budget authority	19.4	14.8	15.7	16.7	17.6
Outlays	14.2	14.8	15.5	16.4	17.4
Budget Committee recommendation:					
Budget authority	12.0	14.3	15.2	16.0	16.8
Outlays	12.9	14.6	15.0	15.9	16.6

(5) *Other Labor Services.*—The Committee recommends $0.4 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $2.5 billion in budget authority and $2.4 billion in outlays over the FY 1979–83 period.

The Committee's recommended targets permit current law spending for programs included in this mission.

MISSION 5: OTHER LABOR SERVICES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.4	0.5	0.5	0.5	0.5
Outlays	.4	.5	.5	.5	.5
Current policy:					
Budget authority	.5	.5	.5	.6	.6
Outlays	.5	.5	.5	.6	.6
Authorizing committees:					
Budget authority	.6	.6	.7	.7	.8
Outlays	.6	.6	.7	.7	.8
Budget Committee recommendation:					
Budget authority	.4	.5	.5	.5	.6
Outlays	.4	.5	.5	.5	.5

(6) *Social Services.*—The Committee recommends $5.9 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $27.5 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee's recommended targets permit sufficient funds to provide for increases in the level of social services funded under Titles XX and IV–(B) of the Social Security Act, and payments of retroactive claims for social services.

MISSION 6: SOCIAL SERVICES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983

Total	10,820	11,190	10,505	11,360	12,325	13,660

[1] Less than $2,500,000.

Note: All estimates are rounded to the nearest $5,000,000.

(550) HEALTH

National need and missions

The national need addressed by *Health* is the improved health status of Americans. Federal programs meet this need through: efforts to improve access to health care services for those who otherwise could not afford proper health care, primarily by payments for services; research into the cause, treatment, and prevention of disease; support for health care work force education and for facility construction; and regulatory efforts to improve public protection on the job and in the consumer marketplace.

The major mission areas in *Health* are: (1) health care services; (2) health research; (3) education and training of the health care work force; and (4) consumer and occupational health and safety.

Current trends

The following table shows the Committee recommendations for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	40.4	38.8
Fiscal year 1978 estimate	46.5	44.3
Fiscal year 1979:		
Current law	52.0	49.9
Current policy	52.4	50.1
President's budget request	52.7	49.7
Appropriations Committee	53.5	50.3
Authorizing committees	54.2	51.0
Budget Committee recommendation	52.7	49.5

Current law and current policy for fiscal years 1979–83

Over the next five years, *current law* would cost a total of $339.8 billion in budget authority and $317.5 billion in outlays for *Health*, while current policy would cost an additional $7.8 billion in budget authority and $6.6 billion in outlays. The Federal Government would account for about one-third of the Nation's total expenditures for health. The implications of current trends in the four major mission areas are:

(1) *Health Care Services.—Current law* would cost a total of $316.2 billion in budget authority and $294.1 billion in outlays over the FY 1979–83 period. This would account for about 28 percent of the Nation's total spending for health care services, and would finance services for about 44 million people in 1979 and 47 to 48 million people in 1983. *Current policy* would cost an additional $3.0 billion in budget authority and $2.9 billion in outlays, and would sustain current levels of assistance in certain programs where adjustments for inflation are not mandated by current law.

Despite these sizeable costs, access to health care will continue to be limited for many. Although the aged and disabled are eligible for medicare, cost-sharing requirements and noncovered services result in their paying 40 percent of their own health costs. Further, about 25 percent of the Nation's poor are ineligible for medicaid because they do not receive welfare benefits under categorical income security programs. (Even the poor who do qualify for medicaid often find their choices limited to health care providers that are willing to take the "less than going rate reimbursement imposed by State reimbursement schedules.) Between 12 and 18 million Americans have no private health insurance, and are ineligible for Federal assistance.

Finally, the focus on the institutional mode of treatment limits cost-effective care for those in need of outpatient care, home care, or preventive services.

(2) *Health Research.—Current law* would cost a total of $14.9 billion in budget authority and $14.8 billion over the FY 1979–83 period. This would provide a total nominal increase of only 2.9 percent over the period, causing substantial reductions in the real level of support. Currently, research efforts focus on treatment rather than prevention, although prevention appears to be more promising. *Current policy* would cost an additional $3.3 billion in budget authority and $2.6 billion in outlays, and would prevent research support declines due to inflation.

(3) *Education and Training of the Health Care Work Force.—Current law* would cost a total of $4.4 billion in budget authority and $4.3 billion in outlays over the FY 1979–83 period, with real levels of support declining steadily as the result of inflation. Because of the long lead-time between obligation of funds and the completion of training, this decline should cause no appreciable decrease in the number of health care workers in 1983, but might have serious implications for the post-1983 period. At present, more than 4.8 million people—about 5 percent of the total civilian labor force—are employed in health-related jobs, and many received their training as the result of Federal aid. *Current policy* would cost an additional $1.1 billion in budget authority and $0.7 billion in outlays, and would sustain real program levels. However, current projections indicate that significant surpluses in physician and nursing manpower may occur by 1990.

(4) *Consumer and Occupational Health and Safety.—Current law* would cost a total of $4.4 billion in both budget authority and outlays over the FY 1979–83 period. Anticipated inflation during the period would reduce Federal compliance and review efforts by 14 percent, a critical development in view of the fact that current Federal efforts are inadequate (for example, only 1 to 2 percent of the Nation's workplaces are now reviewed for compliance with safety requirements in any one year, and about 2.2 million disabling injuries occur every year because of "unsafe" work places). *Current policy* would cost an additional $0.4 billion in budget authority and $0.3 billion in outlays, and would prevent program declines due to inflation.

Future-year choices

(1) *Health Care Services: National Health Insurance.*—The need of many Americans for improved access to health care has been the genesis of many national health insurance proposals, currently ranging from a limited expansion of existing programs to complete financing of all services for all people. The future-year implications of national health insurance depend very heavily on the policies adopted by the Congress. If cost control efforts fail and health care prices continue to rise at the 15 percent per year rate of the past decade, the choices as to the form of national health insurance will be particularly difficult. Continued health cost inflation could make the need for comprehensive national health insurance more critical, but could also force the adoption of a more limited approach that could be accommodated at more reasonable Federal costs.

Depending on the approach adopted, Federal costs for national health insurance by FY 1983 could range from $25 to $150 billion per year.

Committee recommendations

The Committee recommends $52.7 billion in budget authority and $49.5 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $349.7 billion in budget authority and $308.2 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	52.0	58.2	68.3	77.1	84.2
Outlays	49.9	56.2	62.8	70.2	78.4
Current policy:					
Budget authority	52.4	59.2	69.9	79.2	86.9
Outlays	50.1	56.9	64.0	72.1	80.9
Authorizing committees:					
Budget authority	54.2	61.3	72.0	81.6	90.0
Outlays	51.0	56.2	63.0	70.7	79.6
Budget Committee recommendation:					
Budget authority	52.7	59.6	70.3	79.7	87.4
Outlays	49.5	55.6	61.4	67.5	74.2

For the missions in this function, the Committee makes the following recommendations:

(1) *Health Care Services.*—The Committee recommends $47.9 billion in budget authority and $44.8 billion in outlays for this mission in

FY 1979. The Committee anticipates that these figures will total $322.5 billion in budget authority and $281.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation anticipates legislation to improve the medicaid program by some combination of additional benefits, expanded coverage or increased matching rates. The various improvements discussed by the Committee included mandatory dental benefits, coverage of low-income pregnant women, and mandatory coverage of children from low-income non-welfare eligibile families. The Committee did not assume that all these changes would require expenditures for the full fiscal year 1979. Funds are also included for growth in such health service programs as community health centers, migrant health centers, and preventive care programs. The recommendation assumes reductions based on the enactment of a hospital cost containment proposal combining both voluntary and possible back-up Federal controls. Further savings are anticipated from improved administration of the medicaid program.

MISSION 1: HEALTH CARE SERVICES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	47.4	53.5	63.6	72.3	79.4
Outlays	45.3	51.6	58.1	65.5	73.5
Current policy:					
Budget authority	47.5	53.9	64.2	73.1	80.4
Outlays	45.4	51.9	58.7	66.3	74.7
Authorizing committees:					
Budget authority	48.8	55.4	65.7	74.9	82.8
Outlays	46.1	50.9	57 3	64.6	73.0
Budget Committee recommendation:					
Budget authority	47.9	54.5	64.9	74.0	81.3
Outlays	44.8	50.5	56.1	62.0	68.4

(2) *Health Research.*—The Committee recommends $3.1 billion in budget authority and $3.0 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $18.2 billion in budget authority and $17.4 billion in outlays over the FY 1979–83 period.

The Committee recommendation includes discretionary inflation allowances to keep the funding of research activities constant in real terms and anticipates that the President's initiatives for increases in basic research will be a top priority. The Committee notes its concern about the quality of the administration of certain research programs.

MISSION 2: HEALTH RESEARCH

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.9	3.0	3.0	3.0	3.0
Outlays	2.9	2.9	3.0	3.0	3.0
Current policy:					
Budget authority	3.1	3.4	3.6	3.9	4.2
Outlays	3.0	3.2	3.5	3.7	4.0
Authorizing committees:					
Budget authority	3.5	3.8	4.0	4.3	4.6
Outlays	3.1	3.3	3.6	3.8	4.1
Budget Committee recommendation:					
Budget authority	3.1	3.4	3.6	3.9	4.2
Outlays	3.0	3.2	3.5	3.7	4.0

(3) *Education and Training of the Health Care Work Force.*—The Committee recommends $0.8 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $4.0 billion in budget authority and $4.1 billion in outlays over the FY 1979–83 period.

The Committee recommendation includes part of the President's requested reduction in funding for health professions educational assistance. The Committee notes that improvement of the geographical and specialty maldistribution, rather than increasing the total number of health care professionals, is the priority objectives for this mission.

MISSION 3: EDUCATION AND TRAINING OF THE HEALTH CARE WORK FORCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.9	0.9	0.9	0.9	0.9
Outlays	.8	.9	.9	.9	.9
Current policy:					
Budget authority	.9	1.0	1.1	1.2	1.3
Outlays	.8	.9	1.0	1.1	1.2
Authorizing committees:					
Budget authority	1.0	1.1	1.2	1.3	1.4
Outlays	.9	1.0	1.1	1.2	1.3
Budget Committee recommendation:					
Budget authority	.8	.8	.8	.8	.8
Outlays	.8	.9	.8	.8	.8

(4) *Consumer and Occupational Safety and Health.*—The Committee recommends $0.9 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $5.0 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee's recommended target includes funds to support activities mandated by legislation passed by the Congress last year.

MISSION 4: CONSUMER AND OCCUPATIONAL HEALTH AND SAFETY

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.8	0.8	0.9	0.9	1.0

Budget Committee recommendation:					
Budget authority	.9	.9	1.0	1.0	1.1
Outlays	.9	1.0	1.0	1.0	1.0

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Exclusion of employer contribution for medical care:						
Individuals	6,340	7,225	8,240	9,390	10,705	12,205
Corporations						
Deductibility of medical expenses:						
Individuals	2,435	2,655	2,895	3,155	3,435	3,745
Corporations						
Expensing of removal of architectural and transportation barriers to the handicapped:						
Individuals						
Corporations	10	10	(1)	(1)	(1)	(1)
Deductibility of charitable contributions (health):						
Individuals	875	970	1,075	1,195	1,330	1,475
Corporations	160	175	195	215	235	255
Total	9,820	11,035	12,405	13,955	15,705	17,680

[1] Less than $6,500,000.

Note.—All estimates are rounded to the nearest $5,000,000.

(600) INCOME SECURITY

National need and missions

The national need addressed by *Income Security* is the assurance of a minimum standard of living for individuals and families. Federal programs meet this need through: protection against loss of income due to the retirement, disability, unemployment, or death of a wage-earner; provision of income support for those unable to secure an adequate income for themselves; assistance in providing shelter for those without adequate housing; and provision of more nutritionally adequate diets for children and others.

The major mission areas in *Income Security* are: (1) general retirement and disability insurance, (2) Federal employee retirement and disability, (3) unemployment compensation, (4) public assistance, (5) nutrition programs, (6) housing assistance, and (7) other income security programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	168.6	137.0
Fiscal year 1978 estimate	180.1	146.4
Fiscal year 1979:		
Current law	192.5	158.8
Current policy	194.7	158.8
President's budget request	191.4	159.9
Appropriations Committee	191.0	160.4
Authorizing committees	202.9	160.1
Budget Committee recommendation	192.5	59.91

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $1,186.1 billion in budget authority and $945.2 billion in outlays for *Income Security*, while *current policy* would cost an additional $35.3 billion in budget authority and $2.7 billion in outlays. The implications of current trends in the seven major mission areas are:

(1) *General Retirement and Disability Insurance.*—Current law would cost a total of $702.5 billion in budget authority and $663.3 billion in outlays over the FY 1979–83 period. This would provide for projected needs over the period for such programs as Social Security old-age and survivors benefits and disability benefits (collectively called OASDI). These programs now serve 15.6 percent of the total population, which would increase to 16.8 percent, or 38.8 million people, in FY 1983. *Current policy* would cost an additional $0.1 billion in budget authority and $0.6 billion in outlays, and would prevent declines in programs where inflation adjustments are not mandated by current law.

(2) *Federal Employee Retirement and Disability.*—*Current law* and *current policy* are essentially identical, and would cost a total of $124.5 billion in budget authority and $76.5 billion in outlays over the FY 1979–83 period. The largest component, the Civil Service retirement and disability system, now provides benefits to 1.5 million people, or 0.6 percent of the U.S. population; by FY 1983, this would increase to 1.8 million, or 0.8 percent of the U.S. population.

(3) *Unemployment Compensation.*—*Current law* would cost a total of $76.8 billion in budget authority and $53.1 billion in outlays over the FY 1979–83 period. This would provide continued benefits to unemployed workers, the number of which is expected to decline from the FY 1978 average of 2.4 million to 1.8 million in FY 1983, as the rate of unemployment responds to an improving economy. *Current policy* would cost an additional

$0.4 billion in budget authority and $1.0 billion in outlays, for the Federal unemployment benefits and allowances (FUBA) program and for increases in State administrative costs, but would not affect the level of protection for most unemployed workers.

(4) *Public Assistance.—Current law* and *current policy* are the same, and would cost a total of $101.4 billion in both budget authority and outlays over the FY 1979–83 period. The number of recipients is expected to be lower in FY 1983 than at present, due to economic improvement and a declining birth rate. For example, a monthly average of about 16 million people, or 7.3 percent of the U.S. population, will receive food stamps in FY 1978; by FY 1983, this number is expected to decline to 14.6 million, or 6.4 pecent of the population. Simila deceases are expected to occur in other programs, but costs with increase due to gradually rising benetfis.

(5) *Nutrition Programs.—Current law* and *current policy are* essentially identical, and would cost a total of $20.5 billion in budget authority and $20.3 billion in outlays over the FY 1979–83 period. Eight percent more meals than at present are expected to be served in FY 1983 to children in 89 percent of all schools. Total school enrollment is expected to drop by 6 percent over the next five years.

(6) *Housing Assistance.—Current law* would cost a total of $159.0 billion in budget authority and $29.1 billion in outlays over the FY 1979–83 period. The number of persons receiving housing assistance would grow considerably by FY 1983; however, the number added each year would be increasingly constrained by declines in real program levels due to inflation, and would decline from about 380,000 in FY 1978 to 280,000 in FY 1983. The total Federal commitment would grow from 3.6 million families (9 percent of those eligible) in FY 1978 to 5.3 million families (12 percent of those eligible) in FY 1983. *Current policy* would cost an additional $34.7 billion in budget authority and $1.0 billion in outlays. This would provide assistance for an additional 300,000 families by FY 1983, thus raising the total Federal commitment to about 5.6 million families (about 12.7 percent of those eligible).

(7) *Other Income Security Programs.—Current law* would cost a total of $1.4 billion in both budget authority and outlays over the FY 1979–83 period. *Current policy* would cost an additional $0.1 billion in both budget authority and outlays, and would prevent a gradual decline in real program levels due to inflation.

Future-year choices

(1) *General Retirement and Disability Insurance:* (a) *Social Security Reforms.*—Several developments are possible that would affect Social Security programs, including: more equitable treatment of female workers and their dependents and survivors; coverage for all workers, including Federal employees; changes in the earnings limitations for retirees; changes in eligibility requirements for disability benefits; and changes in the financing of the system. The impact of these reforms by FY 1983 could range from *savings* of $21 billion to additional *costs* of $30 billion.

(b) *Expansion of Occupational Disease Disability Programs.*—Legislation may be considered to provide benefits to victims of occupational diseases, such as "brown lung" benefits for textile workers, and benefits for workers exposed to radiation or asbestos particles. Depending on the scope and level of new benefits provided, additional costs by FY 1983 could be as much as $10 billion annually.

(3) *Unemployment Compensation: Minimum Unemployment Benefits.*—Since the States currently set their own benefit levels, the level of income protection offered to unemployed workers varies significantly. Legislation might be considered to establish a national minimum level, resulting in additional annual costs of $4 to $5 billion by FY 1983.

(4) *Public Assistance: Welfare Reform.*—Significant future-year costs may be incurred due to decisions made on welfare reform this year and in future years.

(6) *Housing Assistance: Housing Allowances.*—Legislation may be considered which would provide a housing allowance or other direct housing assistance to low income families. Such a program could reach 40 percent of the eligible population, compared to the approximately nine percent served under existing programs. Annual costs by FY 1983 could be as much as $8.0 billion.

Committee recommendations

The Committee recommends $192.5 billion in budget authority and $159.9 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $1,216.6 billion in budget authority and $967.3 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	192.5	216.0	237.5	260.2	279.9
Outlays	158.8	172.5	187.8	204.1	222.0
Current policy:					
Budget authority	194.7	220.8	244.5	269.6	291.8
Outlays	158.8	172.8	188.3	204.9	223.1
Authorizing committees:					
Budget authority	202.9	229.2	253.7	279.4	302.2
Outlays	160.1	174.0	189.9	207.0	225.5
Budget Committee recommendation:					
Budget authority	192.5	220.5	241.6	270.5	291.4
Outlays	159.9	174.1	189.2	212.3	231.8

For the missions in this function, the Committee makes the following recommendations:

(1) *General Retirement and Disability Insurance.*—The Committee recommends $107.0 billion in budget authority and $109.2 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $702.5 billion in budget authority and $663.3 billion in outlays over the FY 1979–83 period.

The Committee recommendations permit continuation of spending at current law levels. The Committee recommends this policy without prejudice toward certain increases in railroad retirement benefits now pending before the Senate.

MISSION 1: GENERAL RETIREMENT AND DISABILITY INSURANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	107.0	121.5	139.7	159.0	175.4
Outlays	109.2	120.3	132.0	144.2	157.6
Current policy:					
Budget authority	107.0	121.5	139.7	159.0	175.4
Outlays	109.3	120.4	132.1	144.4	157.8
Authorizing committee:					
Budget authority	107.1	121.6	139.8	159.1	175.5
Outlays	109.4	120.5	132.2	144.5	157.9
Budget Committee recommendation:					
Budget authority	107.0	121.5	139.7	159.0	175.4
Outlays	109.2	120.3	132.0	144.2	157.6

(2) *Federal Employee Retirement and Disability.*—The Committee recommends $20.3 billion in budget authority and $12.0 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $124.7 billion in budget authority and $76.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation provides, in addition to current law, for several liberalizations of civil service retirement benefits suggested by the Governmental Affairs Committee in its March 15 report to the Budget Committee.

MISSION 2: FEDERAL EMPLOYEE RETIREMENT AND DISABILITY

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	20.3	22.9	24.9	27.1	29.3
Outlays	12.0	13.5	15.2	16.9	18.8
Current policy:					
Budget authority	20.3	22.9	24.9	27.1	29.3
Outlays	12.0	13.5	15.2	16.9	18.8
Authorizing committees:					
Budget authority	20.7	23.3	25.3	27.5	29.7
Outlays	12.3	13.8	15.6	17.4	19.3
Budget Committee recommendation:					
Budget authority	20.3	22.9	25.0	27.2	29.3
Outlays	12.0	13.6	15.2	17.0	18.9

(3) *Unemployment Compensation.*—The Committee recommends $16.4 billion in budget authority and $11.1 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $76.8 billion in budget authority and $53.1 billion in outlays over the FY 1979–83 period.

The Committee recommendation provides for a continuation of current law.

MISSION 3: UNEMPLOYMENT COMPENSATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	16.4	15.1	15.1	15.2	15.0
Outlays	11.1	10.2	10.2	10.6	11.0
Current policy:					
Budget authority	16.4	15.1	15.2	15.3	15.2
Outlays	11.1	10.4	10.4	10.9	11.4
Authorizing committees:					
Budget authority	16.4	15.1	15.2	15.3	15.2
Outlays	11.1	10.4	10.4	10.9	11.4
Budget Committee recommendations:					
Budget authority	16.4	15.1	15.1	15.2	15.0
Outlays	11.1	10.2	10.2	10.6	11.0

(4) *Public Assistance.*—The Committee recommends $18.9 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $118.1 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation assumes savings from increased targeting of public service jobs on low income people and from the standardization of the allowance provided to AFDC recipients for work related expenses in determining their benefit levels. Small additional costs are assumed for public assistance amendments now pending in the Senate. The Committee recommends an expansion of the earned income tax credit and treatment of the refundable portion of the credit as spending in this function rather than as a loss in revenues, which was the past practice. Other than the expanded earned income credit, the Committee recommendation does not assume any welfare reform costs for FY 1979, but does leave room for welfare reform initiatives in future years. While the allowance for welfare reform costs is reflected in fiscal years 1982 and 1983, the Committee recommendation is not intended to preclude earlier spending on welfare reform should legislation be adopted and implemented.

The Committee recommendation does not assume enactment of legislation providing fiscal relief to State and local governments for part of their welfare costs. The Committee believes that possible shifts in the burdens of welfare costs among the Federal and State/local governments should be dealt with in the context of welfare reform.

MISSION 4: PUBLIC ASSISTANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	18.1	19.4	20.3	21.2	22.3
Outlays	19.1	19.4	20.3	21.2	22.3
Current policy:					
Budget authority	18.1	19.4	20.3	21.2	22.3
Outlays	18.1	19.4	20.3	21.2	22.3
Authorizing committees:					
Budget authority	18.2	19.1	20.0	20.9	21.9
Outlays	18.3	19.1	20.0	20.8	21.9
Budget Committee recommendation:					
Budget authority	18.9	20.3	20.8	27.9	30.1
Outlays	18.9	20.3	20.8	27.9	30.1

(5) *Nutrition Programs.*—The Committee recommends $3.9 billion in budget authority and $3.7 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $21.1 billion in budget authority and $20.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation permits expansion of the special supplemental food programs for women, infants and children (WIC) to the level proposed by the President and also assumes enactment of some reductions in other child nutrition programs.

MISSION 5: NUTRITION PROGRAMS

[In billions of dollars: fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.7	3.8	4.1	4.3	4.6
Outlays	3.6	3.8	4.0	4.3	4.6
Current policy:					
Budget authority	3.7	3.8	4.1	4.3	4.6
Outlays	3.6	3.8	4.0	4.3	4.6

MISSION 5; NUTRITION PROGRAMS—Continued

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Authorizing committees:					
Budget authority	4.1	4.4	4.8	5.1	5.4
Outlays	3.8	4.2	4.6	5.0	5.3
Budget Committee recommendation:					
Budget authority	3.9	3.9	4.2	4.4	4.7
Outlays	3.7	3.9	4.1	4.4	4.6

(6) *Housing Assistance.*—The Committee recommends $25.5 billion in budget authority and $4.4 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $171.0 billion in budget authority and $33.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation equals the President's budget request, the recommendation of the Appropriations Committee and the low range of the Banking Committee's March 15 recommendation to the Budget Committee. The Committee took into account the possible use of Housing Assistance funds for "troubled" housing projects.

MISSION 6: HOUSING ASSISTANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	26.7	33.1	33.1	33.1	33.1
Outlays	4.3	5.0	5.8	6.6	7.4
Current policy:					
Budget authority	28.9	37.8	40.0	42.3	44.7
Outlays	4.3	5.0	5.9	6.9	7.9
Authorizing committees:					
Budget authority	35.9	45.2	48.1	51.0	54.0
Outlays	4.6	5.5	6.6	7.9	9.2

MISSION 6: HOUSING ASSISTANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Budget Committee recommendation:					
Budget authority	25.5	36.3	36.3	36.4	35.5
Outlays	4.4	5.3	6.4	7.7	9.2

(7) *Other Income Security Programs.*—The Committee recommends $0.5 billion in budget authority and $0.6 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $2.4 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation includes an allowance for continuation of the emergency assistance program for low income households with high fuel costs.

MISSION 7: OTHER INCOME SECURITY PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.3	0.3	0.3	0.3	0.2

Corporations						
Total	26,170	28,845	30,740	34,115	37,910	42,150

Note: All estimates are rounded to the nearest $5,000,000.

(700) VETERANS BENEFITS AND SERVICES

National need and missions

The national need addressed by *Veterans Benefits and Services* is support for veterans in recognition of their service in their country's defense. Federal programs meet this need through: payments to compensate for lost earning capacity due to disabilities incurred in service; income assistance for needy, disabled, and aged wartime veterans and their families; training and education to assist veterans in finding civilian employment; medical care for veterans through a separate system of hospitals and other health care facilities; and other specialized benefits such as life insurance coverage and guaranteed housing loans.

The major mission areas in *Veterans Benefits and Services* are: (1) income security for veterans; (2) veterans education, training, and rehabilitation; (3) hospital and medical care for veterans; and (4) other veterans benefits and services.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars; fiscal years]

	Budget authority	Outlay
1977 actual	19.1	18.0
1978 estimate	19.0	19.1
1979:		
Current law	19.6	19.3
Current policy	20.5	20.2
President's budget request	19.1	19.3
Appropriations Committee	20.0	20.0
Authorizing committees	21.6	21.2
Budget Committee recommendation	21.0	20.8

Current Law and Current Policy for FY 1979–83

Over the next five years, current law would cost a total of $96.0 billion in budget authority and $94.7 billion in outlays for Veterans Benefits and Services, while current policy would cost an additional $15.2 billion in budget authority and $14.4 billion in outlays. The implications of current trends in the four major mission areas are:

(1) *Income Security for Veterans.*—Current law would cost a total of $52.7 billion in budget authority and $51.7 billion in outlays over the FY 1979–83 period to provide benefit payments for veterans, dependents, and survivors. However, since veterans income security programs, unlike most other income security programs, are not automatically adjusted by law to offset inflation, the real purchasing power of these benefits would be about one-third less by FY 1983 than at present. Current policy would cost an additional $8.6 billion in budget authority and $8.4 billion in outlays, and would provide for periodic increases to prevent an erosion in benefits due to rising prices.

(2) *Veterans Education, Training, and Rehabilitation.*—Current law would cost a total of $8.9 billion in both budget authority and outlays over the FY 1979–83 period. Annual costs would decline substantially, partly because the eligible population of veterans is expected to decline to one-third of the current level by FY 1983, and partly because real benefits to eligible veterans would decline substantially, since these benefits are not automatically adjusted by current law to reflect inflation. Current policy would cost an additional $3.3 billion in budget authority and $3.2 billion in outlays, to provide periodic increases to compensate for rising prices.

(3) *Hospital and Medical Care for Veterans.—Current law* would cost a total of $30.9 billion in budget authority and $30.8 billion in outlays over the FY 1979–83 period. This would result in a reduction in health services by FY 1983 as real program levels decline due to inflation (current construction projects would not be affected, since funds already have been provided and obligated). The primary focus of veterans health programs would continue to be on acute-care services. *Current policy* would cost an additional $3.1 billion in budget authority and $2.6 billion in outlays, and would prevent levels of health care from declining due to inflation.

(4) *Other Veterans Benefits and Services.—Current law* would cost a total of $3.5 billion in budget authority and $3.4 billion in outlays over the FY 1979–83 period. *Current policy* would cost an additional $0.2 billion in both budget authority and outlays, which should prevent a decline in services due to inflation in general operating expenses.

Future-year choices

(3) *Hospital and Medical Care for Veterans: Health System Reform.*—There is a growing need for the Veterans Administration to reshape its health care system to better meet the needs of the aging veteran population. Necessary changes may include reducing or converting acute-care beds, building nursing homes and providing home health services. Although such reforms might eventually produce savings, their likely effect over the next five years would be to increase costs by as much as $1 billion in FY 1983.

Committee recommendations

The Committee recommends $21.0 billion in budget authority and $20.8 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $108.1 billion in budget authority and $106.7 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	19.6	19.3	19.1	19.0	19.1
Outlays	19.3	19.0	18.8	18.8	18.8
Current policy:					
Budget authority	20.5	21.4	22.2	23.1	24.0
Outlays	20.2	21.0	21.7	22.7	23.6
Authorizing committees:					
Budget authority	21.6	22.6	23.6	24.9	26.2
Outlays	21.2	22.3	23.3	24.6	26.0
Budget Committee recommendation:					
Budget authority	21.0	21.1	21.4	21.7	22.7
Outlays	20.8	20.7	21.0	21.5	22.5

For the missions in this function, the Committee makes the following recommendations:

(1) *Income Security for Veterans.*—The Committee recommends $11.6 billion in budget authority and $11.3 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $61.0 billion in budget authority and $60.0 billion in outlays over the FY 1979–83 period.

The Committee recommendation includes funds for pension reform and improvements in the veterans and survivors service-connected compensation programs.

MISSION 1: INCOME SECURITY FOR VETERANS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	10.5	10.5	10.5	10.6	10.6
Outlays	10.3	10.3	10.3	10.4	10.5
Current policy:					
Budget authority	11.0	11.6	12.2	12.9	13.6
Outlays	10.7	11.3	12.0	12.7	13.4
Authorizing committees:					
Budget authority	11.7	12.4	13.1	14.0	14.9
Outlays	11.4	12.2	12.9	13.8	14.7
Budget Committee recommendation:					
Budget authority	11.6	11.7	12.0	12.5	13.1
Outlays	11.3	11.5	11.8	12.3	13.0

(2) *Veterans Education, Training, and Rehabilitation.*—The Committee recommends $2.8 billion in budget authority and $2.9 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $10.6 billion in both budget authority and outlays over the FY 1979-83 period.

The Committee recommendation permits modest increases above current law for cost-of-living increases or improvements in the GI bill program.

MISSION 2: VETERANS EDUCATION, TRAINING, AND REHABILITATION

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.7	2.2	1.7	1.3	0.9
Outlays	2.8	2.2	1.7	1.3	.9
Current policy:					
Budget authority	3.0	2.8	2.4	2.1	1.8
Outlays	3.1	2.8	2.4	2.1	1.7
Authorizing committees:					
Budget authority	3.0	2.8	2.4	2.1	1.8
Outlays	3.1	2.8	2.4	2.1	1.7
Budget Committee recommendation:					
Budget authority	2.8	2.5	2.1	1.7	1.5
Outlays	2.9	2.5	2.1	1.7	1.4

(3) *Hospital and Medical Care for Veterans.*—The Committee recommends $6.0 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $33.0 billion in budget authority and $32.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation includes sufficient funds to cover new legislation expanding outpatient services of the veterans' medical system and includes an allowance for current policy costs of maintaining the current system, including medical research efforts. The Committee expresses its concern about the inefficient use of acute care facilities and notes that tighter administration coupled with a redirection of resources to outpatient and home health services will reduce future costs while better meeting the needs of the aging veteran population.

MISSION 3: HOSPITAL AND MEDICAL CARE FOR VETERANS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	5.7	5.9	6.2	6.4	6.7
Outlays	5.7	5.9	6.1	6.4	6.7
Current policy:					
Budget authority	5.9	56.	6.8	7.3	7.8
Outlays	5.8	6.2	6.6	7.1	7.6
Authorizing committees:					
Budget authority	6.2	6.7	7.3	8.0	8.7
Outlays	6.1	6.7	7.3	8.0	8.7
Budget Committee recommendation:					
Budget authority	6.0	6.2	6.6	6.8	7.3
Outlays	6.0	6.1	6.4	6.8	7.3

(4) *Other Veterans Benefits and Services.*—The Committee recommends $0.6 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $3.5 billion in budget authority and $3.4 billion in outlays over the FY 1979–83 period.

The Committee recommendation would continue funding at current law levels.

MISSION 4: OTHER VETERANS BENEFITS AND SERVICES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.6	0.7	0.7	0.7	0.8
Outlays	.6	.6	.7	.7	.8
Current policy:					
Budget authority	.7	.7	.8	.8	.9
Outlays	.6	.7	.7	.8	.9
Authorizing committees:					
Budget authority	.6	.7	.8	.8	.9
Outlays	.6	.7	.7	.8	.8
Budget Committee recommendation:					
Budget authority	.6	.7	.7	.7	.8
Outlays	.6	.6	.7	.7	.8

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Exclusion of veterans disability compensation:						
Individuals	840	830	855	850	845	825

Exclusion of GI bill benefits:						
Individuals	200	170	150	130	110	95
Corporations						
Total	1,080	1,040	1,045	1,020	990	955

Note: All estimates are rounded to the nearest $5,000,000.

(750) ADMINISTRATION OF JUSTICE

National need and missions

The national need addressed by *Administration of Justice* is the preservation of public order and the advancement of justice. Federal programs meet this need through: general investigative activities to safeguard the public interest in legal matters and to apprehend and prosecute criminals; fair and prompt trials to assure equal justice under law; dentention and rehabilitation of persons convicted of violating Federal law; and financial assistance to State and local governments in controlling crime and improving criminal justice systems.

The major mission areas in *Administration of Justice* are: (1) Federal law enforcement activities, (2) criminal justice assistance, and (3) other administration of justice programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	3.6	2.6
Fiscal year 1978 estimate	3.8	3.9
Fiscal year 1979:		
Current law	4.0	4.0
Current policy	4.1	4.1
President's budget request	4.2	4.2
Appropriations Committee	4.2	4.3
Authorizing committees	5.1	5.1
Budget Committee recommendation	4.3	4.2

Current law and current policy for FY 1979–83

Over the next five years *current law* would cost a total of $21.7 billion in budget authority and $21.8 billion in outlays for *Administration of Justice*, while *current policy* would cost an additional $1.8 billion in budget authority and $1.7 billion in outlays. The implications of current trends in the three major mission areas are:

(1) *Federal Law Enforcement Activities.*—*Current law* would cost a total of $11.0 billion in budget authority and $10.9 billion in outlays over the FY 1979–83 period. This would continue current efforts to control organized crime, public corruption, drug trafficking, and illegal immigration, and to prevent racial and ethnic discrimination, but at gradually declining levels due to inflation. *Current policy* would cost an additional $0.6 billion in budget authority and $0.5 billion in outlays, and would sustain current real program levels.

(2) *Criminal Justice Assistance.*—*Current law* would cost a total of $3.3 billion in budget authority and $3.4 billion in outlays over the FY 1979–83 period. This would continue existing programs of assistance to State and local governments, but at levels declining from the present 3.5 percent of total State and local spending to about 3 percent in FY 1983. *Current policy* would cost an additional $0.5 billion in budget authority and $0.4 billion in outlays, permitting the Federal Government to sustain its 13.5 percent share of funding for State and local criminal justice activities.

(3) *Other Administration of Justice Programs.*—*Current law* would cost a total of $7.4 billion in budget authority and $7.5 billion in outlays over the FY 1979–83 period. Real program levels would decline gradually due to inflation. *Current policy* would cost an additional $0.8 billion in budget authority and $0.7 billion in outlays, and would sustain current real levels of program activity.

Future-year choices

(1) *Federal Law Enforcement Activities: Drug Enforcement.*—It is possible that a proposal will be considered to increase funding for the Drug Enforcement Administration (DEA) by 25 to 50 percent above current policy levels, to hire additional agents and other personnel so as to improve the control of drug abuse. This could increase annual costs by as much as $0.1 billion by FY 1983.

(2) *Criminal Justice Assistance: Grants to State and Local Governments.*—The current authorization for the Law Enforcement and Assistance Administration expires at the end of FY 1979. The Senate Judiciary Committee has suggested that higher funding may be needed to support State and local efforts to improve criminal justice systems and strengthen law enforcement, or to expand Federal support to include civil as well as criminal justice systems. Others have suggested reductions in LEAA grants. A change of 20 percent from current levels could reduce or increase annual costs by about $0.2 billion in FY 1983.

Committee recommendations

The Committee recommends $4.3 billion in budget authority and $4.2 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $23.6 billion in budget authority and $23.5 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	4.0	4.1	4.3	4.5	4.7
Outlays	4.0	4.2	4.3	4.5	4.7
Current policy:					
Budget authority	4.1	4.4	4.7	5.0	5.4
Outlays	4.1	4.4	4.7	5.0	5.3
Authorizing committees:					
Budget authority	5.1	5.3	5.7	6.0	6.4
Outlays	5.1	5.3	5.6	5.9	6.2
Budget Committee recommendation:					
Budget authority	4.3	4.4	4.7	5.0	5.3
Outlays	4.2	4.4	4.7	4.9	5.2

For the missions in this function, the Committee makes the following recommendations:

(1) *Federal Law Enforcement Activities.*—The Committee recommends $2.1 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $11.7 billion in budget authority and $11.6 billion in outlays over the FY 1979–83 period.

The Committee recommendation for FY 1979 would generally support present levels of program activity by the Department of Justice and other agencies to control organized crime, public corruption, drug trafficking, illegal immigration, and to prevent racial and ethnic discrimination. In addition, it would permit funding of about three-fifths of the total proposed increases by the Senate authorizing committees for FBI salaries, new immigration controls, and increased antidiscrimination and enforcement.

The five-year total would support these activities at current law levels and would also provide for about three-fourths of the discretionary inflation adjustments needed to keep the programs at current real levels. The Committee also included funds for about three-fourths of the estimated cost of new initiatives which are included within its FY 1979 recommendation. The five year total would not fully fund new initiatives in FY 1980–83 unless reductions are made in other activities. The Committee recommendation assumes that greater program efficiencies can be achieved to hold down costs in this mission.

MISSION 1: FEDERAL LAW ENFORCEMENT ACTIVITIES

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.0	2.0	2.2	2.3	2.4
Outlays	1.9	2.1	2.2	2.3	2.4
Current policy:					
Budget authority	2.0	2.1	2.3	2.5	2.6
Outlays	2.0	2.1	2.3	2.4	2.6
Authorizing committees:					
Budget authority	2.1	2.2	2.3	2.5	2.6
Outlays	2.1	2.2	2.3	2.5	2.6
Budget Committee recommendation:					
Budget authority	2.1	2.2	2.3	2.5	2.6
Outlays	2.1	2.2	2.3	2.5	2.6

(2) *Criminal Justice Assistance.*—The Committee recommends $0.7 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $3.7 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation for FY 1979 would continue aid to State and local governments through the Law Enforcement Assistance Administration (LEAA) at about present levels of activity. The Committee rejects the Senate Judiciary Committee proposal to provide for additional LEAA prison construction as premature at this time. The Committee recommendation accepts current law funding levels and about half of the cost of new initiatives as recommended by the President, and the Senate authorizing and appropriation committees. These initiatives would provide additional funding for LEAA State planning grants, State and local antitrust grants, aid for juvenile delinquency, community anticrime programs, and new assistance to victims of crime and to public safety officers.

The five-year total would support criminal justice assistance at about the present program level in budget authority, but at a slightly lower level in outlays. The Committee recommendation would not permit present programs to be funded at the same real dollar level if the FY 1979 new initiatives were also funded during FY 1980–83. This would require that the LEAA program be restructured to accommodate the new initiatives, or that the new initiatives be funded in lieu of some other LEAA assistance to State and local governments.

MISSION 2: CRIMINAL JUSTICE ASSISTANCE

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983

Outlays	1.3	1.4	1.4	1.4	1.5
Budget Committee recommendation:					
Budget authority	.7	.7	.7	.8	.8
Outlays	.7	.7	.7	.7	.8

(3) *Other Administration of Justice Programs.*—The Committee recommends $1.5 billion in budget authority and $1.4 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $8.2 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation for FY 1979 would support Federal litigative, judicial, and correctional activities at about present program levels, and would also accommodate one-fourth of the total expenditures for new initiatives proposed by the President and the Senate authorizing and appropriations committees. These initiatives recommend higher levels of spending for Legal Services to indigents, some increases for U.S. Attorneys, U.S. Marshals, and new Federal judges. They also propose other increases for Federal bankruptcy reform, attorney fees in certain civil actions, and for speedy trial and pretrial services.

The five-year total assumes that greater program efficiencies can be achieved to hold down the costs in later years. The Committee included funds for about three-fourths of the estimated cost of the discretionary inflation adjustment needed to keep programs at constant real levels. The Committee assumes that these reductions in FY 1979–83 can be made without impairing program activities. However, if new initiatives recommended in FY 1979 result in higher program costs in later years comparable reductions are assumed to be made in other programs.

MISSION 3: OTHER ADMINISTRATION OF JUSTICE PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.4	1.4	1.5	1.5	1.6

Tax expenditures related to this function

There are no tax expenditures related to this function.

(800) GENERAL GOVERNMENT

National need and missions

The national need addressed by *General Government* is provision of certain centralized functions of the Federal Government. Federal programs meet this need through such services and activities as: the Legislative branch; the executive offices of the President; central fiscal and financial operations; and centralized property and personnel management activities.

The major mission areas in *General Government* are: (1) legislative functions, and (2) other general government programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	3.9	3.4
Fiscal year 1978 estimate	3.6	3.7
Fiscal year 1979:		
Current law	3.9	3.9
Current policy	4.0	4.0
President's budget request	4.4	4.3
Appropriations Committee	4.4	4.3
Authorizing committees	4.2	4.1
Budget Committee recommendation	4.1	4.1

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $21.0 billion in both budget authority and outlays for *General Government*, while *current policy* would cost an additional $1.6 billion in budget authority and $1.5 billion in outlays. The implications of current trends in the two major mission areas are:

(1) *Legislative Functions.—Current law* would cost a total of $4.8 billion in budget authority and $4.9 billion in outlays over the FY 1979–83 period. Non-pay supporting assistance would decline by about 9 percent in real terms, due to rising prices, and would not be adequate to meet expected needs. *Current policy* would cost an additional $0.3 billion in both budget authority and outlays, and would sustain real levels of supporting activities.

(2) *Other General Government Programs.—Current law* would cost a total of $16.2 billion in budget authority and $16.1 billion in outlays over the FY 1979–83 period. Non-pay supporting assistance would decline by about 11 percent in real terms, due to inflation, and probably would not be adequate to meet expected needs. *Current policy* would cost an additional $1.2 billion in both budget authority and outlays, and would sustain real levels of supporting activities.

Future-year choices

(1) *Legislative Function:* (a) *Congressional Services.*—The increasing legislative workload has resulted in a 20 percent increase in Congressional staff over the past five years. If a similar increase is required over the next five years, additional annual costs of staff and supporting facilities would be about $0.1 to $0.2 billion in FY 1983.

(b) *Congressional Campaign Financing.*—There are several proposals before the Congress to provide Federal financing for Congressional as well as Presidential campaigns, up to a maximum of 50 percent of primary and general campaign spending ceilings, or about 20 cents per vote on a national average. This would cost about $0.1 billion in each election year.

(2) *Other General Government Programs: Internal Revenue Service.*—An increase in funding for IRS may be recommended, to help the Service absorb an increasing workload, develop new automated processing systems, and increase the detection of unified returns and unpaid taxes. Based on experience over the past 5 years, a 2 percent annual increase in personnel, or 10,000 additional employees by FY 1983, might be necessary, at an annual cost in FY 1983 of up to $0.2 billion.

Committee recommendations

The Committee recommends $4.1 billion in both budget authority and outlays for this function in FY 1979. The Committee anticipates that these figures will total $22.2 billion in budget authority and $22.3 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.9	4.0	4.2	4.4	4.6
Outlays	3.9	4.1	4.2	4.3	4.5
Current policy:					
Budget authority	4.0	4.2	4.5	4.8	5.1
Outlays	4.0	4.3	4.5	4.7	5.0
Authorizing committees:					
Budget authority	4.2	4.4	4.8	5.2	5.1
Outlays	4.2	4.4	4.8	5.1	5.5
Budget Committee recommendation:					
Budget authority	4.1	4.2	4.5	4.7	4.8
Outlays	4.1	4.3	4.4	4.7	4.8

For the missions in this function, the Committee makes the following recommendations:

(1) *Legislative Functions.*—The Committee recommends $0.9 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $5.1 billion in budget authority and $5.2 billion in outlays over the FY 1979–83 period.

The Committee recommendation for FY 1979 would generally support legislative activity at the same real level of activity as now exists. It would also permit funding of Sunset legislation and other small housekeeping expenditures at the levels recommended by the Senate Governmental Affairs Committee.

The five-year total generally would allow for the continuation of the same real level of legislative activity as now exists.

MISSION 1: LEGISLATIVE FUNCTIONS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	0.9	0.9	1.0	1.0	1.1
Outlays	.9	1.0	1.0	1.0	1.1
Current policy:					
Budget authority	.9	1.0	1.0	1.1	1.2
Outlays	1.0	1.0	1.0	1.1	1.2
Authorizing committees:					
Budget authority	.9	1.0	1.0	1.1	1.2
Outlays	1.0	1.0	1.0	1.1	1.2
Budget Committee recommendation:					
Budget authority	.9	.9	1.0	1.1	1.1
Outlays	.9	1.0	1.0	1.1	1.1

(2) *Other General Government Programs.*—The Committee recommends $3.2 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $17.1 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation for FY 1979 would generally support fundamental government activities for executive direction and management, central fiscal operation, property and records management, and certain other government activity at about present program levels. It would also permit additional funding for about one-third of the total increases above current law recommended in the President's budget and by the Senate authorizing committees for this mission. These optional spending proposals include additional funding for the Internal Revenue Service, the Bureau of Public Debt, and other central fiscal operations, additional funding for the Trust Territories; higher levels of funding for general property and other programs; and small amounts proposed for administrative law reform and for a new National Growth and Development Commission. The Committee makes no specific recommendation as to which new initiatives should be funded.

The five-year totals would generally result in a declining level of funding in support of the Executive Office of the President, the Treasury Department, the General Services Administration, and other independent agencies which oversee the general operation of the Federal Government. The Committee recommendation provides for three-fourths of the discretionary inflation adjustments needed to maintain present program levels over the next five years. This would require reduction of waste and greater efficiency in existing programs, or elimination of some programs over the next five years.

MISSION 2: OTHER GENERAL GOVERNMENT PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	3.0	3.1	3.3	3.3	3.5
Outlays	3.0	3.1	3.2	3.3	3.5
Current policy:

Individuals	60	75	60	85	65	90
Corporations						

Note: All estimates are rounded to the nearest $5,000,000.

(850) GENERAL PURPOSE FISCAL ASSISTANCE

National need and missions

The national need addressed by *General Purpose Fiscal Assistance* is strengthening federalism through general fiscal assistance to State and local governments. Federal programs meet this need through: general fiscal assistance that may be used essentially without restriction to meet urgent State and local needs; special fiscal assistance to jurisdictions where Federal land holdings deprive governments of tax revenues or where Federal installations impose special burdens on local systems such as schools, roads, and other services; and "counter-cyclical" assistance to areas of high unemployment so that essential services can be maintained.

The major mission areas in *General Purpose Fiscal Assistance are*: (1) general revenue sharing, and (2) other general purpose fiscal assistance programs.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	9.3	9.5
Fiscal year 1978 estimate	9.7	9.6
Fiscal year 1979:		
Current law	9.1	9.1
Current policy	9.1	9.1
President's budget request	15.1	9.8
Appropriations Committee	16.0	9.2
Authorizing committees	9.7	9.7
Budget Committee recommendation	9.7	9.6

Current law and current policy for FY 1979–83

Over the next five years, *current law* would cost a total of $43.6 billion in both budget authority and outlays for *General Purpose Fiscal Assistance*, while *current policy* would cost an additional $2.9 billion in budget authority and $2.6 billion in outlays. The implications of current trends in the two major mission areas are:

(1) *General Revenue Sharing.—Current law* would cost a total of $34.3 billion in both budget authority and outlays over the FY 1979–83 period. The level of assistance would decline from its present 4 percent total of all State and local revenues, to about 2 percent in FY 1983. This could force some governments, particularly those with stagnant or declining tax bases, to impose sharp tax increases or reductions in services. *Current policy* would cost an additional $2.8 billion in budget authority and $2.5 billion in outlays, and would sustain the current level of assistance in real terms.

(2) *Other General Purpose Fiscal Assistance Programs.—Current law* would cost a total of $9.3 billion in both budget authority and outlays over the FY 1979–83 period. Essentially all programs would sustain their current levels in real terms, with antirecession assistance phasing out as the economy continues to improve. *Current policy* would cost an additional $0.1 billion in both budget authority and outlays, which would sustain the real level of funding for Federal capital improvement loans to the District of Columbia.

Future-year choices

(1) *General Revenue Sharing.*—The current program expires at the end of FY 1980. Although the level of assistance may be changed at that time, it is not expected that the funding level would fall outside the range represented by current law and current policy.

Committee recommendations

The Committee recommends $9.7 billion in budget authority and $9.6 billion in outlays for this function in FY 1979. The Committee anticipates that these figures will total $46.1 billion in budget authority and $46.0 billion in outlays over the FY 1979–83 period.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	9.1	8.5	8.6	8.7	8.8
Outlays	9.1	8.5	8.6	8.7	8.8
Current policy:					
Budget authority	9.1	8.5	9.1	9.6	10.2
Outlays	9.1	8.5	8.9	9.5	10.1
Authorizing committees:					
Budget authority	9.7	9.5	9.6	10.2	10.9
Outlays	9.7	9.5	9.6	10.2	10.9
Budget Committee recommendation:					
Budget authority	9.7	9.7	8.8	8.9	9.1
Outlays	9.6	9.7	8.8	8.9	9.0

For the missions in this function, the Committee makes the following recommendations:

(1) *General Revenue Sharing.*—The Committee recommends $6.9 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $34.3 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation assumes funding of General Revenue Sharing at current levels through 1983, and is not meant to prejudice the action of the Congress when the general revenue sharing program is considered for reauthorization in fiscal year 1981.

MISSION 1: GENERAL REVENUE SHARING

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	6.9	6.9	6.9	6.9	6.9
Outlays	6.9	6.9	6.9	6.9	6.9
Current policy:					
Budget authority	6.9	6.9	7.3	7.8	8.3
Outlays	6.9	6.9	7.2	7.7	8.2
Authorizing committees:					
Budget authority	6.9	6.9	6.9	6.9	6.9
Outlays	6.9	6.9	6.9	6.9	6.9
Budget Committee recommendation:					
Budget authority	6.9	6.9	6.9	6.9	6.9
Outlays	6.9	6.9	6.9	6.9	6.9

(2) *Other General Purpose Fiscal Assistance.*—The Committee recommends $2.8 billion in budget authority and $2.7 billion in outlays for this mission in FY 1979. The Committee anticipates that these figures will total $11.8 billion in budget authority and $11.7 billion in outlays over the FY 1979–83 period.

The Committee recommendation would accommodate aid to distressed localities under a supplemental fiscal assistance program at levels requested in the President's urban initiative. The Committee assumes that such assistance would be provided only to local governments experiencing a high degree of fiscal distress. The recommendation also assumes funding of incentive grants to encourage States to provide fiscal assistance to distressed local governments.

MISSION 2: OTHER GENERAL PURPOSE FISCAL ASSISTANCE PROGRAMS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	2.3	1.6	1.7	1.8	1.9
Outlays	2.3	1.6	1.7	1.8	1.9
Current policy:					
Budget authority	2.3	1.6	1.7	1.8	2.0
Outlays	2.3	1.6	1.7	1.8	2.0
Authorizing committees:					
Budget authority	2.8	2.6	2.8	3.4	4.0
Outlays	2.8	2.6	2.8	3.4	4.0
Budget Committee recommendation:					
Budget authority	2.8	2.8	1.9	2.1	2.2
Outlays	2.7	2.8	1.9	2.1	2.2

Tax expenditures related to this function

The estimated revenue losses resulting from tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Exclusion of interest on general-purpose State and local debt:						
Individuals	1,925	2,150	2,309	2,655	2,950	3,255
Corporations	3,470	3,865	4,305	4,780	5,310	5,845
Deductibility of nonbusiness State and local taxes (other than on owner-occupied homes and gasoline):						
Individuals	8,505	9,440	10,480	11,630	12,910	14,330
Corporations						
Tax credit for corporations doing business in U.S. possessions:						
Individuals						
Corporations	485	520	565	610	660	710
Total	14,385	15,975	17,740	19,675	21,830	24,140

Note: All estimates are rounded to the nearest $5,000,000.

(900) INTEREST

National need and missions

The national need addressed by *Interest* is payment of interest on the public debt and miscellaneous other interest payments and collections by the Federal Government.

The major mission areas in *Interest* are: (1) interest on the public debt, and (2) other interest.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	38.1	38.1
Fiscal year 1978 estimate	42.4	42.4
Fiscal year 1979:		
Current law	46.8	46.8
Current policy	46.8	46.8
President's budget request	49.0	49.0
Appropriations Committee	49.0	49.0
Authorizing committees	49.4	49.4
Budget Committee recommendation	46.8	46.8

Current law and current policy for fiscal years 1979–83

Current law and current policy are the same, and over the next five years would

cost a total of $273.9 billion in both budget authority and outlays for *Interest*. The implications of current trends in the two major mission areas are:

(1) *Interest on the Public Debt.—Current law* and *current policy* are the same, and would cost a total of $309.8 billion in both budget authority and outlays over the FY 1979–83 period. This would provide for interest payments on the existing public debt and on the additional debt associated with the fiscal policies projected by the Congressional Budget Office to be consistent with long-term economic assumptions, at estimated rates of interest that are consistent with such policies.

(2) *Other Interest.—Current law* and *current policy* are the same, and would result in total net interest collections, i.e., deductions from both budget authority and outlays, of—$35.9 billion over the FY 1979–83 period.

Future-year choices

Since *Interest* requirements are determined by the level of the public debt and the interest rates that must be paid on borrowings, Congresssional choices affecting *Interest* essentially are limited to the fiscal policy decisions that affect the level of the debt and, especially interest rates. Interest rates also are significantly affected by monetary policy, which largely is not subject to direct control by the Congress.

It is not feasible at present to estimate the effect on *Interest* of future-year Congressional choices.

Committee recommendations

The Committee recommends $46.8 billion in both budget authority and outlays for this function in FY 1979. The Committee anticipates that these figures will total $273.9 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee's recommended targets are the same as the current law/current policy estimates for both missions in this function, and are fully consistent with the Committee's economic assumptions and fiscal policy recommendations.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	46.8	51.6	55.9	58.7	60.8
Outlays	46.8	51.6	55.9	58.7	60.8
Current policy:					
Budget authority	46.8	51.6	55.9	58.7	60.8
Outlays	46.8	55.6	55.9	58.7	60.8
Authorizing committees:					
Budget authority	49.4	51.6	55.9	58.7	60.8
Outlays	49.4	55.6	55.9	58.7	60.8
Budget Committee recommendation:					
Budget authority	46.8	55.6	55.9	58.7	60.8
Outlays	46.8	55.6	55.9	58.7	60.8

For the missions in this function, the Committee makes the following recommendation:

(1) *Interest on the Public Debt.*—The Committee recommends $53.2 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total $309.8 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation will provide for interest payments on the existing public debt and on the additional debt resulting from fiscal policies consistent with the Committee's economic assumptions, at interest rates that are consistent with these policies and assumptions.

MISSION 1: INTEREST ON THE PUBLIC DEBT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	53.2	58.4	63.1	63.3	68.8
Outlays	53.2	58.4	63.1	66.3	68.8
Current policy:					
Budget authority	53.2	58.4	63.1	66.3	68.8
Outlays	53.2	58.4	63.1	66.3	68.8
Authorizing committees:					
Budget authority	55.8	58.4	63.1	66.3	68.8
Outlays	55.8	58.4	63.1	66.3	68.8
Budget Committee recommendation:					
Budget authority	53.2	58.4	63.1	66.3	68.8
Outlays	53.2	58.4	63.1	66.3	68.8

(2) *Other Interest.*—The Committee recommends —$6.4 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total —$35.9 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation will provide for miscellaneous other interest payments and for interests collections by the Federal Government.

MISSION 2: OTHER INTEREST

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	−6.4	−6.8	−7.2	−7.6	−8.0
Outlays	−6.4	−6.8	−7.2	−7.6	−8.0
Current policy:					
Budget authority	−6.4	−6.8	−7.2	−7.6	−8.0
Outlays	−6.4	−6.8	−7.2	−7.6	−8.0
Authorizing committees:					
Budget authority	−6.4	−6.8	−7.2	−7.6	−8.0
Outlays	−6.4	−6.8	−7.2	−7.6	−8.0
Budget Committee recommendation:					
Budget authority	−6.4	−6.8	−7.2	−7.6	−8.0
Outlays	−6.4	−6.8	−7.2	−7.6	−8.0

Tax expenditures related to this function

The estimated revenue losses resulting from the tax expenditures related to this function are set forth in the following table:

[Fiscal years, in millions of dollars]

	1978	1979	1980	1981	1982	1983
Deferral on interest on savings bonds:						
Individuals	625	670	725	780	840	905
Corporations						

Note.—All estimates are rounded to the nearest $5,000,000.

(920) ALLOWANCES

National need and missions

The National need addressed by *Allowances* is providing the annual pay increases which permits employees of Federal agencies other than the Department of Defense to maintain pay comparability with their private sector counterparts (equivalent pay increases for Department of Defense employees are provided for in the *National Defense* function).

The single mission area in *Allowances* is civilian agency pay raises.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual		
Fiscal year 1978 estimate	0.9	0.9
Fiscal year 1979:		
Current law	1.1	1.1
Current policy	1.1	1.1
President's budget request	1.2	1.3
Appropriations Committee	4.2	2.8
Authorizing committees	1.3	1.4
Budget Committee recommendation	.7	.7

Current law and current policy for FY 1979–83

Current law and *current policy* are the same, and over the next five years would cost a total of $7.0 billion in budget authority and $6.9 billion in outlays for allowances for *civilian agency pay raises*. This would provide annual pay increases of 6.4 percent in FY 1979, 7.7 percent in FY 1980, 7.0 percent in FY 1981, 6.6 percent in FY 1982 and 6.6 percent in FY 1983, the levels estimated by the Congressional Budget Office to be required to maintain comparability between Federal and private sector pay.

Future-year choices

The President recently proposed changes in the compensation procedures for senior Federal executives, and tentatively is considering a proposal to adopt a "full compensation" approach to determining comparability of Federal compensation with the private sector. Prospects for enactment of these proposals are uncertain, as are their budgetary impacts.

There also are the future-years' options of continuing the practice of past budget resolutions in requiring Federal agencies to absorb part of the costs of each year's pay raise through savings in other activities. This could produce savings of up to $0.4 billion in FY 1983.

Committee recommendations

The Committee recommends $0.7 billion in both budget authority and outlays for FY 1979. The Committee anticipates that these figures will total $5.4 billion in budget authority and $5.3 billion in outlays over the FY 1979–83 period.

The Committee recommendation reflects the Committee's assumption that the October 1978 comparability pay raise for Federal employees will be limited to 5 percent, and that agencies will be required to absorb 20 percent of the costs of that pay raise through savings in other activities.

The five-year totals assume that annual pay raises will occur for FY 1980–83 at the levels estimated by the Congressional Budget Office to be necessary to maintain the pay of Federal employees at levels comparable to those of their private sector counterparts, and assume that agency absorption of 20 percent of pay raise costs will be required in each of those years.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	1.1	1.4	1.4	1.4	1.5

(950) UNDISTRIBUTED OFFSETTING RECEIPTS

National need and missions

The national need addressed by *Undistributed Offsetting Receipts* is providing deductions from budget authority and outlays due to Federal receipts that cannot reasonably be assigned to other functions.

The major mission areas in *Undistributed Offsetting Receipts* are: (1) rents and royalties in the Outer Continental Shelf ("OCS receipts"), (2) employer share, employee retirement, and (3) interest received by trust funds.

Current trends

The following table shows the Committee recommendation for FY 1979 as compared to recent trends in the function and other alternatives presented to the Committee.

[In billions of dollars]

	Budget authority	Outlays
Fiscal year 1977 actual	−15.1	−15.1
Fiscal year 1978 estimate	−17.0	−17.0
Fiscal year 1979:		
Current law	−17.2	−17.2
Current policy	−17.2	−17.2
President's budget request	−16.5	−16.5
Appropriations Committee	−16.0	−16.0
Authorizing committees	−16.2	−16.2
Budget Committee recommendation	−17.2	−17.2

Current law and current policy for fiscal year 1979–83

Current law and current policy are the same, and over the next five years would result in total deductions of—$103.6 billion from both budget authority and outlays for *Undistributed offsetting Receipts*. The implications of current trends in the three major mission areas are:

(1) *Rents and Royalties on the Outer Continental Shelf ("OCS Receipts").—Current law and current policy* are the same, and would result in total deductions of—$17.3 billion from both budget authority and outlays. These estimates assume the revised OCS management procedures included in S. 9, the OCS Act Amendments, which would, *inter alia*, require increased use of "royalty" bidding, where payments are made to the Federal Government as production of oil and gas occurs, in lieu of "bonus" bidding, which requires initial payments before production, so as to assist smaller producers in obtaining OCS leases.

(2) *Employer Share, Employee Retirement.—Current law and current policy* are the same, and would result in total deductions of—$31.9 billion from both budget authority and outlays over the FY 1979–83 period. This would avoid double-counting the contributions that Federal agencies make toward retirement for their employees, which are included in personnel benefit costs in other functions.

(3) *Interest Received by Trust Funds.—Current law* and *current policy* are the same, and would result in total deductions of—$54.5 billion from both budget authority and outlays over the FY 1979–83 period. This would provide deductions for the intrabudgetary interest payments on U.S. securities held by trust funds; these payments are included in interest on the public debt in the *Interest* function.

Future-year choices

No major choices affecting *Undistributed Offsetting Receipts* are currently expected in the FY 1980–83 period.

Committee recommendations

The Committee recommends—$17.2 billion in both budget authority and outlays for this function in FY 1979. The Committee anticipates that these figures will total—$103.6 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation is the same as the current law/current policy estimate for all components of this function.

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	−17.2	−19.4	−20.3	−23.0	−23.7
Outlays	−17.2	−19.4	−20.3	−23.0	−23.7
Current policy:					
Budget authority	−17.2	−19.4	−20.3	−23.0	−23.7
Outlays	−17.2	−19.4	−20.3	−23.0	−23.7
Authorizing committees:					
Budget authority	−16.2	−17.6	−19.0	−20.5	−22.0
Outlays	−16.2	−17.6	−19.0	−20.5	−22.0
Budget Committee recommendation:					
Budget authority	−17.2	−19.4	−20.3	−23.0	−23.7
Outlays	−17.2	−19.4	−20.3	−23.0	−23.7

For the missions in this function, the Committee makes the following recommendations:

(1) *Rents and Royalties on the Outer Continental Shelf ("OCS Receipts").*—The Committee recommends −$2.8 billion in both budget authority outlays for this mission in FY 1979. The Committee anticipates that these figures will total −$17.3 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation assumes the revised OCS management procedures established by S. 9, the OCS Act Amendments.

MISSION 1: RENTS AND ROYALTIES ON THE OUTER CONTINENTAL SHELF

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current laws:					
Budget authority	−2.8	−3.6	−3.1	−4.3	−3.5
Outlays	−2.8	−3.6	−3.1	−4.3	−3.5
Current policy:					
Budget authority	−2.8	−3.6	−3.1	−4.3	−3.5
Outlays	−2.8	−3.6	−3.1	−4.3	−3.5
Authorizing committees:					
Budget authority	−1.8	−1.8	−1.8	−1.8	−1.8
Outlays	−1.8	−1.8	−1.8	−1.8	−1.8
Budget Committee recommendation:					
Budget authority	−2.8	−3.6	−3.1	−4.3	−3.5
Outlays	−2.8	−3.6	−3.1	−4.3	−3.5

(2) *Employer Share, Employee Retirement.*—The Committee recommends −$5.4 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total −$31.9 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation will provide amounts necessary to offset the intrabudgetary contributions made by Federal agencies to employee retirement systems, which are included as part of personnel benefit costs in other functions.

MISSION 2: EMPLOYER SHARE, EMPLOYEE RETIREMENT

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	−5.4	−5.8	−6.3	−6.9	−7.5
Outlays	−5.4	−5.8	−6.3	−6.9	−7.5
Current policy:					
Budget authority	−5.4	−5.8	−6.3	−6.9	−7.5
Outlays	−5.4	−5.8	−6.3	−6.9	−7.5
Authorizing committees:					
Budget authority	−5.4	−5.8	−6.3	−6.9	−7.5
Outlays	−5.4	−5.8	−6.3	−6.9	−7.5
Budget Committee recommendation:					
Budget authority	−5.4	−5.8	−6.3	−6.9	−7.5
Outlays	−5.4	−5.8	−6.3	−6.9	−7.5

(3) *Interest Received by Trust Funds.*—The Committee recomemnds −$9.1 billion in both budget authority and outlays for this mission in FY 1979. The Committee anticipates that these figures will total −$54.5 billion in both budget authority and outlays over the FY 1979–83 period.

The Committee recommendation will provide amounts necessary to offset intrabudgetary payments of interest on U.S. securities held by the trust funds, which are included as part of interest on the public debt in the *Interest* function.

MISSION 3: INTEREST RECEIVED BY TRUST FUNDS

[In billions of dollars; fiscal years]

	1979	1980	1981	1982	1983
Current law:					
Budget authority	−9.1	−10.0	−10.9	−11.8	−12.7
Outlays	−9.1	−10.0	−10.9	−11.8	−12.7
Current policy:					
Budget authority	−9.1	−10.0	−10.9	−11.8	−12.7
Outlays	−9.1	−10.0	−10.9	−11.8	−12.7
Authorizing committees:					
Budget authority	−9.1	−10.0	−10.9	−11.8	−12.7
Outlays	−9.1	−10.0	−10.9	−11.8	−12.7
Budget Committee recommendation:					
Budget authority	−9.1	−10.0	−10.9	−11.8	−12.7
Outlays	−9.1	−10.0	−10.9	−11.8	−12.7

Tax expenditures related to this function

There are no tax expenditures related to this function

Mr. MUSKIE. A full discussion of the committee's revenue recommendations is also contained in the committee's report. But let me summarize for you now some important features of those recommendations.

The committee recommends a revenue floor of $443.3 billion for fiscal year 1979.

The committee revenue floor allows for a $19.4 billion income tax reduction in addition to the extension of the general tax rate reductions scheduled to expire at the end of calendar 1978.

The $19.4 billion reduction represents a $25 billion reduction on a full year basis, but assumes that all the additional rate reductions first would become effective on January 1, 1979, for only 9 months of fiscal year 1979.

By comparison, the administration recommended a full fiscal year $25 billion in additional net tax reductions. Primarily because of the later effective date assumed by the committee for new rate reductions. The committee recommends $5.2 billion less in net revenue reduction legislation for fiscal year 1979 than does the administration.

The committee specifically rejected a proposal to reduce social security taxes and to partially finance the hospital insurance trust fund with appropriated general revenues.

I strongly concur with the committee in this decision. The American people broadly approve of the existing social security system—a system based for over 40 years on trust funds financed solely with social security tax contributions.

The link between social security benefits and taxes should not be severed by a general financing mechanism without the most deliberate and careful study and analysis.

The 1977 Social Security Amendments first take effect in January 1979. They will have a limited effect in 1979 on both individual workers and the economy. Therefore, the Budget Committee recommends that Congress not act in haste to block those increases. At least four

major studies of the social security system are scheduled during the next year. We should have the benefit of the results of these studies before further action is taken.

Mr. President, tinkering with the social security system every year, even if in response to voter concerns in an election year, will only serve to reduce public confidence in our system and the ability of the Congress to handle it responsib.y.

The committee's revenue floor would allow for a number of legislative proposals, including a college tuition tax credit, a targeted employment tax credit, and an expanded earned income credit.

I was outvoted by the committee on the tuition tax credit. Personally, I oppose enactment of a tuition tax credit, whether it applies solely to college tuition or also to elementary and secondary school costs. Enactment of such a credit would be inflationary at a time when the Senate should do everything it can to contain inflation. The credit would be inflationary because most of its benefits would be captured by educational institutions in the form of higher tuition charges. Taxpayers would be little or no better off than they are without the credit.

Moreover, all the reliable data indicate that, contrary to public perceptions, tuition costs are not rising faster than the average income levels. The need for this credit has not been demonstrated. As a result, a tuition tax credit is neither efficient nor justifiable education policy.

I should add that the committee made no allowance for the increased direct grant approach to tuition aid which the President offered as an alternative to the tax credit

CONTROLLING THE FREE-SPENDING MENTALITY

Mr. President, I have described some of the major implications of the recommended 1979 budget and some of the Budget Committee's concerns in shaping it.

But Mr. President, let there be no doubt that the Senate itself holds the key to success or failure of budget reform.

The congressional Budget Act reforms have gained a momentum and have had an influence on congressional spending as great as any for which we dared hope when they were enacted 4 years ago.

But I must frankly advise the Senate that this may well be the decisive year in which the fate of this attempt at fiscal responsibility will be sealed.

We simple cannot afford to enact every bill, every program which appeals to us—or which some interest group is pressuring us to enact. Each of us in the Senate has a greater responsibility. That is to be responsible with the public interest, the public purse, and the public trust. To ignore this responsibility is to bankrupt our Nation, destroy our budget process and betray the confidence and well-being of the people we are supposed to represent.

Rather, we must choose carefully those bills, those programs, which we have judged most meritorious and most advantageous to the greatest number of American citizens. We cannot afford them all.

Mr. President, in the absence of congressional restraint we could face the very real possibility of an $80 billion deficit in fiscal year 1979.

Not the $61 billion deficit the President proposed.

Not the $56 billion deficit this resolution assumes.

But $80 billion. Almost a 10-percent increase in our national debt to be added in a single year.

This $80 billion deficit was not plucked out of midair. It was taken from the reports of just two committees of the Senate.

First, the Appropriations Committee recommended total outlays in fiscal year 1979 of $508 billion. Second, the Committee on Finance recommended tax cuts to reduce fiscal year 1979 revenues to $428 billion.

The difference between the spending recommended by the Appropriations Committee and the taxes recommended by the Finance Committee is $80 billion. And the requests of the other standing committees would make the total go even higher—beyond $90 billion.

Mr. President, the Budget Committee exercised great care and restraint in reporting to the Senate a $55.6 billion deficit. And now the full Senate must act responsibly in reviewing the congressional budget and adhering to the budget we adopt.

Let Senators who disagree with the recommedations of the Budget Committee openly acknowledge their positions and offer amendments to change the results.

We cannot afford to have Senators supporting the resolution with mental reservations which only emerge when later spending or revenue measures hit the floor. We should all be cognizant of the impact any changes could have on the deficit—and on the Federal budget.

Mr. President, this year the Senate has already demonstrated on the agriculture bill a willingness to pass legislation without pausing to examine its budgetary and inflationary consequences.

Thanks to the House of Representatives which rejected the conference report by almost a 2-to-1 margin, we will not have to live with the consequences of such legislation. We will not have to respond to the American people when they ask why we enacted a bill which would have increased the inflation rate for food by 1.1 percent to 1.5 percent in fiscal year 1979.

But we cannot continue to rely on the the President or the House of Representatives to demonstrate fiscal responsibility in Washington.

The Senate must also send a signal to the American people that we are serious about restraining Federal spending, that we do intend to hold the line on inflation, that we will reduce the deficit.

And we must start today—with the first budget resolution. I realize that the budget recommended by the committee does not provide each committee with everything it wanted Each committee, in making its request for fiscal year 1979, addressed national needs as it saw fit, and none should be condemned for doing so.

But we cannot enact all of this legislation. We cannot afford it all.

I know it, the other Members of this body know it.

The American people know it.

We must begin to show our people that we are doing our very best to hold Federal spending to the lowest possible level consistent with effective fiscal policy to meet the Nation's needs.

Mr. President, any additional spending and a higher deficit than the committee's recommendation would send the wrong signal to the American people, and I must oppose all such amendments.

Mr. President, in closing let me express by great personal admiration and gratitude to the distinguished Senator from Oklahoma (Mr. BELLMON) the ranking member on the Budget Committee, for his consistent support and counsel in upholding the goals and objectives of the Budget Act. I could not have asked to work with an individual more devoted to the maintenance of the integrity of the budget process. Without his unflinching support the budget process would not have had 3 years of positive achievements of which we can all be proud.

Let me also express my thanks to the staffs of the Budget Committee and the Congressional Budget Office for the diligent and excellent and highly professional support they have provided in the preparation of the first budget resolution. Their task this year was especially challenging as the committee moved into multiyear and mission budgeting. But we have come to expect the highest professional performance from them and we were not disappointed this year.

Mr. President, I yield the floor.

Mr. BELLMON. Mr. President, I wish to begin my remarks by congratulating my good friend Chairman MUSKIE for the remarkably incisive statement he has just now made. He covers not only the fiscal year 1979 budget but the entire panopoly of issues and attitudes which underlie the budget process.

His remarks are totally in keeping with the total dedication and inspired leadership Chairman MUSKIE has given the budget process during the past 3 years. His efforts plus the work of an able staff have brought the budget process through its infancy. It is not yet full grown but it is a healthy adolescent—alive and kicking. I am convinced that it can and must be around for a long, long time.

Major credit must go to Chairman MUSKIE for the contribution he has made in the important leadership position the Senate has given him.

Mr. President, I ask unanimous consent that the following members of the staff of the Committee on the Budget be allowed to remain on the floor during consideration of and votes on Senate Concurrent Resolution 80:

Robert S. Boyd, Charles McQuillen, William Stringer, Gary Kuzina, Robert Fulton, Barry Kinsey, Carol Cox, Becky Davies, Paul Carttar, Mike Pillsbury, and Joyce Purcell.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Also, Mr. President, I ask unanimous consent to add to the request the names of Rick Brandon of Senator CHILES' staff and Hal Cross, Karyn Mandan, and Michael Shorr of Senator JAVITS' staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator from Oklahoma yield?

Mr. BELLMON. I yield.

Mr. HARRY F. BYRD, JR. I ask unanimous consent that John I. Brooks of my staff be granted the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, the Senate's consideration today of the first concurrent resolution for fiscal year 1979 marks the beginning of the fourth year of the congressional budget process. It is through this process that Congress has its best opportunity to address systematically its economic policies and national priorities and to express it own will regarding the total level of Federal revenue and expenditures.

By and large, these past few years have demonstrated that Congress does have the ability to effectively reassert its fiscal role in the face of ever increasing executive power. In fact, one need only remember the haphazard process that predated the Budget Act in order to appreciate fully the advances that this body has made in harnessing runaway Federal spending and imposing a considerable degree of order. In the past 3 years, Congress has operated within the set budgetary constraints. Spending ceilings have not ben violated; authorizing legislation has been reported on time; and with few exceptions relating to attachment of legislation has been reported on time; and with few exceptions relating to attachment of legislative amendments, action on appropriation bills has been completed prior to the start of the relevant fiscal year. I submit that all of those are major accomplishments.

As with any new procedure, these initial years have been far from troublefree. Perhaps the greatest problem is attributable to simple political realities—our system of Government tends to focus on attempts to deal with very specific problems and individual pieces of legislation. There is less concern for the larger, more general, yet ultimately deadly, dangers such as runaway inflation. Thus, the temptation to vote for each new or expanded spending program is enormous. Efforts to confront the total costs of the actions we take, and thus avoid the less apparent but more dangerous longer term results, are less attractive. Since the budget process is the most visible effort to bring the vast range of Federal spending into perspective, it is cast by some as the "spoiler." Consequently, in our annual battles between the total budget and its thousands of components, Senators and Representatives who voted for the resolution are tempted to abandon the budget and align themselves with particular and always appreciative special interests. It is a sad fact of political life that legislators who want to do good can, and historically have, by their largess, damaged the body politic they seek to serve. This is evidenced by the fact that the public debt next year will exceed $850 billion and the interest cost of the debt will be over $46 billion in fiscal year 1979.

This moves some commentators to claim that the budget process is ultimately doomed—that the conflicting interests of Members of Congress makes its demise inevitable, that the advocacy of particular programs and interests will forever prevent us from considering the greater issues of inflation and economic vitality.

Such claims are unfortunate and untrue, for one simple reason: Legislators, even while subject to intense constituent pressure, have time after time proven themselves capable of highly responsible action. Thus, when fully understood, the congressional budget process makes too much sense to be allowed to fail. As Congress holds constitutional control over Federal purse strings, as Congress stands as the branch of our Government most clearly representative of the American people, as Congress alone can make the will of the people into law, it would be preposterous for this body not to have a mechanism whereby it can clearly view, effectively control, and adjust in a timely and intelligent way, the scope of Federal activities.

The former system—or I might say lack of system—in which spending and revenue policies were nothing more than the end result of dozens of separate, unrelated decisions, was an embarrassment to this body and a threat to the economic vitality of the country. But if Congress, already equipped with an effective process for ordering national priorities and establishing coherent fiscal policy, were to destroy that system or to render it ineffective and useless, this would be no mere embarassment. Rather, it would be a nationtal disgrace.

Mr. President, the congressional budget process can be better understood and strengthened. It must survive. But it will do so only if Members of Congress and the committees are willing to fit their individual desires into the broader national purposes through the budget process.

Let me illustrate my point. The total recommendations of all Senate committees would have raised the fiscal year 1979 deficit to over $90 billion. At the same time, through the timely and informative reports from other committees, the Budget Committee was able to produce a resolution which attempts to balance the various recommendations while keeping the deficit at a more appropriate level than $90 billion.

The need for this cooperation does not end with establishment of the budget targets. Once adopted by the Senate, and the House, budget resolutions are a compact toward fiscal responsibility which should be respected by all committees and Members of Congress. If the budget process is to be effective—and it must be—it is imperative that this compact be honored, that individual Senators and Representatives take a stand in favor of their budget resolution, one that belongs to all of us. Defenders of the resolution, once adopted, are defenders of the expressed will of the Senate. They are not spoilers; they are simply doing their job in trying to hold the budget resolution in line with the action which the Senate has agreed to take.

Mr. President, I have noted over the past years various reports by Federal auditing agencies suggesting potential savings through program efficiencies and elimination of fraud and abuse.

A recent report from the office of the Inspector General indicating substantial fraud and abuse in HEW programs is a case in point. The Budget Committee is delighted whenever it can assume savings through such measures. In fact, this resolution assumes savings of $700 million in the medicaid and medicare programs through voluntary hospital cost containment. However, I should point out that the Budget Committee has neither legislative nor oversight functions and it is ultimately the proper authorizing and appropriating committee which must effect these potential savings. The March 15 reports submitted to the Budget Committee this year showed little evidence that such reforms were contemplated by the authorizing committees.

The Budget Committee this year has compiled a 5-year budget designed to provide the Senate with an opportunity to see more clearly the future impact of decisions made for fiscal year 1979.

In addition, the committee has focused its discussions and decisions on the major missions within each functional area of the budget—missions that represent the Federal Government's efforts to address the Nation's principal needs and priorities.

As the distinguished chairman of the Budget Committee, Senator MUSKIE, has often pointed out, no one ever claimed that the fiscal discipline which this process affords would be easy. Far from it. In truth, it is very difficult and demands some measure of personal sacrifice from all of us. But we must find ways of making the advantages to be gained from congressional control of the budget every bit as worthwhile and politically palatable as those advantages sought through advocacy of special interests.

Last year was not an easy one for this process, as the budget targets were repeatedly challenged by efforts to further increase a variety of specific programs. And the Senate was not very successful in repelling these challenges, which ultimately increased the annual cost and the deficit by well over $6 billion.

But even at the most discouraging of moments, I found reason to be optimistic. My greatest source of consolation was the very youth of the congressional budget process. We have made considerable progress in the past 3 years. Members of Congress are still adapting to these relatively new constraints on the old free-spending ways, and all phases of the budget process—from economic analysis to markup to scorekeeping—are being reviewed and refined.

This growing budgetary sophistication is quite evident in the resolution now

before us, as major innovations have been made to more nearly achieve the goals of the congressional budget process.

Perhaps most notably, we have all learned that if budgeting is undertaken only one year at a time, Congress can neither develop its own fiscal policy nor establish general national priorities nor control Federal spending.

Furthermore, the committee has paid particular attention to insuring that the current and future budget recommendations are consistent with our economic goals and assumptions.

This year's resolution also reflects the growing capabilities of the budget process and the Budget Committee to respond to the changing economic environment. Lower-than-expected unemployment, a stubbornly high rate of inflation, and the deteriorating international condition of the U.S. dollar have all suggested a rethinking of fiscal policy, and this budget has answered that challenge.

In contrast to the past 3 years, in which our budgets were most affected by unacceptably high unemployment, this year's greatest concern has been inflation, which recent statistics indicate is still growing. In response, the committee has produced a deficit lower than that anticipated for fiscal year 1978, with a fiscal year 1979 spending level some $20 billion below that suggested by Senate authorizing committees and $9 billion under the Senate Appropriations Committee's recommendation. Further, our deficit is $5.7 billion lower than that requested by the President.

Mr. President, I think I should say at this point that those figures need to be analyzed a little more carefully because there are some assumptions that are necessary to be understood before the comparisons are entirely accurate.

Our deficit, however, is the maximum that we can tolerate without placing undue pressure on monetary authorities and pushing inflation even higher.

Economic considerations also prompted the committee to take action such as responding to the changing character of unemployment by recommending that funding for public service jobs be redirected from cyclical efforts to an attack on structural unemployment; and recommending against introduction of general revenue financing of the social security system, since it was viewed as an over-reaction to problems created by last year's hasty consideration of the social security tax increases.

Moreover, with this resolution, the Budget Committee has reaffirmed its conviction to achieve a balanced budget. As the economy moves toward full employment and as the private sector regains its strength, budget surpluses will become necessary to sustain economic growth and to control inflation. The 5-year recommendations by the committee foresee a balanced budget by fiscal year 1983 if the recovery continues as anticipated and other key assumptions prove correct.

Mr. President, I recognize that many of my colleagues will favor even more vigorous restraints on Federal outlays than are represented by the Budget Committee's recommendations. Indeed, I join them in expressing concern over a budget deficit that—while lower even than the President's—is still larger than I would prefer for this point in the recovery period. But it is significant that we are moving toward a balanced budget, and we must not allow this direction to be changed.

The fiscal year 1979 recommendations constitute a strong budget and are worthy of support by the Senate and the full Congress. However, despite the considerable achievements realized by the committee and embodied in the first concurrent resolution, I have certain reservations regarding the future impact of this year's effort.

First, I am troubled that because of the suggested outyear spending levels in this budget, we have reduced our flexibility to accommodate within reasonable ceilings legislative initiatives which will be introduced in the future. While I do not favor proposals like national health insurance and increased governmental spending on energy, should they be adopted in the next few years, we will likely be forced either to continue deficit spending or raise taxes to meet these new obligations.

I am concerned that a statement to this effect, made in my Additional Views to the report on this resolution, may be misinterpreted by some as a proclamation of support for many of these future initiatives. Rather than voicing my position on the individual issues, I intended by the statement made in my additional views, which is found on page 208 of the report, only to express my doubts about our ability to finance them in the next few years without taking relatively drastic actions, that, through greater prudence, we might avoid.

The second point I should like to make, Mr. President, is that I do not believe that this budget has dealt as effectively as it should have with the issue of national priorities. A mature budget process must ultimately come to grips not simply with spending levels, but also with the needs and desires underlying those levels. However, this year, the necessary tradeoffs between priorities did not occur—the old did not give way to the new. For example, the committee funded a major portion of the administration's urban package which had only recently been received and not yet adequately justified. None of the existing urban programs were identified as ineffective, nor was the funding of any current programs cut. This kind of failure further constrains our ability to deal adequately with future needs.

Mr. President, in that connection, let me point out that this budget represents what I consider to be very substantial increases in most of the significant programs, increases which are more than I would have recommended in acting strictly on my own. I felt, as a member of the committee, that I needed to go along and support the final result of the committee, but it is not a result that I personally would have crafted had I been able to do so on my own authority.

For instance, the growth between fiscal year 1978 and 1979 in budget authority is a total of $65.4 billion and in outlays, the growth is $46.3 billion. This amounts to a 13-percent growth in budget authority and a 10-percent growth in outlays. Both those figures are well above the current rate of inflation.

In defense, the rate of growth is $11.6 billion in budget authority and $11.2 billion in outlays. That amounts to a 10-percent growth in budget authority and an 11-percent growth in outlays, again well in excess of inflation.

In international affairs, and here these figures are slightly inappropriate, because we have taken some new action to put some activities in on-budget where previously, they had been considered off-budget. The indicated growth in budget authority is $3.3 billion; in outlays, $1.2 billion. This is a 35-percent increase in growth in budget authority and a 20-percent growth in outlays.

In agriculture—and again, this is a little difficult to understand, because most of the money will finally come back to the Treasury, since a lot of the budget authority is to cover the cost of commodity loans—that increase in budget authority is $9.4 billion. There is a decrease in outlays of $1.0 billion. The percentage increase in budget authority is 313 percent; in outlays, it is a reduction of 11 percent.

In energy and natural resources, the growth in budget authority is $2.4 billion; the growth in outlays is $5.1 billion. There is an 11-percent increase in budget authority and 29-percent increase in outlays, a good bit of which goes to add to the costs of buying oil for the strategic petroleum reserve.

In education and training, the increase in budget authority is $7 billion; in outlays, it is $4.2 billion. It is a $28.5-percent increase in budget authority and a 16-percent increase in outlays.

In health, the increase is $6.2 billion in budget authority, $5.2 billion in outlays. That, Mr. President, is 13 percent in budget authority and 12 percent in outlays.

In income security, the increase is $12.4 billion in budget authority and $13.5 billion in outlays. That figures out to be a 7-percent increase in budget authority, a 9-percent increase in outlays.

In interest, the increase is $4.4 billion in budget authority, the same amount in outlays, the increase being 10 percent in both categories.

There are other functions that I have not mentioned specifically. In those, the growth in budget authority is $8.7 billion, the growth in outlays is $2.5 billion, giving us a 16-percent growth in budget authority and a 5-percent growth in outlays.

My point, Mr. President, in giving these figures to the Senate is to show that this budget has taken into account the requests for significant growth in most of the major functions and there is simply no basis for any charges that the budget has not adequately responded to the legitimate needs of the country. My concern is that we may have over-responded and, in this way, contributed unnecessarily to inflationary pressures that are already growing.

Mr. President, to get to my third and

final point, as a result of the earlier concerns I expressed, I am apprehensive over the possibility that during the 5-year period encompassed in this resolution the Federal share of the gross national product may grow rather than fall back to its historical level of 18 to 19 percent. If we fail to cause a thorough review of, and make needed adjustments in, ongoing programs in the spending base, the Federal Government will consume an ever-larger share of national wealth and thereby reduce the economic freedom which is essential in a free society.

In spite of these reservations, I believe that the budget recommended in this resolution will be adequate to promote continued expansion of our national economy and reduction of unemployment, while easing persistent inflationary pressures.

Mr. President, the need for budgetary discipline is clear. Equally clear is the need for Congress to intelligently and thoroughly structure the budget to assert strongly its rightful role at the forefront of efforts to set the course America will take this year and in the future. Let us discharge that duty in the highest sense of public service.

Mr. President, I suggest the absence of a quorum.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator withhold that request?

Mr. BELLMON. I am very happy to withhold.

(Mr. LEAHY assumed the chair.)

Mr. HARRY F. BYRD, JR. Mr. President, may I ask several questions, after which I shall probably call up an amendment.

I ask the Senator from Oklahoma, and it has nothing to do with the amendment I plan to call up, to look at page 2 of the legislation, line 22, the international affairs item. In most of these items, the new budget authority figure and the outlay figure are roughly the same. There is not a great deal of difference between them.

Mr. BELLMON. Is the Senator referring to the committee report?

Mr. HARRY F. BYRD, JR. No, I am referring to page 2 of the printed concurrent resolution.

Mr. BELLMON. I believe I am with you.

Mr. HARRY F. BYRD, JR. In most of the items listed in the concurrent resolution, there is not a great deal of difference between the new budget authority and the outlays. There is some difference, but not a tremendous difference. But in the international affairs section, we find that the new budget authority is $12,800 million, with the outlays being $7,200 million. That is a 70-percent difference. I am wondering why there would be such a large differential between outlays and new budget authority.

Mr. BELLMON. Mr. President, it probably would be well for someone who is a little more expert in the international category than I am to respond fully, but I can say part of that discrepancy is due to the fact that we are making provision here for establishing this new so-called Witteveen Facility. This international monetary program will help governments with balance-of-payments problems and to support their currencies. That amounts to $1.8 billion in budget authority. We will soon have a chance to debate and vote on an authorization bill recommended by the Senate Foreign Relations and Banking Committees.

In addition, there is a provision for adding to the loan authority of some of the international development banking establishments. Just part of that loan authority will be used in 1 year.

I believe the answer to the question is primarily in those two areas. If the Senator would like, I shall be glad to provide a breakdown of just where this is.

Mr. HARRY F. BYRD, JR. This budget resolution, then, envisions a very large increase in authorizations and appropriations for the international banking institutions, I take it.

Mr. BELLMON. Our chairman has come back. He may want to respond more fully.

I think the answer to the question is that it is not necessarily a large expansion so much as in the budget authority figure making provision for future year use of the funds which, in many cases, is not necessarily expansion, the size of the program, but that the past money has now run out.

Mr. HARRY F. BYRD, JR. In any case, those additional tax funds would be used for that purpose.

Mr. BELLMON. That Senator is correct.

This is, of course, all tax money.

Mr. HARRY F. BYRD, JR. I am wondering whether the Congress is justified in such tremendous increases as proposed by this resolution for these international financial institutions.

The foreign aid program already is tremendously high. Yet, this budget resolution would provide huge additional sums to the international institutions over and beyond the economic aid that will be provided in other areas of the budget.

Does not the committee feel that this is an unusually heavy increase? And why should we be increasing these international financial institutions to the extent that we are?

Mr. MUSKIE. Mr. President, I am sorry I was not on the floor when the Senator raised his question. I will try to respond.

Mr. HARRY F. BYRD, JR. Does the Senator want me to go over the background again?

Mr. MUSKIE. Let me make two points, and then, if I have not covered the Senator's question adequately, I will be glad to have him repeat his question and I will respond.

There are several major elements in the international affairs function which has raised the level of budget authority for fiscal 1979. One is the so-called Witteveen facility created to help countries with balance-of-payment problems generated by the five-fold increase in energy costs and the imbalance in their foreign exchange which resulted.

The administration asked that our contribution be funded off-budget. The Foreign Relations Committee also supported off-budget funding.

If we kept it off, the $1.8 billion would not be here at all. We would not see it.

The Budget Committee pinpointed that program and voted to put it on-budget in fiscal year 1979. It was argued, pursuant to the Budget Act and our constitutional responsibilities to share in policy decisionmaking, that when we undertake diplomatic and financial responsibilities of that kind, we ought to put them on the budget.

In times past, this kind of national effort would not be on-budget and not in these numbers. So that makes the function larger by that amount.

Second, our contributions to international financial institutions is increasing. We did not recommend 100 percent funding at the President's requested level. Instead we recommended 90 percent funding of these obligations. In addition, there were arrearages of contributions due but several years delayed to the World Bank group, the Inter-American Development Bank, and the Asian Development Bank. As long as there were commitments, the committee voted to meet them.

Mr. HARRY F. BYRD, JR. Commitments by whom? Not by the Congress.

Mr. MUSKIE. Yes. Commitments in the sense the United States is a vital part of these institutions and members in them. This country made agreements with the other members of the banks as to the funding levels and we have not met those.

Mr. HARRY F. BYRD, JR. Is the Senator from Maine saying that the Congress has an obligation to appropriate whatever funds the representatives of that Government agree to with other countries as to what they will get?

Mr. MUSKIE. These agreements were made by the previous administration.

Mr. HARRY F. BYRD, JR. Regardless of what administration, they cannot bind Congress, as I understand it.

Mr. MUSKIE. In the literal sense of the word, that is true.

Mr. HARRY F. BYRD, JR. Does the Senator believe it is a moral obligation to accept whatever Mr. McNamara says we ought to put up?

Mr. MUSKIE. No, I suppose not.

It is true we are members in these international financial institutions and that membership has been recognized in the past by the Congress. And the Presidents—using the plural—have undertaken to represent us and enter into those agreements with other countries that are essential if the institutions are to operate.

We have tried to take the leadership in these institutions in order to be of assistance to developing countries, to support export growth in various countries, as well as our own. Strengthening the economies of the so-called middle-income countries, I might add the fastest growing market for American products, is helpful on both sides of the equation. These international development institutions have served a useful purpose.

Mr. HARRY F. BYRD, JR. I am not suggesting they have not, in some cases, served a useful purpose. I am concerned

as to whether, No. 1, Congress has any obligation whatever to accept whatever figure Mr. McNamara, or somebody else in one of these organizations, says it ought to be.

Mr. MUSKIE. Congress has no obligation to support any part of this budget, whether it is a foreign affairs function, or the defense function, or any of the domestic functions. The Congress, of course, in the literal sense, makes its own commitment. I suppose we could even ignore the social security laws, if we wished.

Mr. HARRY F. BYRD, JR. Oh, no. It has nothing to do with that. That statement was prompted, I might say to my friend from Maine, by the statement——

Mr. MUSKIE. But the Senator is asking me, cannot Congress ignore these commitments?

Of course, it can.

Mr. HARRY F. BYRD, JR. That was not what I was asking. What I am asking——

Mr. MUSKIE. The Senator asked if just because President Ford entered into these agreements, whether Congress is obligated to meet the commitments. I am answering the Senator in the way I thought he wanted me to. Of course, we are not obligated.

Mr. HARRY F. BYRD, JR. It is not President Ford, and it makes no difference to me which President it was.

Mr. MUSKIE. The particular obligations to which I am referring were negotiated by him, and I am trying to give the Senator the origins.

Mr. HARRY F. BYRD, JR. I thought they were negotiated by the international banking institutions.

Mr. MUSKIE. The United States is a member of several of these institutions.

Mr. HARRY F. BYRD, JR. I understand.

Mr. MUSKIE. And, as a member, we are part of the negotiation which establishes the funding shares of the various member countries, and other countries have met the commitments they made under those agreements. We have not with respect to the $350 million of arrearages and it is now proposed we meet them.

If Congress does not want to meet them, that is its prerogative in our form of equal and separate branches of Government.

Mr. HARRY F. BYRD, JR. May I ask the Senator, what is $350 million we did not meet?

Mr. BELLMON. Will the Senator yield for one comment?

Mr. HARRY F. BYRD, JR. Yes, I yield.

Mr. BELLMON. If the Senator from Virginia will look on page 67 of the report, there is a table at the bottom of the page that discusses foreign military assistance and sales. He will notice that of the, roughly, $5.6 billion of budget authority over outlays, that $2.4 of that is intended to cover the foreign military assistance and sales.

So, about half of the figure that concerns the Senator from Virginia I think is explained by the fact that we are trying to make provision for the recommended increase in military sales that President Carter has suggested.

Mr. HARRY F. BYRD, JR. That is the first time I heard of the military sales being involved in this particular item.

Mr. BELLMON. This function does cover the foreign military assistance and credit sales.

But I am concerned, as the Senator from Virginia is, that that does seem to be a large chunk. But I believe this explains about half of it.

Mr. HARRY F. BYRD, JR. I thank the Senator from Oklahoma.

Mr. BELLMON. I might point out that this is a jump over 1978, but in 1975 and 1976 we have been at that level in the past. There has been a reduction in recent years, because grant military assistance have been down.

Mr. HARRY F. BYRD, JR. I thank the Senator.

Mr. MUSKIE. We are concerned here with three banking institutions, the World Bank, the Inter-American Development Bank, and the Asian Development Bank. Moneys were all authorized. They have not been fully appropriated, and that is what the arrearages are.

Mr. HARRY F. BYRD, JR. Will the Senator mention all the figures as to what this $350 million in arrearages is?

Mr. MUSKIE. These three banks.

I wish to correct a statement I made earlier. The $350 million does not fully meet the arrearages. The arrearages, as of now, are $834.7 million for the various international development banks.

Mr. HARRY F. BYRD, JR. Those are arrearages from the figures sought by the banks?

Mr. MUSKIE. They are arrearages from the commitments the U.S. Government has made with other countries as our share of funding levels for these financial institutions.

Mr. HARRY F. BYRD, JR. Is it not appropriate for Congress to review those figures and reduce those figures if it feels that the figures are too high?

Mr. MUSKIE. This, of course, is what has happened. This is why there are arrearages of $834.7 million.

Mr. HARRY F. BYRD, JR. Let me see if I understand the Senator. The Senator says that Congress in the past has refused to approve those arrearages. Now we want to come back in this and give up the arrearages.

Mr. MUSKIE. We are not picking up all the arrearages. There are arrearages totaling $734.7 million, and what is included in this resolution is $350 million.

Mr. HARRY F. BYRD, JR. The resolution proposes, then, to pick up $350 million of what these international institutions previously sought but were not granted by Congress. Is that it?

Mr. MUSKIE. Let me see if I can state it in another way.

We have entered into agreements with other member countries in the past for funding shares—shares of funding levels—and we have not fully met ours. It is not a case in which each year there is a formal request from the bank to us. The fact is that we have made a commitment.

Mr. HARRY F. BYRD, JR. It has been each year for the last 10 years or 12 years. Each year, the banks have come in for a replenishment. We just had a fourth replenishment last year for one of these banks.

Mr. MUSKIE. There is a distinction between replenishments and arrearages.

I have a statement from the Treasury on this arrearage problem, which I will have printed in the RECORD, but I will read part of it:

> As part of the FY 1979 foreign assistance appropriations request the Administration is requesting appropriations for $834.7 million—

That is the figures I gave the Senator:

> In unfunded past pledges for the international development banks. This consists of $375 million for IDA, IV, $139 million for the Inter-American Development Bank's capital, $125.3 million for the IDB/FSO—

That is the soft loan program of the Inter-American Development Bank:

> . . . $35.6 million for the Asian Development Bank's capital, $10.5 million for the Asian Development Fund, $143 million for the IBRD and $6.6 million for the International Finance Corporation.
>
> These amounts are needed by the banks to continue effective operations. In the case of IDA, all contributor countries to the fourth replenishment other than the United States have made their full contributions available for drawdown when necessary. By the end of FY 1979, IDA will need approximately $340 million for disbursements from the $750 million we are requesting.
>
> The remainder will be drawn down, as needed, during the following three fiscal years.
>
> In the case of the IDB U.S. failure to provide the amounts previously pledged would cause serious and immediate consequences. The 1978 foreign exchange lending program calls for loans totaling $780 million in the FSO and $930 million in the capital window. Presently FSO availability in convertible currencies—approximately $200 million—will be exhausted by about June 1978. Similarly, with regard to the hard capital window, present availabilities of $280 million will permit normal lending only through about May of this year. After these dates, no loans could be formally approved until further funds are received; all approvals would have to be on a contingent basis. In neither window would there be any reasons to expect action by other donors to offset the U.S. shortfall. To the contrary, the prospects for replenishment, on which calendar 1979 operations depend, will further deteriorate without U.S. action on the shortfalls.
>
> Moreover, our shortfall blocks the use of contributions already made by other member countries by virtue of a character provision which provides that the U.S. share of capital cannot be less than 34.5%. This provision was inserted at U.S. insistence to maintain our veto power in the FSO. The contributions of others, which are now ready to be subscribed, can be accepted only if we either make good on past pledges or give up the veto.
>
> In the case of the ADB, these funds are needed to regain our parity in voting power with Japan. This parity has been our aim from the beginning of the Bank in 1966. When the second general capital increase became effective on September 30, 1977, our voting strength fell to 8.6 percent, considerably less than that of Japan. If we are to maintain our influence on important policy matters in the ADB, these funds must be appropriated as soon as possible.
>
> The threat posed by the funds cut last year for the IBRD is in the reaction of other donors. The internationally agreed U.S. share of the Selective Capital Increase now in progress is only 19 percent—a lower share

than many other donors find warranted by U.S. economic size and strength. When the U.S. reaches an agreement with other donors and then, after other contributions are fixed, further cuts its share, the credibility of the U.S. in subsequent negotiations is seriously eroded. Other donors may then try to drive up the U.S. share by curtailing their own contributions in the expectation that it will subsequently be cut by Congress.

Mr. HARRY F. BYRD, JR. I think it is very desirable to have in the RECORD the figures to which the Senator referred.

Mr. MUSKIE. May I add this, for the Senator's information:

During the course of the Budget Committee's consideration of this item, Members were interested in knowing what the rock-bottom figure on meeting arrearages would be, in terms of the obligations of the banks.

I discussed the matter with Secretary Blumenthal; and after some discussion, he said that he thought they could get by with half of the $634.7 million in fiscal 1979. We provided something less than that. We provided $350 million. The Secretary said he hoped Congress would appropriate the remainder in fiscal 1980.

As the Senator will recall from my reading of this document, some of the requirements would fall in the second and third year from now, so that to some extent we have taken advantage of an opportunity to further delay payment of these arrearages.

And the administration understands that. In a tight budget, we do have to look at those options, but we think we have brought this figure down to a tight figure.

(Mr. MOYNIHAN assumed the chair.)

Mr. HARRY F. BYRD, JR. The figure arrearages, so-called, and I object to that term, but the figures on the so-called arrearages have gone down but the total figure is way up, up tremendously.

I think it is important to have in the RECORD the Treasury communication because it points out the vast amount of money that we are throwing around all over the countryside to all of these international financial institutions, and I am glad to get it in one sheet of paper there in the RECORD.

Mr. MUSKIE. I am trying to say to the Senator I know how vigorous he is in opposition to these programs, because I have heard him before and I am certainly not going to try to cool his indignation on this point. What I am trying to point out is that the obligations covered by this function, to which we are addressing ourselves, are not new obligations; they are obligations we assumed with respect to these international banks. We regarded it in our national interest to be members of these banks.

Many Members over the years I have been here in the Senate have preferred to see foreign aid handled through multilateral institutions like these banks rather than bilateral aid programs administered by AID. These multilateral banks have been regarded in the national interest.

All we are talking about in that part of the function is meeting a part, not all, but a part of our past pledges to these banks.

The Senator may still oppose it, but that is still the explanation.

The Witteveen facility is new. Our share of $1.8 billion expands that function considerably. I could have eliminated it and taken it out of the sight of the Senator by going the off-budget route which we were urged to do by the Treasury and a few Senators.

Mr. HARRY F. BYRD, JR. That would not eliminate it.

Mr. MUSKIE. No, it would not eliminate it, and I wish to get some credit for insisting that it be included in the budget where we can see it. In response to the Senator's indignation, when he says why is it so much bigger, a reason the function is so much bigger is that this year it is included on budget and not off budget.

Mr. HARRY F. BYRD, JR. Last year it was not included at all.

Mr. MUSKIE. It was not included at all because it was not authorized yet.

Mr. HARRY F. BYRD, JR. It was not involved at all.

Mr. MUSKIE. I understand, but there are other off-budget activities that we are bringing back on budget, and I just wish the Senator to recognize when that happens budget implications are going to be inflated. Whether or not we need the Witteveen facility, whether the Senator thinks we should be involved in that additional international responsibility, is an issue he can address when that legislation comes to the floor. But to make room for it in the budget so that it could be considered on its merits, we included $1.8 billion, and that does make the figure larger.

A further item in function 150 that makes the level larger than last year is foreign military assistance and sales. That used to be in the national defense function. You cannot absorb $2.4 billion in budget authority and $600 million in outlays in a small function from a huge function without it resulting in larger numbers.

First, the Witteveen facility; second, these payments to the international financial institutions; and third, foreign military assistance and sales are the three major elements of the foreign affairs function. They are identified. Identifying them does not mean the Senator from Virginia is going to support them, but he has asked the question as to what is included, and those are the items.

Mr. HARRY F. BYRD, JR. I thank the Senator from Maine, and I commend the Senator from Maine and the committee for not permitting these items to be considered as an off-budget item. I think it is very important that they be placed in the budget just as the Senator from Maine has urged and the committee has approved.

So I commend the Senator from Maine (Mr. MUSKIE) for that action. But I think it is certainly the proper course for Congress to take to have all of this as a part of the budget process rather than have the administration, whatever administration it might be, whether it be the Ford or Carter administration, or some other administration, go to the back door and bypass Congress, which has been done, as the Senator pointed out in the past, and has been done in the past.

I still am not clear on it. If the Senator does not mind, I think he mentioned some figures there about the International Development Association. How much is involved in that?

Mr. MUSKIE. May I apologize to the Senator. I am not exposed to these institutions as a member of the Foreign Relations Committee, so I sort of have to brush up my recollection of the details as the Senator's questioning proceeds. With respect to the International Development Association, we now owe $800 million under current policy to IDA V.

Mr. HARRY F. BYRD, JR. Excuse me just a minute. The Senator says we now owe?

Mr. MUSKIE. That is our replenishment obligation on IDA V.

Mr. HARRY F. BYRD, JR. IDA V.

Mr. MUSKIE. IDA V.

Let us take IDA IV first. There is $375 million; that is the arrearage on IDA IV.

Mr. HARRY F. BYRD, JR. How much did Congress appropriate for IDA IV last year?

Mr. MUSKIE. Nothing.

Mr. HARRY F. BYRD, JR. I am wondering how we got that $375 million figure as the arrearage that we allegedly owe IDA IV.

Mr. MUSKIE. We did not appropriate the replenishment amounts as they came due. In other words, each year we have gone through some of the same exercise that we are going through now, determining how much we can delay and postpone out of our replenishment obligations, so that they begin to catch up, of course. For future scheduled replenishments to IDA V, our full commitment will be another $1,175 million. The Senator should have, and I do not have the original commitments, what was the starting point in terms of the agreements we entered into and the shares to which we and other countries committed ourselves.

If you have that beginning point, these can fall into place more readily. All I have before me here are the numbers identifying an obligation for the IDA V, a remaining obligation for IDA IV, and the future scheduled operations. I can give the Senator those four figures.

Mr. HARRY F. BYRD, JR. This is the first year for IDA V, is it not?

Mr. MUSKIE. It is the second year.

Mr. HARRY F. BYRD, JR. The second year for IDA V?

Mr. MUSKIE. Second year.

Mr. HARRY F. BYRD, JR. What was appropriated last year for IDA V?

Mr. MUSKIE. The entire $800 million was appropriated last year for IDA V.

Mr. HARRY F. BYRD, JR. There is no so-called arrearage for IDA V?

Mr. MUSKIE. No; there is no arrearage for IDA V, but there is for IDA IV.

Mr. HARRY F. BYRD, JR. Then IDA IV must go back to 3 or 4 fiscal years?

Mr. MUSKIE. This would be its fourth year, I understand.

Mr. HARRY F. BYRD, JR. So, is the Senate to understand then that although the Senate refused in the past to authorize these funds for IDA IV, we are

going to come along now, 3 or 4 years later, and say that we neglected to do something 3 or 4 years ago and now we are going to appropriate this additional money; is that correct?

Mr. MUSKIE. I am not sure my recollection is clear to judge whether or not it was a refusal altogether or whether it was a postponement of a part. I think it was a postponement to be picked up later rather than a refusal to meet our commitment. I mean just as in this year, if we approve the budget here, we will not be approving the payment of all the arrearages, but only part of them, so I do not interpret that as meaning a refusal to pay the rest.

Indeed, the conversation I had with Secretary Blumenthal 2 week ago was to the effect of how much must we meet this year and how much can we postpone; not how much can we refuse.

Mr. HARRY F. BYRD, JR. Does the chairman of the Budget Committee take the position that we cannot or should not refuse—that we should appropriate whatever they submit and not have any discretion to refuse?

Mr. MUSKIE. I do not think that phrase describes the nature of the commitment I am talking about "whatever they submit." These shares are shares that were established under agreements involving ourselves and other member countries. We are talking about meeting our word, our previous commitment which Congress has already fully authorized but not fully appropriated. It is for the Congress to decide whether or not we just walk out on those agreements, not for the Budget Committee.

We are trying to schedule the funding in accordance with what our obligations are, what our commitments are, and what we can afford to fund of the institutions' requirements.

Mr. HARRY F. BYRD, JR. This is going to take a little longer than anticipated.

Mr. MUSKIE. You see in effect what we are doing, Senator, with respect to the arrearages is postponing those 1 more year just as they were postponed before.

Mr. HARRY F. BYRD, JR. That certainly was not what the Senate did last year. By a recorded vote the Senate cut $150 million out of the World Bank, out of IDA, cut it out by recorded vote here.

It was sustained by the House. It is now law. Yet we are being told now, as I understand it, we have got to come back and make that up although the Senate, by recorded vote, refused to appropriate.

Mr. MUSKIE. It was not on the budget resolution.

Mr. HARRY F. BYRD, JR. I beg pardon?

Mr. MUSKIE. There was not a vote on the budget resolution.

Mr. HARRY F. BYRD, JR. It was not on the budget resolution but it was on the appropriation bill.

Mr. MUSKIE. I do not believe that vote is being negated by this provision in the budget.

What happened was, as I understand, the contribution of IDA IV in the appropriations bill was struck from that appropriations bill last year. That did not go to the question of rejecting our total commitment to IDA IV.

Mr. HARRY F. BYRD, JR. No, of course, it did not.

Mr. MUSKIE. That would have to be done by legislation, I would assume.

Mr. HARRY F. BYRD, JR. What was done, I may say to the Senator, was the request was for $950 million, and the Senate reduced that by $150 million, reduced it to $800 million, which I assumed, and I though most Members of the Senate assumed, that the Senate had the responsibility, not only the right but the responsibility, to do that if the Senate felt the figure was too high.

What happens is when the Senate does that, whether it be a committee doing it, as has been done in the past, or the Senate itself, as has been done in the past, the administration, whichever the administration is, then adds that up and comes in at a later date and says, "Oh, wait, you did not pay us as much as we wanted last time so that is an arrearage we have to take up this year." So we have to fight the battle every year.

Mr. MUSKIE. I guess what the Senator ought to have then is legislation withdrawing or reducing our commitment to these institutions. If we delay, as we do here, payment of a commitment that is one thing. But to actually cancel it out, I would think, would require positive legislation because the fact that we reduced the amounts appropriated before or there is a reduction in the amounts appropriated, have never been interpreted as a legislative repeal of the authorization from which the request for the appropriation came.

Mr. HARRY F. BYRD, JR. Of course, all of us——

Mr. MUSKIE. Often in appropriations bills we try to influence legislation. Although we are not supposed to, we do. If the Senator seeks to permanently reduce our commitment to these institutions, or one of them, then he ought to seek legislation with that objective. But to ask the Budget Committee to act as though it were a legislative committee with power to treat a commitment of this kind as no longed valid legally, I think is to go beyond our mandate and role.

Mr. HARRY F. BYRD, JR. Well, that is not what the Senator is asking at all.

I can see it is going to take a great deal of time on this, so, if it suits the Senator from Maine, I would like to leave this subject temporarily because, as I understand it, we have 50 hours of debate on the budget resolution, and I would like to——

Mr. MUSKIE. I hope we do not take all 50 of them, Senator.

[Laughter.]

Mr. HARRY F. BYRD, JR. I would like to come back to this matter of international——

Mr. MUSKIE. Of course, any time it would suit the Senator's convenience.

Mr. HARRY F. BYRD, JR. I thank the Senator.

AMENDMENT NO. 1795

At this point I call up amendment No. 1795.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk proceeded to read the amendment.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 3, line 24, delete "$31,600,000,000;" and insert in lieu thereof "$31,114,000,000;".

On page 3, line 25, delete "$31,200,000,000." and insert in lieu thereof "$30,714,000,000.".

On page 4, line 2, delete "$52,700,000,000;" and insert in lieu thereof "$48,626,000,000;".

On page 4, line 3, delete "$49,500,000,000." and insert in lieu thereof "$45,426,000,000.".

On page 4, line 5, delete "$192,500,000,000;" and insert in lieu thereof "$191,454,000,000;".

On page 4 line 6, delete "$159,900,000,000." and insert in lieu thereof "$158,854,000,000.".

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that the Senator from Texas (Mr. TOWER) and the Senator from North Carolina (Mr. HELMS) be added as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. President, this amendment to Senate Concurrent Resolution 80, the first concurrent resolution on the budget, quite simply would eliminate funds from the budget which the Department of HEW itself says have been misspent.

I am sure that my colleagues were as startled and appalled as I was when the Inspector General of HEW reported, on April 3, that during 1977 his Department had misspent between $6.3 billion and $7.4 billion.

This misspending was attributed to a combination of waste, mismanagement, and fraud. Mr. President, those figures and that statement are not the figures and not the statement of the Senator from Virginia. Those figures were developed by the Inspector General of HEW itself: that between $6.3 billion and $7.4 billion was misspent, due to a combination of waste, mismanagement, and fraud.

These, to me are startling figures. First, the funds misspent by HEW, at the lowest estimate, consumed the total Federal income tax payments of more than 4 million American families with incomes of $15,000 each.

Second, the funds misspent by HEW in 1977 exceeded by 50 percent the entire expenditure of the Federal Government on energy programs.

Third, the amount misspent through waste, mismanagement, and fraud by HEW last year was at a rate of $17 million a day.

Fourth, the HEW misspending exceeded the total of all individual Federal income taxes collected in each Senator's State with the exception of the six largest States.

Secretary Califano stated that the Inspector General's findings showed that about 5 percent of HEW's $36 billion in 1977 outlays was misspent. This calculation, however, includes the huge social security programs for retirement and disability, in which very little waste was found. Those programs seem to be running efficiently. If we deduct the retire-

ment and disability funds and the small amount of waste in those programs, we find that in the rest of HEW's operations, $6.2 billion was misspent out of a total of $62.5 billion. In other words, outside of social security, HEW wasted, through mismanagement and fraud, a dime out of every dollar.

Lest anyone think that the report of misspending in HEW is exaggerated, let us keep in mind that the report came from the Department's own Inspector General. Furthermore, the Inspector General in his report made this statement:

In our view, the report portrays a conservative measure of the extent of fraud, abuse, and waste in key HEW programs and their cases.

That is a very significant statement that I want to read into the RECORD again. The Inspector General in his report stated:

In our view, the report portrays a conservative measure of the exent of fraud, abuse, and waste in key HEW programs and their causes.

Yes, the report that between $6.3 billion and $7.4 billion was wasted is, in the words of the Inspector General, a conservative estimate. Clearly the HEW budget is out of control.

It seems to me that the chief cause of this gross misuse of public funds is the astronomical growth of the budget of HEW. Is it not obvious that money has been appropriated for this exploding Department so fast, at so fast a rate, that no one can keep track of it? Is it not clear that the programs in HEW have mushroomed to the extent that they are out of control?

The total budget request for HEW for 1979 exceeds $165 billion.

Mr. President, I made an error in stating that total. That was the 1978 budget. The 1979 figure is $181 billion. Ten years ago, in 1968, it was one-fourth that amount, or $41 billion. Just in the last 4 years the HEW budget has grown by 76 percent.

If we set aside trust funds and count only the Federal funds or general revenues used by HEW, we find that the total more than doubled, from $27 billion to $55 billion, from 1972 to 1978.

I am sure that this skyrocketing spending has a lot to do with the waste, mismanagement, and fraud which the Inspector General of HEW has uncovered. The most rudimentary sense of responsible stewardship of public funds, namely, the tax dollars paid to the Government by the hard-working men and women of this country—demands, as I see it, that this monumental misuse of money be halted. But first, the amount of funds given to HEW must be cut. We will not eliminate waste until we get the appropriation under control. That is the purpose of the amendment which I am offering today.

In calculating the amount by which funds for HEW programs should be reduced to end misspending, I have given the Department the benefit of every doubt. First let me say that I am not speaking of reducing funds below the current fiscal year; I am speaking of reducing the figure in the second concurrent resolution. But in calculating the amount by which funds for HEW programs should be reduced to end misspending, I have given the department the benefit of every doubt. That is what this amendment does; it gives the Department the benefit of every doubt.

First, I have taken the lowest estimate of 1977 misspending by the Inspector General. He said the range of misspent funds was from $6.3 billion to $7.4 billion, and I have accepted the $6.3 billion figure.

Second, I have taken into account the fact that Secretary Califano claims a number of corrective actions have been undertaken in his department. While these actions are of fairly recent date, and there is no proof of any total of misspending eliminated—there is no proof of that at all—still, I have credited HEW with a reduction in waste, mismanagement, and fraud of 10 percent since 1977.

Finally, I have eliminated from accounting any alleged misspending not clearly traceable to a single HEW program.

The result is an amendment of the budget resolution which would reduce outlays and budget authority by just over $5.6 billion, or $727 million less than the Inspector General's low estimate of 1977 misspending. This would be approximately 3 percent of HEW's budget request.

It is interesting to note that HEW, for the coming year, is seeking an increase of about $7 billion in its Federal funds—seeking an increase of $7 billion, that is, in funds from general revenues, outside of social security and other trust funds.

This increase is about equal to the amount which the Inspector General found was wasted last year.

In light of the Inspector General's finding, I think it would be outrageous to approve a major increase in funds for HEW.

The reduction envisioned in my amendment would be distributed in this way: Function 500, a reduction of $486 million; function 550, a reduction of $4,074 million; function 600, a reduction of $1,046 million.

This distribution of reductions accords with the distribution of misspending reported by the Inspector General, to the best of my knowledge. Since I do not believe that either budget authority or outlays should be approved for the purpose of being misspent, I have made identical reductions in both the budget authority and outlay allocations.

It is important to bear in mind that this amendment would in no way damage federally funded projects in education, health, or income security. No person would be denied a real benefit to which he or she is entitled under the law. What we would be cutting by the adoption of this amendment would be funds that would, based on the findings by the Inspector General, almost certainly be squandered in waste, mismanagement, and fraud.

I must point out that my amendment would have the effect of reducing Federal outlays and the deficit by $5.6 billion. This would help to counter inflation by reducing the budget deficit from $55.6 billion to $50 billion, or a reduction in the deficit of 10 percent.

I realize that many of my colleagues argue that we need to incur a large deficit in the year ahead to provide certain new programs or to stimulate the economy. While I do not agree with such arguments, I recognize that they represent sincerely held beliefs.

Surely, however, no one can reasonably argue that we should run multibillion dollar deficits to finance waste, mismanagement, and fraud. I hope the Senate will adopt this amendment.

I ask unanimous consent that at this point in the RECORD there be printed tables showing HEW appropriations outlays for 1970 through 1979, and personal income tax liability by State.

I also ask unanimous consent that there be printed in the RECORD at this point chapter 1 of the HEW Inspector General's report which is a summary of the best estimates of fraud, waste, and abuse in HEW programs.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Department of Health, Education, and Welfare, appropriated funds and total outlays, fiscal years 1970–79, inclusive

(Billions of Dollars)

	Appr. funds	Total outlays
1970	17	52
1971	21	62

[From Department of HEW, Office of Inspector General, Annual Report]

CHAPTER 1—AN INVENTORY OF "BEST ESTIMATES" OF FRAUD, ABUSE, AND WASTE IN HEW PROGRAMS

A wealth of information has resulted from Congressional hearings, GAO audits, HEW audits, quality control surveys, and other studies dealing with problems of fraud, abuse, and waste in HEW programs. Some of these span many years and reveal chronic failures to take corrective action. Others reveal dramatic progress in reducing losses due to errors and ineligibility rates. But no summary or analysis of these findings has ever been compiled. Hence, it was decided to compile an inventory of the "best available estimates" we could locate.

It must be stressed that this summary is no more than an initial inventory. It is not an independent study, although we believe the data are reasonable estimates. Because the sources are not complete, the inventory is not complete. Despite these limitations, it is the best perspective that has yet been assembled. In our view, it portrays a conservative measure of the extent of fraud, abuse, and waste in key HEW programs, and their causes.

It must also be acknowledged that it is virtually impossible to distinguish sharply between *fraud, abuse,* and *waste,* since frequently one problem involves all three. For purposes of rough definition, we have adopted the following:

Fraud is defined as the obtaining of something of value, unlawfully, through willful misrepresentation.

Abuse covers a wide variety of excessive services or program violations, and improper practices not involving prosecutable fraud.

Waste is the incurring of unnecessary costs as a result of deficient practices, systems of controls.

As summarized below, this inventory of best estimates reveals that for programs involving Federal outlays in FY 1977 of $136.1 billion, the incidence of fraud, abuse and waste—at a minimum—ranged between $6.3 and $7.4 billion (exhibit 1).

EXHIBIT 1

INVENTORY OF "BEST ESTIMATES" OF FRAUD, ABUSE, AND WASTE IN KEY HEW PROGRAMS, FISCAL YEAR 1977

Program	Federal outlays (billions)	Best estimates of losses (in millions)
A. Health care:		
Medicaid	$9.8	$2,310–$2,640
Medicare	21.9	2,217
Subtotal	31.7	[1] 4,527–4,857
B. AFDC	6.3	669
C. Income security and SSI	89.7	[2] 494–1,201
D. Social services	2.7	88
E. Student financial aid	3.6	356
F. ESEA title I	2.1	97
G. Indirect	(3)	102
	136.1	6,333–7,370

[1] Federal losses revealed by medicaid quality control range from $330,000,000 to $660,000,000, depending upon interpretation of data. This matter is under review by GAO. Higher number preferred by HCFA.

[2] Range of estimates provided by SSA. Only lower number is verified by them.

[3] In above.

This was between 4.7 and 5.4 percent of the Federal outlays—although the range is from 1 percent of the Income Security Program to 24 percent or more of the Medicaid Program.

The detail supporting these data is contained in Appendix I and summarized in this chapter. It is clear that most of the loss is attributable to errors and faulty management systems—i.e., waste—rather than to fraud and abuse. While these categorizations are necessarily imprecise, they underscore the wisdom of Congress in defining the OIG charter so that it is concerned both with detecting fraud and abuse and fostering efficiency and economy, through better systems and controls.

A. MEDICARE LOSSES (FEDERAL SHARE)

This is the largest area of losses due to all causes.

[In millions of dollars]

	Causes		
	Management and systems	Professional and technical	Fraud and abuse
1. Errors, ineligibility, overpayments, audit findings	525–855		
2. Failure to collect 3d party liability	330		
3. Medicaid mills			423
4. Clinical labs			45
5. Excessive hospital beds		377	
6. Unnecessary surgery		187	
7. Unnecessary hospital stays		41	
8. Excessive physician costs—percentage contracts		25	
9. Unnecessary X-ray costs		172	
10. Questionable nursing home costs			185
Total	855–1,185	802	653

Note: Range: $2,310 to $2,640 (24 to 27 percent).

It is recognized that additional sources of fraud and abuse are missing, particularly by pharmacists, physicians, home health agencies, and other providers. Further, some of the losses attributed to professional and technical reasons might be found to fit the category of fraud and abuse. The classifications shown are those identified by the inventory as interpreted by the IG

B. MEDICARE LOSSES

This is the second largest category identified in the inventory:

[In millions of dollars]

	Causes		
	Management systems	Professional and technical	Fraud and abuse
1. Excessive nursing differential		185	
2. Renal dialysis costs		152	
3. Provider overpayments	141		
4. Audit findings	27		
5. Excessive hospital beds		753	
6. Unnecessary surgery		468	
7. Unnecessary hospital stays		83	
8. Excessive physician costs from percentage contracts		48	
9. Unnecessary X-ray costs		344	
10. Questionable nursing home costs			15
Total—($2,217)	168	2,034	15

Again, the limitations of data are acknowledged but it is of interest to observe that losses due to (1) management and systems deficiencies, and (2) fraud and abuse are much lower than for Medicaid. However, far larger losses are identified due to "professional and technical" causes.

C. LOSSES IN THE AID TO FAMILIES WITH DEPENDENT CHILDREN PROGRAM (AFDC)

The problems encountered in this program are widespread and characterized by payment errors, ineligibility, and beneficiary fraud and abuse. The best estimates are as follows:

	Amount (Millions)
Payments to ineligibles and overpayments to eligibles	$490
Fraud and abuse	145
Quarterly expenditure report reviews	13
Audit exceptions	21
Total	669

As in case of Medicaid, the leading problems in AFDC are management and systems problems.

An area requiring continuing study is administrative costs, which have grown from $575 million to $1.3 billion (over 118 percent between 1973 and 1977. Continuing findings of improper charges are occurring. A total of 66 States audits identified $78.2 million, claimed by States, as not eligible for Federal reimbursement during the 3-year period ending August 31, 1977.

D. INCOME SECURITY AND SUPPLEMENTAL SECURITY INCOME

In terms of program dollars, these programs accounted for over $89.7 billion in Federal outlays in FY 1977. The problem areas, again, are largely concerned with systems, as illustrated by the following:

SSI overpayments and payments to ineligible recipients (including nursing home residents)—$334 million.

Overpayments to Retirement and Survivors Insurance beneficiaries, Disability Insurance and Black Lung beneficiaries—$867 million.

Total—$494 to 1,201 million.[1]

Again, it is recognized that some portion of these amounts may be attributable to fraud and abuse.

E. SOCIAL SERVICES

In the Title XX area of $2.7 billion, $88 million of disallowances was revealed in FY 1977 by the Quarterly Expenditure Report

[1] It should be noted that a substantial amount of estimating is involved in this number, and Social Security states that at least $707 million must be considered "ball park" figures of "questionable reliability." They are offered here simply to denote an order of magnitude.

Reviews ($82 million) and audit exceptions ($6 million). Disallowances represent improper expenditures due to overpayments, unallowable costs, services to ineligibles, etc. Other areas requiring further study are contracting for servises (especially homemaker/chore), improper diversion of funds, etc.

F. STUDENT FINANCIAL AID PROGRAMS

The five Student Aid Programs disbursed $3.6 billion in FY 1977. A wide range of problems was found by the inventory:

Program	*Amount (Million)*
Excessive payments and payments to ineligibles (BEOG)	$120
Fraud and abuse by schools (NDSL and GSL)	53
Fraud and abuse—Defaulted loans (NDSL and GSL)	183
Total	356

These problems are primarily concerned with faulty management practices and systems, which have permitted and encouraged fraud and abuse.

G. ESEA TITLE I

$2.1 billion in FY 1977 of Federal funds were granted to local educational agencies to meet the special needs of disadvantaged children.

Audits of these programs revealed the need for financial adjustments equal to 4.6 percent of funds, or $97 million in FY 1977, which have been improperly expended because of violations of regulations concerned with (1) supplanting of funds, (2) permitting students not eligible to participate, and (3) failure to meet the comparability standards.

H. INDIRECT COSTS

Last year $102 million was disallowed through reviews and negotiations with colleges, universities, hospitals, State and local governments, and other institutions who submitted indirect cost proposals in connection with their conduct of HEW programs. These negotiations are conducted by HEW's regional offices.

I. AREAS NEEDING FURTHER RESEARCH IN ORDER TO ESTIMATE FRAUD, ABUSE, AND WASTE

In the above discussions we have noted the absence of (1) any estimates for home health agencies and a variety of other health providers, (2) possible overcharges by contractors in the Social Services Programs and (3) excessive administrative costs in the AFDC Program.

In addition to these, some major areas which we feel are especially worthy of further study are:

Drug purchases, where Federal expenditures in FY 1977 were about $2.7 billion.

Respiratory therapy, where the Federal expenditures in FY 1977 were reported as $272 million, and where the staff of the Senate Committee on Finance feels that abuses are occurring.

The other Student Financial Aid Programs not discussed earlier, namely, the College Work Study and Supplemental Educational Opportunity Grants Programs.

This inventory will be repeated periodically and strong support given to expanding and sharpening all estimates, while seeking more scientific measures. Project Integrity should make an important contribution to this objective in the health field, as well as the projects planned by HCFA's Office of Program Integrity (OPI).

J. SUMMARY OF BEST ESTIMATES INVENTORY FOR FY 1977

In the meantime, to place the above in an overall perspective, Exhibit 2 shows a breakout by program area and type of fraud, abuse, and waste. This analysis discloses the relative importance of each area and highlights the need for improved management and systems.

In this connection, Exhibit 3 shows a recapitulation of HEW personnel resources by program now allocable to (1) quality control operations, (2) management and systems oversight, (3) accounting and auditing oversight, and (4) fraud and abuse investigations. The numbers in parentheses indicate the increases in staffing requested in the FY 1979 budget.

In summary this analysis reveals that there are today 4,282 personnel authorized in the several functional areas concerned with fraud, abuse, and waste. This number would grow to 5,636 in FY 1979. Of greater interest is a comparison of the distribution of these personnel by function in the two years, as shown in the following:

Function

Percent Distribution of Personnel

	FY 1978 (4,282)	*FY 1979 (5,636)*
Quality control	45	43
Management and systems	10	8
Accounting and auditing	25	20
Fraud and abuse	20	29
Total	100	100

EXHIBIT 2

INVENTORY OF LOSSES BY PROGRAM AND CAUSE

[In millions of dollars]

	Management and systems	Professional and technical	Fraud and abuse	Total
A. Medicaid	$855–$1,185	$802	$653	$2,310–$2,640
B. Medicare	168	2,034	15	2,217
C. AFDC	524	----------	145	669
D. Income security and SSI	494–1,201	----------	----------	494–1,201
E. Social services	88	----------	----------	88
F. SFA	120	----------	236	356
G. ESEA	97	----------	----------	97
H. Indirect cost	102	----------	----------	102
Total	2,448–3,485	2,836	1,049	6,333–7,370

EXHIBIT 3

DISTRIBUTION OF PERSONNEL

[Parenthetical figures requested in fiscal year 1979 budget]

Program	Quality control	Management and systems	Accounting and auditing	Fraud and abuse	Total
HCFA	359 (484)	105 (133)	1 ----------	379 ----------	844 (997)
SSA	1,597 (1,932)	78 ----------	5 ----------	125 (315)	1,805 (2,330)
PHS	----------	19	36	----------	55
OHDS	----------	28	47	----------	75
OS	15	123	900 (960)	114 (214)	1,152 (1,312)
OE	----------	61 (65)	90 (92)	200 [1] (710)	351 (867)
Total	1,971	414	1,079	818	4,282
Percent	45	10	25	20	100
Total fiscal year	(2,431)	(446)	(1,141)	(1,618)	(5,636)
Percent	43	8	20	29	100

[1] In fiscal year 1979, 510 permanent and temporary positions will be added to support the loans collection effort.

While much improved overall staffing is proposed in FY 1979 (including a very sizeable addition to collect defaulted loans in the Student Financial Aid Programs) the understaffing of the "management and systems" area is prominent in both years. It is our belief that there is now a significant imbalance because of this. While "Quality Control" operations properly require a large number of personnel to develop precise measures to depict trends, the staff available to plan corrective actions, test them, and provide consulting service and technical assistance is inadequate. Unless this staffing imbalance is corrected, the opportunities to cut the losses resulting from management and systems deficiencies will not be exploited.

This finding is borne out in the chapters which follow by numerous findings resulting from our audits and investigations. The message is that more attention must be given to tightening the "front end" of systems—especially eligibility determinations and claims payments—while simplifying reimbursement rules and procedures, and insisting on higher standards of integrity—by all concerned, beneficiaries, employees, and managers alike—in the expenditure of public funds on HEW programs.

Mr. BELLMON. Will the Senator yield?

Mr. HARRY F. BYRD, JR. I yield.

Mr. BELLMON. First, Mr. President, let me say that the savings which are anticipated are largely in the entitlement programs. The medicaid program has waste estimated to be $2.3 to $2.6 billion, medicare about $2.2 billion AFDC

$269 million, SSI $334 million, and social services $88 million.

Those, Mr. President, are all entitlement programs and they are all under the jurisdiction of the Finance Committee.

In past years the Senate Budget Committee has had the audacity, I suppose is as good a word as any, to suggest to the Finance Committee that they might make some savings in certain programs for which they have oversight responsibility. When we have done that, we have incurred the wrath of the Finance Committee. In no case have they agreed that they can make the savings and in no case have the savings actually resulted.

I think all we are saying here is the fact that the Inspector General is agreeing with the Budget Committee, and that the Finance Committee ought to take action to tighten down the way these programs are run and to eliminate some of the fraud, mismanagement, and abuse that the Senator from Virginia has very properly pointed out.

This year when we received the May 15 letter from the chairman of the Finance Committee, Senator RUSSELL LONG, he includes on page 6—and I believe the Senator from Virginia has a copy of this—a statement that says:

> At the same time, the committee notes that the administration budget proposes a savings of $.7 billion in Medicare and Medicaid through its hospital cost containment proposal. The committee believes it would be unrealistic to base a congressional budget estimate on the expectation that this proposal will be enacted.

In effect, the chairman of the Finance Committee is saying to the Budget Committee, "Do not expect any significant savings in the medicare-medicaid program."

While I agree with the objective of the Senator from Virginia, I believe realistically we could not possibly expect the Finance Committee to come anywhere close to obtaining a $5.6 billion savings by cleaning up the programs it has under its jurisdiction in 1 year.

The budget resolution does assume a $700 million savings in medicare and medicaid over what the Finance Committee has recommended. They have recommended $300 million in quality control savings. We assume that, and then we go on and assume another $700 million savings in addition.

I believe the Budget Committee has been responsive to what we believe are realistic possibilities in the programs to which the Senator from Virginia has called our attention.

Mr. HARRY F. BYRD, JR. I thank the Senator. That does not in any way get to the fact that HEW has been granted more money than it has been able to properly spend. It does not get around the fact that HEW misspent between $6.3 and $7.4 billion. I think this budget resolution should take that into consideration and that the figures for functions 500, 550, and 600 should be reduced to reflect at least two-thirds of the amount which has been misspent. It does not reflect the total amount of funds misspent. It does not reflect the total at all. It does reflect about two-thirds of the amount which has been misspent. I think that is reasonable. As a matter of fact, I think it would be unreasonable for the Senate to approve a budget resolution which did not take into consideration the Inspector General's report showing just how great is the amount of funds being misspent by that Department of Government.

Mr. MUSKIE. Mr. President, I have just a couple of observations, adding to what my good friend from Oklahoma has already said.

In the first place, I am sure all of us are outraged by any evidence we ever get of fraud, waste, and abuse in Government programs. I do not think the report to which the Senator from Virginia refers is accurately characterized when he describes it only as evidence that HEW has misspent public funds. The fraud, waste, and abuse described in the report goes much further than that. It goes into the health delivery services in this country in the private sector.

It goes to the standards of individual citizens, whether they are students receiving education loans or other people eligible in one way or another under entitlement programs. This is not evidence only of Government abuse; it is evidence of citizen abuse.

If I may read from page 74 of the report, just to give something of the flavor of what this report undertakes to describe for us all:

"It includes moneys paid to ineligibles."

Well, who are ineligibles? They are senior citizens, other citizens, students. Those are the people who are eligible under entitlement programs, and there are others. If ineligibles are getting money or have received money under these programs, how do we, in the Budget Committee, get that money back in order to reduce the Government's total needs for this purpose? Education programs, for example, are forward funded. To the extent that these abuses took place in the student loan program last year, for example, that money has already been paid out. How does the Budget Committee, may I ask the Senator from Virginia, get that money back in order to reduce the Department's needs for funds in fiscal 1979?

If there have been overcharges by those who deliver health services, those overcharges have been paid and are disclosed by postaudit procedures. How do we get the money back?

I am sure the Senator, as a member of the Committee on Finance, is more of an expert on those kinds of procedures than we on the Budget Committee, because it is the Committee on Finance which oversees some of these entitlement programs and which has the responsibility for trying to find ways to eliminate fraud, waste, and abuse. We rely upon the Committee on Finance to tell us how and to what extent savings can be realized that we can reflect in our budget recommendations.

I remember 1 year, 2 years ago, our recommendation in that respect was challenged on the floor by the chairman of the Committee on Finance, who said we were expecting miracles of him that the Finance Committee could not produce. Yet Senator BYRD, as one member of the Committee on Finance, expects the Budget Committee, somehow, to produce that miracle and to find a way to realize $5.6 billion in waste so that we can reduce the requirements for next year

I know of no way to get those savings except by putting the pressure on the Finance Committee. The Senator from Oklahoma has already stated that we followed the recommendations of the Finance Committee with respect to the savings that can be realized in quality control and other savings. If the Senator from Virginia can assure us that the Finance Committee will find a way to recover this $5.6 billion so that we can apply it to the program needs for 1979, I should be delighted to accept his amendment and count on those returns, but I do not know of any such way.

The mere fact that these abuses have taken place, to me, suggests that we have a management problem here; maybe also a policy problem. Maybe there is a way of putting together legislative policy to improve the management of these things so that students will not lie about their eligibility—if they do lie; I do not know. Or that they will repay their loans if they do not repay them, and I guess they do not always repay them; or that doctors will not overcharge, or that ineligibles will not apply for benefits.

If there is a magic answer that would eliminate these human weaknesses that are represented in so much of this report, I should be glad to know what it is and I should be glad then to take advantage of it and thence to reduce the budget. But to suggest that the Budget Committee, because this report exists, is at fault for somehow not converting that report into actual dollar savings on the order of $5.6 billion that we can use to fund the program for fiscal year 1979, I think, is going beyond the bounds of reason. I do not think there is any reason for us to do it. I do not think there is any way we can be expected to do that.

The Senator assures the eligibles that they would not be hurt, that his amendment would not hurt them at all; that it would not hurt the senior citizens benefits under social security; that it would not hurt the beneficiaries under the student loan program; that it would not hurt medicare beneficiaries. Why would it not? If there are $5.6 billion missing from these functions that is needed to fund social security or to fund medicare, where is it going to come from if we cut it out now? I should like to know the answer to that question. Either entitlement benefits are going to have to be denied contrary to law or programs like health research, that are not entitlement programs and which are a small part of the total, would have to be eliminated altogether. In other words, programs financed by straight appropriations that are under the jurisdiction of this Department would have to be decimated in order to absorb the $5.6 billion if we do not want to cut the benefits of those entitled to benefits under the entitlement laws.

You cannot have it both ways. The Budget Committee does not have a special bank account labeled "fraud, waste,

and abuse" out of which we can draw checks to pay for these benefits.

We ought to welcome this report for what it does point out to us. This is a red flag. This tells us where there are abuses. This is a challenge to the Finance Committee. This is a challenge to other committees of Congress to find out where those abuses exist and to do everything possible, legislatively and administratively, in a management way, to eliminate it.

Even then there is going to be an irreducible minimum. I tell you, average human beings have ways of getting around laws and administrative procedures and practices that the genius of legislators cannot confound. And there is an irreducible minimum in that errors are going to happen in any case. That amounts to a few million dollars of this $5.6 billion.

I say to my good friend from Virginia that I applaud his bringing this important matter to the attention of the Senate. I certainly do not object to his offering his amendment, because I think maybe, in that way, he drives these points home to our colleagues in the Senate that this problem does exist and maybe we can meet the challenging of meeting it. But I do not think we can meet it by arbitrarily reducing funds necessary in this function to meet legitimate needs of people that our laws say are entitled to social security benefits, medicare benefits, education benefits, and so on.

Why should we punish the innocent, those who have not abused the law, in an ill-conceived attempt to get at those who have abused it? I am for getting at the abuses, but let us work through the committees that have jurisdiction to find out who they are, where they are, how they can be blocked and frustrated; what new law we need to do it and how, administratively, we can do it effectively. If we can do all that, we will have met a tough challenge. But I do not think we can do it by just cutting down the top number on the income security function and the health function and the education function in this budget resolution. It just is not going to work. If the Senate does it that way, we know we are bound to hurt some people that this Congress intends to help.

Mr. HARRY F. BYRD, JR. Mr. President, the fact is that the Department of Health, Education, and Welfare spent approximately $7 billion, or misspent approximately $7 billion through mismanagement and waste. Taking that into consideration and in reducing the budget recommendation by $5.6 billion, which is two-thirds of the amount which the Inspector General said was misspent, does not take away from those functions and from those individuals who, by law, are entitled to the appropriation.

What it does say is that HEW has been getting too much money. It cannot appropriately spend that amount of money and, as a result, has been misspending it.

Unless an amendment along those lines is approved by the Congress, HEW will continue to get such huge amounts of funds that additional large amounts will be again misspent through waste, mismanagement, and fraud.

I was at a meeting with a group of 500 or 600 citizens not long ago—just a few days ago, as a matter of fact. This subject came up and one of the citizens addressed this question to me. He said: "Can't the Congress do anything about the misspending of public funds?"

Maybe my reply was wrong, but I said, "Yes, the Congress can, if the Congress will."

I realize it is difficult to try to get Government spending under control. I understand that eliminating waste in the Executive Department is not easy. But if we are going to take the view that it is impossible, then we are condemning taxpayers to go on forever paying billions of dollars year after year in funds that will be misspent.

I realize that I have a minority view in regard to Government finance. I realize that I am in a minority position in the Congress of the United States when I say that the American tax funds are not being used as a public trust. They are not being handled as a public trust.

I realize I am in a minority position when I take the view that we are appropriating to the departments of Government too much money, such vast sums that they cannot be appropriately spent.

I must say that even though I have held that view for a while, even I was shocked by the Inspector General's report. I could not conceive of such gigantic figures, such huge amounts of tax funds, being misspent through waste, mismanagement, and fraud.

Now, they can take the view in the Congress, "Well, that's too complicated. It's very difficult. I don't know how we are going to get hold and get Government spending under control. We just have to coast along."

That is an approach this Congress has taken for many years now. I suspect it will go on for a while yet, although as this inflation increases—and it is going to increase—as this inflation increases the working people of this country one of these days will rise up and demand that something be done.

There is an interesting Gallup poll which was published this morning. The results of the poll taken by the Gallup organization showed that by a ratio of 9 to 1—9 to 1—the American people would prefer that the Government get inflation under control rather than to give a reduction in taxes.

To me, that is quite significant. I would think most American citizens would like to have and would want a reduction in taxes, and I think they do. But the individual citizen and the working people of this country can understand that in order to get a tax reduction that means anything, in order to get a tax reduction without stimulating inflation, it is necessary to get Government spending under control.

This amendment is just one effort to do that. This amendment is addressed to areas of the budget which, through investigation by the Inspector General of the Department itself, presents evidence that between $6.3 billion and $7.4 billion appropriated by the Congress has been misspent.

There is no way, of course, that anyone can force the Congress to take steps to attempt to get such misspending of funds under control. But I felt it was worth the effort to present the amendment.

I would have no hesitancy at all in being the only Senator on the floor to vote for it. I would be glad, as a matter of fact, to be in that position, in a way. The only reason I would not be glad to be in that position is because I would like to see it passed.

This Congress cannot go on month after month, year after year, spending more and more money, running more and more deficits, without all of that being paid for.

Many of my colleagues say, "Don't worry about the deficit, just add it to the debt. No one has to pay the debt. Just add it to the debt."

The American people, I am convinced, do not believe that. The American people, I am convinced, realize that this huge Government spending, including the waste, must be paid for either by direct taxation or by the most vicious tax of all—inflation, and that is the way it is being paid for now.

That is the way the fiscal 1978 budget deficit is being paid for. That is the way the 1977 budget deficit was paid for; the 1976 budget deficit; the 1975 budget deficit. And that is the way the 1979 budget deficit will be paid for, through the cruel and hidden tax of inflation.

Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MUSKIE. Mr. President, I assure my good friend the Senator from Virginia that I am as concerned about eliminating fraud, waste, and abuse in Government programs as he is, and I am sure of his commitment. I doubt that any Member of this body would not join us in that concern.

Second, I say to my good friend from Virginia that my response to his amendment by no means constitutes running away from the problem, because I think it is too hard to handle. If that were my test, I would have rejected this Budget Committee responsibility 4 years ago. But if one really wants to get at problems of this kind, one must find a way to do it.

On page 169 and following pages of this report, to which the Senator has referred, there is a list of the kind of abuses that were referred to U.S. attorneys in calendar year 1977. I am going to refer to a few of them, so that one might have an appreciation of the difficulty of converting this report into cash that can be cut from a budget resolution.

These are some of the cases, and I read them off briefly:

One, billing for services not rendered. This presumably was a health professional who billed for services not rendered.

Two, billing for services not rendered.

Three, bribery and kickbacks to providers.

Four, billing for services not rendered.

Five, billing for services not rendered.

Six, excessive payments.

Seven, billing for services not rendered.

Eighth, billing for services not rendered.

Nine, falsifying records recertification for participation in medicare program.

Ten, falsifying medicare recipient claims.

Eleven, falsifying records documents.

Twelve, bribery.

And so on, page after page of this kind of abuse.

These are all criminal abuses which subject the perpetrators to prosecution under the criminal laws of this country.

How does HEW convert these lists of cases in the Federal district courts into cash to pay medicare benefits or social security benefits or to make student loans?

If one wants another description of the kind of abuses to which the Senator's amendment is addressed, I refer him to page 86 of the document, and I read:

> We identified four cost centers related to hospital inpatient services where we believe $2 billion in Federal funds may have been lost due to fraud, waste and abuse.

That is $2 billion of the Senator's $5.6 billion, and there are just four items.

What is the first one? Excessive hospital beds, $1.130 billion. These are hospital beds scattered throughout the country in communities which, I suspect, resist and resent any effort on the part of HEW or even State medical authorities to cut back on those beds. Beds in a hospital are considered surplus when the annual occupancy rate falls below 80 percent.

What does the Senator propose—that we give HEW the authority to arbitrarily eliminate hospital beds in any part of the country where that test is not met? That is what needs to be done in order to save that $1.1 billion. How does the Senator's amendment equip us to do that? That is a responsibility for the legislative committee. That is part of the $2 billion.

Second, unnecessary surgery, $655 million. I read from the report:

> The Subcommittee on Oversight and Investigations of the House Committee on Interstate and Foreign Commerce performed an in-depth examination into the area of unnecessary surgery and concluded, in a report dated January 1976, that an estimated 17 percent of all procedures funded by Medicare and Medicaid during fiscal year 1974 were unnecessary.
>
> Making the same assumptions as above—namely that 17 percent of the procedures are unnecessary—and applying this same percentage to FY 1977 costs, we estimate $468 million of Medicare funds and $187 million of Medicaid funds were spent on unnecessary surgery that year.

How does HEW go about eliminating unnecessary surgery? You would have to find a way to do it and do it quickly, before fiscal year 1979, in order to achieve the savings the amendment of the Senator from Virginia would ask us to achieve.

The third category: Unnecessary hospital stays. Without reading that at length, doctors are ordering unnecessary hospital stays. How does HEW get an instant answer to that problem in order to satisfy the Senator from Virginia?

Fourth, excessive physicians' cost:

> A study funded by HCFA . . . shows that physicians on a percentage system of reimbursement make more money than salaried doctors doing the same type of work . . .
>
> The message in these statistics . . . is that consumers and taxpayers are being overcharged by as much as $215 million a year because doctors are making exorbitant profits from percentage contracts with hospitals.

What, then, should we do—prohibit doctors by law from entering into percentage contracts with hospitals? If you do not have some such change in the laws, how are you going to eliminate that fraud, abuse, and so on?

I say to the Senator from Virginia that, as I look over this report—and my curiosity has been stimulated by his amendment—I find that the achievement of his objective is not a simple matter of changing a number in a budget resolution but is a task of hard, nitty-gritty work for appropriate committees of the Senate and the House, and hard, nitty-gritty administration, and then some changes in policy by States as well as by the Federal Government.

If the Senator thinks he can achieve all that by an amendment on the Senate floor this afternoon, I think he is being oversimplistic, and he certainly is not going to be effective in achieving what he wants to achieve—with all respect.

(Mr. SARBANES assumed the chair.)

Mr. MOYNIHAN. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. MOYNIHAN. Mr. President, as a member of the Finance Committee, I state that I am ultimately persuaded by the careful argument which the Senator from Maine has made about the difficulty of applying the concerns of the Senator from Virginia to the budget resolution.

As a member of that committee and as one who holds him in the highest regard I wholly share his indignation and his concern. I do think this is a responsibility which we must carry forward in the Finance Committee, as the Senator from Maine has said.

To the degree that the Senator from Virginia takes the lead in this enterprise, I hope he will consider me as one who will follow him, and I will feel honored to do so.

There is a question of the integrity of the public purposes with respect to these laws, and those who do not care about that integrity do not care about these issues, either.

I thank the Senator.

Mr. MUSKIE. I thank the Senator from New York.

Mr. BELLMON. Mr. President, the HEW inspector general's report, which has been referred to, points out that the loss in the AFDC program is $669 million. This consists largely of overpayments and payments to ineligibles, and it is certainly a loss that should get our attention and the attention of the appropriate committees, and the program should be tightened down to eliminate it.

But I point out that since 1973 when the AFDC quality control program was started by the previous administration the dollar losses from overpayments and payments to ineligibles have dropped from 16.5 percent down to about 8.5 percent. So there is an ongoing effort being made to reduce the waste and the overpayments under the AFDC program.

Congress, on the recommendation of the Finance Committee, has endorsed a goal of 4 percent dollar loss. So we are trying to get from 16½ percent down to 4. We are already more than halfway there. It is unlikely that we will ever be able to get the error rates down to zero, and that is what the Inspector General's report would assume, and it is a totally unrealistic assumption.

The budget resolution assumes that there will be continued improvement in program management, and we hope that the Finance Committee will take the lead insuring faster progress in trying to eliminate the overpayments that still exist in this program.

I wish to make it clear, Mr. President, that I am not at all opposed to the objective of Senator BYRD's resolution. The only problem is that it is really the responsibility of the oversight committees to move in that direction and, as I have said before, when we tried to assume they would, the Budget Committee has been criticized for having made that assumption, and this year we did not go as far as the Senator wants to go, although we did assume savings of over $700 million in the health function, over and above those recommended by the Finance Committee.

The Inspector General's study found that most of the fraud and abuse in health was from inappropriate or unnecessary services; only about 25 percent was from provision of services to ineligible recipients. This suggests that large savings can best be achieved by legislation designed to provide proper incentives to providers to reduce unnecessary or inappropriate care. Such legislation is the responsibility of the authorizing committees, especially the Finance Committee which has jurisdiction over medicare and medicaid. That committee must act before the Budget Committee can assure that these savings are going to accrue.

One act, the medicare antifraud and abuse bill, has just been passed by Congress. This act addresses some of the problems identified in the Inspector General's report. For example, it makes medicare fraud a felony and it strengthens enforcement efforts, and I wish to say for the record that the Senator from Oklahoma supported this antifraud and abuse bill. This legislation should help to reduce fraud and abuse. However, it is going to take some time to implement the act, and we cannot achieve savings of the magnitude suggested by the Senator's amendment in 1 year.

Mr. President, on this matter of reducing fraud and abuse in medicare and medicaid, I would be very happy to support an amendment that is more real-

istic. I do not know whether the Senator would find it possible to reduce the amount of savings anticipated, but I would say that if we can speed up the action or the work under the antifraud and abuse bill it would be, I think, a very good thing for us to attempt to do.

Mr. President, on the higher education-student aid programs, the Budget Committee recommendation is $1.4 billion below what the administration requested and $1.6 billion below the Human Resources Committee request. So we have, we think, been extremely careful not to provide excess fundings in that mission. I hope the budget restraint reflected in the Budget Committee's recommendation will help to promote the kind of good management the Senator from Virginia is recommending.

No Member of the Senate wants the student aid money or any other program benefits to go to people who are not eligible. All of us in Congress and the executive branch need to step up the oversight of these programs, but again that is primarily the responsibility of the authorizing committees.

I suggest to the Senator from Virginia that he push the Finance Committee to exercise this oversight, and I agree with our chairman that arbitrary budget cuts of the magnitude suggested by the Senator from Virginia are excessive and that it is not the way to improve the management of the program. I think a more reasoned approach would perhaps get the results that the Senator from Virginia wants, not all in one year, but over a period of years.

Mr. HARRY F. BYRD, JR. Mr. President, if the Senator will yield there, he feels this figure is excessive. Does the Senator have a figure in mind that would be acceptable?

Mr. BELLMON. I would suggest to the Senator from Virginia that that figure should come from the Finance Committee. The oversight committee, the Budget Committee, in the past has attempted to produce figures that we thought were reasonable but until we can get the cooperation and support of the authorizing committees our figures are not acceptable here on the floor.

Mr. HARRY F. BYRD, JR. I misunderstood the Senator. I thought he had in mind supporting the amendment if the figures were changed slightly.

Mr. President, I ask unanimous consent that Senator ROTH of Delaware be named a cosponsor of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. And I shall take only a moment or two.

I think the importance of putting the——

Mr. BELLMON. Mr. President, will the Senator yield for one comment?

Mr. HARRY F. BYRD. I yield.

Mr. BELLMON. I wish to point out, as I tried earlier, that the budget resolution does assume a savings of $1 billion in the health mission. That is already in our——

Mr. HARRY F. BYRD, JR. How much has the Budget Committee increased the HEW appropriations exclusive of social security? I think the answer is $7 billion.

Mr. BELLMON. As I understand it, our increases are to account for the costs of inflation and normal expected increases.

Mr. HARRY F. BYRD, JR. I understand that. But regardless of the reason—if I am wrong, correct me—the fact is that the budget resolution provides for a $7 billion increase in the operation of HEW exclusive of social security.

Mr. BELLMON. But from that the department must pay the increased costs due to inflation, which I think the Senator will agree are certainly substantial.

Mr. MUSKIE. For instance, indexing social security benefits every year adds $5 to $6 billion.

Mr. HARRY F. BYRD, JR. This is exclusive of social security, I will say to the Senator.

Mr. MUSKIE. We are talking about programs where indexing is of that order of magnitude.

Mr. HARRY F. BYRD, JR. We are talking about programs exclusive of social security being increased according to this budget resolution for HEW $7 billion.

Mr. BELLMON. But those are entitlement programs. The costs of medicare and medicaid delivery are going to rise as inflation goes up, and the Budget Committee would be highly irresponsible to ignore that fact.

Mr. HARRY F. BYRD, JR. I am wondering whether Congress would not be irresponsible to ignore the fact that $7 billion has been wasted. So they did not need that $7 billion last year. This is an increase of over and above that $7 billion.

Mr. MUSKIE. Mr. President, if the Senator will yield, he says they did not need the $7 billion. How in heaven's name when HEW processes the application for a student loan is HEW to anticipate that that applicant is ineligible, that he is applying fraudulently? Or how is HEW to anticipate when it is paying a doctor's bill for a patient covered by medicare or medicaid that that particular bill was fraudulent, for services not required, or for excessive surgery? How does HEW control that, by denying payment at that point? Will the Senator tell me?

Mr. HARRY F. BYRD, JR. I think the answer is what the Senator from Oklahoma said a moment ago, that there needs to be a great management responsibility in HEW. Apparently what HEW has been doing is just trying to get rid of the money that Congress has been appropriating to it.

Mr. MUSKIE. Is the Senator suggesting that nobody in America is defrauded except the Government? What the Senator is saying is that the Government somehow has to anticipate now that it is going to be defrauded to the extent of $7 billion, should anticipate that in advance and not pay the money. But not pay to whom at that point?

Mr. HARRY F. BYRD, JR. Maybe it is not realistic to feel that $7 billion of tax funds should not be misspent by HEW. Maybe I am being unrealistic.

Mr. MUSKIE. The Senator is putting words in my mouth which I resent deeply because the Senator offers an oversimplistic way of getting at the problem. He accuses me of not caring about the problem.

Mr. HARRY F. BYRD, JR. I did not accuse the Senator of not caring. I was speaking of myself.

Mr. MUSKIE. The Senator was referring to me.

Mr. HARRY F. BYRD, JR. I am speaking of myself. I said maybe I am unrealistic.

Mr. MUSKIE. May I say to the Senator he is a member of the Finance Committee.

It is clear that the responsibility for handling this problem rests in the Finance Committee. If the Finance Committee will tell me, through you as its spokesman, or through its chairman, that it can take this Department by the scruff of the neck and shake $7 billion of fraud, waste, and mismanagement money out of it this next year, I will be glad to cut this deficit by $7 billion or by $5.6 billion, whatever.

Mr. HARRY F. BYRD, JR. Only the Congress——

Mr. MUSKIE. The Senator is a member of the committee.

Mr. HARRY F. BYRD, JR. I do not speak for the committee. Only the Congress can deliver a message to HEW; only Congress can do that. You start cutting HEW's budget—not cutting it but stop giving them such tremendous increases as are envisioned by this budget resolution, and then that will get the word to them. They will begin to tighten up their operation.

The first thing they have to do is tighten up their operations.

Mr. MUSKIE. The first thing to do is to eliminate all citizens who are tempted to commit fraud, to overcharge, to apply for benefits they are not eligible for; the only way you can eliminate such concerns is to strike the programs from the lawbooks of the country. Then you do not open them to temptation, you do not bring temptation within the reach of the average citizen—the doctor who overcharges the citizen who applies for benefits he is not eligible for. That way you will legislate virtue not only for the Department of Health, Education, and Welfare but for all of our fellow citizens all over the country.

Mr. HARRY F. BYRD, JR. I will say to my dear friend I would take it from the opposite direction. I would tackle it by the Congress demanding greater competency on the part of the Administrators of HEW.

I will yield to the Senator from Idaho.

Mr. McCLURE. I thank the Senator from Virginia for yielding. I compliment the Senator for raising this issue. I think it needs to be highlighted.

I understand the concerns of our Members on the Budget Committee and with the desire to demand good and efficient administration. I think this is what we should demand, good and efficient administration.

The Finance Committee does not administer these programs; HEW administers these programs.

It seems to me that to say the Finance Committee has to find a way of administering the program flies in the face of the government organization that says Congress passes the laws and creates the programs but the executive branch administers the programs. It was not in the creation of the programs but in the administration of the programs that the waste occurred.

I think the Senator from Virginia is exactly correct in focusing on a problem that does exist and says that it is our responsibility, as the Congress, as the legislative branch, to require of the administrative branch to clean up their act, to stop the waste of the taxpayers' money that ought to be flowing through to legitimate beneficiaries of programs created by Congress.

I think it might be well to compare for a moment the relative efficiency or lack thereof. It has been suggested that 16-percent waste was too much, and that a $7 billion waste is, perhaps, too much, and it can be reduced, but that $7 billion waste is 7 percent of their budget.

It is worthwhile noting that social security recipients, a broad spectrum of American citizens, a much larger program than these HEW programs, in that case the loss in maladministration of social security programs is less than 1 percent; and for my colleagues to indicate that a 7-percent inefficiency, a 7-percent wastage, is acceptable when we can look at another program that has less than 1 percent waste seems to me to fly in the face of reality, and also to obscure the responsibility which we in Congress have to try to require better administration of these programs.

I appreciate the initiative of my colleague from Virginia. He is doing his usual fine service in this body and to the people of this country in focusing on fiscal mismanagement of this country. Certainly that is one of the basic problems.

Mr. HARRY F. BYRD, JR. I thank the Senator from Idaho. I will take just one moment, and then, if it is the wish of the other Senators, I would have a vote.

I just want to say I think it is important if we are going to reduce waste in Government—and I do not see how anyone can deny that there is waste, and I do not know that anyone does really—here is the time to start by reducing the vast amount of money that is permitted as a result of this budget resolution.

Mr. BELLMON. Mr. President, will the Senator from Virginia yield for a question?

Mr. HARRY F. BYRD, JR. Yes.

Mr. BELLMON. Does the Senator, who is a member of the Finance Committee, the committee that has oversight over these programs, genuinely believe this kind of savings is possible?

Mr. HARRY F. BYRD, JR. I think if this Congress would tell HEW, if it adopts this amendment, that there will be a $5.6 billion reduction, HEW can manage its affairs where that would not hurt any recipients who really are entitled to receive the appropriation.

Mr. BELLMON. So the answer to the question is, yes, you feel that the savings of $5.6 billion are possible in the administration of these programs?

Mr. HARRY F. BYRD, JR. I think, based on the funds that HEW has in the past mishandled, yes, I think it is appropriate.

Mr. BELLMON. Does the Senator further believe that the Finance Committee would not be offended if the Senator from Maine and I joined in this resolution and helped pass it here on the floor?

Mr. HARRY F. BYRD, JR. I do not speak for the Senate Finance Committee. I am only one member of the Senate Finance Committee. I personally would welcome the Senator's support and that of the Senator from Maine, and I hope he will support it. That is the most hopeful news I have heard all day—as a matter of fact, it is the most hopeful news I have heard all year.

Mr. BELLMON. We have undertaken this on our own—the Budget Committee has brought in a resolution assuming savings not of this magnitude, but at a level which has incurred the opposition of the Finance Committee.

Mr. HARRY F. BYRD, JR. I do not know about that. I think if you will check the record—Senator MUSKIE does not have to check the record, because he is aware of it—I voted against every single effort to increase what the Budget Committee did. What I am trying to do is reduce what the Budget Committee brought in.

Mr. BELLMON. Our position is that the Budget Committee over the years has been very close to the proposal that the Senator from Virginia is offering, not in magnitude so much as in direction and in thrust.

Mr. HARRY F. BYRD, JR. Fine, I am delighted to be in such good company. That makes me feel real good.

Mr. BELLMON. If the Senator from Virginia can persuade his own chairman, the Senator from Louisiana, that this is a good approach, he might be surprised at how much support he would get from the members of the committee.

Mr. HARRY F. BYRD, JR. If I can persuade the chairman of the Budget Committee and the ranking Republican member of the Budget Committee, I am sure we can make some headway in other areas.

Mr. MUSKIE. That I would doubt considerably, may I say to my good friend, but before I vote I would check with Senator LONG.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that the Senator from Nevada (Mr. LAXALT) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. President, I have three tables showing the deficit in Federal funds and interest on the national debt, the unified budget receipts and outlays, and the national debt in the 20th century. I ask unanimous consent to have these tables printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

DEFICITS IN FEDERAL FUNDS AND INTEREST ON THE NATIONAL DEBT FOR FISCAL YEARS 1959-79, INCLUSIVE—PREPARED BY U.S. SENATOR HARRY F. BYRD, JR., OF VIRGINIA

[In billions of dollars]

Year	Receipts	Outlays	Surplus (+) or deficit	Debt interest
1959	65.8	77.0	−11.2	7.8
1960	75.7	74.9	+.8	9.5
1961	75.2	79.3	−4.1	9.3
1962	79.7	86.6	−6.9	9.5

Mr. BELLMON. Mr. President, before we vote I would like to make the record clear that I do not want to seem, and I do not think any member of the Budget Committee wants to seem, to try to be providing funds for waste or mismanagement or abuse. Our resolution already has assumed some $1 billion savings in the medical programs which we took to be realistic, and to be about the limit which we could realistically hope to achieve, and hope to see the oversight committees achieve and HEW achieve.

If the Senator from Virginia has reason to believe that that figure is inadequate, then certainly it ought to be reconsidered. But the budget resolution we have before the Senate at this time does assume some savings and in the out years perhaps we can reach a figure of something like that which the Senator from Virginia has in mind.

Mr. HARRY F. BYRD, JR. I move the adoption of the amendment.

The PRESIDING OFFICER. Do the Senators yield back their time?

Mr. HARRY F. BYRD, JR. There is no time involved, is there?

Mr. MUSKIE. Yes, there are 2 hours on each amendment.

Mr. HARRY F. BYRD, JR. I yield back my time.

Mr. MUSKIE. I yield back my time, Mr. President.

The PRESIDING OFFICER. All the time has been yielded back. The question, therefore, is an agreeing to the amendment of the Senator from Virginia. The yeas and nays have been ordered on the amendment, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. ANDERSON), the Senator from Texas (Mr. BENTSEN), the Senator from North Dakota (Mr. BURDICK), the Senator from Florida (Mr. CHILES), the Senator from Missouri (Mr. EAGLETON), the Senator from Montana (Mr. HATFIELD), the Senator from Maine (Mr. HATHAWAY), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Louisiana (Mr. LONG), the Senator from South Dakota (Mr. MCGOVERN), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from Florida (Mr. STONE) are necessarily absent.

I further announce that the Senator from New Jersey (Mr. WILLIAMS) is absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. ANDERSON), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from North Dakota (Mr. BURDICK) would each vote "nay".

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Nebraska (Mr. CURTIS), the Senator from New Mexico (Mr. DOMENICI), the Senator from New York (Mr. JAVITS), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I also announce that the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. GARN), and the Senator from Kansas (Mr. PEARSON) are absent on official business.

The result was announced—yeas 28, nays 48, as follows:

[Rollcall Vote No. 129 Leg.]

YEAS—28

Allen	Hansen	Proxmire
Bartlett	Hatch	Roth
Byrd, Harry F., Jr.	Hayakawa	Schmitt
DeConcini	Helms	Scott
Dole	Hodges	Talmadge
Eastland	Laxalt	Thurmond
Ford	Lugar	Tower
Goldwater	McClure	Young
Griffin	Morgan	Zorinsky
	Nunn	

NAYS—48

Bayh	Haskell	Nelson
Bellmon	Hatfield, Mark O.	Packwood
Biden	Heinz	Pell
Bumpers	Hollings	Percy
Byrd, Robert C.	Humphrey	Randolph
Cannon	Inouye	Riegle
Case	Jackson	Sarbanes
Chafee	Kennedy	Sasser
Church	Leahy	Schweiker
Clark	Magnuson	Sparkman
Cranston	Mathias	Stafford
Culver	Matsunaga	Stennis
Danforth	Melcher	Stevens
Durkin	Metzenbaum	Stevenson
Glenn	Moynihan	Wallop
Gravel	Muskie	
Hart		

NOT VOTING—24

Abourezk	Eagleton	McGovern
Anderson	Garn	McIntyre
Baker	Hatfield, Paul G.	Pearson
Bentsen	Hathaway	Ribicoff
Brooke	Huddleston	Stone
Burdick	Javits	Weicker
Chiles	Johnston	Williams
Curtis	Long	
Domenici		

So Mr. HARRY F. BYRD, JR.'s amendment (No. 1795) was rejected.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. RANDOLPH. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, and I do this after having consulted with the distinguished chairman (Mr. MUSKIE) and the distinguished ranking member (Mr. BELLMON) and others on both sides of the aisle, that the time be reduced from 50 hours to 20 hours, with the understanding that if all of the 20 hours are consumed in the offering of amendments, and Senators wish to have additional time for debate thereafter, there will be an extension of 4 hours. I should think 20 hours should be sufficient. In the event it was not, however, the Senators would have that backup, of course.

Mr. HARRY F. BYRD, JR. Mr. President, reserving the right to object, does the Senator from West Virginia feel that will be adequate time for a $500 billion proposition?

Mr. ROBERT C. BYRD. I think it would be adequate time. We have already used 4 hours and this will make it a maximum of 24 hours. This time can be increased by unanimous consent. After the 24 hours have expired, if the Senator feels he needs additional time, that will be satisfactory .

Mr. HARRY F. BYRD, JR. I do not expect to take a great deal of time. As the discussion progresses, there may be areas which perhaps would require more discussion than first appeared on the surface. I will not object.

Mr. ROBERT C. BYRD. If the Senator needs additional time, that will be fine. As the Senator saw the other night, I was not very successful in one endeavor. If the Senator feels that a little more than 24 hours will be necessary, we will have a little more.

Mr. HARRY F. BYRD, JR. Does the Senator mean 24 additional hours?

Mr. ROBERT C. BYRD. In addition to what we have used thus far.

Mr. HARRY F. BYRD, JR. I do not believe we would have any trouble in cutting it down.

Mr. ROBERT C. BYRD. I would have no trouble cutting it down. A nondebatable motion can be offered and the Senate will cut it down, I am sure. This seems to be a reasonable compromise, having used some of it already.

Mr. HARRY F. BYRD, JR. It is so reasonable, I cannot but agree.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Who yields time?

Mr. DECONCINI. Mr. President, I ask unanimous consent that Jerry Bonham be granted the privilige of the floor during debate and vote on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, the Senator from California has been wanting to make a statement. I wonder if he is prepared at this time?

Mr. HAYAKAWA. Mr. President, I ask unanimous consent that Janet Olson of my staff be granted the privilege of the floor during consideration of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, I yield to the Senator from Kansas 5 minutes.

Mr. DOLE. Mr. President, before the Senate has further debate on specific sections of the first concurrent budget resolution, I want to address my colleagues on several budgetary items which are particularly important. The decisions which Congress makes in its budget resolutions could well set the tone for the performance of the economy for the near future. There is no doubt about it, many difficult decisions will have to be made between now are passage of the resolution and we must not lose sight of the importance of our actions to American citizens and taxpayers.

ECONOMIC OUTLOOK

When the administration sent the fiscal year 1979 budget to Congress, the total requests were in excess of $500 billion, an unprecedented figure. The deficit under that budget would be $60 billion more than the budget for fiscal year 1978 with a total increase in spending of over $40 billion. The picture of economic instability that these numbers present is not comforting. The primary economic cloud on our horizon is a continuing high rate of inflation. Both the President's

proposal and the Budget Committee's recommendation fail to take adequate steps to control the enemy of every American, inflation.

As long as Congress continues to bow to requests for bigger and bigger spending deficits—and the Senator from Kansas was involved in agriculture legislation recently that I felt was very important, we had some very hard decisions to make. I respect the view of the chairman on that issue.

However, unless we reverse the current trend, the high rate of inflation that the United States has experienced will continue.

It seems to the Senator from Kansas that thus far, at least, the efforts made by the administration are not adequate. They are rather insignificant in comparison to the inflationary pressures that will be generated by a budget deficit of the size now under consideration.

CONGRESS MUST ACT FIRST

After looking at the proposals in President Carter's 1979 budget, it is clear that the first steps toward a rational economic policy will have to be made by Congress. Hard choices will have to be made not only in the budget resolution but also in the appropriation legislation that will follow during the remainder of the session.

In the Budget Committee, I was ready to support reductions in figures for virtually every budget function except defense. As a people, we must stop looking to the Government for a solution to every problem that confronts us without thinking of the costs involved. We must all realize there is nothing magical about Government spending that will cure all the ills of the country. Too often, a bigger Government program only creates a bigger problem.

AMERICA'S DEFENSE MUST REMAIN STRONG

The one area in which the Budget Committee has made cuts in the budget that I cannot agree with is in defense spending. The cuts in function 050, defense, are unwarranted. The administration's proposal of $128.4 billion in budget authority and $117.8 billion in outlays for defense in fiscal year 1979 does not provide for the growth needed to fulfill our commitments to our NATO allies and to update our naval strength. In the first round of the markup, the committee shaved $1.2 billion in outlays from the administration's request. At the start of the second round, the chairman suggested an additional cut in outlays of $1 billion.

America is at a crossroads. We have seen our posture and respect slip around the world. The United States cannot afford to be vulnerable. The problems and tensions we face are too serious. The Middle East remains unsettled. The Horn of Africa is an explosive powder keg. The Soviet Union is continually expanding their offensive capabilities.

Wherever we look, whether it is the Mideast or the Horn of Africa, or whether it is dealing with the Soviet Union, we find difficulty and confusion.

Although I strongly take exception with the administration's decision to cancel the B–1 bomber, to curtail the full-scale development of the MX missile system, and to cut back new naval ship construction, the defense function reported by the Senate Budget Committee contains a further elimination or drastic curtailment of major weapons systems needed ot insure the security of our country now and in the future.

Besides these somewhat controversial programs, the Budget Committee has made reductions in many other defense programs. Many of these projects have been a major part of our defense strategy for a number of years. The F–14 long-range Navy interception aircraft and the F–18, also for the Navy, were left out even though the Soviets have stepped up production of the backfire bomber. A number of other programs, ranging from a more fuel efficient transport to submarine-based cruise missiles, were also impaired by the Budget Committee's actions.

This unilateral self-denial is dangerous. It is based on the faulty assumption that the United States with little or no military modernization will be able to deter a Soviet attack on the United States and in Western Europe.

TAXES ARE A MAJOR ITEM IN 1979 BUDGET

Recent actions and potential changes in the tax system occupy a pivotal position in the 1979 budget. Congress has legislated a major increase in the tax burden and is feeling the heat from the indignation of taxpayers in this election year. The response from Congress promises to create an even larger budget deficit.

Last December, the leadership of both Houses of Congress proclaimed a victory upon the passage of the social security financing amendments. However, it seems that those who vigorously supported the tax increase are now the biggest advocates of tax relief.

I might say to the credit of the Budget Committee, that is one area where the Budget Committee indicated a show of good judgment insofar as trying to find some immediate solution. It seems as we look at the social security tax and the social security tax increase and the best way to deal with it that many Members of Congress have come up with unique and indigenious ideas.

The Senator from Kansas expressed serious doubts about the social security legislation that would raise $227 billion in new social security taxes in the next 10 years. I felt, as I do now, that the action taken was hasty and ill-conceived.

The social security tax is intolerable. I believe that Americans need and deserve a tax cut. However, the tax cut should not come from a reduction in social security taxes. A better approach is to give taxpayers a tax break that will not adversely affect the social security system. I have introduced legislation to accomplish this goal and will pursue this avenue in the Senate Finance Committee.

SOCIAL SECURITY TAX CREDIT

My proposal, S. 2808, would grant a 20-percent refundable tax credit on the social security employee and self-employed contribution paid. The legislation will grant tax relief to Americans inflicted with the burdensome social security tax without endangering the integrity of the social security trust fund. It avoids the perils of general revenue financing by retaining the requirement that Congress cannot indiscriminately raise social security benefits without increasing social security taxes to pay for the benefits. My proposal, unlike general revenue finance or social security tax rollback will keep the social security trust fund actuarially sound. I support the decision of the Budget Committee not to take the easy way out of the social security dilemma.

POLICY IS IN STATE OF FLUX

The indecision in Congress about the size of social security tax increases is matched in the hesitation of the Ways and Means Committee on the proper size of a general tax reduction. With the specter of rising inflation, many committee members are backing away from a major tax reduction. Administration spokesmen are suggesting that some moderation in the size of the tax reduction may be needed to help the fight against inflation. The Federal Reserve Board chairman, G. William Miller, has urged the President to cut back or postpone the tax reduction.

This type of ambivalence is typical of recent congressional action in the area of taxes. The rule has been ad hoc tax cuts, usually in elections years, in response to continuing inflation. Normally these reductions have been just enough to offset the effects of inflation, but only past inflation not future inflation. Some Members of Congress have proposed a more significant reduction in tax rates, an idea which has some merit. However, these proposals fail to come to grips with the realities of the distortions that inflation introduces into the tax system.

INDEXING IS NEEDED

The reason that inflation is a problem is that the tax system treats every increase in income as if it were real income. The tax system does not take into account the fact that a worker's real income has increased less than nominal income because the entire nominal income gain is taxed. Thus, with the sustained high inflation in recent years, workers have had wage increases reduced not only by inflation but also by the higher taxes that must be paid as inflation pushes incomes into higher tax brackets.

I believe that the way to provide for continued and orderly growth is to index the tax system. Legislation to index the tax system before the Congress, in fact addressed in the Senate Finance Committee today, will provide the needed economic stimulus in the out-years without new inflation. Indexing will stop the endless and counterproductive roller-coaster policies of the past.

EMPLOYMENT EXPANSION PROVIDED

In the Tax Reduction and Simplification Act of 1977, Congress adopted for the first time a jobs tax credit. I have advocated this type of "peoples" tax credit since I was in the House a number of years ago. In both the 94th and the 95th Congresses, I introduced legislation to establish a jobs tax credit. The President's budget strangely indicated that the employment tax credit would be allowed to expire. It is a sign of encouragement to

all unemployed Americans that the Budget Committee has corrected this oversight.

The resolution provides $200 million for a targeted jobs tax credit to areas which are economically depressed and to groups that have higher unemployment rates. A targeted approach will encourage more jobs for the money and help most minority and young Americans whose unemployment rates range as high as 40 percent.

STATE AND LOCAL CRIME CONTROL AID GIVEN

The administration has called for some reduction in spending and even more significant shifts of money between programs in the criminal justice system. One administration target has been the Law Enforcement Assistance Administration. While some LEAA projects have seemed an unwise choice of expenditures, the many planning grants that LEAA has given to government in Kansas have been very beneficial. These LEAA planning functions have wide support in rural communities across the country.

The Budget Committee would continue aid to State and local governments through the LEAA at about present levels of activity. The suggested level of funding would provide room for some limited initiatives for LEAA State planning grants and other areas. I hope that the Appropriations Committee follows the lead of the Budget Committee and does not make reductions in LEAA planning grant activities.

Mr. President, I hesitate to support the resolution as reported because of the cuts in the defense and the fact that I believe additional spending cuts in nonmilitary areas could have been made. President Carter has asked for increased budget authority for many areas—urban policy, education, and health—without the underlying policy decisions in these areas being made. The President's urban plan is keyed to "distressed areas" yet not a definition of what a "distressed area" is included in the plan. The administration has proposed a new Cabinet level Department of Education, the cost of which is unknown. President Carter still supports national health insurance which could have a major impact on the budget projections for future years. These budget proposals are typical of the fuzzy requests made to Congress. The President has asked for a blank check in these areas. I do not think that the American public is willing to spend the money that a blank check requires.

The time for Congress to make the choice to move toward a balanced budget is on this first budget resolution. If we do not reduce the size of the deficit, inflation will continue to accelerate. The consumer prize squeeze is cause for national alarm. It is the responsibility of the Congress to curb spending and to cut back unneeded regulations that cost consumers and business billions of dollars each year.

Mr. BELLMON. Mr. President, I yield myself 2 minutes.

First, I commend the Senator from Kansas for the fine statement he has made. He points out some very cogent elements that need to be understood better.

Mr. President, I ask unanimous consent to have printed in the RECORD a table showing a comparison of the defense budgets of the President and the Senate Budget Committee.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FISCAL YEAR 1979 COMPARISONS OF DEFENSE BUDGETS

[In billions of dollars]

	President		Senate Budget Committee	
	Budget authority	Outlays	Budget authority	Outlays
Unadjusted	128.4	117.8	129.8	116.6
CBO reestimates (outlay shortfall)		−1.9		
Trident delay	−.9			
Assume 5 percent pay cap	−.5	−.5		
Assume 20 percent pay absorption	−.5	−.5		
Adjusted total	126.5	114.9	129.8	116.6

Note: Senate Budget Committee over (+)/under (−) President: Budget authority, +3.3; Outlays, +1.7.

Mr. BELLMON. Mr. President, the Budget Committee makes some assumptions that the President did not make. We assumed the Trident submarine, No. 8, will be delayed and that this will reduce the need for spending $900 million of budget authority.

We assumed a 5-percent pay cap that saves $500 million, and a 20-percent pay absorption that saves $500 million, which puts our budget figures, the Budget Committee figures, at $129.8 in budget authority, compared to the President's figure of $126.5, and the Budget Committee's outlay figures of $116.6 compared to the President's of $114.9.

So comparing the two assumptions, the Budget Committee is $3.3 billion higher than the President's.

The PRESIDING OFFICER (Mr. GRAVEL). The Senator's time has expired.

Mr. BELLMON. One additional minute.

The Senate Budget Committee's figure is $3.3 billion above the President's and the budget authority $1.7 billion above the President's in outlays.

So I believe it is neceessary to keep the record straight by stating when we compare the President's defense budget with the Senate Budget Committee's figures, using the same assumptions, that the Budget Committee is $3.3 billion over in budget authority and $1.7 billion in outlays.

The PRESIDING OFFICER. Who yields time?

The Senator from Virginia.

Mr. HARRY F. BYRD, JR. Mr. President, I just want to address a question or two.

The PRESIDING OFFICER. Who yields time to the Senator?

Mr. BELLMON. How much time does the Senator from Virginia require?

Mr. HARRY F. BYRD, JR. I just wanted to ask a few questions. I do not think it will take long.

Mr. BELLMON. Ten minutes?

Mr. HARRY F. BYRD, JR. Let us say 10 minutes.

Mr. BELLMON. I am happy to yield the Senator 10 minutes.

Mr. HARRY F. BYRD, JR. I thought I might address this question to either the manager or the ranking minority member.

Page 2 of the resolution says:

The amount by which the statutory limit of such debt should accordingly be increased $101.800 billion.

Is the Senator from Virginia correct in assuming from that that the Federal funds deficit would be $101.8 billion?

Mr. MUSKIE. The $101.8 billion includes the Federal fund deficit.

Mr. HARRY F. BYRD, JR. The resolution says that the amount of the deficit in the budget which is appropriate in the light of economic conditions and all relevant factors is $55.6 billion.

Of course, that means the unified budget, the total budget.

Mr. MUSKIE. The Senator is correct.

Mr. HARRY F. BYRD, JR. The next item says that the appropriate level of the public debt is $853.8 billion, and the amount by which the statutory limit on such debt should be accordingly increased is $101.8 billion.

Now, I would assume, although I may be in error, that that must be the anticipated Federal funds debt.

Mr. MUSKIE. The Federal funds deficit is included in those figures.

Mr. HARRY F. BYRD, JR. Pardon?

Mr. MUSKIE. Those figures include borrowing by off-budget agencies as well as, of course, the on-budget borrowing.

Mr. HARRY F. BYRD, JR. Yes.

Mr. MUSKIE. I do not know if I have it with me. But that is the answer to the question. I can get the detail of it.

Mr. HARRY F. BYRD, JR. I would appreciate that. I am taking it from memory. My recollection is that the Federal funds deficit, leaving out the off-budget items, would be about $74 billion, and the off-budget items then must be somewhere around $26 billion.

Would that be correct?

Mr. BELLMON. Will the Senator from Virginia yield?

Mr. HARRY F. BYRD, JR. Yes, I yield.

Mr. BELLMON. That figure the Senator pointed out would seem to be disproportionate. But the fact is the total amount of borrowing has to be adequate to cover the particular debt at its highest point. It may be the debt will reach a higher level sometime during the fiscal year and then comes down, so at the end of the year it is only $55.6 billion. But in order to cover those fluctuations, it is necessary to raise the debt limit to the figure of $101.8 billion.

Mr. MUSKIE. The detail I have in front of me now. The existing debt ceiling is $752 billion through July 1 of this year.

Mr. HARRY F. BYRD, JR. Yes.

Mr. MUSKIE. Now, in order to anticipate what it would be at the beginning of fiscal year 1979, we have to estimate what the debt will be at the end of the current fiscal year, that is, September 30.

Mr. HARRY F. BYRD, JR. That is right.

Mr. MUSKIE. And as of that date, it is estimated it will be $769.2.

In other words, there would have to be an increase in the debt ceiling for the

current fiscal year from $752 to $769.2 to cover the remainder of this fiscal year.

Then to that we add the estimated fiscal year 1979 deficit of $55.6.

Mr. HARRY F. BYRD, JR. No, not $55.6. That is the Federal—I mean——

Mr. MUSKIE. I am giving the Senator the details.

Mr. HARRY F. BYRD, JR. I beg pardon.

Mr. MUSKIE. We will get to it. I will give the items.

Mr. HARRY F. BYRD, JR. That is fine.

Mr. MUSKIE. We add $55.6. The deficit of the off-budget agencies is estimated at $12.5, and then to that is added the surplus of trust funds which is $16.5. Because they hold Government securities, they are counted in as part of the debt.

If we add those four items, we arrive at the figure of $853.8 billion.

Going over those again, $769.2 billion at the end of this fiscal year. $55.6 billion is the estimated deficit for 1979, $12.5 billion, the off-budget agencies, and $16.5 billion, the surplus of trust funds.

That adds up to $853.3 billion.

Mr. HARRY F. BYRD, JR. Let me state it this way and see if I am accurate in so stating: As we all know, of course, the debt is affected primarily and almost entirely by the Federal funds deficit rather than by the unified deficit.

Does the Senator have the Federal funds estimate? The Senator from Virginia has a figure of $74 billion as the Federal funds deficit. To that is added the off-budget borrowing. Was it 16.5 or 12.5?

Mr. MUSKIE. 12.5.

Mr. HARRY F. BYRD, JR. That is $86.5 billion. What is the 16.5 the Senator gave me a moment ago?

Mr. MUSKIE. The 16.5 is the surplus of the trust funds.

Another item that the Senator may not have included is this—and I do not know how that fits his method of computing it: The anticipated debt at the end of this fiscal year would be $769.2 billion, which is $17.2 billion above the existing debt ceiling.

Mr. HARRY F. BYRD, JR. The figure I have for the deficit for fiscal 1978, the current year, is $64.8 billion. But the Senator says it will be how much for the current fiscal year?

Mr. MUSKIE. The deficit for fiscal 1978 is $56.3 billion.

Mr. HARRY F. BYRD, JR. That is the unified deficit.

Mr. MUSKIE. That is the unified deficit.

Mr. HARRY F. BYRD, JR. The Federal funds deficit is what—that is, general operations of Government, leaving out the trust funds?

Mr. MUSKIE. I am afraid I do not have that figure as such.

Mr. HARRY F. BYRD, JR. All right. In any case, the debt limit in this 1 year needs to be increased by $101.8 billion.

Mr. MUSKIE. Part of that is the fiscal 1978 increase. Take $17.2 from that number, and that shows the increase, reflecting the off-budget agencies, the on-budget agencies, the increase in the surplus of trust funds.

Mr. HARRY F. BYRD, JR. That is right. Let me state it this way, and see if it is about right: Included in this $101.8 billion is the deficit which will be incurred for the period July 1 through September 30.

Mr. MUSKIE. Yes.

Mr. HARRY F. BYRD, JR. And from October 1 through the following fiscal year—in other words, 15 months. This $101.8 billion is a 15-month figure, not a 12-month figure.

Mr. MUSKIE. The Senator is correct. That states it more simply.

Mr. HARRY F. BYRD, JR. I thank the Senator. That is the point on which I was not clear. I am glad to have that cleared up.

The PRESIDING OFFICER. The 10 minutes of the Senator have expired.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield me additional time?

Mr. MUSKIE. I yield the Senator 5 additional minutes.

Mr. HARRY F. BYRD, JR. I thank the Senator.

The figure I have for the interest on the debt—I am speaking now of the upcoming fiscal year—is $55.9 billion. On page 4, the figure for new budget authority is $46.8 billion. Is that for fiscal 1979?

Mr. MUSKIE. That is for fiscal 1979.

Mr. HARRY F. BYRD, JR. That figure is a great deal lower, if I am correct about it, than the budget estimate. I am wondering why it would be that much lower. It is exactly $9 billion less.

Mr. MUSKIE. Is the Senator looking at the budget report? If he looks at page 160 of the budget report, there are two tables that are relevant. The one at the top indicates "Mission 1: INTEREST ON THE PUBLIC DEBT," $53.2 billion. The table at the bottom indicates "Mission 2: OTHER INTEREST," which is minus $6.4 billion. If the Senator will make the subtraction, he will get $46.8 billion as the net.

Mr. HARRY F. BYRD, JR. I suppose that, really, my question to the Senator is, which is the appropriate figure to use? It occurs to me that the interest on the debt—in other words, what it costs to service the debt—is a great deal higher than the figure included in the budget resolution. The reason it is higher is that there is offsetting interest which the Government receives. As I understand it, the Budget Committee has reduced the total interest charges by the amount of the offsetting interest. Is that correct?

Mr. MUSKIE. No. We have given the functional total, which is accurate. In the report, it gives the information on the makeup of the functional total, and the interest on the public debt is clearly stated on page 160, at $53.2 billion.

Mr. HARRY F. BYRD, JR. Then, what is the $6 billion on the table below?

Mr. MUSKIE. Other interest payments and interest collections by the Federal Government. Collections exceed payments, and so there is a net inflow of $6 billion.

Mr. HARRY F. BYRD, JR. That is right. That is what I mentioned, I think, a moment ago.

Mr. MUSKIE. Yes.

Mr. HARRY F. BYRD, JR. The Senator has offset the cost of financing or servicing the debt.

Mr. MUSKIE. Both of these items are included in that function, and I do not know of any way to avoid the arithmetic of subtracting the interest received from the interest paid in order to get the functional total. I don't see a problem so long as the functional total is clearly described in the committee report, which I think it is.

In other words, interest paid is not a separate function from interest collected; and this is not the only place where we offset expenditures, say, by income of one kind or another received. For example, we receive revenues from oil leases in the Outer Continental Shelf, and that is subtracted in function 950, undistributed offsetting receipts.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUSKIE. I yield another 5 minutes.

Mr. HARRY F. BYRD, JR. I am not critical, I might say to the Senator. I just wish to understand the procedure used.

Mr. MUSKIE. I understand.

Mr. HARRY F. BYRD, JR. I do not doubt, and I do not say that the Budget Committee is not using the appropriate procedure. But I do say this, that the cost of servicing the debt is not $46.8 billion.

Mr. MUSKIE. It is $53.2 billion.

Mr. HARRY F. BYRD, JR. It is $53.2 billion. That is the cost of servicing the debt.

Mr. MUSKIE. The Senator is correct.

Mr. HARRY F. BYRD, JR. As a result of the deficits and as a result of the total debt the taxpayers are billed for that much.

Mr. MUSKIE. The Senator is correct.

Mr. HARRY F. BYRD, JR. There is an offset that is the interest which the Government receives in other areas.

Mr. MUSKIE. That is correct.

Mr. HARRY F. BYRD, JR. But so far as servicing the debt is concerned, it is greater than the $46.8 billion.

Mr. MUSKIE. That is clearly correct, yes.

Mr. HARRY F. BYRD, JR. I thank the Senator.

The PRESIDING OFFICER. Who yields time?

Mr. MUSKIE. Does the Senator wish more time for any purpose?

Mr. HARRY F. BYRD, JR. Not at the moment.

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time? Whose time will the rollcall be charged to?

Mr. MUSKIE. I ask unanimous consent that the time be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. Presi-

dent, will the Senator from Oklahoma yield for 5 minutes so that I might ask a question?

Mr. BELLMON. I am very happy to yield 5 minutes to the distinguished Senator from Virginia.

Mr. HARRY F. BYRD, JR. Mr. President, I note that the new budget outlays—and I shall use round figures for clarity—in the budget resolution are $499 billion and the appropriate level of new budget authority is $566 billion. There is a difference of $67 billion between outlays and new budget authority.

My question is: If one looks at other years, is that not an unusually wide difference between outlays and budget authorities?

Mr. BELLMON. The Senator understands, of course, that the difference is that in the budget authority we include funds that will not be spent in this current fiscal year.

Mr. HARRY F. BYRD, JR. Yes.

Mr. BELLMON. Some defense procurement comes in out years, some of the public works in others.

Going back to fiscal year 1975, the budget authority was $412 billion, outlays were $326 billion. That is about a $90 billion difference, which is regular.

Mr. HARRY F. BYRD, JR. It is greater than that. The last year I think the difference was about $40 billion—the current year as compared with the previous year was about $40 billion.

Mr. BELLMON. In fiscal year 1976, the budget authority was $415 billion; outlays were $365 billion. That was a $50.5 billion difference which, considering the size of the budget, was pretty much in line with fiscal year 1979.

Fiscal 1977, the budget authority was $465 billion; the outlays were $401 billion, so that was a $64 billion spread.

As the Senator said, in fiscal 1978 the budget authority was $501 billion and the outlays $452 billion, so the spread was $48 billion. So I think the range is not necessarily out of line with the past.

The fact is, I might say to the Senator from Virginia, the Budget Committee has been trying very hard to hold budget authority down, because we realize that does translate into future spending, and while I could not go through and give the Senator from memory all the issues we discussed, we were aware of this danger, and we are trying to be responsible and hold the figure as low as we can.

Mr. HARRY F. BYRD, JR. I thank the Senator for the information he has submitted to the Senate.

The reason I inquired is that there is a difference of about 17 percent in budget authority as compared with outlays. Apparently that is not necessarily out of line.

Mr. BELLMON. Mr. President, I suggest the absence of a quorum, with the time to be charged equally to both sides.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. I yield to the distinguished Senator from North Carolina. How much time would the Senator need?

Mr. MORGAN. Ten minutes.

Mr. MUSKIE. I yield 10 minutes.

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. MORGAN. Mr. President, before I begin my prepared remarks, I want to commend my distinguished colleagues, the Senator from Maine (Mr. MUSKIE), and the Senator from Oklahoma (Mr. BELLMON) for the very fine work they have done on the budget resolution and the work they have done during the last four years in trying to make the Budget Reform Act work in the Senate.

I happen to believe that it is, perhaps, that act is, the most important piece of legislation that has been enacted by this Congress in a decade, if not in decades.

It was inconceivable to me, as a member of State government in North Carolina, where we had always practiced fiscal responsibility and were required by law to maintain a balanced budget, that this Congress had no real way of knowing how much money was being spent during the session until after the session was over and the appropriations had been added up.

The PRESIDING OFFICER. Will the Senator withhold until we can get some order in the Senate? The Senator is entitled to be heard.

The Senator may proceed.

Mr. MORGAN. I believe that the Budget Reform Act of 1974 offers to the American people a real hope of bringing some sense of fiscal responsibility into our actions.

As I said to my colleague, the Senator from Maine, this morning, I appreciate very much the hard work that he has done, work which has at times appeared to be thankless, in trying to make this act work.

I listened this morning to his presentation. I wish every Member of the Senate who was not here would take the time to read his presentation and see how far we have come in making the Budget Act work, and yet at the same time see how far we need to go.

I think I have done very well in trying to support the act on almost every occasion where I have declined to vote to waive the budget resolution in given cases. I am not here to say that on every occasion I have, although I do not remember having not done so. But after listening to the distinguished Senator this morning I concluded then and there that I do not intend to vote again to waive the provisions of the budget resolution. When we adopt this budget resolution we ought to be able to see far enough down the road to take care of contingencies and emergencies, and if we cannot do that then those matters would just have to wait, in my mind, for another year.

I thought it was rather meaningful this morning that the Senator from Maine pointed out that at least 10 Members of the Senate who had voted against the budget resolution in years past, if not last year, because it called for expenditures of too much money, had voted to suspend that resolution during the year in order to spend more money than the resolution called for.

So I think it is really time that we in the Senate take this Budget Act seriously and make a concerted effort to live within the resolution, and that we emphasize it to the people, our colleagues, in the House.

I just came back from a weekend in North Carolina. I realize, of course, that it is just past the time for paying income taxes, but I heard more real concern from the people of my State about deficit spending on the part of the Federal Government and irresponsible fiscal policies than ever before. It came from a group, from groups, of people who never before have expressed this kind of concern.

I might say I visited a couple of months ago at a caucus in Charlotte, N.C., a caucus that normally is concerned with spending programs. These people a few years ago, this particular caucus, would have been involved and would have been more concerned with how much money are you willing to spend than any other caucus. I went there prepared to answer that. Much to my chagrin the entire evening was taken up in considering reckless spending on the part of the Federal Government.

I might mention that this was a minority caucus. These people, because of what Congress has done and the Government has done over the years, have now become substantial taxpaying citizens, and they are beginning to see waste in Government, not only the Federal Government but at every level. So I think it is something we should all be concerned about.

I want to make one other observation before I go on to my prepared remarks. We sometimes blame ourselves and we blame each other for the large amounts of spending in Congress. But what I said to my people in North Carolina last week, and what I am going to continue to say, is that the people in Congress represent the will of the people in America. The entire Congress may not represent the will of the people in my home State, because I think we are more conservative in our spending outlook than most people, but by and large we represent the will of the people of America. When the people of America stop demanding so many of these programs and begin to support us in our efforts to bring fiscal soundness to our budget, then we can do it.

Our President recommended a budget that I think was fairly conservative, taken in the light of the inflationary spiral, but in almost every single program where he recommended cuts I have been lobbied by my constituents back home, to put it back.

I will give you an illustration. I had a delegation call on me from the conservation program. That is a great program, and I, for one, have benefited from it, because I have been a farmer all my life.

But they came to me and said, "Look, if you accept the President's recommendation, you are going to lose 20 men

in your home district." You see, they related it to my district.

Then I had the 4-H Clubs—a great program; I was a 4-H Club member. I remember very well a white-faced steer I took to the fair and sold. It was a great program.

They had young people visit me, who said, "Look, if you follow the President's recommendation, this is what we are going to lose in North Carolina," and they must have listed a dozen different programs.

When I went home this weekend, on the front page of my county paper there was a headline stating that my county plans to ask for a $1 million grant for community action programs.

I am sure we could use that money; but somewhere along the way we are going to have to say, back home, that we can do things ourselves, that these may be things that are desirable, but we cannot afford them. There is not a Member of the Senate, or not a one listening to me today, who has not at one time or other had a desire for a new automobile, or maybe the wife would like to have had a new refrigerator, but you had to take a look at your budget and say, "You know, we just can't afford it at the present time." That is what we are going to have to say to some of our people back home.

Mr. President, I wish now to make a few remarks on the budget as a whole.

The budgetary framework we are about to approve today proposes that the United States spend some $55 billion that it does not have. Although smaller than the $60 billion deficit proposed by the President, this figure is still far too high. This $55 billion deficit will raise the total national debt to about $600 billion. I, for one, do not believe that we can continue this pattern of reckless spending without fundamentally damaging the free enterprise system and our system of limited government. We must find a way to bring the Federal budget into balance.

The deficit we are being asked to approve today will continue a trend of unrestrained deficit spending that, since 1969, has nearly doubled the total national debt. At the end of fiscal 1978 the national debt will total almost $600 billion, up from $279 billion in fiscal 1969. This doubling of the total national debt in under 10 years does not look well for the future solvency of our Government. There was once a day when we resorted to deficit spending only in times of grave national emergency. But since 1969 we have endured massive deficits, whether in time of peace or in times of war, in times of prosperity as well as in times of recession. Our deficit spending has become reckless, uncontrolled, and indiscriminate. What began as an emergency practice has now become standard operating procedure.

Deficit spending is a fundamentally unsound practice and a good deal of our current economic difficulty can be traced to the unrestrained deficit spending of recent years. Deficit spending has become popular, because deficit spending is perceived as a quick means of economic stimulus. This view is faulty. Deficit spending will cause nothing but inflation unless private investment is strong. But—and this is the key link missed by deficit proponents—private investment is undermined by deficit spending. Deficit spending starts a vicious cycle leading to more and more deficit spending: As the Government borrows money to finance deficit after deficit, private investors have less money available to build job-creating business. Starved for funds, the private sector is unable to create enough jobs. Consequently, rising unemployment leads the Government to raise the deficit, starting the cycle anew.

If I may digress for a moment to give a very simple illustration, I am a director of a small savings and loan association in my hometown of about 50,000 people. Either last summer or the summer before—the exact time escapes me—the Federal Government had to have $17 billion in order to meet its obligations, and they put out a particular issue of bonds in denominations as low as $1,000, paying more interest than we were able to pay in our savings and loan association; and we had a run on our savings and loan association of people drawing their money out and putting it in Government bonds.

What that meant was that we had less money to invest in my county, to make available to homebuilders to build homes. That is a cycle that we get into, and I think it is one we ought to be aware of.

Not only does deficit spending "crowd out" private investment and cause inflation, but deficits undermine the business confidence so essential to job-creating investment decisions. The business community perceives that the Federal Government is fundamentally out of control. Businessmen are not going to invest in long-term capital investments when they think Government-fueled inflation is growing. I believe there is mounting evidence that the business community will not make job-creating capital investment until the Federal Government sets its own house in order. Balancing the budget would be an unmistakable signal that the Federal Government will no longer be a disruptive force in the economy.

In the 1960's we thought high inflation and high unemployment were impossible at the same time. Today we have both: high unemployment and high inflation. This worsening picture is the long-term consequence of reckless deficit spending. With our deficits we have created short-term unproductive employment at the expense of long-term investment in plants and factories, with the stable payroll they provide. I believe the inflation picture is bound to worsen despite the President's new anti-inflation drive. Having starved private investment, we will find that our attempts at "economic stimulus" will increasingly cause inflation, not create jobs. It is time we stop the spiral of fiscal irresponsibility before we do irreversible damage to the economy.

The massive deficits of recent years and the damage they have done can clearly be blamed on Congress and on Congress alone. Congress alone has the responsibility and, most importantly the power, to balance the budget. The budget is not balanced, because we have not balanced it. Faced with the unpopular choice between raising taxes and cutting spending, which is important to the people back home, Congress has taken the easy way out—deficit spending. The electoral consequences of raising taxes or cutting spending are short and quick. But the consequences of deficit spending are longer term and not so direct. In responding only to the short-term pressure for more spending and low taxes, Congress has clearly failed in its responsibility to the public.

While Congress must be more disciplined in its spending habits, I believe the time has come to bring a halt to recklessly running up deficits. We have abused the right to tax and to spend, and so we must forfeit part of that right. Only a constitutional amendment limiting Congress can stem the political pressures that have lead to our present excesses, especially if our present Budget Act does not work.

In my home State of North Carolina the constitution requires that the budget be balanced each year. This constitutional requirement has insured the solvency of the State of North Carolina. I think it is time the Federal Government adopt a similar solution to the problem of growing deficits.

In writing the Constitution, the Founding Fathers were guided by the animating principle of the American revolution: "No taxation without representation." The Founding Fathers were careful to insure that the power to tax resided only in those who were the representatives of the taxpayers. Deficit spending violates the principle of taxation without representation, because deficit spending is really a tax on the unborn, and the unborn do not vote. Because the unborn cannot vote, Congress can tax items with impunity. There is not a powerful constituency against deficit spending because the victims of our reckless spending are not yet born. This year alone, we will spend $45 billion paying off an old debt. This figure is sure to grow in years ahead. We must stop burdening our children with taxes that will not benefit them and of which they had no opportunity to approve.

A constitutional amendment limiting the Congress ability to spend beyond receipts has precedent in the profoundest principles of our Constitution. In delineating the powers of the branches of Government, the founders were careful to preserve from congressional control those matters that might be popular in the short run but harmful in the long run. For example, civil liberties were to be guaranteed by the courts rather than by Congress. In many periods of hysteria or intolerance Congress—responsive to the immediate yearnings of the people—might well have repealed basic civil liberties but for the fact that guardianship of these liberties was entrusted to the courts. The founders here as elsewhere recognized that the well-being of the Nation could not be entrusted to short term impulse and convenience. Quite simply, the founders recognized

that we as a nation needed protection from our own short term impulses and passions.

I believe it is time to take the fiscal integrity of the Federal Government out of the hands of those dominated by the short term perspective and insure that integrity by constitutional means. Both the economic chaos we are creating and the most central principles of constitutional Government require nothing less.

Mr. MUSKIE. Will the Senator yield.

Mr. MORGAN. I am delighted to yield.

Mr. MUSKIE. First, I express my appreciation for the Senator's attention today. Second, I would like to say how grateful I have been for the steadfast and understanding support which he has given the Senate Budget Committee and, more importantly, the congressional budget resolutions over the years he has been in the Senate that we have brought those resolutions to the floor. I know for the last 3 years the Senator has been one of only 16 Senators whose support for the budget resolution is above 500. I know that comes, because of his great interest in the problem and his great concern about inflation and about the importance of setting a goal for balancing the budget.

I have listened to what he has had to say this afternoon. I think he is right on target. I appreciate his philosophy. More than anything, I wanted to indicate my recognition of the help that he has given to us and to me particularly over the last 3 years.

Mr. MORGAN. I thank my distinguished colleague very much.

Mr. MOYNIHAN addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. MUSKIE. How much time would the Senator wish?

Mr. MOYNIHAN. Fifteen minutes, if possible.

Mr. MUSKIE. I yield 15 minutes to the Senator.

Mr. MOYNIHAN. I thank the distinguished chairman of the committee.

Mr. President, I would like to raise a concern with the managers of this resolution. The Committee on Finance will soon be coming to the Senate floor with a bill know as H.R. 7200, the public assistance amendments of 1978. This will include a series of important provisions affecting the present public welfare system.

One of these provisions is fiscal relief for State and local governments with respect to their present share of welfare costs. In some jurisdictions these costs are very high indeed. In most of the counties of New York State, for example, they exceed 50 percent of the county budget.

I am chairman of the Subcommittee on Public Assistance of the Finance Committee. Last summer I first proposed such relief in the amount of $1 billion to be allocated among the several States according to their welfare cost burdens. In our hearings, Governors, mayors, county executives, and public welfare administrators made it abundantly clear that not only was such relief essential to them if they were to continue providing welfare recipients the benefits to which they are entitled, but also that such fiscal relief is necessary as a precursor of general welfare reform itself.

This proposition was initially resisted by some, including the present administration, which indicated reluctance to provide fiscal relief until such time as a comprehensive welfare reform plan was fully implemented.

We argued the opposite view, that States and localities ought not to have to wait until 1982 for help with these financial burdens of the welfare system inasmuch as a single clear and undisputed objective of the welfare reform proposal is that the Federal Government should assume a much larger proportion of the local costs of this national program than it now does.

We argued further that the way to build momentum for welfare reform was to begin right now what we could do right now, which was to provide some share of that relief. In time, the President came round on this view, and it was agreed that for the 3 fiscal years commencing with the present one and including the two to follow, there would be fiscal relief for welfare costs, the payments for fiscal 1979 and 1980 to be included in, the President hoped, a general welfare bill which would take effect in fiscal 1981.

Mr. President, I would like to state that I, for one, am still altogether optimistic about our prospects of enacting a major piece of welfare legislation this year. I accept that it is historical to suppose that such an event is ever going to happen but there has been an intervening event of great consequence, which is that the distinguished minority leader and the Senator from Oklahoma, who is the distinguished ranking minority member of the Budget Committee, Senator DANFORTH, of Missouri, and Senator RIBICOFF, of Connecticut, have come forward with a major welfare proposal which represents the first assertion of large bipartisan interest in the Senate for such a measure.

We are now holding hearings on the Baker-Bellmon-Danforth-Ribicoff proposal, and we have in H.R. 7200, among other things, a vehicle by which we might send elements of such a bill back to the House. Members of the House by no means have given up their efforts. We have spent 15 months in bringing ourselves to this stage. To abandon the enterprise now would scarcely abide by our own purposes or previous pronouncements. In my mind, it makes the case for not abandoning fiscal relief.

I would have to say that the report of the first concurrent resolution on the budget for fiscal 1979 is not reassuring with respect to the broader responsibility the Federal Government has taken on to share the increasing resources that flow from a graduated income tax under conditions of protracted inflation with State and local governments which do not have the same resources.

The Budget Committee reports, for example, with respect to function 850, which is general revenue sharing, the level of assistance contemplated over the next 5 years—this is on page 155—would decline from its present 4 percent total of all State and local revenues to about 2 percent in fiscal 1983.

This marks a major decision in political economy. If it goes forward like that, it seems to me I should be most reluctant to see that happen, but in any event that is what is projected here.

Under section 850, for general purpose fiscal assistance, the Budget Committee recommendation is to cut the President's budget request of $15.1 billion to $9.7 billion, a reduction of one-third, or 36 percent. At the same time,—and in striking contrast—on function 350 the committee proposes to increase the President's budget request for agriculture from $7.2 to $12.4 billion, an increase of 70 percent. The figures have been just about reversed; from $7.2 billion agriculture and $15.1 billion for general revenue sharing, we go to $12.4 billion for agriculture and $9.7 billion for revenue sharing.

It is a policy decision of very large moment. My proposal with respect to $400 million is not very sizable. I hope the chairman of the committee will want to comment, inasmuch as revenue sharing has seemed so much to be an urban program. Most Americans live in urban areas. Revenue-sharing is cut by a third.

Mr. MUSKIE. Will the Senator yield?

Mr. MOYNIHAN. Of course, I am happy to yield.

Mr. MUSKIE. With respect to the President's budget in function 850, that number was higher than the committee's, because the administration has proposed a taxable municipal bond option. At the present time, as the Senator knows, municipal bonds are not taxable.

Mr. MOYNIHAN. Yes.

Mr. MUSKIE. What the administration proposed was a substitute for that in the form of an interest subsidy. If we had included that, we would have had to include budget authority in function 850 to cover it. We did not include it.

Mr. MOYNIHAN. Mr. President, I am only harassing the chairman about these bills for the purpose of impressing upon him the minuscule proposal I put before him for a mere $400 million.

Mr. MUSKIE. I understand, but I was puzzled for a moment, because I momentarily forgot why we should be so much lower than the President in budget authority for function 850. Once I recalled the facts, I thought I ought to share the recollection with the Senator from New York.

Mr. MOYNIHAN. I had feared the Senator might, but at the same time, he would grant that on page 155 of the committee report appears the 5-year forecast for general revenue sharing. To cut the proportion of State and local expenditures supplied by revenue sharing by half, from 4 to 2 percent, is an event we will all want to talk about, a proposition we will want to discuss.

Mr. President, what I want now to ask of the chairman is, would the budget resolution as recommended by the Budget Committee prevent the Senate from approving State and local fiscal relief as recommended by the Finance Committee and agreed to by the President?

Mr. BELLMON. Mr. President, if I may respond, the Budget Committee's

recommendations to the Senate do not assume any of the $400 million funding for fiscal relief the Finance Committee recommended. While the Budget Committee's recommendations do not preclude the passage of a fiscal relief provision, such a provision could only be enacted if there were offsetting reductions in one or more of the priority items included in our assumptions. To pay for fiscal relief, the Finance Committee could reduce spending by a total of $400 million in other programs within its jurisdiction. This could be achieved by substituting fiscal relief costs for other increases in expenditures assumed by our committee—such as the social service claims settlement, increased title XX funding, increased health program funding and an expanded earned income tax credit—or by enacting benefit reductions in current programs such as social security, medicare, medicaid, AFDC, and SSI.

What I am saying, Mr. President, is that there is room here, but it is up to the Finance Committee to decide where to use that room.

Mr. MOYNIHAN. I do thank the distinguished Senator from Oklahoma for a very clear and satisfactory reply.

I would like to ask one further question, in order that we might know what our relationships are likely to be. That is, does the Senate Budget Committee oppose fiscal relief in principle? I point out, for example, that the committee's altogether proper concern for inflation may not be most effectively directed to this issue, because we are involved here not with an increase in overall Government expenditure, but with a transfer of levels of expenditure among levels of Government. I wonder if my friend, the Senator from Oklahoma, wishes to comment on that.

Mr. BELLMON. Mr. President, I am very happy to respond. Let me first say that the Senator from Oklahoma does not oppose fiscal relief. In fact, the bill which the Senator from New York mentioned earlier does provide fiscal relief.

Mr. MOYNIHAN. It most assuredly does, and most effectively, I might say.

Mr. BELLMON. The Budget Committee's decision not to assume, in the first budget resolution, that the $400 million would be provided was based on two considerations: First, our judgment that we had to identify any and all uncertain items—and cut those out of the budget wherever possible—in order to hold down the deficit. This is a particular concern this year, as my colleague knows. The deficit is still far too large.

It is up around $55 billion. We felt we had to be vigilant not to let it get any higher than it already is.

Second, the Budget Committee felt that fiscal relief should be addressed as part of the overall welfare reform issue rather than as a forerunner of welfare reform. On the latter point, I would like to make the following personal observations as a coauthor of one of the pending welfare reform proposals:

First. Most people who have studied the welfare system agree that poverty is a national problem—I think that is the key underlying issue here—and that the Federal Government should bear a larger percentage of future welfare costs than it now does. In particular, the burden of welfare financing should be taken off the local property tax in those States where that tax provides much of the support for welfare.

Second. I fear that providing fiscal relief without first enacting a welfare reform bill may slow down the progress of welfare reform, since it will tend to take off some of the pressure for enactment of a reform bill.

The PRESIDING OFFICER (Mr. METZENBAUM). The 15 minutes allotted to the Senator from New York has expired.

Mr. BELLMON. I yield an additional 5 minutes.

Third. President Carter has not included in his budget or otherwise endorsed fiscal relief before welfare reform. His most recent position statement is contained in the March 22 announcement of his urban strategy. He said:

> . . . I propose to phase in the fiscal relief component of the Better Jobs and Income Act as soon as Congress passes this legislation, rather than in 1981 as originally planned.

Fourth. The welfare bill, which six other Senators and I have coauthored (S. 2777), provides fiscal relief for State and local governments, starting in fiscal year 1980 and increasing in fiscal year 1981 and fiscal year 1982. In fiscal year 1982 and beyond, our bill would provide a shift of more than $3 billion per year in State and local costs to the Federal level.

Fifth. I believe personally, and I want to stress this point, that we can and should pass a welfare reform bill this year. If substantial progress can be made between now and September on welfare reform, I would support the addition of money to the second budget resolution if needed to enable fiscal relief to begin in fiscal year 1979, even though it would not start until fiscal year 1980 under the bill that we have introduced, which I support.

What I am saying to the Senator is, if we can get some progress toward welfare reform, I shall be glad to support additional funds.

Mr. MOYNIHAN. I could not be more grateful to the Senator, both for the energy he has shown in the preparation of the welfare bill and in his responses today.

I appreciate the clarification the Senator has provided on first, the considerable flexibility which will exist under this resolution for the finance committee and the Senate as a whole for consideration of fiscal relief, and second, on Senator BELLMON's personal perspectives on fiscal relief and its relationship to welfare reform. While I differ with him on the latter point, I am very pleased that we are in basic agreement on the much more important longer-run fiscal relief question.

I would take 1 more minute of his time just to ask whether there may be some current figures on this whole question of the different rates of revenue increases for the Federal Government and the State and local governments.

The last time I knew, these figures, because of this phenomenon of inflation, suggested that for every 1 percent increase in the revenue of the Federal Government owing to the graduated tax system and an increase of 1 percent or less in revenues of State and local government.

I do not assert this is a fixed ratio in our economy, but it was once rather stable and, if it is still the case, the Federal Government has a responsibility to increase its rate of revenue sharing rather than otherwise if anything like equal levels of governmental competence and fiscal viability are to be retained at the different levels of the Federal system.

Inflation will do many things to us. One thing it will do the quickest is give the Federal Government an extraordinary predominance in the political economy as against State and local governments.

Mr. BELLMON. The Senator's figures are correct. The Federal revenues are increasing more rapidly than State and local governments. But we probably should not press this too far because during hearings this year we were told by competent witnesses that whereas Federal Government budget deficits are $55 billion or $60 billion, the State and local governments are carrying very sizable surpluses.

That is not true in all instances.

Mr. MOYNIHAN. I do thank the Senator from Oklahoma and the Senator from Maine.

I leave the general thought in mind, but I thank them very much for these specific undertakings. I appreciate the time of the committee.

Mr. BELLMON. I thank the Senator. I have enjoyed working with him on this.

Mr. MUSKIE. With respect to the Senator's observations relative to the relationship between Federal revenues and growth in GNP, the figures he used were 1.5 to 1, as I recall.

Mr. MOYNIHAN. That was the early 1970's.

Mr. MUSKIE. That is true as to the personal income tax, but not as to Federal revenues generally. The figure there is between 1.2 and 1.3 percent.

With respect to general revenue sharing, we made no assumptions that would respond to the magnitude of that program, would respond to inflation. That is a decision for Congress to make. The Congress has just renewed general revenue sharing with some increase to reflect inflation. But we felt in committee we ought not make any assumptions about what Congress would do when the next authorization period came up.

Of course, Congress can do whatever it decides appropriate at that time.

Mr. MOYNIHAN. But is it not the case that the figure the Senator has just projected as in the Budget Committee report shows, in effect, a policy decision to reduce the impact of revenue sharing rather considerably unless we decide to do something about it.

The way things are left, we are going to cut the impact of that program in half.

Mr. MUSKIE. I do not think——

Mr. MOYNIHAN. This is not the doing of the Budget Committee at all.

Mr. MUSKIE. But I do not think there

is anything in the history, which is not all that long, to shorten that conclusion. That may happen, but my own guess is that Congress will probably increase the amount by something to reflect inflation.

But may I state, Federal expenditures on the order of $84 billion in the 1979 budget now go to State and local governments through grant and aid programs and block grant programs.

Mr. MOYNIHAN. And that has——

Mr. MUSKIE. That has grown enormously.

Mr. MOYNIHAN. That is the point I would make. This money will make its way back. But if we do not watch out, it will be in very precise grants decided on in Washington and administered from Washington, in contrast to the general theory of revenue sharing which was to maintain local decisionmaking.

Mr. MUSKIE. I understand whenever moves are undertaken to convert those specific grant-in-aid programs to more general block grant programs or general revenue sharing, not only is there response here in Congress where people like to make the spending decisions more directly, but there is also resistance among constituencies at the grassroots who do not like to lose our specific programs.

Mr. MOYNIHAN. Constituencies created by the Federal Government.

Mr. MUSKIE. That is true, but they are there.

Mr. MOYNIHAN. A vertical bureaucracy, to the State capital and the county.

Mr. MUSKIE. There are also State, local and county governments who become constituencies because they see that when programs are converted to general purpose programs like community development programs, for example, that the larger units tend to benefit and the smaller get lumped together in groups where they have to scramble for inadequate funding.

So the problem of shifting from grant-in-aid programs to general revenue sharing is not all that simple.

I have been a proponent for that movement over several years and we may make some progress. I think we ought not ignore the fact, however, that $84 billion is being made available in fiscal year 1979.

There is another point, may I say to the Senator. Although surpluses are not evenly distributed among State governments today, nevertheless, overall, State governments are in surplus.

There are those in politics at the State level who pat themselves on the back for the fact that they are in surplus, whereas the big, bad, Federal Government is in deficit, ignoring the fact that in many cases their surpluses are made possible by the general revenue sharing funds that deepen the Federal deficit.

So there is a little grating of the nerves that takes place in that kind of dialog.

But, nevertheless, I think the Senator has made a valid point. I have long believed when we finally dealt with the welfare problem adequately we would lift that burden to a substantial degree off State and local governments, as we probably should. I think that is likely to happen.

So when we look at the whole picture, at that time we may see the equities a little differently and, hopefully, we will make more equitable distributions of the burden.

I would like to say one other thing, if I may, to the Senator about the tough choices that he will face as he considers the possibility of finding room in this budget resolution for fiscal relief.

The choices to which Senator BELLMON referred are tough ones. We assumed increases in a variety of programs in the Finance Committee jurisdiction, such as $500 million for social services claim settlement, $200 million for increased title funding, and $400 million for an expanded earned income credit. To accommodate fiscal relief, one or more of those may have to be cut.

But, in any case, that option is there.

I agree with what my good friend from Oklahoma said on that point. We do not try to exercise those options for the committees involved.

Mr. MOYNIHAN. You have troubles enough.

Mr. MUSKIE. We inherit all the accumulated problems of all the other committees, and I guess we should not complain about that.

Mr. MOYNIHAN. I thank the chairman and I thank the ranking minority member.

Mr. MUSKIE. Mr. President, earlier, the Senate acted on an amendment presented by the distinguished Senator from Virginia (Mr. HARRY F. BYRD, JR.). Subsequent to the vote on that amendment, I received a letter from the Secretary of HEW, Joseph A. Califano, Jr., on the subject of the amendment and the intentions of the Department to seek to implement the Inspector General's report which was the basis for that amendment.

I ask unanimous consent that the letter be printed in the RECORD at this point, so that Members who are concerned about the amendment and particularly the Inspector General's report can get this evidence of the Secretary's determination to seek to implement that report.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF
HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., April 24, 1978.

Hon. EDMUND S. MUSKIE,
Chairman, Committee on Budget, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I understand that during floor consideration of S. Con. Res. 80, the First Concurrent Resolution on the FY 1979 Budget, Senator Harry Byrd intends to offer an amendment to reduce outlay authority by $5.6 billion in the three functional categories affecting HEW programs. Specifically, the amendment would eliminate: (a) $500 million from Function 500—Elementary and Secondary Education Programs, (b) $4.1 billion from Function 550—Medicare and Medicaid, and (c) $1.0 billion from Function 600—AFDC and SSI.

According to Senator Byrd, the basis for this sweeping amendment is the recently released annual report by HEW's Inspector General, which estimated that of $148 billion in HEW fiscal year 1977 outlays, between $6.3 and $7.4 billion were unnecessarily or improperly spent. This estimate, which is rough and incomplete, was prepared at my request because I believe it is important that we identify all potential areas of unnecessary and inappropriate expenditures as we strive to eliminate them.

To use this estimate as a basis for making widespread reductions in HEW programs, however, would be a serious mistake. It would attempt to cure complex problems primarily in the entitlement programs of Medicare, Medicaid, AFDC and SSI which have developed over many years.

Adoption of the Byrd amendment would not help to accomplish the goal of eliminating fraud, abuse and error from these programs. Aggressive and sustained action is the way to deal with such problems, and we are committed to such action.

Congress acted last year to assist us in meeting problems of fraud and abuse by approving H.R. 3, the Medicare, Medicaid antifraud and abuse legislation. Enactment of our proposed hospital cost containment bill, now pending before Congress, would represent a major step in dealing with the problem of excessive health care costs. Reducing the excessive number of existing hospital beds will also contribute significantly to a lowering of unnecessary Medicare and Medicaid expenditures. We will also need assistance from Congress in other areas to acquire the necessary tools to eliminate fraud, abuse and waste in Federal health programs.

The other major reduction proposed by the Byrd amendment would be in the area of education activities. It would eliminate Administration initiatives to increase Title I, ESEA to benefit approximately 900,000 more children, increase the Federal share of educating handicapped children, and increase Head Start Funds.

We are committed to improving the management of HEW programs and to assure that taxpayers' dollars are properly spent for the purposes intended. We have undertaken major initiatives to deal with the problems discussed in the Inspector General's report, among them:

Protect Integrity, which uses computer techniques to screen Medicaid claims of doctors and pharmacists for fraud, abuse, and error.

Project Match, which matches payrolls and welfare rolls to identify individuals improperly receiving cash assistance.

Operation Cross-Check, which uses computer techniques to identify government employees who have defaulted on student loans.

A reorganization that consolidated Medicare and Medicaid administration in the Health Care Financing Administration in order to manage more effectively the Federal health dollar and to reduce fraud, abuse, and error.

A reorganization and consolidation of the student assistance program and to put them on a sound financial footing.

Consolidation of all cash assistance programs under the Social Security Administration.

Timely development of criteria for the establishment of State fraud and abuse units in Medicare and Medicaid as required by Congress.

Tightened control over grants and procurements.

Development of major new accounting and quality control systems in Medicare and Medicaid, SSI and AFDC aimed at reducing error rates.

Institution of a major initiative tracking system to monitor departmental provision of services in an effective fashion including error rate reduction.

Proposing major welfare reform legislation to consolidate all cash assistance programs on a single computer system to reduce fraud, abuse, and error.

These and other actions clearly demonstrate our commitment to deal effectively with the problems identified in the In-

spector General's report. Senator Byrd's amendment would not result in the savings he has projected. If adopted, it could instead cause reductions in important discretionary grant programs to meet the outlay levels proposed. We therefore urge the rejection of Senator Byrd's amendment.

Sincerely,

JOSEPH A. CALIFANO, Jr.

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

● Mr. CRANSTON. I want to comment on how this budget resolution affects funding for the Space Shuttle. As most Senators know, the Space Shuttle is a transportation system which enables a space vehicle to be launched, orbit the Earth, and be recovered. As the generation of space vehicles which follows upon the successful Apollo program, the Shuttle will provide us with routine access to space, at considerable savings resulting from phasing out of inefficient nonreusable launch vehicles.

The development plan for Space Shuttle envisions construction of five orbiters. The orbiter is that component of the Shuttle that contains crew and payload and is reusable. Congress, wisely I believe, established a five-vehicle fleet in order to assure that the full potential of the Shuttle system would be realized.

The administration has proposed to reverse the Congress decision and reduce the Shuttle fleet to four orbiters, and consider additional orbiter capacity in future years. The fifth orbiter is needed. At the relatively small additional cost of $265 million, spread out over several years, it constitutes a particularly sound investment. For fiscal year 1979 the funding requirement is small indeed, some $4 million. Moreover, delaying its procurement until fiscal year 1981 will add as much as $235 million to its cost according to reliable estimates. That, in my view is penny-wise and budget-foolish.

Will the chairman tell me whether the budget resolution we are debating today assumes funding for the fifth Space Shuttle orbiter?

Mr. MUSKIE. I know that the distinguished Senator from California is a strong supporter of the Space Shuttle. Let me respond to his question by first noting that the civilian space program, including the Shuttle, falls into Function 250: General Science, Space and Technology. In this function, the Budget Committee is recommending targets of $5.2 billion in budget authority and $5.0 billion in outlays.

Mr. CRANSTON. Yes, I am aware those are the recommended amounts. The chairman will recall our discussion during the Budget Committee markup about this item.

Mr. MUSKIE. As the Senator knows, the Budget Committee does not make its determinations by line items. We do not specify individual programs in the budget resolution, so the Budget Committee has neither endorsed the fifth orbiter nor rejected it.

However, the $5.2 billion budget authority recommended amount would be sufficient to accommodate first year funding of the fifth orbiter, should the authorizing and appropriations committee wish to proceed with it, as the committee's report notes on page 72.

Mr. CRANSTON. I believe the other items that are included in the President's budget in this function are also quite important. They include funds for the National Science Foundation and the basic research programs of the Department of Energy, and the balance of the civilian space program.

To assure funding sufficient to cover the fifth Shuttle orbiter, it is my understanding that the budget authority total in function 250 would need to be $5,220 million. This amount represents the President's budget request for this function of $5,216, which does not include the orbiter plus the orbiter's first year incremental cost, which is only $4 million. Is the $5.2 billion recommended by the committee sufficient to cover the $5,220 required to fund the fifth orbiter and the other programs in this function?

Mr. MUSKIE. Yes. The Budget Committee, as the Senator from California knows, in order to simplify its work and assist others in understanding it, uses the conventional rule of rounding. Under this rule, for example, 5,163 would be rounded up to 5.2 while 5,249 would be rounded down to 5.2.

Mr. CRANSTON. So the $5.2 billion recommended by the committee is not a flat 5,200.

Mr. MUSKIE. That is correct.

Mr. CRANSTON. So that if actual fiscal year 1979 spending in function 250 threatened to total 5,220 in budget authority or even 5,235, the distinguished chairman of the Budget Committee would not come to the floor and suggest that a piece of pending legislation which would create that spending level was breaching the functional target of the budget resolution.

Mr. MUSKIE. As long as the spending, under the rule of rounding, could be rounded down to 5.2, my position would be that the bill does not exceed the target. The committee's past practice and current policy has been and is to define spending as within the target if the amount in question can be rounded to the target amount.

Let me state though that should spending legislation involve additional spending and, when rounded, cause the function 250 total to reach $5.3 billion in budget authority, then the target the committee is now recommending would be considered breached, and I reserve judgment as to what action I would recommend to the Budget Committee as appropriate.

Mr. CRANSTON. I understand that, and I thank the chairman for his clarification of this issue.

Mr. MUSKIE. Again, let me state for the record that the Budget Committee's recommended budget authority target in function 250 of $5.2 billion does not endorse or reject the fifth Shuttle orbiter. The mix of program activity within the functional amounts is for others to determine. But the target of $5.2 billion is not our view of a ceiling of 5,200. If spending can be rounded down to the 5.2 amount, I will not consider the functional target to have been breached. If the fifth orbiter can be funded within such spending, then the target is sufficient to accommodate the orbiter.●

ROUTINE MORNING BUSINESS

(Routine morning business transacted and additional statements submitted today are as follows:)

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

REPORT OF THE UNITED STATES SINAI SUPPORT MISSION—MESSAGE FROM THE PRESIDENT—PM 168

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report, which was referred to the Committee on Foreign Relations:

To the Congress of the United States:

In conformity with Section 4 of Public Law 94–110 of October 13, 1975, I am pleased to transmit herewith the Fifth Report of the United States Sinai Support Mission. It describes the continuing operation of the United States early warning system in the Sinai and its contribution to maintaining the disengagement arrangements between Egypt and Israel under the Sinai II Agreement signed on September 4, 1975.

The estimated cost for operating and maintaining the U.S. early warning system in Fiscal Year 1978, including all contractor and headquarters expenses, is expected to be about ten percent less than the $12.2 million appropriated. For Fiscal Year 1979, the budget is estimated at $11.7 million.

During the six-month period covered in this report, twenty-two minor violations of the Sinai II Agreement were detected. In each instance the violation was an unauthorized aircraft overflight. None of these incidents was serious.

Both parties to the Agreement recently reaffirmed to the Director of the Sinai Support Mission their full confidence in the manner in which the U.S. is discharging its responsibilities in the Sinai and wished this effort to continue as it is at present.

Dramatic developments in the Middle East over the past six months expanded hopes for a comprehensive peace settlement. While the diplomatic process is underway, I believe it imperative that the U.S. continue to meet fully its obligations under existing agreements. The activities of the Sinai Support Mission play an important part in fulfilling these obligations, and I urge continued Congressional support for this effective peacekeeping mission.

JIMMY CARTER.

THE WHITE HOUSE, *April 24, 1978.*

MESSAGE FROM THE HOUSE RECEIVED DURING THE RECESS

Under authority of the order of April 20, 1978, the Secretary of the Senate, on April 20, 1978, received a message from the House of Representatives which announced that the Speaker has signed the following enrolled bill and joint resolution:

S. 2452. An act to authorize funds for the Hubert H. Humphrey Institute of Public Affairs and for the Everett McKinley Dirksen Congressional Leadership Research Center; and

H.J. Res. 649. A joint resolution to authorize the President to call a White House Conference on the Arts, and to authorize the President to call a White House Conference on the Humanities.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on April 21, 1978, he presented to the President of the United States the following enrolled bill:

S. 2452. An act to authorize funds for the Hubert H. Humphrey Institute of Public Affairs and for the Everett McKinley Dirksen Congressional Leadership Research Center.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. ALLEN, from the Committee on Agriculture, Nutrition, and Forestry, with an amendment and an amendment to the title:

S. 2146. A bill to amend the Consolidated Farm and Rural Development Act, as amended (Rept. No. 95–752).

By Mr. DECONCINI, from the Committee on the Judiciary, with an amendment and an amendment to the title:

S. 1819. A bill to reduce the cost of operating the Federal criminal justice system, reduce the criminal caseload of the Federal courts, and establish alternatives to criminal prosecution for certain persons charged with nonviolent and, in selected instances, violent offenses against the United States, and for other purposes (Rept. No. 95–753).

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation, with an amendment:

S. 2789. A bill to provide authorization for appropriations for the Office of Rail Public Counsel, and for other purposes (Rept. No. 95–754).

EXECUTIVE REPORTS OF COMMITTEES

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

Saul Silverman, of Pennsylvania, to be Assayer of the U.S. Assay Office at New York, N.Y.

The following-named persons to be Directors of the Securities Investor Protection Corporation:

Hugh F. Owens, of the District of Columbia;

Ralph D. DeNunzio, of Connecticut;

Brenton H. Rupple, of Wisconsin; and

Michael A. Taylor, of New York.

(The above nominations from the Committee on Banking, Housing, and Urban Affairs were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation:

Rear Adm. Robert I. Price, U.S. Coast Guard to be the Commander, U.S. Coast Guard Atlantic Area, with the grade of vice admiral.

Rear Adm. James S. Gracey, U.S. Coast Guard, to be the Commander, U.S. Coast Guard Pacific Area, with the grade of vice admiral.

Rear Adm. John B. Hayes, U.S. Coast Guard, to be the Commandant of the U.S. Coast Guard, with the grade of admiral.

Rear Adm. Robert H. Scarborough, Jr., U.S. Coast Guard, to be the Vice Commandant of the U.S. Coast Guard, with the grade of vice admiral.

(The above nominations from the Committee on Commerce, Science, and Transportation, were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Mr. CANNON. Mr. President, I also report favorably sundry nominations in the Coast Guard which have previously appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of April 6, 1978, at the end of the Senate proceedings.)

By Mr. EASTLAND, from the Committee on the Judiciary:

Glen E. Robinson, of California, to be U.S. marshal for the northern district of California.

(The above nomination from the Committee on the Judiciary was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. RANDOLPH (for himself and Mr. SCHWEIKER):

S. 2972. A bill to amend the Comprehensive Employment and Training Act of 1973 to provide special consideration to Opportunities Industrialization Centers and to other community-based organizations in the furnishing of services under that act, and for other purposes; to the Committee on Human Resources.

By Mr. MOYNIHAN (for himself and Mr. MCCLURE) (by request):

S. 2973. A bill authorizing appropriations to the Secretary of the Interior for services necessary to the nonperforming arts functions of the John F. Kennedy Center for the Performing Arts, and for other purposes; to the Committee on Environment and Public Works.

By Mr. CHURCH (for himself, Mr. JACKSON, Mr. PAUL G. HATFIELD, Mr. MCGOVERN, Mr. EAGLETON, Mr. MCCLURE, Mr. ZORINSKY, Mr. STEVENS, Mr. GRAVEL, Mr. CULVER, and Mr. MARK O. HATFIELD):

S. 2974. A bill to establish a National Historic Trails Category within the National Trails System, to designate certain historic routes as National Historic Trails, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. HATHAWAY (by request):

S. 2975. A bill to authorize a supplementary fiscal assistance program of payments to local governments, and for other purposes; to the Committee on Finance.

By Mr. MORGAN:

S. 2976. A bill for the relief of Evelyn Khoury; to the Committee on the Judiciary.

By Mr. PACKWOOD:

S. 2977. A bill for the relief of Renuka Pavia; to the Committee on the Judiciary.

By Mr. MCCLURE:

S. 2978. A bill to amend the Occupational Safety and Health Act of 1970 to prohibit restrictions on work rules in locations in which there is hunting, fishing, or shooting sports, and for other purposes; to the Committee on Human Resources.

By Mr. RIEGLE:

S. 2979. A bill to provide a special program of financial assistance to Opportunities Industrialization Centers in order to provide new motivational and skills training opportunities for welfare recipients, and new incentives for business and industry to coordinate their employment plans and job creation efforts with Opportunities Industrialization Centers and national community-based organizations which have demonstrated effectiveness in developing cooperative relationships with the private sector; to the Committee on Human Resources.

By Mr. CHAFEE (for himself, Mr. DANFORTH, Mr. HELMS, Mr. ROTH, and Mr. DECONCINI):

S.J. Res. 129. A joint resolution directing the Architect of the Capitol to halt construction of the extension to the Dirksen Office Building and providing for the conversion of the site of such extension into a public park to be known as the Philip A. Hart Park and an underground parking garage for tourists and visitors to the Capitol; to the Committee on Rules and Administration.

By Mr. MATHIAS (for himself and Mr. BAYH):

S.J. Res. 130. A joint resolution designating John Philip Sousa's "The Stars and Stripes Forever" as the national march of the United States; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. RANDOLPH (for himself and Mr. SCHWEIKER):

S. 2972. A bill to amend the Comprehensive Employment and Training Act of 1973 to provide special consideration to Opportunities Industrialization Centers and to other community-based organizations in the furnishing of services under that act, and for other purposes; to the Committee on Human Resources.

OPPORTUNITIES INDUSTRIALIZATION CENTERS AND COMMUNITY-BASED ORGANIZATIONS SERVICES IMPROVEMENT ACT

● Mr. RANDOLPH. Mr. President, for myself and the able Senator from Pennsylvania (Mr. SCHWEIKER) I send to the desk for appropriate reference a bill to amend the Comprehensive Employment and Training Act of 1973 to provide that special consideration be given to Opportunities Industrialization Centers and other community-based organizations in the furnishing of services under that act.

As we know, unemployment continues to be one of our most serious national problems. While measures which serve to stimulate job creation may be sufficient to brighten the employment picture for some, there remains a large group of unemployed Americans who are not likely to benefit from an increase in demand. This group, comprised of the young, the minorities, and middle-aged and older workers, those entering the labor market for the first time, and other similarly disadvantaged individuals, share a common problem of little training and even less experience.

We must continue our efforts to combat this pressing national problem. The legislation being introduced today seeks to assure that those organizations, with demonstrated ability to train and successfully place disadvantaged individuals, will be given the opportunity to continue their participation in the attempt to reduce unemployment. It is my belief that special consideration should be given to community-based organizations such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, and other similar groups.

The effectiveness of community-based organizations in delivering quality services is graphically demonstrated by the record of Opportunities Industrialization Centers (OIC). Under the guidance of Rev. Leon Sullivan, the OIC, since its creation in 1964, has trained over 400,000 previously unemployed individuals. Of that number, 75 percent were placed in meaningful jobs following training and 80 percent were retained in those jobs. This impressive record assumes greater significance when viewed in light of the fact that an investment of $1,500 per trainee was able to yield a savings of approximately $2 billion in Federal assistance payments while simultaneously generating $4 billion in wages.

Also of significance is OIC's ability to reach the disadvantaged Americans which CETA was designed to benefit. Of those trained by OIC through its network of 150 community-based chapters in 48 States in 1977, 90 percent were economically disadvantaged, 74 percent were public assistance recipients, 62 percent were heads of families, and 13 percent were veterans. Although OIC is open to all qualified individuals, 75 percent of its participants are members of minority groups and 90 percent of the participants have a high school education or less.

This record makes it readily apparent that OIC, as well as other community-based organizations, can, and do, deliver the requisite services necessary to reach the chronic, hard-core unemployed. This bill seeks to recognize this proven ability.

The Congress supported the provision for special consideration for community-based organizations contained in the Comprehensive Youth Employment and Demonstration Projects Act last year. It should similarly support the special consideration for community-based organizations in other than the Youth titles of CETA proposed by this bill.●

● Mr. SCHWEIKER. Mr. President, I am pleased to join with my distinguished colleague from West Virginia, Mr. RANDOLPH, in sponsoring a bill to improve the Government's employment and training programs by insuring special consideration to Opportunities Industrialization Centers and other community-based organizations in carrying out the programs authorized by the Comprehensive Employment and Training Act.

The unemployment crisis in the United States today is well known to every Member of the Senate. Millions of Americans are unable to find meaningful employment, and even more tragically, a vast number of them are virtually unemployable because they lack the skills, education, or experience necessary to successfully compete in the labor market. This year, Congress will likely enact two major pieces of legislation, the Comprehensive Employment and Training Amendments of 1978 and the Full Employment and Balanced Growth Act of 1978, to deal with this national disaster. In both bills, primary emphasis should be given to assisting the hard-to-employ to obtain meaningful, permanent jobs. The legislation Senator RANDOLPH and I introduce today is designed to improve CETA's services by insuring appropriate utilization of programs of demonstrated effectiveness operated by community-based organizations, such as Opportunities Industrialization Centers of America, Inc.

In my opinion, and as indicated by the statistics presented in Senator RANDOLPH's comments, Rev. Leon Sullivan's Opportunities Industrialization Centers operate our Nation's most effective manpower training programs, particularly in working with the private sector to place trainees in permanent jobs. Many of the witnesses who testified before the Subcommittee on Employment, Poverty, and Migratory Labor on the CETA reauthorization bill last month stressed the need for increased efforts to prepare the hard-to-employ for employment and place them into unsubsidized jobs. To accomplish this, we must take maximum advantage of the effective programs already in operation.

Mr. President, Congress, particularly the Senate, has recognized the effectiveness of OIC and other community-based organizations in past legislation dealing with unemployment. For example, last year, in passing the Youth Employment and Demonstration Projects Act of 1977, Congress adopted a section I sponsored which provided that, in operating the youth employment and training programs authorized by title II of that act, prime sponsors shall give special consideration to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as OIC, the National Urban League, SER-Jobs for Progress, Mainstream, and the like.

In addition, the Comprehensive Employment and Training Act now recognizes the work of OIC and other community-based organizations by specifically listing them as eligible participants in CETA programs. The original language of the Senate-passed version of CETA went a step further, with a provision I sponsored, requiring that prime sponsors give special consideration to OIC and other community-based organizations, just what we propose today, in the operation of job training programs.

Mr. President, I have in the past sponsored several bills designed to fund directly through the Secretary of Labor comprehensive employment and training programs operated by OIC and other community-based organizations. However, concern had been expressed that such an approach would diminish the emphasis on decentralized prime sponsor operation of employment and training programs. Therefore, we do not take that approach in this legislation. Instead, we seek to reassert the consensus of the Senate that CETA prime sponsors, in carrying out the programs authorized by that act, give careful attention and special consideration, just as the law now requires with respect to youth programs, to all programs of demonstrated effectiveness operated by OIC and other community-based organizations.

Mr. President, I hope my colleagues will continue to give these organizations the endorsement they have earned and insure appropriate utilization of their programs in our employment and training activities.

I ask unanimous consent that the text of our bill appear in the RECORD following my statement.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2972

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Opportunities Industrialization Centers and Community-Based Organizations Services Improvement Act".

SEC. 2. (a) Section 103 of the Comprehensive Employment and Training Act of 1973 (hereafter in this Act referred to as the "Act") is amended by inserting at the end thereof the following new subsection:

"(j) Programs receiving assistance under paragraph (1) of subsection (a) of this section shall give special consideration, in carrying out programs authorized under this title, to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, employer related nonprofit organizations, and other similar organizations.".

(b) Section 202 of the Act is amended by adding at the end thereof the following new subsection:

"(c) Programs receiving assistance under subsection (a) of this section shall give

special consideration, in carrying out programs authorized under this title, to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, employer related nonprofit organizations, and other similar organizations.".

(c) (1) Section 315 of the Act is amended by inserting "(a)" after the section designation and by adding at the end thereof the following new subsection:

"(b) The Secretary shall, in carrying out the provisions of this title, give special consideration to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, employer related nonprofit organizations, and other similar organizations.".

(d) Section 407 of the Act is amended by adding at the end thereof the following new subsection:

"(c) In carrying out the provisions of this section, the Secretary shall give consideration to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, employer related nonprofit organizations, and other similar organizations.".

(e) Section 603 of the Act is amended by adding at the end thereof the following new subsection:

"(d) Programs receiving assistance under paragraph (1) of subsection (a) of this section shall give special consideration, in carrying out programs authorized under this title, to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, employer related nonprofit organizations, and other similar organizations.". ●

By Mr. CHURCH (for himself, Mr. JACKSON, Mr. PAUL G. HATFIELD, Mr. MCGOVERN, Mr. EAGLETON, Mr. MCCLURE, Mr. ZORINSKY, Mr. STEVENS, Mr. GRAVEL, Mr. CULVER, and Mr. MARK O. HATFIELD):

S. 2974. A bill to establish a National Historic Trails Category within the National Trails System, to designate certain historic routes as National Historic Trails, and for other purposes; to the Committee on Energy and Natural Resources.

NATIONAL HISTORIC TRAILS ACT OF 1978

● Mr. CHURCH. Mr. President, I am introducing today, along with cosponsors, the National Historic Trails Act of 1978.

When Congress enacted the National Trails System Act 10 years ago, we established a system to identify and protect certain routes of national significance. At that time, two trails, the Appalachian Trail and the Pacific Crest Trail were immediately included in the system due to their spectacular scenic and recreational potential. Fourteen other routes were to be studied by the Departments of Interior and Agriculture to determine if they too should be part of the national system.

Citing increasing demands by the public for outdoor recreation, the original National Trails Act sought to provide high quality scenic and recreational opportunities along specific established trails. The routes selected for study under the 1968 act were thought to be excellent candidates for inclusion within the national system as either national scenic or national recreational trails. However, once the studies were concluded by the executive agencies on some of these 14 trails, those agencies determined that trails such as the Lewis and Clark Trail and the Oregon Trail did not qualify for addition to the national system under the criteria of the 1968 act. For instance, the Department of Interior's report on the Oregon Trail found that:

The Oregon Trail has national historical significance as one of the best known and most heavily traveled routes in the Nation's westward migration, and was a major determinant in settlement of the American Northwest. Strong public support exists for its commemoration and preservation. It does not, however, qualify as a national scenic trail since approximately 80 percent of the route has been altered or destroyed by highways, utility rights-of-way, agriculture, and other activities. It also does not follow a continuous and scenic corridor suitable for hiking and horseback riding which are qualifying criteria for National Scenic Trails.

Similarly, the conclusion reached in the studies of the Mormon Pioneer, Lewis and Clark, and Iditarod (Alaskan Gold Rush) Trails was that each of these trails is of national historical significance, but does not provide the kind of scenic or recreational opportunities necessary for inclusion in the National Trails Systems as it is presently structured. However, each of these studies also recommended including the trail in question within the Trails System as a national historic trail if the 1968 act were suitably amended and the necessary category established.

Mr. President, the legislation I am introduced today has three purposes. First, it corrects the oversight in the 1968 National Trails System Act by creating a new category of national historic trails. Without this new category and the protection it will afford, the heritage of our country's historic migration and transportation routes, with their remaining edifices and artifacts, may be lost forever. And we would be the less for it. Many historic trail remnants have, according to Interior's Oregon Trail report, already been "erased by the bulldozer and the plow." What remains of our historic trails lie "gently on the land, as easily erased as a pencil line on paper."

Second, this bill designates four historic routes, the Oregon Trail, the Mormon Pioneer Trail, the Lewis and Clark Trail, and the Editarod Trail as the first national historic trails. As I mentioned earlier, each of these trails has been thoroughly studied by the various departments and was found to possess outstanding historical qualities which should be protected through inclusion within the national system.

Finally, the legislation amends the 1968 act to provide procedures for the study of other routes to determine the feasibility and suitability of their designation as national historic trails. These new procedures are needed to provide a mechanism to study trails which though not available for intensive recreation, are nonetheless vital parts of America's past.

To qualify for designation as a national historic trail, a trail must meet all three of the following criteria:

It must be a trail or route established by historic use and must be historically significant as a result of that use. The route need not currently exist as a discernable trail to qualify, but its location must be sufficiently known to permit evaluation of public recreation and historical interest potential;

It must be of national significance with respect to any of several broad facets of American history, such as trade and commerce, migration and settlement, or military campaigns. To qualify as nationally significant, historic use of the trail must have had a far-reaching effect on broad patterns of American culture. Trails significant in the history of native Americans may be included;

It must have significant potential for public recreational use or historical interest based on historic interpretation and appreciation. The potential for such use is generally greater along the roadless segments developed as historic trails, and at historic sites associated with the trail. The presence of recreation potential not related to historic appreciation is not sufficient justification for designation under this category.

In the last Congress, I sponsored legislation which was subsequently signed into law to authorize a study of the desirability of designating the route traveled by Chief Joseph and the Nez Perce Indians during their famous retreat of 1877, as a national scenic trail.

During hearings on that legislation before the Parks and Recreation Subcommittee, I suggested that this route should eventually be classified as an historic trail. Although the route is one of classic beauty, it is my belief that its deep historical value should be recognized directly.

It is my intent in introducing this legislation to create a category in the National Trails System which will encompass those routes presently excluded from designation under the 1968 act and those presently under study which more properly should be classified as historical rather than scenic or recreational.

Mr. President, I ask unanimous consent that excerpts from various reports prepared by the Department of Interior, a resolution adopted by the board of directors of the National Trails Council in support of a historic trails category, and the text of the bill be printed in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2974

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Historic Trails Act of 1978".

TITLE I.—FINDINGS AND PURPOSES

SEC. 101. FINDINGS.—The Congress finds that—

(a) The primary purpose for the enactment of the National Trails System Act of 1968 (P.L. 90–543) was to establish a national system of recreational and scenic trails in order to meet some of the outdoor recreation needs of America's expanding population and in order to promote public access to, travel within, and enjoyment and appreciation of the open-air, outdoor areas of the Nation;

(b) The National Trails System Act as amended by P.L. 94–527 established procedures for studying other nationally significant trails to determine the suitability of their inclusion within the National Trails System as National Scenic Trails and identified 22 routes to be so studied;

(c) A number of the studies recently completed pursuant to the National Trails System Act have found that routes of important national historic significance—such as the Oregon Trail, the Mormon Pioneer Trail, the Lewis and Clark Trail, the Santa Fe Trail and the Iditarod Trail—when compared to concepts set forth in P.L. 90–543 and criteria subsequently developed for national scenic trails, are not suitable for inclusion within the National Trails System as National Scenic Trails;

(d) Because these routes presently have no formal protection, they are subject to a multitude of pressures which threaten to alter or destroy their historic values;

(e) Without adequate protection, the heritage of our country's historic migration and transportation routes, with their remaining historic edifices and artifacts, may be lost forever;

(f) It is therefore in the National interest to amend the National Trails System Act to establish a category of National Historic Trails in order to commemorate certain routes important and significant to American history as routes of trade and commerce, migration and settlement, or military campaigns; and

(g) The Oregon Trail, the Mormon Pioneer Trail, the Lewis and Clark Trail, and the Iditarod Trail, all having been studied and found suitable for protection are logical additions to the National Trails System as National Historic Trails.

SEC. 102. PURPOSES.—The Congress declares that the purposes of this Act are to—

(a) Establish within the National Trails System a category of National Historic Trails;

(b) Amend the National Trails System Act to provide procedures for the study of certain trails to determine their suitability for inclusion within the National Trails System as National Historic Trails; and

(c) Designate certain routes of special historical significance as National Historic Trails.

TITLE II.—ESTABLISHMENT OF A NATIONAL HISTORIC TRAILS CATEGORY WITHIN THE NATIONAL TRAILS SYSTEM

SEC. 201. The National Trails System Act (82 Stat. 919; 16 USC 1241), as amended, is further amended as follows:

(a) In section 2(a) after "promote" insert "the preservation of,"; and after "outdoor areas" insert "and historic resources".

(b) In section 2(a) delete "(ii)" and the remainder of the sentence and insert "(ii) secondarily, within scenic areas and along historic travel routes of the Nation, which are often remotely located.".

(c) In section 2(b) delete "and scenic" and insert ", scenic and historic".

(d) In section 3 redesignate subsection "(c)" as "(d)", and insert a new subsection (c) as follows:

"(c) National historic trails, established as provided in section 5 of this Act, which will be extended trails which follow as closely as possible and practicable the original trails or routes of travel of national historical significance. Designation of such trails or routes shall be continuous, but the established or developed trail, and the acquisition thereof, need not be continuous onsite. National historic trails shall have as their purpose the identification and protection of the historic route and its historic remnants and artifacts for public use and enjoyment ".

(e) In the new section 3(d) delete "or national scenic" and insert "national scenic or national historic".

(f) Change the title of section 5 to read "NATIONAL SCENIC AND NATIONAL HISTORIC TRAILS".

(g) In section 5(a), insert in the first sentence after the word "scenic" the words "and national historic" and change the second sentence to read: "There are hereby established the following National Scenic and National Historic Trails:".

(h) In section 5(a)(1), in the first sentence, after the word "Appalachian", insert "National Scenic", and in section 5(a)(2), in the first sentence, after "Pacific Crest", insert "National Scenic".

(i) In section 5(b) after "national scenic" wherever it appears insert "or national historic"; in the first sentence after the phrase "Secretary of the Interior," insert "through the agency most likely to administer such trail,"; delete the third sentence; and delete that portion of the fourth sentence which precedes the numerical listing, and insert in lieu the following: "The studies listed in subsection (c) of this section shall be completed and submitted to the Congress, with recommendations as to the suitability of trail designation, not later than three complete fiscal years from the date of enactment of their addition to this subsection, or from the date of enactment of this sentence, whichever is later. Such studies, when submitted, shall be printed as a House or Senate document, and shall include, but not be limited to:".

(j) In section 5(b)(3) after the semicolon add "and in the case of national historic trails the report shall include the recommendation of the Secretary of the Interior's National Park System Advisory Board as to the national historic significance based on the criteria developed under the Historic Sites Act of 1935 (49 Stat. 666; 16 USC 461);"

(k) In section 5(b)(8) delete the word "and" at the end of the sentence; in section 5(b)(9) change the period at the end of the sentence to a semicolon; and at the end of section 5(b) add the following new paragraphs:

"(10) the anticipated impact of public outdoor recreation use on the preservation of a proposed national historic trail and its related historic and archeological features and setting, including the measures proposed to ensure evaluation and preservation of the values that contribute to their national historic significance; and

"(11) to qualify for designation as a national historic trail, a trail must meet all three of the following criteria:

"(A) It must be a trail or route established by historic use and must be historically significant as a result of that use. The route need not currently exist as a discernable trail to quality, but its location must be sufficiently known to permit evaluation of public recreation and historical interest potential. A designated trail should generally accurately follow the historic route, but may deviate somewhat on occassion of necessity to avoid difficult routing through subsequent development, or to provide some route variation offering a more pleasurable recreational experience. Such deviations shall be so noted on site. Trail segments no longer possible to travel by rail due to subsequent development as motorized transportation routes may be designated and marked outside as segments which link to the historic trail.

"(B) It must be of national significance with respect to any of several broad facets of American history, such as trade and commerce, migration and settlement, or military campaigns. To qualiy as nationally significant, historic use of the trail must have had a far-reaching effect on broad patterns of American culture. Trails significant in the history of native Americans may be included.

"(C) It must have significant potential for public recreational use or historical interest based on historic interpretation and appreciation. The potential for such use is generally greater along roadless segments developed as historic trails, and at historic sites associated with the trail. The presence of recreation potential not related to historic appreciation is not sufficent justification for designation under this category.".

(l) In section 5 delete subsection (d), and insert a new section 5(d) to read as follows:

"(d) The Secretary charged with the administration of each respective trail shall, within one year of the date of the addition of any national scenic or national historic trail to the System, and within sixty days of the enactment of this sentence for the Appalachian and Pacific Crest National Scenic Trails, establish an advisory council for each such trail, each of which councils shall expire ten years from the date of its establishment. The appropriate Secretary shall consult with such council from time to time with respect to matters relating to the trail, including the selection of rights-of-way, standards for the erection and maintenance of markers along the trail, and the administration of the trail. The members of each advisory council, which shall not exceed thirty-five in number, shall serve for a term of two years and without compensation as such, but the Secretary may pay, upon vouchers signed by the chairman of the council, the expenses reasonably incurred by the council and its members in carrying out their responsibilities under this section. Members of each council shall be appointed by the appropriate Secretary as follows:

"(i) a member appointed to represent each Federal department or independent agency administering lands through which the trail route passes, and each appointee shall be the person designated by the head of such department or agency;

"(ii) a member appointed to represent each State through which the trail passes, and such appointments shall be made from recommendations of the Governors of such States;

"(iii) one or more members appointed to represent private organizations, including corporate and individual landowners and land users, which in the opinion of the Secretary, have an established and recognized interest in the trail, and such appointments shall be made from recommendations of the heads of such organizations: *Provided*, That the Appalachian Trail Conference shall be represented by a sufficient number of persons to represent the various sections of the country through which the Appalachian Trail passes; and

"(iv) the Secretary shall designate one member to be chairman and shall fill vacancies in the same manner as the original appointment.".

(m) In section 5 add a new subsection (e) as follows:

"(e) Within two complete fiscal years of the date of enactment of legislation designating a trail as part of the system, and within two complete fiscal years of the date of enactment of this subsection for the Pacific Crest and Appalachian Trails the responsible Secretary shall, after full consultation with affected Federal land managing agencies, the Governors of the affected States, and the Appalachian Trail Conference in the case of the Appalachian Trail, submit to the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate, a comprehensive plan for the acquisition, management, development, and use of the trail, including but not limited to, the following items:

"(1) specific objectives and practices to be observed in the management of the trail, including the identification of all significant natural, historical, and cultural resources to be preserved (along with high potential historic sites and high potential route segments in the case of national historic trails), details of anticipated cooperative agreements to be consummated with other entities, and an identified carrying capacity of the trail and a plan for its implementation;

"(2) an acquisition or protection plan, by fiscal year, for all lands to be acquired by fee title or lesser interest, along with detailed explanation of anticipated necessary cooperative agreements for any lands not to be acquired; and

"(3) general and site-specific development plans, including anticipated costs.".

(n) In section 6 in the first sentence delete "or national scenic" and insert ", national scenic or national historic", and in the second sentence delete "or scenic" and insert ", national scenic, or national historic".

(o) In section 7(a) in the first sentence delete "National Scenic Trails" and insert "national scenic and national historic trails"; in two instances in subsection (b), and in the first sentence of subsection (c), after "scenic", insert "or national historic"; in the fourth sentence of subsection (c), after "trail", insert "and within any high potential historic sites and high potential route segments of any national historic trail"; in subsection (c) in the second proviso, after "recreation" delete "or scenic" and insert ", national scenic, or national historic"; and in the fifth sentence after "recreation" delete "and scenic" and insert ", national scenic, and national historic"; in subsection (d) after "recreation" delete "or scenic" and insert ", national scenic, or national historic"; in subsection (e) after "scenic" in both instances where it appears insert "or national historic"; in subsection (h) in the first sentence after "recreation" delete "or scenic" and insert ", national scenic, or national historic", and in the second sentence after "scenic" insert "or national historic"; in subsection (i) after "recreation" delete "or scenic" and insert ", national scenic, or national historic".

(p) In section 7(c) at the end of the fourth sentence insert the following: "Where a national historic trail follows existing public roads, developed rights-of-way or waterways, and similar features of man's nonhistorically related development, approximating the original location of a historic route, such segments may be marked to facilitate retracement of the historic route, and where a national historic trail parallels an existing public road, such road may be marked to commemorate the historic route.".

(q) In section 7(e), in the first proviso, delete within two years".

(r) In section 7(g), delete the second proviso entirely.

(s) At the end of subsection 7(g) add the following new sentence: For national historic trails, direct Federal acquisition for trail purposes shall be limited to those areas indicated by the study report or by the comprehensive plan as high potential segments or high potential historic sites.".

(t) In section 8 in the first sentence of subsection (a) after "establishing park, forest, and other recreation" insert "and historic" and after "administered by States, and recreation" insert "and historic"; and at the end of the first sentence insert the following: "The Secretary is also directed to encourage states to consider, in their comprehensive statewide historic preservation plans and proposals for financial assistance for State, local, and private projects submitted pursuant to the Act of October 15, 1966 (80 Stat. 915), as amended, needs and opportunities for establishing historic trails.".

TITLE III.—DESIGNATION OF CERTAIN ROUTES AS NATIONAL HISTORIC TRAILS

SEC. 301. The National Trails System Act (82 Stat. 919; 16 USC 1241) as amended, is further amended as follows:

(a) In section 5(a), delete paragraph (3) and insert in lieu the following new paragraphs:

"(3) The National Historic Oregon Trail, a route of approximately two thousand miles extending from near Independence, Missouri, to the vicinity of Portland, Oregon, following a route as depicted on maps identified as 'Primary Route of the Oregon Trail 1841–1848', in the Department of the Interior's Oregon Trail study report dated April 1977, and which shall be on file and available for public inspection in the office of the Director of the National Park Service. The Trail shall be administered by the Secretary of the Interior.".

"(4) The National Historic Mormon Pioneer Trail, a trail of approximately one thousand three hundred miles from Nauvoo, Illinois, to Salt Lake City, Utah, following the primary route of the Historic Mormon Trail depicted on a map, identified as, "————" in the Department of Interior Mormon Trail study report dated ——— —, ——: *Provided*, (a) that while this section of this Act commemorates the entire route of the Mormon Trail along its historic alinement by designation as the National Historic Mormon Pioneer Trail, only those suitable cross-country segments of the Mormon Trail which are within the exterior boundaries of federally administered areas and which meet the national historic trail criteria established in this Act, are established initially as components of the National Historic Mormon Trail; and (b) that the Secretary of the Interior may designate lands outside of the exterior boundaries of federally administered areas as segments of the National Historic Mormon Trail upon application from State or local government agencies or private interests involved if such segments meet the national historic trail criteria established in this Act and such criteria supplementary thereto as the Secretary may prescribe, and are administered by such agencies or interests without expense to the United States.".

"(5) The National Historic Lewis and Clark Trail, a trail of approximately three thousand seven hundred miles, extending from Saint Louis, Missouri, to the mouth of the Columbia River in Oregon, following the outbound and inbound routes of the Lewis and Clark Expedition depicted on maps, identified as, "Vicinity Map, Lewis and Clark Trail study report dated April 1977: *Provided*, (a) That while this section of this Act shall commemorate the entire route of the Lewis and Clark Expedition along its historic alinement by designation as the National Historic Lewis and Clark Trail, only those selected land and water based components of the Lewis and Clark Trail which are within the exterior boundaries of federally administered areas and which meet the national historic trail criteria established in this Act, are established initially as components of the National Historic Lewis and Clark Trail; and (b) that the Secretary of the Interior may designate land outside of the exterior boundaries of federally administered areas as segments of the National Historic Lewis and Clark Trail upon application from State or local government agencies or private interests involved in such segments meet the national historic trail criteria established in this Act and such criteria supplementary thereto as the Secretary may prescribe, and are administered by such agencies or interests without expense to the United States.".

"(6) The National Historic Iditarod Trail, a trail of approximately one thousand six hundred miles extending from Seward to Nome Alaska, following the route(s) as generally depicted on the maps identified as 'The Seward-Nome Route', in the Department of Interior's Alaskan Gold Rush Trails study report dated September 1977, and which shall be on file and available for public inspection in the office of the Director of the National Park Service. The trail shall be administered by the Secretary of the Interior.".

TITLE IV.—MISCELLANEOUS PROVISIONS

SEC. 401. The National Trails System Act (82 Stat. 919; 16 USC 1241), as amended, is further amended as follows:

(a) At the end of section 7, insert the following new paragraphs:

"(j) The provisions of section 5(a) of this Act designating certain national historic trails, do not prohibit the construction, reconstruction, or improvement of roads, highways, railroads, or water transportation routes which may be designated as segments of a national historic trail."

"(k) Notwithstanding any other provision of law, the designation of any trail under section 5(a) of this Act as a national historic trail shall not prohibit the construction of new transportation or utility systems across or along portions of the trail right-of-way.

SEC. 402. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

STUDY REPORT: OREGON TRAIL

FOREWARD

The Oregon Trail was a wagon road stretching 2,000 miles from Missouri to Oregon's Willamette Valley. It was not a road in any modern sense, only parallel ruts leading across endless prairie, sagebrush desert, and mountains to an unknown Promised Land.

A quarter of a million people set out on this faint track, their possessions reduced to what could be carried in a wagon or on the backs of their livestock. Most said goodbye forever to friends, relatives, and familiar places. Many were destined to a shallow grave along the way, and the Oregon Trail often has been called the longest cemetery in the Nation.

To survivors, the 6-month journey was the most important event in their lives. Over 700 of them left diaries and journals. These written accounts, together with remnants and relics of the trail itself, today provide a window to the past.

Many trail remnants have been erased by the bulldozer and the plow. Much of the route today lies under highways and city streets, or traverses farmland where prairie grasses and sagebrush have given way to corn and wheat. Here and there, however, are segments relatively untouched by civilization. Much of the Oregon Trail's potential for public enjoyment lies in these visible remnants, and in the historic sites associated with the trail.

What remains of the Oregon Trail lies gently on the land, as easily erased as a pencil line on paper. If protected, these remnants can provide future generations the opportunity to catch glimpses of our land as it appeared to the emigrants, to relive vicariously their great adventure, and to sense the enormity of its consequence . . .

STUDY REPORT: THE MORMON TRAIL

NATIONAL SIGNIFICANCE

Background

The history of the United States during the nineteenth century was one of discovery, exploration, and settlement of a vast continental area. Within the space of a few years the boundaries of the United States were pushed across half the continent. The most significant aspect of this era was the movement of emigrants. The optimistic farmer, moving with his family to Oregon; the persevering Mormon, searching for a home in which he might live in peace; and the adventurous Forty-Niner, hurrying to the new El Dorados with visions of the wealth that awaited him there—all these carried American civilization westward and built the foundations for a new society.

The Mormon migration was unique by contrast to other migrations and was one of the dramatic events in the history of American westward expansion. It was a permanent movement of a whole people—family groups led by Brigham Young to a new location and a fresh start. Except for possibly the segment in Iowa, Young Mormon pioneers did not originate the route they followed. It was a combination of several existing routes beginning with the earlier trapper, missionary, and Indian trails, and the more widely known Oregon, Overland, and California Trails. Yet, the Mormon emigration "differed profoundly from the Oregon and California westward migrations."[1]

For their journey from Nauvoo, Illinois, Brigham Young set forth the organization and rules by which the Mormons would travel. For example, the pioneers were directed to organize themselves into tens, fifties, and hundreds. During 1847 these groups were organized in semi-military fashion with Brigham Young as general and others serving as company captains, hunters, and scouts.

Unlike most of the California- or Oregon-bound emigrants, the first thoughts of Brigham Young's pioneer company were to improve the journey for the Mormons who would follow. They "noted good campgrounds, wood, water, grass, measured distances and set up mileposts."[2] *The Emigrants' Guide*, compiled by William Clayton, a member of the Mormon pioneer party, became the guidebook for thousands of emigrants who followed their trail.

The Mormons established semi-permanent camps and ferries, graded down the steep approaches to fords, and cleared boulders out of the path. In contrast, the Oregon- and California-bound emigrants continued to follow the steep descent at Windlass Hill above Ash Hollow. They did little to make the route easier because none expected to go that way again. The Mormons not only traveled west, but also eastward to pick up supplies and new converts at the Missouri River, or to meet faltering companies and help them on to Salt Lake City.

The Mormons were one of the principal forces in the settlement of the West. "They opened up southern Iowa, from Locust Creek to the Missouri, made the first roads, built the first bridges, and established the first communities along the route."[3]

They made Winter Quarters (Florence, a suburb of Omaha) and Kanesville (Council Bluffs) into outfitting points that rivaled Independence, Westport, and St. Joseph of Oregon Trail fame. "They defined the road up the north side of the Platte that is now the route of both U.S. 30 and the Union Pacific Railroad."[4]

National qualities

Existing national monuments, Federal, State, and local recreation areas, and scenic tour routes provide a full range of outdoor recreation opportunities along or accessible from the Mormon Trail.

Many historic points along the 1,300-mile (2,092-km.) route have high potential for historical interpretation and/or recreation. National recognition would enhance the importance of historic values commemorated at these sites and encourage preservation and interpretive facilities for a trail now considered only part of a broad migration corridor to the west.

Most of the original Mormon Trail has disappeared across Iowa and Nebraska. Croplands and highways have removed all but a few traces of the route. However, in the western sections through Wyoming and Utah, much of the environment is little different today than it was in 1847. In these sections, numerous ruts and other trail evidence remain undisturbed.

Various bluffs and geologic features form impressive landmarks along the natural migration corridor. Notable among these are the Mississippi and Des Moines Rivers, which the Mormons crossed in their journey from Illinois through Iowa. Farther west in Nebraska the corridor included such prominent natural landmarks as Courthouse and Jail Rocks, Chimney Rock, and Scotts Bluff. Now a national monument, Scotts Bluff offers a sweeping panorama of the North Platte Valley from its summit. From this point, Chimney Rock lying 25 miles (40 km.) east and Laramie Peak looming 100 miles (161 km.) west can be located.

In contrast to the pastoral scenes of Iowa and the river valley of Nebraska, the mountain and desert scenery of Wyoming and the forested rugged mountains and canyons of Utah provide awe-inspiring, ever-changing scenery.

Spectacular and colorful rock formations and the snowcapped Wind River Range border the trail. The scene along the Sweetwater River remains virtually unchanged with features including Devils Gate and Split Rock which rises 1,000 feet (305 meters) above the valley floor in this semidesert region.

Significant segments of the trail and adjacent trails were used by early-day Indians, ancient cliff-dwelling tribes, explorers, missionaries, fur traders, mountain men, and the fabled miners. Ghost towns, mining operations, museums, and reconstructed "boom towns" associated with the Old West are in evidence along the trail corridor.

The potential for connecting trails of nationwide interest is exceptional. In addition to following the corridor of the nationally known Oregon Trail, the Mormon Trail crosses the Lewis and Clark Trail at the Missouri River and the Continental Divide Trail at South Pass. In places it parallels the Overland Stage, Cherokee, and Pony Express Trails. It has connections with several other Old West routes, including the Lander Cut-Off and the Sidney-Deadwood, Bozeman, Pikes Peak, and Cheyenne-Deadwood Stage Trails, to name only a few.

STUDY REPORT: THE IDITAROD (SEWARD-NOME ROUTE) AND OTHER ALASKAN GOLD RUSH TRAILS—DEPARTMENT OF THE INTERIOR, SEPTEMBER 1977

SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS

The Seward-Nome (Iditarod) route is composed of a number of trails and side trails developed at different times during the Gold Rush Era. The Iditarod strike began in 1908; it was the last of the major Alaskan strikes and prompted the Alaska Road Commission to improve the Rainy Pass-Kaltag section of the Seward to Nome trail. Because the Iditarod mining district was the most common destination of travelers in this last phase of the Gold Rush Era, the name Iditarod Trail has become a term of convenience to describe the many geographic and historic segments of the Seward to Nome trail. These trails, aggregating 2,037 miles, offer a rich diversity of climate, terrain, scenery, wildlife, recreation, and historic resources in an environment largely unchanged since the days of the stampeders. It is the isolated, primitive quality of this historical environment that makes the Iditarod National Historic Trail proposal unique. No where in the National Trails System is there such an extensive landscape, so demanding of durability and skill during its winter season of travel. On Iditarod, today's adventurer can duplicate the experience and challenge of yesteryear.

Though comprehensive studies of historic resources remain to be done, preliminary surveys have indicated that the Iditarod Trail possesses national historical significance. Rapid erosion of known historic resources, and impending threats to the primitive quality of the trail, are immediate concerns. Should the Congress act favorably on the Iditarod Trail proposal, comprehensive studies and management programs would be initiated to preserve the trail's historic environment and resources.

STUDY REPORT: LEWIS AND CLARK TRAIL

INTRODUCTION

Historical background

In 1803 President Jefferson commissioned two Army officers, Captains Meriwether Lewis and William Clark, and their Corps of Discovery, as the Expedition was commonly known, to explore routes through the newly purchased Louisiana Territory and to secure and extend this claim to the Pacific Ocean. In May of 1804, the group left the preparation camp near Wood River, Illinois, to cross vast regions of the Louisiana Territory and the Pacific Northwest in one of the most important events in Western United States history.

They followed the Missouri River upstream for approximately 2,400 miles to Three Forks in Montana, then the Jefferson River to its headwaters, and thence the Beaverhead River to the vicinity of the Continental Divide at Lemhi Pass. Proceeding toward the Pacific, the explorers followed the Salmon River, recrossed the Montana-Idaho border at Lost Trail Pass and continued through the Bitterroot Valley to the vicinity of Lolo, Montana. Again crossing the Montana-Idaho border, this time at Lolo Pass, the group began its westward descent along the Clearwater, Snake, and Columbia Rivers. In November 1805, they arrived at the Pacific Ocean.

On the return trip, the Expedition followed the same general route as far as Lolo, Montana, where they formed into two groups. Captain Lewis followed the Bitterroot, Clarks Fork and the Blackfoot Rivers to cross the Continental Divide at what is now Lewis and Clark Pass. He descended the Sun River and explored the upper reaches of the Marias River before proceeding down the Missouri River. Captain Clark traveled south to cross the Divide at Gibbon's Pass, descended the Beaverhead and Jefferson Rivers and then crossed to the Yellowstone River. He followed the Yellowstone downstream and joined Lewis below its confluence with the Missouri River.

Captain Clark and Captain Lewis together made the remainder of the trip down the Missouri and arrived at St. Louis in September 1806.

NATIONAL SIGNIFICANCE

Background

The Lewis and Clark Expedition of 1804–1806 is considered by many to be one of the most important factors in the expansion of the Continental United States. It paved the

way for the settlement and development of the Northern Plains, the Rocky Mountains, and the Pacific Northwest. This journey had a profound and lasting effect on the political, economic, and geographic development of the western half of the Nation.

The need for exploration of the western portions of the continent had become apparent to President Jefferson long before Napoleon made his offer to sell the Louisiana Territory. In his address to Congress on January 18, 1803, Jefferson asked for and was granted an appropriation of $2,500 for an expedition across the continent to the Oregon Country.

Later that year, Napoleon offered to sell all of the Louisiana Territory for $15 million. Jefferson took this opportunity and on October 25, 1803, the United States Senate ratified the Louisiana Purchase Treaty.

On May 14, 1804, with the firing of a cannon shot, the Lewis and Clark Expedition set forth from their winter camp at the mouth of Wood River, Illinois, to secure the American claim. The trip lasted 2 years, 4 months, and 9 days and encompassed about 7,500 miles. Few similar journeys were so well managed and so free from errors in judgment, miscalculations, and tragedy. Only an incident with the Sioux Indians at the mouth of the Bad River and another with the Blackfeet which resulted in the deaths of two Indians marred the trip. The only death among members of the Expedition was that of Sergeant Floyd and is presumed to have resulted from a ruptured appendix.

The contacts made with the Indians by Lewis and Clark were of great political importance in the Government's later dealings with the various tribes. By completing a journey up the Missouri River and then down the Columbia to the Pacific Ocean, the Americans strengthened their claim to the Oregon Country.

There were significant economic benefits resulting from the Expedition. Trappers and then traders gradually penetrated this rich land. Lewis and Clark established that beaver were abundant and exploitation began almost immediately. The fur trade was the principal industry of the area until the late 1830's when the price for pelts declined.

Descriptions and specimens of the flora and fauna taken back by members of the Expedition added considerably to the scientific knowledege existing at that time. Birds, small mammals, hides, and boxes of Indian articles were returned to the East. Detailed descriptions of the pronghorned antelope, the Columbia blacktailed deer, beaver, bobcats, foxes, wolves, and squirrels were prepared.

Geographically, the Expedition had more far-reaching effects. Prior to the journey, it was generally assumed that a mere 20 miles separated the Missouri headwaters from the headwaters of the Columbia River which could be followed to the sea. They had not anticipated mountains as extensive as the Rockies. Instead of 20 miles, they were forced to traverse almost 200 miles of rugged territory to reach a tributary of The Snake River. Most significant, however, was the final realization that a northwest water passage to the Orient could never exist.

NATIONAL QUALITIES

On this 7,500-mile journey, the Lewis and Clark Expedition traversed a wide variety of physical environments. From the hardwood forests of the northern Ozarks to the rolling grasslands and cottonwood river bottoms of Kansas, Nebraska, and Iowa, they followed the muddy Missouri River into what is now the Dakotas. Bison, antelope, and other game were plentiful along the rolling grasslands.

In Montana, the explorers passed through the desolate, but beautiful, Missouri "Breaks," where spectacular rock formations bordered both sides of the river. In western Montana, the Expedition encountered pine-covered slopes of the Rocky Mountains. After crossing the snow-capped Continental Divide, they descended tributaries of the Columbia to the Pacific. Here they spent a cold, damp winter on the densely forested Pacific Coast. Portions of this wilderness which the explorers crossed have been drastically changed by man, while other portions remain virtually unchanged from the way they appeared to Lewis and Clark.

The Missouri River has since been channeled and impounded. Numerous towns and cities appear along the banks. Although much of the river is no longer wild, much of its charm remains. The river is lined with cottonwoods and flanked by cultivated fields, creating a pastoral scene. Waterfowl still follow the Missouri in their seasonal migration, and catfish are found in the old oxbows and along the river banks.

The great change has been the construction of six large dams on the river from Nebraska to central Montana. These reservoirs, which are almost end-to-end through the Dakotas, have inundated many of the historic sites and scenic features related to the Expedition. The loss to historians has been a gain for recreationists. The large lakes now offer abundant opportunities for boating, swimming, and fishing.

West of Fort Peck Reservoir in Montana are the Missouri Breaks. The beauty of this area prompted one member of the party to record, "These hills exhibit a most extraordinary and romantic appearance as the water has worn the soft sandstone into a thousand grotesque figures which seem the productions of art, so regular is the workmanship . . ." This stretch of river between Fort Peck Reservoir and Fort Benton remains, today, in its appearance and in its wild nature, much as it was in 1805.

After a long portage around the Great Falls of the Missouri and a difficult decision at Three Forks, the party chose the Jefferson River and followed it and the Beaverhead to the Continental Divide at Lemhi Pass. Along this stretch they first experienced the ruggedness and the beauty of the Rocky Mountains. Portions of this area have been developed, but the beauty still remains.

The Salmon River and the Lolo Trail followed by the Expedition through the Idaho Mountains remain relatively untouched by modern man. The area is characterized by steep valleys, coniferous forests, lakes, and rapidly flowing streams.

The remainder of the party's westward journey followed the Snake River, and finally, the Columbia River to the Pacific Coast. Both of these rivers have undergone major development and modifications. The impoundments on the Snake are in remote, isolated canyons, while those on the Columbia are paralleled by good roads and are easily accessible.

Many changes in the character of the land and water have occurred during the last 165 years. Much of the wild land has been tamed. The rivers have been harnessed by large dams. Although the wildness has been diminished, the opportunities for fishing, boating, and camping have been increased many fold as a result of the river development projects.

RESOLUTION OF THE NATIONAL TRAILS COUNCIL PERTAINING TO THE ESTABLISHMENT OF NATIONAL HISTORIC TRAILS

Whereas, there are many trail routes in the United States which are of national historic significance, and

Whereas, the National Trails System Act does not contain provision for designation of historic trails, and a number of trails having historical significance which are presently under study for designation as national scenic or recreation trails do not meet the criteria for such designation; and

Whereas, it is important that the historical significance of these routes as foundations of the country's development be preserved for the enjoyment, recognition and understanding of future generations of Americans.

Therefore, be it resolved that the National Trails Council, an organization representing members of the public and government involved in the establishment and use of all types of trails, urges the Congress of the United States to amend the National Trails System Act to provide for the category of National Historic Trails and Travelways; and

Be it further resolved that the National Trails Council urges the U.S. Department of the Interior and the U.S. Department of Agriculture to support such legislation, including the preparation of and immediate submittal of appropriate draft legislation to Congress to accomplish this objective.●

○ Mr. GRAVEL. Mr. President, I am delighted to join Senator CHURCH in sponsoring legislation to create a new system of national historic trails.

Last Congress I introduced legislation—reintroduced this Congress as S. 929—to create a category of historic trails within the National Trails System and to designate the Iditarod Trail in Alaska as a national historic trail. Since that time several other bills have been introduced designating potential historic trails, and legislation dealing with several of these trails has cleared the House. This legislation being introduced today consolidates the various historic trail bills before the Senate and forms the basis for a comprehensive new system of trails which I believe will be a significant asset to the National Trails System and to our Nation's historic resources.

The trail of particular concern to me is the Iditarod Trail. This trail with its major branches and alternate routes stretches nearly 2,000 miles between Seward and Nome, Alaska. The various routes were used first by Native peoples and later by those seeking gold during the famous Alaskan Gold Rush days at the turn of the century. Primarily a winter route, the trail served as the only communication and transportation link with the "Outside" for many of the gold mining boomtowns during the 6 to 8 months when the rivers and seas were frozen.

Today a few segments near population centers are being used as recreational trails by dog mushers, cross-country skiers, snow-machiners, hikers, and other outdoor enthusiasts. Some segments are still used as winter transportation links between remote Alaskan villages. Other segments have been overlain by roads and the Alaskan Railroad, while still other segments remain as faint to nonexistent traces through Alaska's bush. In commemoration of the historic trail and to the vital role of dog mushing in Alaska's history, a 1,000-mile dogsled race has been held annually since 1973 between Anchorage and Nome. This race remains the supreme test of man and dog with travel conditions and stamina requirements varying little from that experienced by mushers 80 years ago.

This bill incorporates virtually all of the provisions of my bill, S. 929. However, there are some differences which I want to emphasize and which I will seek modifications of prior to passage of this legislation. The Iditarod Trail was found by the Department of the Interior to not qualify as a national scenic trail due to

large stretches of trail having very low potential as developed, hiking-type trails such as the Appalachian Trail, due to the use of off-road vehicles along many portions, and due to development of roads and a railroad over portions of the trail.

It is important to emphasize that although there are segments which are unroaded, they are still not suitable for development as hiking-type trails. In addition, many of these unroaded segments are being used for recreational purposes and basic transportation purposes by off-road vehicles, primarily snowmachines.

Thus, at least in the case of the Iditarod Trail I will be recommending that the fourth sentence in section 7(c) of the National Trails System Act prohibiting off-road vehicle use on national scenic trails not be applied to historic trails. I do recognize that there may be segments of historic trails where it will be desirable to limit off-road vehicle uses to protect historic sites and sensitive environmental areas, but this should be dealt with administratively on a case-by-case basis by the trail manager.

Another concern which I understand is shared by others supporting this historic trails legislation is that the entire trail corridor may somehow be treated as a national historic site as that term is used under section 4(f) of the National Transportation Act. This section provides that no Federal actions may be taken affecting such sites unless there is no prudent and feasible alternative, and if there is none, that substantial mitigation be done. Because existing roads and railroads and potential road crossings and corridors will be a part of the Iditarod Trail, I think we need language clarifying that this legislation should not be construed as to interfere with normal upgrading and work on existing transportation systems or prohibit the development of new transportation systems across or along portions of the trail route. There, of course, may well be specific historic sites along the route which would merit 4(f) protection.

I am quite confident that these concerns will be addressed and satisfactorily resolved in the consideration of this bill. I strongly urge my colleagues to join with me in support of this bill and to seek its swift passage.●

By Mr. HATHAWAY (by request):

S. 2975. A bill to authorize a supplementary fiscal assistance program of payments to local governments, and for other purposes; to the Committee on Finance.

SUPPLEMENTARY FISCAL ASSISTANCE ACT OF 1978

● Mr. HATHAWAY. Mr. President, today, by request, I am introducing the administration's draft bill "To authorize a supplementary fiscal assistance program of payments to local governments." The legislation would replace the Anti-recession Fiscal Assistance program which expires on September 30, 1978.

The Senate Finance Subcommittee on Revenue Sharing, Unemployment Compensation and Economic Problems has scheduled a hearing at 10 a.m. on May 3, 1978 to consider supplemental fiscal assistance to State and local governments.

I ask unanimous consent that the Senate Finance Committee press release concerning the hearing be included in the RECORD.

Also, in order that my colleagues may have an opportunity to fully consider the administration's recommendations on this important Federal measure, I ask unanimous consent that the text of the administration bill and a section-by-section analysis be printed in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2975

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Supplementary Fiscal Assistance Act of 1978."

FINDINGS OF FACT AND DECLARATION OF POLICY

SEC. 102. FINDINGS.—The Congress finds and declares—

(a) that local governments represent a significant segment of the national economy whose sound fiscal and economic condition is essential to national economic prosperity;

(b) that secular economic decline and national economic problems have imposed considerable hardships on many local government budgets;

(c) that general purpose assistance has been especially helpful to those governments experiencing secular economic problems which are aggravated by severe cyclical fluctuations; and

(d) that a general assistance program which aids local communities requiring fiscal relief is an essential component of a comprehensive urban policy.

AUTHORIZATION OF PAYMENTS

SEC. 103. (a) IN GENERAL.—The Secretary of the Treasury (hereinafter referred to as the "Secretary") shall in accordance with the provisions of this Act make payments to local governments, territories, Indian tribes, and Alaskan Native villages to provide fiscal assistance to areas experiencing substantial unemployment or a high degree of fiscal strain or secular economic decline as reflected in disproportionately slow growth in employment, per capita income, and population.

(b) PAYMENTS TO RECIPIENT GOVERNMENTS.—The Secretary shall pay, not later than five days after the beginning of each calendar quarter, to each eligible local government, territory, Indian tribe, and Alaskan Native village, which has filed a statement of assurances under section 106, an amount equal to one fourth of the annual amount allocated to such government under section 104. The first quarterly payment shall be made within the first five days of October 1978. Payments under this Act may be made with necessary adjustments on account of overpayments or underpayments.

(c) AUTHORIZATION FOR APPROPRIATIONS.—There is hereby authorized to be appropriated for payments to eligible local governments, territories, Indian tribes, and Alaskan Native villages for the fiscal year 1979 the sum of $1,040,000,000, and for the fiscal year 1980 the sum of $1,000,000,000, and such additional sums in each fiscal year as may be necessary for the administration of this Act.

LOCAL GOVERNMENT ALLOCATION

SEC. 104. (a) IN GENERAL.—The Secretary shall allocate to each eligible local government from the amount appropriated for payments for each fiscal year pursuant to section 103, an amount for each such fiscal year equal to such government's local government percentage multiplied by an amount equal to the difference between the amount appropriated pursuant to section 103 and the amounts allocable pursuant to sections 113 and 114. Such allocation shall be made by the Secretary during the September preceding the appropriate fiscal year for which such allocation is made, based on the most current available data, pursuant to rules issued section 111 of this Act.

(b) LOCAL GOVERNMENT PERCENTAGE.—For purposes of this Act the local government percentage for an eligible local government is equal to the quotient resulting from—

(1) the product of the local distribution index for such eligible local government multiplied by the local revenue sharing amount for such eligible local government, divided by

(2) the sum of such products for all eligible local governments.

(c) DEFINITIONS.—For purposes of this Act—

(1) "local government" means a county, municipality, township, or other political subdivision of a State which is a unit of general government (determined on the same principles as are used by the Bureau of the Census for general statistical purposes), and performs substantial governmental functions. Such term includes the District of Columbia.

(2) "eligible local government" means a local government which satisfies the following conditions:

(A) For a local government with boundaries in whole or in part within a Standard Metropolitan Statistical Area (SMSA), as defined by the Department of Commerce and reported to the Secretary (hereinafter "SMSA governments"), an "eligible local government" is a local government which, in the area under its jurisdiction, either—

(i) has a local unemployment rate as determined pursuant to subparagraph (3)(A) in excess of 4.5 percentage points; or

(ii) satisfies at least two of the following:

(a) the local rate of growth in employment, as determined pursuant to subparagraph (3)(B), is less than the rate of growth in employment in all SMSA's;

(b) the local rate of growth in per capita income, as determined pursuant to subparagraph (3)(C), is less than the rate of growth in per capita income for all SMSA's;

(c) the local rate of growth in population, as determined pursuant to subparagraph (3)(D), is less than the rate of growth in population for all SMSA's.

(B) For a local government with boundaries entirely outside an SMSA (hereinafter "non-SMSA governments"), an "eligible local government" is a local government which meets the unemployment or growth criteria set forth in subparagraphs (2)(A)(i) or (ii), above, except that the term "non-SMSA" is inserted in lieu of "SMSA."

(3) Local rate of unemployment, and local rate of growth in employment, per capita income, and population are determined as follows:

(A) "Local unemployment rate" is the rate of unemployment in the area under the jurisdiction of the local government during the most recent four calendar quarters for which data are available, as determined or assigned by the Secretary of Labor and reported to the Secretary. In the case of a local government for which the Secretary of Labor cannot determine a local government unemployment rate, the Secretary of Labor shall assign such local government the local unemployment rate of the smallest unit of local government or appropriate geographic area for which a local unemployment rate has been determined and within the jurisdiction or area in which such local government is located, unless an unemployment rate has been provided for the local government to the Secretary of Labor by the Governor of the State in which the local government is located and such rate has been determined

by the Secretary of Labor to have been developed in a manner consistent with procedures used by the Secretary of Labor and then assigned to the local government.

(B) "Local rate of growth in employment" is the rate of employment growth determined by subtracting from the employment in the area under the jurisdiction of a local government for the most recent four calendar quarters for which data are available, the employment within such area for a four calendar quarter period which preceded such recent four calendar quarters by either five or six years (depending on which prior year data are most useful), as determined by the Bureau of Labor Statistics for the Secretary of Labor, and dividing this difference by the employment within such area for the earlier four calendar quarter period. In the event that data are not available for such earlier period for determining an allocation under this section, the Secretary of Labor shall determine the rate of growth in employment on the basis of data for the most appropriate period of time less than five years preceding the most recent year for which data are available. In the case of a local government for which the Secretary of Labor cannot determine employment for a local government, the Secretary of Labor shall assign to such local government the local rate of growth in employment of the smallest unit of local government or appropriate geographic area for which such rate has been determined and within the jurisdiction or area in which such local government is located, unless a local rate of growth in employment has been provided for the local government to the Secretary of Labor by the Governor of the State in which the local government is located and such rate has been determined by the Secretary of Labor to have been determined in a manner consistent with procedures used by the Secretary of Labor and then assigned to the local government. The local rate of growth in employment shall be determined or assigned by the Secretary of Labor and reported to the Secretary.

(C) "Local rate of growth in per capita income" is determined by subtracting from the per capita income in the area under the jurisdiction of a local government for the most recent year for which data are available, the per capita income within such area for a year which preceded such recent year by either five or six years (depending on which prior year data are most useful), as determined by the Bureau of the Census for the Secretary of Commerce for general statistical purposes, and dividing this difference by the per capita income within such area for the earlier year. In the event that data are not available for such earlier period for determining an allocation under this section, the Secretary of Commerce shall determine the local rate of growth in per capita income on the basis of data for the most appropriate period of time less than five years preceding the most recent year for which data are available. The local rate of growth in per capita income shall be determined by the Secretary of Commerce, and reported to the Secretary.

(D) "Local rate of growth in population" is determined by subtracting from the population in the area under the jurisdiction of the local government for the most recent year for which population data are available, the population in such area as of a date which preceded the date of the most recently available population data by either five or six years (depending on which prior year data are most useful), as determined by the Bureau of the Census for the Secretary of Commerce for general statistical purposes, and dividing this difference by the population within such area for the earlier year. In the event that data are not available for such earlier period for determining an allocation under this section, the Secretary of Commerce shall determine the local rate of growth in population on the basis of data for the most appropriate year less than five years preceding the most recent year for which data are available. The local rate of growth in population shall be determined by the Secretary of Commerce and reported to the Secretary.

(4) "Local revenue sharing amount" for a local government is the amount determined under section 108 of the State and Local Fiscal Assistance Act of 1972, as amended (31 U.S.C. § 1221 *et seq.*), for such local government for the most recently completed entitlement period, as defined under section 141(b) of such Act.

(5) "Local distribution index" means:

(A) For each SMSA government, the largest of the quotients resulting from—

(i) subtracting 4.5 percentage points from the local unemployment rate for such government and dividing the difference by the standard deviation weighted by population of all SMSA governments' unemployment rate, using 4.5 percentage points as the midpoint in calculating the weighted standard deviation;

(ii) subtracting the local rate of growth in employment for such government from the rate of growth in employment for all SMSA (as calculated from data collected by the Bureau of Labor Statistics for the Secretary of Labor and reported to the Secretary for the same time period) and dividing the difference by the standard deviation weighted by population of all SMSA governments' rates of growth in employment for the same time period;

(iii) subtracting the local rate of growth in per capita income for such government from the rate of growth in per capita income for all SMSAs (as calculated from data collected by the Bureau of the Census for the Secretary of Labor and reported to the Secretary for the same time period) and dividing the difference by the standard deviation weighted by population of all SMSA governments' rates of growth in per capita income;

(iv) subtracting the local rate of growth in population for such government from the rate of growth in population for all SMSAs (as calculated from data collected by the Bureau of the Census for the Secretary of Labor and reported to the Secretary for the same time period) and dividing the difference by the standard deviation weighted by population of all SMSA governments' rates of growth in population.

(B) For each non-SMSA government, the same as it does for a SMSA government under subparagraph (5)(A) above, except that the term "non-SMSA" is to be inserted in lieu of "SMSA."

(d) ALLOCATION LIMITATIONS.—

(1) If the amount which would be allocated for any fiscal year to any eligible local government, territory, Indian tribe and Alaskan native village under this Act is less than $200, then no amount shall be paid to such government hereunder.

(2) The maximum amount payable annually to a local government under this Act shall be the lesser of the annual allocation determined under this section or the amount allocated during the period beginning July 1, 1977 and ending June 30, 1978 under title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.*), except for those governments which received no allocation under such Act during the period beginning July 1, 1977 and ending June 30, 1978.

(3) Amounts allocated under this section in excess of the maximum allowed under paragraph (d)(2) shall be reallocated to those remaining eligible local governments that have not exceeded the maximum allocation under paragraph (d)(2). Governments with no allocations under title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.*), for the period beginning July 1, 1977 and ending June 30, 1978 shall not be eligible for such reallocations under this paragraph.

(e) LOCAL GOVERNMENT LOCATED IN A LARGER ENTITY; BOUNDARY CHANGES AND GOVERNMENTAL REORGANIZATION, ETC.—

(1) ONLY PART OF UNIT LOCATED IN LARGER ENTITY.—If only part of a local government is located in a larger governmental entity, such part shall be treated for allocation purposes as a separate unit of local government, and all computations except as otherwise provided in section 104(c)(2)(A) and appropriate rules, shall be made on the basis of the ratio which the estimated population of such part bears to the population of the larger governmental entity.

(2) BOUNDARY CHANGES, GOVERNMENTAL REORGANIZATION, ETC.—If by reason of boundary line changes, State statutory or constitutional changes annexations or other governmental reorganizations, or other circumstances, the application of any provision of this section to a local government does not carry out the purposes of this Act, the application of such provision shall be made, under rules prescribed by the Secretary, in a manner which is consistent with such purposes.

USES OF PAYMENTS

SEC. 105. Each local government, territory, Indian tribe, and Alaskan native village shall use payments made under this Act for basic services customarily provided to persons in the area under the jurisdiction of such government, including expenditures for capital outlay and basic governmental operations.

STATEMENT OF ASSURANCES

SEC. 106. Each eligible local government, territory, Indian tribe, or Alaskan native village my receive payments under this Act only upon filing with the Secretary a statement of assurances, at such time and in such manner as the Secretary prescribes by rule. The Secretary may not require any such government to file more than one such statement during each fiscal year. Each statement shall contain—

(a) an assurance that the requirements of section 105 will be complied with;

(b) an assurance that such government will—

(1) use fiscal, accounting, and audit procedures which conform to guidelines established therefore by the Secretary (after consultation with the Comptroller General of the United States), and

(2) provide to the Secretary (and to the Comptroller General of the United States), on reasonable notice, access to, and the right to examine, such books, documents, papers, or records as the Secretary may reasonably require for purposes of reviewing compliance with this Act;

(c) an assurance that reasonable reports will be furnished to the Secretary in such form and containing such information as the Secretary may reasonably require to carry out the purposes of this Act;

(d) an assurance that the requirements of section 107 will be complied with;

(e) an assurance that the requirements of section 108 will be complied with;

(f) an assurance that such government will spend amounts received under this Act only in accordance with the laws and procedures applicable to the expenditure of its own revenues.

NONDISCRIMINATION

SEC. 107. (a)(1). IN GENERAL.—No person in the United States shall, on the ground of race, color, national origin, or sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity of a local government, territory, Indian tribe or Alaskan native village which receives funds made available under this Act, or any program or activity of any State, local or territorial

government funded in whole or in part with funds received under title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.*). Any prohibition against discrimination on the basis of age under the Age Discrimination Act of 1975 (42 U.S.C. § 6101 *et seq.*) or with respect to an otherwise qualified handicapped individual as provided in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794 *et seq.*) shall also apply to such programs or activities. Any prohibition against discrimination on the basis of religion, or any exemption, from such prohibition, as provided in the Civil Rights Act of 1964 (42 U.S.C. § 2000e (2)) or title VIII of the Act of April 11, 1968 (42 U.S.C. § 3601 *et seq.*), shall also apply to such programs or activities.

(2) EXCEPTIONS.—

(A) FUNDING.—The provisions of paragraph (1) of this subsection shall not apply where any State, local or territorial government or Indian tribe or Alaskan native village demonstates, by clear and convincing evidence, that the program or activity with respect to which the allegation of discrimination has been made is not funded in whole or in part with funds made available under this Act or title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.*).

(B) CONSTRUCTION PROJECTS IN PROGRESS.—The provision of paragraph (1), relating to discrimination on the basis of handicapped status, shall not apply with respect to construction projects commenced prior to January 1, 1977.

(b) ENFORCEMENT AND REMEDIES.—The provision of subsection (a) of this section shall be enforced by the Secretary in the same manner and in accordance with the same procedures as are required by sections 122, 124, and 125 of the State and Local Fiscal Assistance Act of 1972, as amended (31 U.S.C. § 1221 *et seq.*), to enforce compliance with section 122(a) of such Act. The Attorney General shall have the same authority, functions, and duties with respect to funds made available under this Act and under title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.*) as the Attorney General has under sections 122 (g) and (h) and 124(c) of such first cited Act with respect to funds made available under that Act. Any person aggrieved by a violation of subsection (a) of this section shall have the same rights and remedies as a person aggrieved by a violation of subsection (a) of section 122 of such first cited Act, including the rights provided under section 124(c) of such Act.

LABOR STANDARDS

SEC. 108. All laborers and mechanics employed by contractors on all construction projects funded in whole or in part by payments under this Act or title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 et seq.) shall be paid wages at rates not less than those prevailing on similar projects in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act (40 U.S.C. §§ 276a, 276a-5). The Secretary of Labor shall have, with respect to the labor standards specified in this section, the authority and functions set forth in Reorganization Plan No. 14 of 1950 (15 CFR 3176) and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. § 276c).

WITHHOLDING

SEC. 109. Except as otherwise provided by section 107(b), whenever the Secretary, after affording reasonable notice and an opportunity for a hearing, finds that a State, local or territorial government or any Indian tribe or Alaskan Native village has failed to comply substantially with any assurance filed pursuant to section 106 of this Act or title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 et seq.), the Secretary shall notify that government, tribe or village that further payments will not be made under this Act until he is satisfied that there is no longer any such failure to comply. Until he is satisfied, no further payments shall be made to such government, tribe or village under this Act.

DATA PROVISION RESPONSIBILITIES

SEC. 110. The Secretary of Labor and the Secretary of Commerce shall provide information and data necessary to the administration of this Act. Such information and data shall be provided for each local government, and shall be made available when necessary to the Secretary to assist him in carrying out the provisions of this Act. The Secretaries of Labor and Commerce shall also advise the Secretary as to the availability and reliability of relevant information and data.

RULEMAKING

SEC. 111. The Secretary is authorized to prescribe, after consultation with the Secretary of Labor and the Secretary of Commerce, such rules as may be necessary for the purpose of carrying out his functions under this Act. Such rules shall be prescribed by the Secretary not later than ninety days after the effective date of this Act.

REPORTS

SEC. 112. The Secretary shall report to Congress as soon as is practical after the end of each calendar year during which payments are made under the provisions of this Act. Such reports shall include detailed information on the amounts paid to each local or territorial government, Indian tribe and Alaskan Native village under the provisions of this Act and any amounts withheld by the Secretary pursuant to sections 107 and 109.

ALLOCATION TO PUERTO RICO, GUAM, AMERICAN SAMOA AND THE UNITED STATES VIRGIN ISLANDS

SEC. 113. (a) IN GENERAL.—There shall be allocated for each of the fiscal years 1979 and 1980 for the purpose of making payments under the Act to the Commonwealth of Puerto Rico, Guam, American Samoa and the Virgin Islands, an amount equal to 1 percent of the amount appropriated pursuant to section 103, multiplied by the applicable territorial percentage.

(b) ALLOCATIONS.—

(1) Territorial percentage.—For purposes of this section, the territorial percentage is equal to the quotient resulting from the division of the territorial population of a territory by the sum of the territorial populations for all territories.

(2) For purposes of this section—

(A) "territory" means the government of the Commonwealth of Puerto Rico, Guam, American Somoa or the Virgin Islands;

(B) "territorial population" means the most recent population for each territory as determined by the Bureau of the Census for the Secretary of Commerce and reported to the Secretary;

(3) The provisions of sections 103, 104 (d)(1), 105, 106, 107, 108, 109, 110, 111, and 112 shall apply to payments to the territories under this Act.

(c) PAYMENTS TO TERRITORIAL LOCAL GOVERNMENTS.—The governments of the territories are authorized to make payments to local governments within their jurisdiction from sums authorized by and received pursuant to this Act as they deem appropriate.

ALLOCATIONS TO INDIAN TRIBES AND ALASKAN NATIVE VILLAGES

SEC. 114. (a) IN GENERAL.—There shall be allocated for each of the fiscal years 1979 and 1980 for the purpose of making payments under the Act to Indian tribes and Alaskan Native villages, an amount equal to 0.3 percent of the amount appropriated pursuant to section 103, multiplied by the applicable Indian tribe or Alaskan Native village percentage.

(b) ALLOCATIONS.—

(1) Indian tribe or Alaskan Native village percentage.—For purposes of this section, the Indian tribe or Alaskan Native village percentage is equal to the quotient resulting from the division of the Indian tribe or Alaskan Native village population by the sum of the populations for all Indian tribes and Alaskan Native villages.

(2) For purposes of this section—

(A) "Indian tribe or Alaskan Native village" means an Indian tribe or Alaskan Native village which has a recognized governing body and performs substantial governmental functions.

(B) "Population" means the most recent population for each Indian tribe or Alaskan Native village as provided by the Bureau of Indian Affairs for the purposes of the State and Local Fiscal Assistance Act of 1972, as amended (31 U.S.C. 1221 et seq.).

(3) The provisions of section 103, 104(d)(1), 105, 106, 107, 108, 109, 111, and 112 shall apply to payments to the Indian tribes and Alaskan Native villages under this Act.

APPLICABILITY TO ANTIRECESSION FISCAL ASSISTANCE

SEC. 115. Except for section 213 of title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 et seq.), and except as otherwise provided herein, such title II is repealed and the provisions of this Act shall govern the expenditure by State, local and territorial governments (as defined in title II) of funds made available under title II.

SECTIONAL ANAYSIS OF A BILL

"To authorize a supplementary fiscal assistance program of payments to local governments, and for other purposes."

Section 101. Short Title. This section provides that the Act may be cited as the "Supplementary Fiscal Assistance Act of 1978."

Section 102. Findings of Fact and Declarations of Policy. This section sets forth a policy statement on the importance of the economic well-being of local governments to the national economy. Many local governments have experienced secular decline, and are also suffering from the effects of national economic problems. Due to these economic factors, there is a need for a program to continue general purpose fiscal assistance to local governments experiencing budgetary hardship due to secular economic decline. In addition, assistance to local governments is an essential element of a comprehensive urban policy.

Section 103. Authorization of Payments. This section authorizes the Secretary of the Treasury (hereinafter referred to as "the Secretary") to make payments each calendar quarter to local governments experiencing substantial unemployment (above 4.5%) or secular economic decline, as reflected in slow growth or decline in two of the three following factors: employment, per capital income and population. (§ 103(a) and (b)).

This section also authorizes an appropriation of $1,040,000,000 for each of fiscal year 1979 and $1,000,000,000 for fiscal year 1980 for payments to eligible local and territorial governments, Indian tribes and Alaskan native villages, in addition to funds necessary for the administration of the program. This level of funding for the program is consistent with the President's budget. Payments are authorized only to local and territorial governments, Indian tribes and Alaskan native villages, and the level of funding represents

an amount that approximates such governments' aggregate share under title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.;* hereinafter referred to as "title II").

State governments are excluded for several reasons. As independent political entities, State governments have a variety of revenue sources that are not available to local governments. Further, many State governments have current revenue surpluses and, as a whole, are less in need of supplemental fiscal assistance than local governments experiencing substantial unemployment or secular economic decline. Also, State governments are generally not experiencing a secular economic decline. Direct payments to local governments will be made effective in alleviating budgetary hardships resulting from high levels of unemployment and secular economic decline within a local jurisdiction.

The existing program under title II contains several variable factors which control the level of funding nationally, and to individual governments each quarter. These fluctuations in funding cause a considerable decree of uncertainty on the part of recipient governments and hinder their efforts to plan, budget and efficiently use the funds. A great deal of the uncertainity as to funding levels and eligibility in the existing program is eliminated in the program under this Act. The latter provides for the amount appropriated to be allocated and paid nationally during a fiscal year. Also, the possibility that funding would cease when the national rate of unemployment fell to six percent has been deleted from this Act.

Payments would continue to be made on a quarterly basis but allocations to the individual governments would be made annually; quarterly allocation and reallocation, as required by the existing program, are no longer deemed necessary since the mitigation of cyclical fluctuations is no longer a purpose of the legislation. Local governments would thus have adequate notice of whether they are eligible for the program, and of the amount of their payment for the upcoming fiscal year. Payments would be made within the first five days of each calendar quarter in fiscal years 1979 and 1980.

The program of payments under this Act, like those under the State and Local Fiscal Assistance Act of 1972, as amended (31 U.S.C. § 1221 *et seq.*) and title II of the Public Works Employment Act of 1976, as amended (42 U.S.C. § 6721 *et seq.*), is not a grant or financial assistance program. It is an entitlement program and, as such, is not governed by the requirements and conditions normally applicable to grant or financial assistance programs.

Section 104. Local Government Allocation. This section contains the formula, definitions and eligibility criteria used to allocate funds to local governments under this Act. The formula criteria are necessarily complex to accommodate the various measures of fiscal strain and financial need.

Section 104(a) provides that each eligible local government's annual allocation under the Act will equal its "local government percentage" multiplied by the appropriation for the fiscal year less the amounts allocable to the territories under § 113 and to Indian tribes and Alaskan native villages under § 114.

Section 104(b) provides the method for determining a "local government percentage." That percentage represents each government's share of the annual appropriation. A local government percentage is computed by multiplying a government's "local distribution index" (a term defined in § 104 (c)(5)) by its local revenue sharing amount for the most recently completed general revenue sharing entitlement period, and then dividing the product of that multiplication by the sum of such products for all eligible local governments nationally.

This allocation formula differs from the formula under title II which is geared exclusively to unemployment, and multiplies a government's unemployment rate in excess of 4.5% by its local revenue sharing amount. The local government index used for the program in this Act utilizes several additional data factors in measuring fiscal need. The local revenue sharing amount data factor under the current legislation is retained because of its factors of tax effort, population and per capita income. Also, it is incorporated so as to produce a result consistent with the distribution pattern of the current program.

Section 104(c) sets forth the eligiblity criteria and the method of calculating a local government index for each eligible local government.

The definition for a local government (§ 104(c)(1)) is substantially the same as the definitions used in the State and Local Fiscal Assistance Act of 1972, as amended (31 U.S.C. 1221 *et seq.*) and title II.

Eligibility (§ 104(c)(2)) is limited to fiscally distressed local governments because State governments generally have a greater revenue raising capacity and would be better able to replace title II funds.

For the purpose of determining eligibility, local governments are divided into two categories—those wholly or partly within a standard metropolitan statistical area (SMSA) (§ 104(c)(2)(A)) and those entirely outside an SMSA (non-SMSA) (§ 104(c)(2)(B)). Because of techniques used to generate unemployment and employment data, separation into SMSA and non-SMSA groups will compensate for and minimize measurement discrepancies between the sizes of potential recipient governments. Fiscal stress between urban and rural governments may not be comparable by the same measures, and the SMSA/non-SMSA distinction is intended to equalize the relative posture of each group.

A government will be eligible if it has an unemployment rate in excess of 4.5%, or if it satisfies two of the following three conditions: (1) its local rate of growth in employment is less than such rate for all SMSAs (or non-SMSAs); (2) its local rate of growth in per capita income is less than such rate for all SMSAs (or non-SMSAs) or; (3) its local rate of growth in population is less than such rate for all SMSAs (on non-SMSAs). Therefore, a government can qualify on the basis of its unemployment rate, or its slow growth as compared to its group (SMSA or non-SMSA) in two of the three data factors specified above (employment, population or per capita income). Generally, these growth rates are determined by subtracting from the most recently available data for each data category, the data for a preceding comparable period of time for all eligible local governments, or for a specific government, as appropriate, and dividing that difference by the data for such prior period.

The eligibility criteria measure the government's secular economic condition and serve as indicators of a government's fiscal strain, if any.

The use of a local unemployment rate (§ 104(c)(3)(A)) in excess of 4.5% results in targeting to areas with higher fiscal strain, since unemployment rates above this level generally reflect the magnitude of secular decline, such as decline in employment, low assessable base growth, and high tax burdens. Unemployment rate is a conceptually straightforward measure of economic distress that is widely accepted by the public, Congress, and various interest groups, and is used in the current program. Therefore, the use of unemployment also provides a link with the existing distribution pattern. A virtue of unemployment rates is their availability on a current basis. The use of an unemployment rate above 4.5% also serves as a measure of a local government's social welfare burden in terms of welfare payments, and health and criminal justice services.

The local rate of growth in employment (§ 104(c)(3)(B)) is a good indicator of the long term trend of the local economy. When used in conjunction with the local rate of growth in per capita income and population, it may give a better indication of secular economic decline in rural government areas than unemployment alone. Also, it represents the employment aspects of the unemployment, and is more indicative of government revenues, since employment generates tax receipts.

As a determinant of taxable wealth and level of economic activity, measurement of local rate of growth in per capita income (§ 104(c)(3)(C)) gauges each government's economic position relative to its group (SMSA or non-SMSA). For governments in rural areas, this is a particularly good indication of relative secular economic decline. Per capita income is also an important measure of living standards and purchasing power, and therefore relates directly to economic conditions and government financial condition. This indicator can also provide a measure of underemployment, which is particularly common in rural areas because many agricultural jobs pay low wages in relation to manufacturing or service jobs, and there are often too few full-time jobs relative to population.

Recent evidence indicates that there is a direct relationship between local rate of growth in population (§ 104(c)(3)(D)) and fiscal condition. Generally, cities with declining or slowing population growth have greater fiscal strain.

The local rate of growth in population is also considered to be a good indicator of a community's attractiveness in terms of its ability to draw future residents and a labor supply and, thus, of its future economic health. The local rate of growth in population may reflect past shifts in economic activity as well as how to predict future changes. Individuals make residential choices for a number of reasons. To the extent that people move in search of better employment opportunities, the rate of growth in population is a second-order indicator of past economic performance.

Population changes affect governmental revenues and expenditures, either directly or indirectly, since they impact the economic base of a government. For example, the residential property tax is the foundation of most local government revenues. Changes in population influence the amount of property tax revenues by causing changes in the market value of residential property. As the population of a city increases, demand for available housing is likely to rise and so will its market value and, thus, property tax revenues. Although the supply of housing will in time expand in response to this rise in demand, this does not happen immediately. A fall in a city's population produces the opposite effect: demand drops, as do market values and property tax receipts. The supply of housing in this instance is usually even more unresponsive and will remain constant for some time.

Once the SMSA and non-SMSA eligible governments are identified, then next step is to determine each eligible government's "local distribution index" (§ 104(c)(5)). Several calculations are used so that each government gets the benefit of whichever one produces the highest result. These four

separate calculations are based on the following data: (1) the local rate of unemployment in excess of 4.5%; and the local rates of growth in (2) employment, (3) per capita income, and (4) population. For each of these data categories, the difference between a local government's rate and its group's (SMSA or non-SMSA) rate is divided by the standard deviation (weighted by population to account for differences in size between governments) of the rates of the governments in its group.

Once this index is developed for each government, it is used to compute that government's local government percentage. That percentage represents a local government's share of the total funds to be made available for payments to local governments each fiscal year of the program.

Section 104(d) provides that if the annual allocation to a local or territorial government, Indian tribe or Alaskan native village for a fiscal year is less than $200, such government shall not receive any payment for that fiscal year. Allocations below $200 per year are too small to be meaningful to those governments and the processing of the payments creates a substantial administrative burden (§ 104(d)(1)).

The other limitation on allocations (§ 104 (d)(2)) is that a government may not receive more funds under the Act than it received under title II during the period beginning July 1, 1977 and ending June 30, 1978, except for those governments which received no allocation under such Act during that time period. Funds made available due to this allocation constraint will be redistributed to the remaining governments (§ 104 (d)(3)). Governments that received no allocations under title II during the aforementioned time period will not benefit from this redistribution of funds.

Section 104(e) provides authority regarding treatment, for allocation purposes, of a local government located only in part within a larger political entity, and authority to take into account boundary changes and governmental reorganizations.

Section 105. Use of Payments. This section provides that payments under the Act shall be used for basic services customarily provided to persons under the jurisdiction of the recipient local or territorial government, Indian tribe or Alaskan native village. The governments may use payments for the same governmental purposes for which as they use their own revenues, including capital expenditures for equipment and construction projects. This provision eliminates the restriction on capital expenditures currently applicable to payments under title II. As with funds under title II, these payments may be used as the local contribution for a Federal matching grant to be utilized in a manner not inconsistent with the Act.

Section 106. Statement of Assurances. This section provides that in order for a local or territorial government, Indian tribe or Alaskan native village to receive a payment, a statement of assurances shall be filed annually with the Secretary. The signatory government shall assure the Secretary that it will comply with the following conditions in the expenditure of payments under the draft bill: the government will use the funds for basic expenditures as set forth in section 105 (§ 106(a)); it will use fiscal, accounting and audit procedures that conform to guidelines established by the Secretary (after consultation with the Comptroller General) (§ 106 (b)(1)), it will provide access to the Secretary (and the Comptroller General) of any books, documents, papers or records as the Secretary may require to review compliance within the provisions of the Act (§ 106(b) (2)); it will make such reports as are requested by the Secretary to carry out the purposes of the Act (§ 106(c)); it will comply with the nondiscrimination requirements of section 107 (§ 106(d)) and the labor standards requirements of section 108 (§ 106(e)); and it will use payments only in accordance with the substantive laws and budgetary procedures that are applicable to the use of its own source revenues (§ 106(f)). The latter assurance is currently in the State and Local Fiscal Assistance Act of 1972, as amended, and title II and would be the principal restriction on the use of the payments under this Act.

Section 107. Nondiscrimination. This section prohibits discrimination on the basis of race, color, national origin or sex under any program or activtiy funded by payments under either this Act or title II (§ 107(a)(1)). Any prohibition against discrimination on the basis of age under the Age Discrimination Act of 1975 (42 U.S.C. § 6101 *et seq.*) or with respect to an otherwise qualified handicapped individual as provided in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794 *et seq.*) also applies to any such program or activity; the handicap discrimination provisions would not be applicable to construction projects begun before January 1, 1977 (§ 107(a)(2)(B)). The ban on discrimination on the basis of religion in the Civil Rights Act of 1964 (42 U.S.C. § 2000e(2)) and in title VIII of the Civil Rights Act of 1968 (42 U.S.C. §§ 3601–19) also applies to such program or activity. In addition, the provisions of the State and Local Fiscal Assistance Act of 1972, as amended and title II with respect to fund tracing (§ 107(a)(2) (A)), administrative enforcement, the authority of the Attorney General to intervene or initiate suit, and private remedies (31 U.S.C. § 1242, 1244–45), are incorporated in this section (§ 107(b)) of the Act.

Thus, the section is substantially similar to the pertinent provision in title II. However, it is intended that any act of discrimination alleged to have occurred prior to the effective date of this Act, despite the repeal of title II, will continue to be subject to the jurisdiction of the Secretary.

Section 108. Labor Standards. This section provides that all laborers and mechanics employed by contractors on construction projects funded in whole or in part by payments under this Act or title II shall be paid wages at rates not less than those prevailing on similar projects in the locality as determined by the Secretary of Labor under the Davis-Bacon Act (40 U.S.C. §§ 276a–5).

This section is substantially identical to the pertinent provision in title II. However, it is again intended that the Secretary retain jurisdiction, notwithstanding the repeal of title II.

Section 109. Withholding. This section provides that after affording reasonable notice and an opportunity for a hearing, payments shall be withheld by the Secretary from a government that has failed to perform any action covered by any assurance required by section 106 of this Act or by title II, except for the nondiscrimination provisions, until the Secretary is satisfied that compliance with that section has been achieved. For discrimination cases, the remedies and procedures of section 107 apply.

Section 110. Data Provision Responsibilities. This section requires the Secretary of Labor and the Secretary of Commerce to collect and make available to the Secretary the data needed to administer the Act. The Secretaries of Labor and Commerce are also required to advise the Secretary as to the availability and reliability of data relevant to the program.

Section 111. Rulemaking Authority. This section authorizes the Secretary, after consultation with the Secretaries of Labor and Commerce, to prescribe rules necessary to carry out his functions under this Act, not later than 90 days after the effective date of this Act.

Section 112. Reports. This section provides that the Secretary shall report to Congress as soon as practical after the end of each calendar year during which payments are made, on the amounts paid to local governments, Indian tribes and Alaskan native villages, as well as withholding actions taken pursuant to section 107 (Nondiscrimination) and section 109 (Withholding).

Section 113. Allocations to Puerto Rico, Guam, American Samoa, and the United States Virgin Islands ("territories"). This section allocates to these territories, in the aggregate, an amount equal to 1 percent of the amount appropriated for each fiscal year (§ 113(a)). Each of the territories shall receive an allocation based on its population compared to the total population of all the territories (§ 113(b)(1)). Each territory may allocate such sums to the local governments within its jurisdiction as it deems appropriate (§ 113(c)). This is similiar to the pertinent provision in the title II, except that the funds paid to the territories under his Act are not in addition to the funds paid to the eligible local governments.

Section 114. Allocations to Indian tribes and Alaskan native villages. This section allocates to Indian tribes and Alaskan native villages, in the aggregate, an amount equal to 0.3 percent of the amount appropriated for each fiscal year (§ 144(a)). Each tribe or village shall receive an allocation based on its population compared to the total population of all Indian tribes and Alaskan native villages (§ 114(b)(1)). This differs from title II, under which the tribes and villages are generally treated in the same manner as local governments.

Section 115. Applicability to Antirecession Fiscal Assistance. This section repeals title II with certain exceptions and provides that the expenditure of any funds made available in fiscal year 1977 and 1978 provided under title II, which remain unexpended, shall be governed by the provisions of this Act. Thus, restrictions under title II relating to use and other matters will no longer be applicable to the expenditure of those funds, after this Act become effective. Since the countercyclical aspects of the existing program are no longer relevant under this Act, funds remaining available for expenditure will not be subject to the requirements that have been imposed for countercyclical purposes. The exceptions to repeal are for the purpose of ensuring that the assurance, nondiscrimination, labor standards and withholding provisions of title II remain in force with respect to title II funds. It is intended by this means to preserve the Secretary's jurisdiction over noncompliance which has, or is alleged to have, occurred prior to the effective date of this Act.

Subcommittee on Unemployed Compensation, Revenue Sharing and Economic Problems Announces Hearing on the Supplemental Fiscal Assistance Proposals Contained in the President's National Urban Policy Recommendations

Subcommittee Chairman William D. Hathaway (D.-Maine) today announced that a hearing will be held on May 3, 1978, on the President's national urban policy recommendations regarding supplemental fiscal assistance for State and local governments. These proposals would replace the Antirecession Fiscal Assistance Act which expires on September 30, 1978.

The hearing will be held on Wednesday, May 3, 1978, at 10 a.m. in room 2221 Dirksen Senate Office Building.

Senator Hathaway noted that, "The Countercyclical Assistance Program which will expire later this year, has provided critical assistance to State and local governments suffering from high unemployment and inadequate revenues." He pointed out that, "Termination of this program could prove disastrous for many of these governments which continue to lack a sufficient tax base to provide adequate revenues to maintain government services at even the most minimal levels. The President's proposal to provide $1 billion of additional fiscal assistance annually for the next two fiscal years is an important step in the right direction. The purpose of this hearing is to determine whether the proposed modifications of this program constitute constructive changes." Hathaway added that it is his hope that the extension of this important program can be authorized as soon as possible.

Requests to Testify.—Persons who desire to testify at the hearing should submit a written request to Michael Stern, Staff Director, Committee on Finance, Room 2227 Dirksen Senate Office Building, Washington, D.C. 20510 by no later than close of business on Friday, April 28, 1978.

Legislative Reorganization Act.—Senator Hathaway stated that the Legislative Reorganization Act of 1946, as amended, requires all witnesses appearing before the Committees of Congress "to file in advance written statements of their proposed testimony, and to limit their oral presentations to brief summaries of their argument."

Witnesses scheduled to testify must comply with the following rules:

(1) A copy of the statement must be filed by the close of business two days before the day the witness is scheduled to testify.

(2) All witnesses must include with their written statement a summary of the principal points included in the statement.

(3) The written statements must be typed on letter-size paper (not legal size) and at least 75 copies must be submitted by the close of business the day before the witness is scheduled to testify.

(4) Witnesses are not to read their written statements to the Committee, but are to confine their ten-minute oral presentations to a summary of the points included in the statement.

(5) Not more than ten minutes will be allowed for oral presentation.

Written Testimony.—Senator Hathaway stated that the Subcommittee would be pleased to receive written testimony from those persons or organizations who wish to submit statements for the record. Statements submitted for inclusion in the record should be typewritten, not more than 25 double-spaced pages in length and mailed with five (5) copies by May 26, 1978, to Michael Stern, Staff Director, Committee on Finance, Room 2227, Dirksen Senate Office Building, Washington, D.C. 20510.●

By Mr. McCLURE:

S. 2978. A bill to amend the Occupational Safety and Health Act of 1970 to prohibit restrictions on work rules in locations in which there is hunting, fishing, or shooting sports, and for other purposes; to the Committee on Human Resources.

● Mr. McCLURE. Mr. President, a recent action by OSHA poses a serious threat to the future of sport hunting for millions of American outdoorsmen. This threat stems from a decision by OSHA to fine a Louisiana timber company for operating an unsafe workplace because the company allowed public hunting on its 580,000 acres of timberlands.

If this ruling is allowed to stand, landowners throughout the country could be forced to close their land to sportsmen. Access to millions of acres is at stake. OSHA jurisdiction extends not only to workers employed on private timberland, but also to farmland and even national forests. My concern about this ruling is heightened by the fact that OSHA told the timber company that no abatement action other than removal of the hunters or the employees would be considered sufficient. The company involved, Olinkraft, has decided to fight this case through the OSHA appeal system and I commend them for that. But Congress created OSHA and we should be the ones who correct its abuses. Therefore, I am introducing legislation to remove from OSHA any authority to regulate hunting, fishing, or any shooting sport. Under my bill, these activities would continue to be regulated by the agencies with the most knowledge and experience in this area, the fish and game departments of the 50 States.

The outdoor heritage of our country is unique because in America hunting and fishing are not a special privilege reserved exclusively for the wealthy and powerful but are available to all. In no other country are these sports so widely enjoyed. Our wholesome outdoor way of life cannot be preserved if Congress allows an agency of the executive branch on its own to overturn a longstanding policy which benefits millions of American sportsmen.

Mr. President, I ask unanimous consent that there be printed in the RECORD a statement by a spokesman for the Louisiana Department of Wildlife and Fisheries and also a memorandum prepared by the Department of Fish and Wildlife of Oregon.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LOUISIANA DEPARTMENT OF WILDLIFE AND FISHERIES

Out of the millions of hunters in the United States, probably half avail themselves of lands which could be affected by the OSHA ruling. In the western states, where 90 percent of the land may be owned by the federal government, the percentage could be much greater than that,

If that citation is upheld by the administrative law judge, and possibly in the federal courts, then millions of sportsmen throughout the United States could be denied access to hundreds of millions of acres previously open for hunting.

Timber companies and other large landholding corporations would find it extremely difficult to separate their workers from the hunters under current free access policies which have provided so many sportsmen with land on which to hunt.

The implications are astronomical. And we're not just talking about Louisiana, where we have some 15 million acres of forestland. Were talking about all the 50 states.

If OSHA maintains its position that you have to separate workers from sportsmen, then the people who will be hurt most are the hunters themselves. These companies couldn't realistically be expected to shut down their operations during the hunting season.

Instead, it's possible that they would simply close their lands to hunting rather than to be faced with federal action.

[Oregon Department of Fish and Wildlife]

MEMORANDUM

Subject: Hunting Accidents/Woods Employees.

Oregon casualty statistics bear no correlation whatsoever of hunting related accidents to timber operation employees.

For your information I have enclosed copies of Oregon Casualty Reports for 1974–5–6. A short summary is included below:

Casualties

1974		35
1975		58
1976		50
Total		143

Self-inflicted/hunting partner

1974		33
1975		51
1976		43
Total	(89%)	127

Occurred at 0–25 yards

1974		27
1975		44
1976		38
Total	(76%)	109

Of particular note is the fact that 89% of these casualties involved a hunting partner or were self-inflicted. It is a common misconception of the non-hunting public that hunters are mistaken for game or are wounded in some sort of massive crossfire by unknown shooters. Our stats have shown that this is simply not true. The majority of Oregon's hunting casualties are the result of individual carelessness at very close range. Regulatory agencies need not concern themselves with hunting activity as a reason for curtailing any other occupational or sporting activity, as those concerns have no basis in fact.●

By Mr. RIEGLE:

S. 2979. A bill to provide a special program of financial assistance to opportunities industrialization centers in order to provide new motivational and skills training opportunities for welfare recipients, and new incentives for business and industry to coordinate their employment plans and job creation efforts with opportunities industrialization centers and national community-based organizations which have demonstrated effectiveness in developing cooperative relationships with the private sector; to the Committee on Human Resources.

OPPORTUNITIES INDUSTRIALIZATION CENTERS SKILLS TRAINING AND PRIVATE SECTOR JOB CREATION WELFARE REFORM ACT OF 1978

● Mr. RIEGLE. Mr. President, I am today introducing the Opportunities Industrialization Centers (OIC) Skills Training and Private Sector Job Creation Welfare Reform Act. Congressman MICHAEL O. MYERS has introduced similar legislation in the House, along with 21 cosponsors.

This legislation would authorize the Department of Labor to contract with the OIC, the National Urban League, SER–Jobs for Progress, Mainstream, and other national community based organizations to provide motivational and skills training to welfare recipients and then

to provide job counseling and placement in permanent private sector jobs.

The goal of the legislation is to take 500,000 Americans off welfare and place them in meaningful jobs. Priority for assistance will be given to those welfare recipients who are: First, the particularly hard to employ; Second, living in urban and rural areas with the highest concentration of welfare clients; and Third, living in rural areas so that outmigration can be minimized. Unemployed people who were laid off during the last recession and whose unemployment insurance has recently expired would also be eligible. Special outreach efforts will be made to Vietnam-era veterans, the handicapped, older persons, women, and minorities.

Mr. President, the OIC and other national community based organizations have outstanding records in the area of job training over many years. This legislation will provide additional support for these outstanding programs and provide many more people with the opportunity of obtaining meaningful work.●

By Mr. CHAFEE (for himself, Mr. DANFORTH, Mr. HELMS, Mr. ROTH, and Mr. DECONCINI):

S.J. Res. 129. A joint resolution directing the Architect of the Capitol to halt construction of the extension to the Dirksen Office Building and providing for the conversion of the site of such extension into a public park to be known as the Philip A. Hart Park and an underground parking garage for tourists and visitors to the Capitol; to the Committee on Rules and Administration.

HALT CONSTRUCTION OF THE PHILIP A. HART SENATE OFFICE BUILDING

● Mr. CHAFEE. Mr. President, the joint resolution I am introducing today would require the Architect of the Capitol to order an immediate halt to any further construction of the Philip A. Hart Senate Office Building, which now threatens to be the most expensive Federal building in the Nation's history.

Once work is halted, the site would be reclaimed as a park for Washington residents and visitors to the Capitol, and would be named the Philip A. Hart Public Park.

Mr. President, I take this action because I am overwhelmed by the projected cost of this publicly financed palace. It is now estimated that its final cost will be $122 million, or approximately 10 times as costly as the Louisiana Purchase. Plus, since the opening of the building is 3 years away, we can just wonder how valid today's cost projection is.

Looking down into the 3-acre, five-story-deep excavation pit, and looking ahead to the cost escalations still to come, my head literally spins. I am convinced, Mr. President, that we are digging a hole in which taxpayers would rather not be.

The rationale for constructing this building was to help alleviate staff overcrowding. In fact, the size of the Senate staff has almost doubled since 1968, and the legislative budget has more than tripled in that time.

But a new building will only compound this growth, not cure its symptoms. I am a firm believer in Parkinson's law—that work expands to fill the time available. I am also a firm believer in CHAFEE's law—that staff expands to fill the space available.

Does anyone really think we in the Senate are not imaginative enough to find ways to employ sufficient people to overcrowd this third Senate office building?

Is it really necessary to build another marble giant whose gross square footage will almost equal the combined area of both the Russell and Dirksen Senate Office Buildings, two structures that already give us over 31 acres of floor space?

In 1972, when funds were first appropriated for the Hart Building, it was "only" a $48 million project. That escalated to $68 million in 1973, and $85 million in 1974. The Architect of the Capitol recently requested an additional $37 million for completion of the building, which would bring its total cost to $122 million.

Let us look at the record and make a realistic appraisal of this building's final cost. Since first conceived and funded 6 years ago, its "final cost" has gone up over 150 percent. So, for the sake of argument let us say that "final cost" will go up another 75 percent in the 3 years before the doors open in May 1981.

That would make the final bill a whopping $213 million. Look at it this way: That's approaching half the current budget for the entire State of Rhode Island.

This project is already establishing itself not as memorial to the Honorable Philip A. Hart, but as an offensive monument to the continued growth of the Senate's bureaucracy. If we desire to halt inflation, we have to cut back on every project where its effects are being most painfully felt. Let us start with a massive building intended solely for the comfort and convenience of 100 Americans—the ones who voted for the structure in the first place.

If Congress intends to tell Federal agencies and departments to tighten their belts in the fight against inflation, then the Senate must be willing to strike the first blow and set an example.

I am not going to be swayed by the old argument of, "Well, we've already spent so much money, we have to go ahead." As a former Secretary of the Navy, I have heard that one before.

We have to stop this right now.●

By Mr. MATHIAS (for himself and Mr. BAYH):

S.J. Res. 130. A joint resolution designating John Philip Sousa's "The Stars and Stripes Forever" as the national march of the United States; to the Committee on the Judiciary.

NATIONAL MARCH OF THE UNITED STATES

● Mr. MATHIAS. Mr. President, I send to the desk for myself and Senator BAYH, a joint resolution to designate "The Stars and Stripes Forever," by John Philip Sousa as our national march.

Throughout history, music has been an integral part of human civilization. The major events of our personal lives—weddings, funerals, commencements, religious observances, athletic events, ceremonial occasions, and so forth—are distinguished by musical accompaniment. Music sets the mood, heightens the senses, deepens the feelings, and highlights the significance of special moments, just as it helps to make a leisurely afternoon or evening more pleasant and relaxing.

During the Bicentennial we all realized the significance of music in public ceremonies. And year after year on the Fourth of July, one event certain to occur in virtually every town and city is a parade. It is appropriate, therefore, that we, as a nation, recognize the contribution American composers of marching music have made to our lives and to our celebrations.

In that spirit, Mr. President, members of the American School of Band Directors Association and others have suggested that we should pay tribute to all of our great composers by designating as our national march what they believe to be the greatest march of the greatest composer of marches, John Philip Sousa.

John Philip Sousa has been selected for this honor for numerous reasons. Born in our Nation's Capital, he remained a Washingtonian in spirit throughout his life. He was the son of immigrant parents. His musical genius was evident very early, and he enrolled in a conservatory in Washington at the age of 6. He enlisted in the U.S. Marine Band at the age of 13, and served for 5 years until he left to pursue more formal studies of music. He had sold his own musical compositions by the age of 18. In 1880, at the age of 26, he became the conductor of the U.S. Marine Band. He served as conductor for 12 years. During that time he composed the official Marine March, "Semper Fidelis" as well as such famous marches as the "Washington Post March," "The High School Cadets," "The Gladiator," "Hands Across the Sea," "King Cotton," and "The Liberty Bell." In 1890, Sousa edited for the Department of the Navy a work entitled "National, Patriotic and Typical Airs of All Lands."

Sousa served with distinction with three branches of our Armed Forces; as musical director of the VI Army Corps during the Spanish-American War, as conductor of the U.S. Marine Band, and as lieutenant in charge of Navy bands during World War I. He served in the latter position for nominal compensation, and raised millions of dollars for the Government's liberty loan drives. Sousa's contributions were recognized by his receipt of the Royal Victorian Order of Great Britain, the Golden Palms and Rosette of the French Academy, and the Cross of Artistic Merit of the Academy of Arts, Science, and Literature of Hain-

ault, Belgium. Sousa was elected to the Hall of Fame of Great Americans.

During his life, John Philip Sousa composed more than 100 marches, as well as a number of waltzes, overtures, suites, comic operas, and other musical compositions. He became to the march what Strauss was to the waltz or Beethoven to the symphony. His personal library of music was bequeathed to the University of Illinois. John Philip Sousa died in 1932 and was buried in Congressional Cemetery in Washington, D.C.

Mr. President, Sousa's distinction as a musical composer, band director, public leader, and patriotic citizen makes it appropriate that through him we honor all composers and musicians throughout the Nation. We can do this by designating his great work "The Stars and Stripes Forever" as our national march.

I am pleased, therefore, to introduce this resolution and to commend it to the attention of my colleagues. I ask unanimous consent that the text of the measure be printed at this point in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 130

Whereas, through his many outstanding military airs and marches, John Philip Sousa has brought worldwide musical recognition to the United States of America;

Whereas Sousa's "The Stars and Stripes Forever" is universally known and is associated with our flag and our country more than any other military air or march; and

Where the United States of America has no official national march to be used to salute the appearance of high Federal and State Government officials, other than the President, on public occasions: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the musical composition by John Philip Sousa, known as "The Stars and Stripes Forever", is hereby designated the national march of the United States of America.

SEC. 2. For the purposes of this joint resolution, the term "The Stars and Stripes Forever" means a composition by John Philip Sousa consisting of the following words and music:

THE STARS AND STRIPES FOREVER
(Words and Music by John Philip Sousa)

1. Let martial note In triumph float, And liberty extend its mighty hand, A flag appears, 'Mid thun-d-rous cheers, The banner of the Western land. The emblem of the brave and true, Its folds protect no tyrant crew, The red and white and starry blue, Is Freedom's shield and hope.

CHORUS

Other nations may deem their flags the best And cheer them with fervid elation, But the flag of the North and South and West is the flag of flags. The flag of Freedom's nation. Hurrah for the flag of Freedom's nation. Hurrah for the flag of the free, May it wave as our standard forever, The gem of the land and the sea, The Banner of the Right. Let despots remember the day When our fathers with mighty endeavor, That by their might, And by their right, It waves forever!

2. Let eagle shriek From lofty peak, The never ending watchword of our land. Let summer breeze Waft through the trees The echo of the chorus grand. Sing out for liberty, and light, Sing out for freedom and the right, Sing out for Union and its might, Oh, patriotic Sons!

CHORUS

Other nations may deem their flags the best And cheer them with fervid elation, But the flag of the North and South and West is the flag of flags, The flag of Freedom's nation. Hurrah for the flag of the free, May it wave as our standard forever, The gem of the land and the sea, The Banner of the Right. Let despots remember the day When our fathers with might endeavor, Proclaim'd as they march'd to the fray, That by their might, And by their right, It waves forever!

[Due to mechanical limitations, music referred to is not printed in the RECORD.]

[For the musical version referred to herein see clerk's copy on file in the Senate.●]

● Mr. BAYH. Mr. President, I am pleased to join with my distinguished colleague from Maryland, Senator MATHIAS, in introducing legislation to designate "The Stars and Stripes Forever" by John Philip Sousa as the national march of the United States.

We Americans are a people with a unique national heritage, who point with pride to our achievements. Americans have contributed much to a wide variety of musical expressions. But I think we would be hard pressed to point to a single invidual who has had more of an impact than John Philip Sousa, American composer, performer, conductor, and author.

Born in the Nation's Capital in 1854, Sousa was trained in classical music, receiving his first instruction on the violin and later learning several band instruments. At the age of 13, he joined the U.S. Marine Band, of which his father had been a member, as an apprentice, and remained with the band for the next 5 years. During this time, Sousa began his prolific career as a composer, and before reaching his twentieth birthday had toured as an orchestra conductor.

At the age of 26, Sousa assumed the conductorship of the Marine Band, and embarked on a reorganization of the band which emphasized its development through new patterns of instrumentation which allowed the band to produce effects as soft as those of a symphony orchestra. Prof. Al G. Wright, director of bands at Purdue University, has noted that "probably no man will ever exert a greater influence on the total growth and recognition of the Wind Band as an accepted vehicle of culture on the concert stage as did John Philip Sousa." Sousa organized his own band in 1892, and this elite group of top professionals traveled over 1 million miles, delighting audiences worldwide.

In his career, Sousa wrote some ten comic operas, including the still popular "El Capitan," 50 songs, 2 overtures, and 12 suites, while rightly being hailed as the "March King." It has been said that Sousa was to the development of the march what famed Viennese composer Johann Strauss was to the waltz, and even an abbreviated listing of his compositions emphasizes his accomplishments. Among the popular Sousa scores which occupy a distinctive place in American history are "The Washington Post March," "Semper Fidelis," "The Thunderer," "King Cotton," and "High School Cadets." The most famous of all, the strains of which are familiar to virtually all Americans young and old, is surely "The Stars and Stripes Forever." Therefore, it is fitting that we accord formal recognition to this piece by designating it as our national march, both in tribute to John Philip Sousa, a man who once listed his occupation as "Salesman of Americanism," and in acknowledgement of the degree to which this particular march symobilzes the American spirit itself. A constituent, Debra Lankford of Evansville, Ind., recently wrote to me and summed up the impact of "The Stars and Stripes Forever." She wrote:

> Just like the song, America has had its ups and downs, its loud and soft times, and yet it always moves on stronger than ever. The brisk tempo reflects this nation's desire for leadership and zest for life.

Ours is a musical country, as each year thousands of our young people look forward to performing in school bands and orchestras, and many adults recall happy memories of similar times in years before. It has been noted that anyone who has ever performed "Stars and Stripes" in a band knows the reaction and feeling associated with this music. I do not think it would be going too far to say that each of us who hears it, whether played by a great symphony orchestra or a high school band on the Fourth of July, is moved. A wide variety of band associations support the recognition of this march as a national symbol, and I urge my colleagues to consider this measure favorably.●

ADDITIONAL COSPONSORS

S. 1967

At the request of Mr. ROBERT C. BYRD, the Senator from New Hampshire (Mr. MCINTYRE) was added as a cosponsor of S. 1967, relating to deposit of social security contributions by State and local governments.

S. 2388

At the request of Mr. PACKWOOD, the Senator from New Mexico (Mr. DOMENICI was added as a cosponsor of S. 2388, a bill to amend the Internal Revenue Code of 1954 to provide for the exclusion from gross income of certain employer educational assistance programs.

S. 2576

At the request of Mr. MCCLURE, the Senator from North Carolina (Mr. HELMS) was added as a cosponsor of S. 2576, a bill to amend the Internal Revenue Code of 1954 with respect to the tax treatment of earned income of U.S. citizens and resident aliens from sources without the United States, and for other purposes.

S. 2725

At the request of Mr. MATSUNAGA, the Senator from Hawaii (Mr. INOUYE) was

added as a cosponsor of S. 2725, a bill to provide that certain air traffic specialists be considered as air traffic controllers for retirement purposes.

S. 2751

At the request of Mr. KENNEDY, the Senator from Connecticut (Mr. RIBICOFF) was added as a cosponsor of S. 2751, a bill to amend the Immigration and Nationality Act relative to the admission of refugees.

S. 2929

At the request of Mr. HELMS, the Senator from Arkansas (Mr. BUMPERS) was added as a cosponsor of S. 2929, a bill to provide for the safeguarding of taxpayer rights, and for other purposes.

SENATE JOINT RESOLUTION 121

At the request of Mr. PELL, the Senator from Nebraska (Mr. CURTIS) was added as a cosponsor of Senate Joint Resolution 121, authorizing the President to proclaim the second full week in October 1978 as National Legal Secretaries' Court Observance Week.

SENATE CONCURRENT RESOLUTION 73

At the request of Mr. DOLE, the Senator from Utah (Mr. HATCH) was added as a cosponsor of Senate Concurrent Resolution 73, relating the imposition of import fees on crude oil.

SENATE CONCURRENT RESOLUTION 79

At the request of Mr. MCCLURE, the Senator from Montana (Mr. MELCHER), the Senator from Delaware (Mr. ROTH), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Montana (Mr. PAUL G. HATFIELD), and the Senator from New Hampshire (Mr. DURKIN) were added as cosponsors of Senate Concurrent Resolution 79, disapproving proposed regulations of the Department of the Treasury requiring centralized registration of firearms and other matters.

AMENDMENT NO. 1796

At the request of Mr. SPARKMAN, the Senator from Massachusetts (Mr. BROOKE) was added as a cosponsor of Amendment No. 1796, intended to be proposed to S. 2637, the Housing and Community Development Amendments of 1978.

AMENDMENTS SUBMITTED FOR PRINTING

CONGRESSIONAL BUDGET, 1979—S. CON. RES. 80

AMENDMENT NO. 1799

(Ordered to be printed and to lie on the table.)

Mr. PROXMIRE submitted an amendment intended to be proposed by him to Senate Concurrent Resolution 80, setting forth the congressional budget for the U.S. Government for the fiscal year 1979.

(The remarks of Mr. PROXMIRE when he submitted the amendment appear elsewhere in today's proceedings.)

AMENDMENT NO. 1801

(Ordered to be printed and to lie on the table.)

Mr. NELSON submitted an amendment intended to be proposed by him to Senate Concurrent Resolution 80, supra.

CIVIL SERVICE RETIREMENT COSTS AND THE FIRST CONCURRENT BUDGET RESOLUTION

Mr. NELSON. Mr. President, the amendment I am submitting today would increase the budget authority of the income security function—Function 600—set forth in the first concurrent budget resolution by $6.1 billion to reflect the liability the Federal Government will incur in fiscal year 1979 as a result of the Federal retirement benefits provided to Federal employees through the civil service retirement program. Currently, the Federal agencies report only their annual matching contributions, not the total liability associated with providing civil service retirement benefits to Federal workers. This amendment would increase budget authority under Function 600 to reveal the present and future costs in fiscal year 1979 of the largest Federal retirement system—the civil service retirement program.

It is time for the Congress to acknowledge that the Federal Government has assumed monumental liabilities associated with the civil service retirement program, and reflect these retirement costs in the Federal budget.

In 1974, Congress enacted the Budget Control Act. This legislation established an annual discipline through which Congress, after consideration of the President's proposed budget and with the advice of its legislative committees and of this process. Civil service retirement expenditure and revenue targets for Federal programs. This amendment is designed to fulfill the goals and objectives of this process. Civil Service Retirement benefits have significant budgetary implications for Federal agency operation costs that should be reflected in the congressional budgeting process.

Right now, there are some 68 different retirement systems covering Federal employees, although seven of these plans cover 98 percent of all Federal employees. These seven retirement systems include: civil service, Foreign Service, uniformed services, U.S. Tax Court judges, Tennessee Valley Authority, Federal judiciary, and the Federal Reserve Board. The civil service retirement program, however, covers 75 percent of all Federal employees.

The fiscal year 1979 budget recommendations sent to the Congress by the President do not reveal how much it costs American taxpayers to support the retirement benefits of personnel within Federal agencies. This is true for virtually every agency of the Federal Government, ranging from the Department of Health, Education, and Welfare to the Department of Commerce.

Budgets of the Federal agencies indicate only a portion of the costs associated with the civil service retirement system. The portion of retirement costs which these budgets do reveal is the amount which the agency is required to contribute as its match to the employee contribution. Agencies whose employees are covered by the civil service retirement system are required to make a matching contribution to the retirement fund. This agency match is generally 7 percent of payroll throughout the Federal Government, where the employee works in the Government.

This approach to the reporting of the agency contributions to the civil service retirement programs on behalf of their employees does not reflect the full costs to the Federal Government of the primary Federal retirement program. In fact, the employee and agency contributions together do not pay for even one-half the cost of the civil service retirement program.

Data prepared at my request by the chief actuary of the civil service retirement fund demonstrates that, at a minimum, the civil service retirement system in fiscal year 1977 cost 29.3 percent of payroll with the Federal Government paying 75 percent of these costs. Employees contributed 7 percent, agencies another 7 percent, and general revenue contributions were 15.3 percent, making for a total Government contribution of 22.3 percent of payroll. Virtually all the other Federal retirement programs are similarly situated—employee and agency contributions are not paying the full cost of retirement benefits.

I ask unanimous consent that a report prepared for me by the chief actuary of the civil service retirement system, which illustrates the true total costs of the civil service retirement system be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

CONTRIBUTIONS OF THE CIVIL SERVICE RETIREMENT FUND AS A PERCENTAGE OF COVERED PAYROLL

Fiscal year	Employee contribution	Government contribution			Total[1]
		Agency	General revenues	Total Government contribution	
1970	6.7	6.7	0.9	7.6	14.3
1971	7.0	7.0	2.8	9.8	16.8
1972	7.0	7.0	3.9	10.9	17.9
1973	7.0	7.0	5.9	12.9	19.9
1974	7.0	7.0	7.7	14.7	21.7
1975	7.0	7.0	11.8	18.8	25.8
1976	7.0	7.0	13.1	20.1	27.1
1977	7.0	7.0	15.3	22.3	29.3
PROJECTED[2]					
1978	7.0	7.0	17.5	24.5	31.5
1979	7.0	7.0	19.4	26.4	33.4
1980	7.0	7.0	21.2	28.2	35.2
1985	7.0	7.0	23.1	30.1	37.1
1990	7.0	7.0	25.1	32.1	39.1
1995	7.0	7.0	26.8	33.8	40.8
2000	7.0	7.0	28.0	35.0	42.0

[1] Combined employee, Government contributions.
[2] With 4 percent CPI, 4.5 percent salary increase, and 5 percent interest on trust funds.

Mr. NELSON. Because Federal agencies indicate only a portion of the costs accruing to the Government for providing benefits under the Civil Service Retirement program, the actual cost of Federal Government operations is being seriously understated, and some agencies whose operations are intended to be self-supporting are annually receiving large unrecognized subsidies.

This amendment would insure that the fiscal year 1979 first concurrent budget resolution acknowledge and anticipate the liabilities the Federal Government will incur in the next fiscal year as a result of the benefits promised to Federal employees by the Civil Service Retirement program.

In my judgment, Congress should recognize these Civil Service benefit costs in the budget process, and require that the agencies recognize the costs in their budgets, so that the Congress and the American public will be provided with realistic information on the actual cost of Federal retirement systems, and therefore the total cost of operating programs and agencies. With this information, our ability to make sound fiscal and legislative decisions on funding or amending Federal retirement and agency programs would be significantly enhanced.

This is not a new idea. It has, in fact, been recommended by the General Accounting Office in a report entitled "Federal Retirement Systems: Unrecognized Costs, Inadequate Funding, Inconsistent Benefits", and in an Office of Management and Budget circular, No. A–76.

The General Accounting Office, in its report on the Federal retirement systems, reached this conclusion:

> Funding of Federal retirement systems remains a serious, growing problem that needs further attention. We believe that retirement costs for all systems should be determined and funded on a dynamic basis. The Congress, employees, and taxpayers should not be misled by unrealistic estimates of retirement costs. When the full costs are not recognized, there may be a tendency to adopt added benefits which could jeopardize the eventual affordability of the retirement systems. Lack of full cost recognition also results in the understatement of the costs of Government programs, including subsidies to agencies whose operations are intended to be self-supporting. Furthermore, without full funding, the Government's retirement system liabilities are not totally reflected in the public debt.
>
> We recommend that the Congress enact legislation requiring all Federal retirement systems to be funded on a dynamic normal cost basis and that the difference between dynamic normal cost and employee contributions be charged to agency operations.

COST OF FEDERAL RETIREMENT PROGRAMS

The benefits accruing to employees under the various Federal retirement systems represent a very large and growing long-term financial commitment of the Federal Government. The full recognition of these liabilities as they accrue is essential, both in terms of determining and allocating the cost of Government operations and in determining the uncontrollable fixed costs to general revenues. At present, these benefit costs are not fully recognized and, consequently, huge unfunded liabilities have been created and the costs of operating Federal programs are understated.

An examination of the civil service retirement system, which covers 75 percent of Federal employees, illustrates the situation most Federal retirement systems find themselves in.

CIVIL SERVICE RETIREMENT COSTS

Normal Cost—The value of benefit rights accrued annually by employees under a retirement system is referred to as the "normal cost" of the system. Normal cost is commonly expressed as a percent of payroll, representing the estimate of the amount of funds which, if accumulated annually and invested over covered employees' career, will be enough to meet their future benefit payments. The process utilized to determine the normal cost involves mathematically predicting the future experience of the system—salary progression, rate of return on investments, probable rates of employees' death, disability, retirement and termination of employment—and translating this experience into cost on the basis of the system's benefit provisions.

METHOD OF FINANCING

A retirement system is considered actuarially sound if trust fund reserves and income to be received are equal to the system's liability for benefit payments to present retirees and the anticipated liability for active employees who will receive benefits in the future.

Most Federal employees contribute 7 percent of pay and agencies match this contribution with another 7 percent for a total of 14 percent (congressional employees contribute 7.5 percent, and Members of Congress contribute 8 percent of pay). Historically, the 14 percent combined rate has been compared to the static normal cost of 13.64 percent, leading some to the conclusion that the Civil Service Retirement System is actuarially sound.

Because of the relationship between the employee contribution rate and the static normal cost, many people are convinced that Federal employees pay half the cost of their benefits. Historically, the Government has not always matched the employee contribution each year by putting its contribution into the trust fund, and therefore, it is widely believed that the current unfunded liability is the responsibility of and should be financed by the Federal Government.

In fact, employees pay much less than half the cost of the retirement system, and this can be demonstrated in several ways. The fact that the largest share of the benefit cost is paid by Federal general revenues can be seen my comparing total employee contributions to the benefits received by new annuitants. By this measure, each group of new retirees pays over their working years for less than 2 years of their retirement benefit. The 1975 Civil Service Retirement statistical report, for example, shows an average total contribution by employees of $10,218 and an average annual benefit of $7,164. If interest payments are included, the employee contributions would pay benefits for less than 4 years while the life expectancy after retirement of new annuitants is around 20 years. Although many other factors are involved, such as survivor benefits, withdrawal probabilities and cost-of-living increases, the ratio of expected employee share of Civil Service Retirement costs to Government contributions is 1 to 5.

The total cost of the civil service retirement system in fiscal year 1977 was 29.3 percent of payroll, with the Federal Government paying 75 percent of these costs. At my request, the chief actuary projected the future costs of this system.

By the year 2000 the chief actuary estimates that the civil service retirement system will cost a total of 42 percent of payroll or 7 percent of pay for employees and 35 percent of payroll for the Government. It should be emphasized that these cost projections are based on optimistic economic projections of a 4 percent increase in the Consumer Price Index, 4.5 percent salary increase and 5 percent interest annually.

Clearly, the current method of utilizing static calculations to determine financing requirements does not reveal the total costs of the system. The total costs are hidden from the general public and even from Federal employees or retirees who often believe their contribution and an equal agency contribution on their behalf actually finances the system.

There is a need to determine the actual long-range cost of the current civil service retirement system and other Federal retirement systems, taking into account the effect of inflation on salaries and benefits. Such costs should be determined through the use of dynamic assumptions.

There are three major economic assumptions which must be included in a dynamic valuation of a retirement system: annuity increases, salary increases occurring as a result of inflation adjustments, and the rate of investment return.

In civil service retirement, post-retirement annuities are tied to the Consumer Price Index (CPI) and initial annuity levels are related to the average of the highest 3 years' salary. Therefore, assumptions must be made as to the future CPI annuity increases and salary increases in a dynamic valuation of civil service retirement. The interest rate for investment return used in a dynamic valuation should also be higher than that used for a static valuation since the return should be higher as inflation increases.

The Civil Service Retirement Board of Actuaries, in its most recent actuarial report, expressed concern that the potential long-range obligations resulting from pay increases and annuity cost-of-living adjustments are not reflected in static calculations. The Board, therefore, presented dynamic calculations in its report.

Both the General Accounting Office and the Office of Management and Budget (OMB) have recommended that the costs of the civil service retirement system be determined through the use of dynamic calculations.

In October of 1976, OMB instructed all Federal agencies to use a retirement cost factor of 31.7 percent of payroll when making decisions and cost comparisons for the purpose of determining whether to use Federal employees and

facilities or contract out for needed services and products. In June of 1977, OMB temporarily suspended the instructions. However, my office has been advised that OMB plans to re-issue the instructions at the beginning of the upcoming fiscal year.

The time has come for the Congress to recognize the retirement programs' total costs in the budget process, in appropriations, and in developing future legislation and policy. If Congress is to make prudent decisions, then the true facts must be revealed.

UNDERSTATED COSTS RESULT IN UNRECOGNIZED SUBSIDIES

When agencies, whose operations are intended to be self-supporting, are only charged a portion of the costs accruing to the Government for Federal retirement programs, these agencies are receiving annually substantial unrecognized subsidies.

There are many Government agencies that have been established to operate on a self-supporting basis, and others that sell products or services which are expected to recover costs incurred. Because most of these agencies are charged only 7 percent of payroll for Federal retirement contributions, their operations are, in effect, subsidized by an amount that is equal to the agency's share of unrecognized and unallocated retirement costs.

The General Accounting Office reported that the Federal Home Loan Bank Board, the Export-Import Bank, the Federal Deposit Insurance Corporation, the Panama Canal Company and Canal Zone Government, and the Farm Credit Administration collectively received $41 million in subsidies in 1976. The General Accounting Office calculated the subsidies by using the Office of Management and Budget's estimate of 24.7 percent as the dynamic normal cost for the retirement system not covered by employee contributions.

I ask unanimous consent that the letter from the General Accounting Office be printed in the RECORD.

U.S. GENERAL ACCOUNTING OFFICE,
Washington, D.C. April 24, 1978.

HON. GAYLORD NELSON,
U.S. Senate.

DEAR SENATOR NELSON: This is in response to your letter of March 10, 1978, which asked, among other things, for a comprehensive list of Federal agencies and the amounts by which their fiscal year 1979 budget authority should be increased to reflect the actual cost of Federal retirement programs. In subsequent discussions with your staff, it was agreed that the information should be limited to the three largest retirement programs—the civil service, uniformed services, and Foreign Service retirement systems—and that the additional amounts should be aggregated for each of the 12 cabinet-level departments.

CIVIL SERVICE RETIREMENT SYSTEM

As discussed in our August 3, 1977, report entitled, "Federal Retirement Systems: Unrecognized Costs, Inadequate Funding, Inconsistent Benefits," the costs of benefits accruing each year under the civil service system are understated because no consideration is given in the "normal cost" calculations to the effect of future general pay increases and annuity cost-of-living adjustments on ultimate benefit payments.

The normal cost of the system is currently estimated to be 13.66 percent of pay which is about equal to the combined rate of contributions being made to the retirement fund by agencies and their employees (generally 7 percent of pay each). However, the Office of Management and Budget (OMB) has determined that the "dynamic" normal cost of the system is 27.4 percent of pay, assuming that future pay increases and interest on fund investments will average 1.5 percent and 2.5 percent, respectively, above the future rate of inflation. Based on this OMB estimate, Federal agencies should be contributing 20.4 percent of their covered employees' pay to the fund (27.4 percent less 7 percent employee contributions) if their budgets are to reflect the full cost to the Government of benefits accruing under the system.

The total payroll for employees covered by the system is estimated to be about $45.8 billion during fiscal year 1979. At 20.4 percent of pay, the cost to the Government of benefits accruing during the year will be $9.3 billion—$6.1 billion more that the $3.2 billion included as agency contributions in the proposed fiscal year 1979 budget. The following table shows the amounts we estimate should be added to the budgets of each of the 12 departments to reflect their share of retirement system costs.

[In millions]

Department	Costs at 20.4 percent of pay	Costs included in proposed budget	Additional amounts needed
Agriculture	$305.6	$104.9	$200.7
Commerce	111.2	38.1	73.1
Defense	2,227.5	764.3	1,463.2
Energy	82.2	28.2	54.0
Health, Education, and Welfare	523.5	179.6	343.9
Housing and Urban Development	71.9	24.7	47.2
Interior	205.5	70.5	135.0
Justice	209.3	71.8	137.5
Labor	93.2	32.0	61.2
State	57.7	19.8	37.9
Transportation	233.0	110.9	212.1
Treasury	385.8	132.4	253.4
Total	4,596.4	1,577.2	3,019.2

The remaining $3.1 billion in unrecognized costs are applicable to the Postal Service ($1.3 billion) and other Federal agencies ($1.8 billion).

UNIFORMED SERVICES RETIREMENT SYSTEM

This system operates on a pay-as-you-go basis. A fund is not maintained, and benefit payments are financed through annual congressional appropriations. As a result, the Department of Defense budget reflects some of the cost of retirement benefits earned in prior years but does not include any accrual of retirement costs for current military personnel.

At our request, the actuary for the Department of Defense calculated the normal cost of the system using the economic assumptions followed by OMB for the civil service system. The normal cost was determined to be 37.1 percent of basic pay, excluding survivor benefits and benefits for reserve personnel.

The proposed fiscal year 1979 budget includes $17.2 billion for basic pay for active military personnel. At 37.1 percent of basic pay, the cost of retirement benefits accruing during the year would be $6.4 billion.

FOREIGN SERVICE RETIREMENT SYSTEM

Under this system, employees contribute 7 percent of pay, and the Government contributes the difference between the system's normal cost and employee contributions. Currently, the system's actuary estimates normal cost to be 21.89 percent of pay, 14.89 percent of which represents the Government's share. However, using OMB's economic assumptions, the system's actuary estimated normal cost to be 32.37 percent of pay.

The proposed fiscal year 1979 budget includes $40.6 million as the Government's share of the system's currently accruing retirement costs. This amount is based on a normal cost contribution of 21.89 percent and an estimated 1979 payroll for personnel covered by the system of $272.9 million. However, based on the same payroll and a normal cost of 32.37 percent, the Government's share for fiscal year 1979 would be $69.2 million, a difference of $28.6 million from that contained in the proposed budget.

We trust this information satisfies your needs.

Sincerely yours,

H. L. KRIEGER,
Director.

Mr. NELSON. Mr. President, the U.S. Postal Service provides another example of a subsidy being provided to an agency that is intended to be self-supporting.

Of all the agencies participating in the civil service retirement system, the Postal Service is the only one required to amortize any increase in the system's unfunded liability which results from employee pay raises and benefit increases. The General Accounting Office reported that in 1976, "the Postal Service paid about $1 billion to the civil service retirement fund, including $614.5 million to match employees' contributions and $385.9 million in amortization payments. However, if accruing costs were calculated on a dynamic basis and the Postal Service was required to pay all costs not covered by employees' contributions, the service's 1976 contribution would have been approximately $2.2 billion—$1.2 billion more than the amount paid. Subsidies will continue each year as long as the Postal Service is not required to pay for cost-of-living adjustments received by retirees."

Many other agencies and instrumentalities are receiving similar subsidies, including the Federal National Mortgage Association, farm credit banks, the Tennessee Valley Authority, and the District of Columbia, to name just a few. There are many others.

Through the budget process, Congress should recognize the full cost of Federal retirement programs; otherwise, the cost of Government operations will be understated. The liabilities assumed by the Government, as required in the various retirement laws, will be ignored and agencies and entities whose operation the Congress intended to be self-supporting will continue to receive subsidies.

The amendment I am offering will put an end to the Congress ability to deceive itself and the American public by failing to recognize the full costs of the civil service retirement system. This amendment will add $6.1 billion in budget authority to Function 600 in order to fully recognize the retirement costs associated with all Federal employees covered by civil service retirement. Several weeks ago, I introduced legislation which would

move the legislative committees toward recognition of these costs. I have also advocated the establishment of one pension committee here in the Senate to oversee the proliferation of Federal retirement programs, to review and update their financing plans, and to coordinate their benefits.

Today I am proposing that the budget process, and ultimately the appropriation process, also recognize Federal retirement systems' costs. The Federal Government has promised civil service retirement benefits to millions of Federal workers. It is time now to recognize the terms and obligations associated with providing those benefits.

AMENDMENT NO. 1802

(Ordered to be printed and to lie on the table.)

Mr. EAGLETON submitted an amendment intended to be proposed by him to Senate Concurrent Resolution 80, supra.

● Mr. EAGLETON. Mr. President, I was saddened earlier this year when President Carter submitted a fiscal year 1979 defense budget of $128.4 billion in budget authority and $117.8 billion in outlays. This is $10.6 billion in budget authority and $10.2 billion in outlays above the corresponding figure for the fiscal year 1978 defense budget. Many of us had hoped that the President would have been able to make a reduction in the defense budget.

I find it very unfortunate, in view of the already sizable increase proposed by the President, that the Senate Budget Committee has reported out a concurrent resolution that proposes to add $1.4 billion to the President's defense budget. I simply do not see any need for such an increase, and share the President's view, stated in his address on inflation on April 11, that—

> The prospective deficit in the budget is as large as we can afford without compromising our hopes for a balanced economic growth and a declining inflation rate . . . I'm especially concerned about . . . [potential increases in] defense spending . . . By every means at my disposal I will resist these pressures and protect the integrity of the budget. Indeed, as opportunities arise, we must work to reduce the budget deficit, to insure that beyond 1979 the deficit declines steadily and moves us toward a balanced budget.

Because I believe so strongly that we should not go above the President's recommendation for defense, I am, therefore, submitting an amendment that would restore his figures to the budget resolution for the defense function. Of course, it also makes necessary technical adjustments to the totals and the deficit.

I hope that my colleagues can support this amendment, and support the President in this matter.●

HOUSING AND COMMUNITY DEVELOPMENT AMENDMENTS OF 1978—S. 2637

AMENDMENT NO. 1800

(Ordered to be printed and referred to the Committee on Banking, Housing, and Urban Affairs.)

Mr. PROXMIRE (by request) submitted an amendment intended to be proposed by him to S. 2637, the Housing and Community Developments of 1978.

(The remarks of Mr. PROXMIRE when he submitted the amendment appear elsewhere in today's proceeding.)

LABOR LAW REFORM ACT OF 1978—S. 2467

AMENDMENT NO. 1803

(Ordered to be printed and to lie on the table.)

Mr. HELMS submitted an amendment intended to be proposed by him to the bill (S. 2467) to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such act.

NOTICES OF HEARINGS

SUBCOMMITTEE ON PARKS AND RECREATION

● Mr. ABOUREZK. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of a public hearing before the Parks and Recreation Subcommittee of the Senate Energy and Natural Resources Committee.

The hearing is scheduled for May 1 beginning at 10 a.m., in room 3110 of the Dirksen Senate Office Building. Testimony is invited regarding proposals to designate certain historic trails to the National Trails System Act, including H.R. 6900, S. 929, S. 28659, S. 2663, S. 2664, and S. 2974.

For further information regarding the hearing, you may wish to contact Laura Beaty at x47144.

Those wishing to testify or who wish to submit a written statement for the record should write to: Parks and Recreation Subcommittee, room 3106, Dirksen Senate Office Building, Washington, D.C. 20510.

CHANGE OF HEARINGS ON BUDGET REQUEST OF LEAA

● Mr. EASTLAND. Mr. President, I wish to announce that the hearing previously scheduled on the budget request of LEAA for April 18 was canceled, because of final debate on the Panama Canal Treaty. This hearing has now been rescheduled for May 1 and May 8 at 10 a.m. in room 2228, Dirksen Senate Office Building.●

CHANGE OF DATE OF HEARING

● Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that the public hearing scheduled for Tuesday, May 2, 1978, has been rescheduled for Wednesday, May 3, 1978, at 9 a.m., in room 2228, Dirksen Senate Office Building, on the following nominations:

Cristobal C. Duenas, of Guam, to be judge of the district court of Guam for a term of 8 years (reappointment).

Alfred Laureta, of Hawaii, to be judge for the district court for the Northern Mariana Islands for a term of 8 years (new position Public Law 95–157).

Len J. Paletta, of Pennsylvania, to be U.S. district judge for the western district of Pennsylvania vice Herbert P. Sorg, retired.

Leonard B. Sand, of New York, to be U.S. district judge for the southern district of New York vice Charles M. Metzner, retired.

Any persons desiring to offer testimony in regard to these nominations shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.●

CHANGE OF HEARINGS ON BUDGET REQUEST OF LEAA AND BUDGET REQUEST OF CIVIL RIGHTS DIV.

● Mr. EASTLAND. Mr. President, I wish to announce that the additional hearing previously scheduled on the budget request of LEAA has been moved ahead from 10 a.m. to 9:30 a.m. on May 8.

The hearing previously set for April 25, at 2 p.m. on the budget request of the Civil Rights Division has been rescheduled for May 8 at 10:30 a.m. in room 2228, Dirksen Senate Office Building.●

ADDITIONAL STATEMENTS

MAY 3—SUN DAY

● Mr. BAYH. Mr. President, on May 3 citizens all around the Nation will join together to participate in Sun Day, demonstrating their conviction that solar energy should play an important role in America's future. This national celebration will be dedicated to making progress in harnessing the power of the sun—whose rays belong to us all—to help heat, cool, and light our homes and factories and farms just as soon as is technically and economically feasible.

May 3 has been designated Sun Day to call attention to the applications of solar energy, what can be done to increase its usage and the roles that individuals, private enterprise and Government can play in its development. Activities have been planned in most American communities highlighting solar technology, including a number of Hoosier communities. There will be exhibits of solar-powered apparatus, panel discussions, and outdoor rallies.

In short, Sun Day will be a national celebration of the world's only inexhaustible, predictable, and nonpolluting energy source.

I am proud to have been a sponsor of the congressional resolution designating May 3 as Sun Day. As a member of the Solar Coalition—a bipartisan group of congressional members—it has been my privilege to work on legislation designed to promote the development of solar energy. The Solar Coalition is united in the conviction that solar energy in its many forms is the resource that will best provide harmony between our need for energy and national goals to stimulate our economy and protect the environment.

Solar technologies are not exotic. Many of them predate the oil, gas, and nuclear technologies that surround us today. Few people realize that solar energy goes beyond the scope of solar collectors or photoelectric power cells. Wind, biomass conversion, hydroelectric power, and energy derived from wood are all examples of solar energy—and none would be possible without the Sun's energy-laden rays.

The United Auto Workers Union has been among those in the forefront of finding practical applications for solar technology. The union has installed solar panels at its conference center in Michigan, and is sponsoring an exhibition of solar powered devices on Sun Day in Indianapolis.

Clearly, solar energy has become an integral part of our daily lives. Dozens of homes and businesses all over Indiana have installed heating and cooling systems that rely on energy from the Sun. And in his energy message to Congress last spring, President Carter set for the Nation a goal of having solar energy in use in 2.5 million American homes by 1985. In New York City, some enterprising residents erected a windmill on the roof of their apartment building that not only provides a large portion of their electric usage, but actually sends power into Con Edison's system on windy days.

Not long ago, many of my colleagues in the Solar Coalition joined in a letter to the President asking the administration to join with us in endorsing reasonable, well-planned and thorough programs to stimulate the use of solar energy and development of new solar technologies. This request was followed by the introduction of 11 different legislative proposals which reflect a good start toward accomplishing the goal of commercialization of this important energy option.

One bill, which I have cosponsored, will make loans available to small companies through the Small Business Administration for marketing and producing solar or energy conservation products or services. It will also fund training seminars to help small businesses facilitate the installation and servicing of solar energy systems. These proposals will be the subject of hearings in the Senate soon, and stand a good chance of becoming law this year.

Disturbing to me has been the Department of Energy's apparent lack of emphasis on solar projects, such as biomass conversion—which converts such products as solid urban wastes and farm residues—into methane and other alternative fuels. Senator EDWARD BROOKE and I have introduced an amendment to the DOE authorization bill to increase the funding levels for biomass projects to helps get this vital option off the ground.

Mr. President, the major barriers to introduction of solar energy in this country have been economics and lack of information. Those barriers are rapidly coming down. As increased efficiencies and demand have reduced solar prices, the costs of competing energy sources have steadily gone up. At the same time, the public has become increasingly aware of new solar options and more willing to try such devices out.

I am hopeful that the legislative package introduced by the Solar Coalition last month, combined with the solar tax credits in the National Energy Plan, now pending in conference, will move us toward near-term widespread introduction of solar energy within the next decade. I will do all I can in the coming days to support and adequately fund Federal programs designed to achieve the goals. I urge public and private organizations throughout the country to participate in Sun Day and follow up with public information services to alert our citizens to the opportunities solar energy offers them as individual consumers, as well as the important benefits it promises for our country.

Mr. Preident, I have attached two recent articles on solar energy for the information of my colleagues and constituents. One appeared in the February 1978 edition of Solar Age and was written by a constituent of mine, Charles Akers. Mr. Akers has recently constructed a solar heated home in Montgomery County in Indiana, and has been professionally involved, as an architect, in stimulating the use of solar energy in his community. The second article, entitled "We Can Use Solar Energy Now", written by Denis Hayes, appeared in the February edition of the Washington Post. It succinctly describes the state of the art of solar technology and outlines the steps we must take to make progress toward its widespread use.

Mr. President, May 3, 1978, when the Sun first hits the United States at the top of Cadillac Mountain in Maine, a group of citizens will be there to usher in the nationwide Sun Day activities with a celebration honoring solar energy. Let us hope that they are also celebrating a new era in our energy scheme, one of abundant, reliable, and clean power from the Sun.

The articles referred to above follow:

CHARLES AND SHIRLEY AKERS' SOLAR HOUSE

(By Charles Akers)

In June of 1976, my wife and I found and purchased a forty-four acre farm in Montgomery county in Indiana on which we planned to design and construct a new home. Because of the nationwide furor, the energy crisis, and because at that time my architectural firm was involved with a solar retrofit project for the local park and recreation center, it seemed only natural that we give serious consideration to using solar energy in the new house. Some simple mathematics reflecting the high interest rates and the estimated solar system cost of $8,000 soon revealed what all knowledgeable solar buffs know, but few dwell upon: the painful fact that solar heating is no bargain at today's fossil fuel prices. An $8,000 investment, at 9½ percent interest, and twenty-year payback, amortizes at the rate of $895 per year. The estimated cost of oil heating a residence of the proposed size would only be $557 per year. If solar energy accounted for 60 percent of the total house heating needs, there would be only $334 savings to pay back $895 per year. It would take my lifetime to pay the initial investment if the price of oil never increased.

We turned to other rationalizations for building solar—the obvious future increase in fossil fuel prices, energy conservation, anticipated governmental tax breaks, publicity for the architectural firm, service to God and country. When all was said and done—and I was perfectly honest with myself—I knew we would build solar not for any noble or wise reasons, but simply because I wanted to do it. The experience has been exciting, educational, rewarding, and fun. I feel certain the future will make it a wise and noble venture.

The space heating system is an air collector type that uses water heat storage in conjunction with the house distribution system which is a normal forced air furnace and ductwork installation. Electric resistance is the back up heat source. The air collection method seemed to be the most appropriate for an on-site constructed collector because of low initial cost, freeze-proof, and non-leaking features. Because it requires only semi-skilled trades to install, it was an easy choice over a liquid collection system. The storage medium is water in 50 gallon barrels placed in an insulated basement storage room. Water was selected over rocks or masonry because of the greatly reduced storage space requirements and because of the more efficient heat transfer from natural convection within the water barrels. In addition, the barrels are cheap ($3 each), available and easy to handle by hand.

Domestic hot water is heated by a liquid collection system and electric resistance heat back up. About 125 square feet of looped galvanized steel pipe, painted black, attached to the collector metal plate, and filled with non-toxic antifreeze, were incorporated in the upper portion of the air collector. The liquid is circulated to the hot water tank. The domestic water is used on a year-round basis and this method brings the most heat to the source of need without introducing unnecessary heat into the house in the summer. The hot water collector uses the direct sunlight striking its area, and is strategically placed to collect additional heat, summer and winter, from the entire collector because the air moving through the collector passes over the water heating portion at the point of highest air temperature.

Because the collector must be ventilated in the summer, the hot air is vented to the exterior and draws replacement air from within the house space via the furnace ductwork from each room. This results in natural gravity ventilation that could be reinforced by forced air ventilation if desired, by turning on the collector circulation fan manually. This combination has worked well, and in conjunction with the carefully designed window ventilation it has made air conditioning unnecessary.

The laundry room is located on the second floor, directly beneath the solar collector. This is near the source of most household laundry and allows easy connection of the clothes dryer to the solar collector heat. When there is heat in the collector, a manual damper allows solar preheated air to enter the dryer. The exhaust air is directed to the exterior in summer and to the interior in winter, providing warm humidifying air for the house.

Our basic design philosophy was that the house was to be first and foremost a livable and comfortable home for the family. The solar and energy conservation requirements would be important, but secondary to that prime goal. I wanted no part of cavemen underground living or passive heat, southern glare, snow blindness. The solar guest to our

home was to be an automated servant, not a benevolent time-demanding master. The beautiful north view of woods, creek, and a farming valley deserved and got large glass windows regardless of heat loss. North light and northern viewing still have tremendous virtue. Wood stove heating and cooking are fine for those who want to live primitive, but that sort of thing is impossible for the busy and rushed life of our family. Microwave oven, hot showers, and electric heat back-up are frivolous necessities to our modern family life style. A full basement doesn't conserve energy, but the cheap space used for solar heat storage, food canning room, tornado shelter, general storage, and future game room justified its inclusion. The new house is not air conditioned because we prefer natural ventilation, which is especially appropriate for this rural site.

Early in the planning I decided an important goal would be to design a residential solar energy system that could be constructed with off-the-shelf local materials, by local building trades, at a cost below the current manufactured systems price. The system, especially the collector portion would be integrated in the overall architecture of the house. It would have a natural place of importance, but would not dominate, or be the overpowering architectural feature. In addition, it seemed reasonable to incorporate as many fringe benefitsof energy use and conservation as practical beyond the basic house space heating needs. The total system provides space heating, domestic hot water heating, clothes drying heat, and summer ventilation. A central fireplace capable of heating the house and adding heat to the solar storage was incorporated into the final design.

Our construction management division used local carpenters, electricians, plumbers and heating contractors for the project. Because of their reluctance to bid on the unfamiliar solar system, all trades were hired on a time-and-material basis. This arrangement proved to be satisfactory and especially appropriate. The contractors were able to do the solar work at a guaranteed profit, and we were able to monitor the actual cost of the solar portion of the project in detail. I would recommend this construction approach for any solar project erected in an area where the construction trades are suspicious of the newfangled solar construction. After the project was complete, they were, to a man, amazed at the simplicity of the solar concept and the routine skills required. I believe they would now bid-price any future solar work in this area without reservation.

The cost for the complete system came well within our budget even though there were first-time construction problems that would not be part of any future similar system. Based upon our experience and cost records, this type of solar system—including the domestic hot water system—could be marketed complete for less than $7,000.

We moved into the home in late June 1977, but the solar system was not completed and operating until late fall. A complete analysis of the system will not be available until next fall, 1978. The furnaces, the collector fan, and the hot water heater have been metered separtely and will give an accurate report of the total electricity used for each unit. From this I will be able to determine the energy provided by the sun. To date our biggest disappointment has not come from the performance of the system, but has come from the uncooperative weather. We have been especially pleased with the domestic hot water system. It furnished 65 gallons of 140°F water on a sunny autumn day. The space heating system was started up too late in season to develop the potential of the 2,500 gallon storage system, but the collector has recorded 62,500 Btuh on a sunny December noon, 20° F, outside temperature, and appears to have the desired capability if only more than one day of sunlight would make an appearance. Central Indiana had only five sunny days and a few scattered cloudy days in the month of November. The rest have been, to my dismay, foggy and overcast. An open house on Sunday afternoon November 22 produced 321 interested and curious visitors, but not one Btu from an embarrassing cloudy sky.

[From the Washington Post, Feb. 27, 1978]

WE CAN USE SOLAR ENERGY NOW

(By Denis Hayes)

We all believe in solar homes. We think we heat our houses with oil, natural gas or electricity, but 95 percent of their warmth comes from sunbeams. In a sunless world, our dwellings would be 400 degrees Fahrenheit below zero when we turned on our furnaces. The houses of solar pioneers simply squeeze a few more degrees from the sun than do the conventional homes of their neighbors.

Twenty years ago, virtually all Americans hung up their weekly wash on "solar clothes driers." Today, few do. If I hang my wash on a line and you put yours into an electric drier, the solar energy I use will be ignored by statisticians while the electricity you use will be tabulated in next year's almanacs.

We ignore the sun for the same reasons that fish ignore water: It is abundant, free and dependable.

The solar influx is so large that it defies easy comprehension by students of conventional energy sources. Every day, the world receives 10,000 times more energy from the sun than humankind derives from all conventional fuels combined. But the official 825-page United Nations Survey of World Energy Supplies does not even mention the sun.

We know how to harness this solar influx directly as sunlight and indirectly through wind, green plants and running streams. Every essential technological ingredient for a commercial solar energy system has existed for more than a decade, although most of these devices have not yet benefited from mass production. The issue today is whether we will make the necessary policy decisions to develop these resources, or whether vested interests will coerce our continued reliance on sources that are dangerous, vulnerable to disruption and ultimately unsustainable.

Unlike fossil and fissile fuels, sunlight is a flow and not a stock. Once a gallon of oil is burned, it is gone forever; but the sun will cast its rays earthward billions of years from now, whether sunshine is harnessed for human needs or not. Technical improvements in the use of sunlight could lower prices permanently; similar improvements in the extraction of finite fuels could hasten their exhaustion.

SOLAR HEATING AND COOLING

Heating water with sunlight is simple. The collector is, in essence, a box with a black bottom and a glass top. Glass is transparent to sunlight but not to the radiation of longer wavelengths given off by the hot collector itself. Hence, heat is trapped inside. When water is pumped through the hot collector, its temperature rises. The hot water is then piped to a very well insulated storage tank where it is kept until needed.

Other countries are outpacing the United States in this field. About 30,000 American homes heat their water with sunlight. In tiny Israel, 200,000 homes have solar water heaters, and in Japan the figure is over 2 million. In remote northern Australia, where fuels are expensive, the law requires solar water heaters on all new buildings.

There is some controversy over how rapidly we will catch up. The original goal of the Carter administration's energy plan was 2.5 million solar heaters by 1985. In subsequent congressional testimony, Energy Secretary James Schlesinger trimmed this target to 1.3 million.

Wilson Clark, energy adviser to Gov. Jerry Brown of California, finds the federal figures amusing. "We will, beyond a doubt, have more solar collectors installed in California by 1985 than those guys are forecasting for the whole country," says Clark. The Solar Energy Industries Association, which represents most major solar manufacturers considers 11 million installations a reasonable 1985 goal.

Sunshine can also be used to heat buildings. "Passive" systems store energy right where sunlight strikes the building's walls and floor. Such systems are designed to shield the structure from unwanted summer heat while capturing and retaining the sun's warmth during the colder months. Passive solar architecture is, beyond doubt, the most efficient and cost-effective way to heat and cool new buildings. Modest investments will often provide 80 to 100 per cent of a building's space conditioning requirements. But passive features cannot easily be added to existing structures.

"Active" solar heating systems are more expensive, but they can be bolted onto the roofs or southern walls of existing buildings as a substitute for—or supplement to—conventional furnaces. In active systems, fans or pumps move solar-heated air or liquid from collectors to storage areas, from which heat is withdrawn as needed. Solar self-sufficiency will usually dictate a combination of active and passive features in all but the southern rim of the United States.

Buildings can be cooled as well as heated by sunlight. Again, passive solar design is the most important first step, but active solar air conditioners are also now being marketed. Absorption solar air conditioners, which operate on the same principle as gas refrigerators, reach peak cooling capacity when the sun burns brightest, which is when they are most needed. They therefore could reduce peak demands on many electrical power grids. As solar air conditioners penetrate the housing market, the overall economics of active solar heating systems will improve, because solar collectors will begin providing a year-round benefit.

Solar technologies have industrial applications as well. A study of the Australian food processing industry, for example, found that heat comprised 90 per cent of the industry's energy needs. Almost all this heat was at under 150 degrees Centigrade and 80 per cent was below the boiling point of water. Such low-temperature heat can be easily produced and stored using simple solar devices. In the United States, solar heating is now being applied to a soup-canning plant in California, a fabric-drying facility in Alabama and a concrete block factory in Pennsylvania. Solar-powered laundries and car washes are now operating in California, and a St. Louis brewery has turned to solar pasteurization.

SOLAR CELLS

The most exciting solar electric prospect is the photovoltaic cell—now the principal power source of space satellites and the main element in photographic light meters. Such cells generate electricity directly when sunlight falls on them. They have no moving parts, consume no fuel, produce no pollution, operate at environmental temperatures, have long lifetimes, require little maintenance and can be fashioned from silicon, the second most abundant element in the earth's crust.

Photovoltaic cells are modular by nature, and little is to be gained by grouping large masses of cells at a single collection site. On the contrary, the technology is most sensibly applied in a decentralized fashion—perhaps incorporated in the roofs of buildings—to minimize transmission and storage problems. With decentralized use, solar cells can be combined with compatible technologies to use waste heat for space heating and cooling, water heating, and refrigeration. Last summer a photovoltaic array in Mead, Nebr., irrigated 80 acres of corn at a thousand gallons per minute.

The manufacture of photovoltaic cells is currently a low-volume business—only 750 kilowatts of photovoltaic capacity were produced in 1977—and the products are consequently rather expensive. But a recent U.N. report concluded that solar cells would become cheaper than nuclear power if they received a total investment of $1 billion—less than the cost of just one large nuclear power plant.

STORING SUNLIGHT

Solar energy is too diffuse, intermittent and seasonally variable to harness directly to serve some human needs. Interruptions plague all energy systems, however. Electrical power lines snap, gas and oil pipelines crack, dams run low during droughts and nuclear power plants frequently need repairs, refueling and maintenance.

Sometimes the intermittent nature of an energy source causes no problems. For example, solar electric facilities with no storage capacity can be used to meet peak demands, since virtually all areas have their highest electrical demands during daylight hours.

Low-temperature heat can be temporarily stored in such substances as water or gravel; in fact, substantial short-term heat storage capacity can be economically designed into the structural mass of new buildings. The larger the storage container, the less surface area (through which heat can leak) it has per unit of volume. Large storage tanks serving clusters of houses can be designed to have such low leakage rates that seasonal storage becomes economically possible. Princeton physicist Theodore Taylor advocates solar "ponds" serving as many as 100 houses—collecting heat in July for use in February, and producing ice in February for air conditioning in July.

Eutectic salts, which melt at about 90 degrees Fahrenheit, provide a much more compact storage medium than water. These cheap, plentiful salts can hold prodigious amounts of heat. In the past, salt caked on the interior walls of the storage container, interfering with efficient heat transfer. General Electric has overcome this problem by rotating the storage cylinder at 3 revolutions per minute.

Electricity can be stored directly in batteries. Existing batteries are expensive, but new types may soon enter the market. For example, the "iron redox" batteries that will store 2,200 kilowatt-hours of photovoltaic-generated electricity for an Arkansas community college are expected to cost less than one-fifth as much as standard lead-acid batteries when mass produced.

But nuclear reactors and large coal plants also require energy storage. These facilities cannot be geared up and down to follow the peaks and valleys of electrical demand; they produce power at a steady rate, and surplus power from non-peak hours must be stored for the periods of heaviest demand. Because more energy is used during the day than at night, the overall storage requirements for a society based on renewable energy sources may prove no greater than those of an all-nuclear society.

SOLAR COSTS

Conventional wisdom holds that while solar energy has many attractive characteristics, it is too expensive today to see widespread application. As is so often the case with conventional wisdom, yesterday's truth has become today's misapprehension.

Five years ago, solar energy could not compete economically with low-priced fuels. Most solar homes used materials that were handcrafted in small workshops. But since 1973, the cost of solar equipment has dropped steadily while the costs of all competing energy sources have skyrocketed. Today, with factory production, a typical solar collector costs about $25 a square foot; by 1981, mass production could bring average costs under $10. Solar technologies already can provide energy for many purposes at no higher cost than conventional energy sources.

Take, for example, solar heating. Throughout the lower 48 United States, solar house heating now makes economic sense at the margin. That is to say, if the energy is to come from a new solar unit or a new nuclear power plant, the solar investment will be cheapest. The homeowner, of course, will not be buying electricity just from the expensive new power plant; the utility will average the expensive new energy in with cheap energy from existing sources, so that the true cost of new power is hidden from the individual consumer (and borne, through rising utility bills, by all consumers). But for society as a whole, the new energy could be most cheaply harnessed with solar equipment.

Even where the homeowner must compare the marginal costs of new solar equipment with the average cost of competing energy sources, solar investments will generally make sense over the lifetime of the building. The most important first step is to incorporate passive solar design into the building's blueprints. Often this costs little or nothing. For example, it costs no more to place most windows in the southern wall than to place them facing north, but southern windows capture the sun's warmth while northern windows merely leak the building's internal heat. Roof overhangs, masonry floors and working shutters are not expensive. Yet, combined with tight construction and good insulation, they can lower the heating load of the building by 75 per cent and more. In Arkansas, 200 well-designed houses constructed under a grant from HUD cost no more than neighboring houses built using conventional construction standards, but their fuel bills are only one-fourth as high.

More elaborate designs can lead to greater savings. In the relatively mild climate of Atascadero, Calif., Harold Hay's passive solar house was constructed with bags of water incorporated in its roof. These act like "thermal flywheels," capturing energy on winter days and storing it to meet nighttime heating requirements. In the summer, the system collects heat from the interior during the day and radiates it outward at night. The cost of the solar features was about $5,000. The solar system has provided 100 per cent of the home's heating and cooling needs for several years.

In climates where passive solar design will not provide 100 per cent of heating requirements, back-up fuels or active solar systems are needed. In Princeton, N.J., architect Douglas Kelbaugh's passive solar home captures energy through a huge southern window wall during the day and stores it in a concrete interior wall to meet nighttime heating requirements. Like other passive solar homes, the Kelbaugh residence employs no pumps or fans—just careful design. The solar features cost around $9,000, and they provide virtually all of the home's requirements. In the unusually cold winter of 1976–77, the year's heating bill was just $75. Financed with a conventional home mortgage, Kelbaugh's solar energy system would require $1,800 cash at construction with monthly payments of $60—far less than his neighbors' fuel bills.

Many different solar collectors, pumps, fans and storage systems are now on the market. Prices frequently fluctuate several-fold. For example, solar collectors can be built and installed for a materials cost of about $2 per square foot. Prices of professionally installed solar collectors can range from under $10 per square foot to more than $70. The prices of thermal storage containers range from about $10 per cubic meter for hand-built systems to as much as $35 per cubic meter for commercial products. Hand-built solar systems can hold marked advantages over all competing energy sources. At the lower end of the price range, commercial solar systems also make economic sense.

Skeptics often point to the high-cost solar equipment used in some federal solar demonstration projects and claim that the buildings could have been heated with oil for a fraction of the cost. But such buildings incorporate no cheap passive solar features and they generally employ the most expensive solar hardware on the market. Moreover, the price of oil is an average price—not the price of new oil—and even this average price is kept artificially low through oil depletion allowances, intangible drilling cost write-offs, foreign tax credits, unsafe tankers built for accelerated depreciation, polluting refineries in the Caribbean and direct governmental price controls. Even in this loaded contest, solar energy compares fairly well.

THE COST OF SOLAR CELLS

Even photovoltaic cells—the most expensive technology now being used to harness solar energy—are much less expensive than is commonly believed. For example, a panel of distinguished scientists assembled by the Ford Foundation incorrectly reported in 1977 that "current [photovoltaic] collector costs are about $200,000 per kilowatt of peak electrical capacity."

The most charitable thing to be said for this figure is that it is 20 years out of date. Solar cells did cost about $200,000 a peak kilowatt in the late 1950s, but by early 1975, the costs had dropped to $31,000. By September, 1976—eight months before the Ford report was issued—the costs had dropped to $15,500.

Within months of the Ford report's release, the cost of solar cells fell to $11,750 a peak watt. And last December, the Department of Energy awarded a grant for a solar cell array that "tracks" the sun across the sky and concentrates its rays into comparatively small photovoltaic cells. This system, which will be installed at the Arkansas community college, will generate 362 kilowatts at a total installed cost of $6,000 per peak kilowatt.

Making allowances for the average availability of sunshine versus the average capacity factors of large nuclear power plants and considering demand patterns, transmission and storage, solar cells are now probably about 10 times as expensive as nuclear power in the most favorable regions of the United States. Solar cells now cost about one-tenth what they cost 5 years ago; nuclear power now costs about twice as much as it cost 5 years ago.

The United States now has about 48,000 megawatts of nuclear capacity and less than 1 megawatt of terrestrial photovoltaic capacity. With mass production, solar cell costs are expected to continue falling dra-

matically. A 1977 report by the Federal Energy Administration contends that a $240 million purchase of 150 megawatts of solar cells, staggered over three years, would lead to a cost of just $500 per kilowatt for the 70 megawatts producted the third year.

Both solar-electric and wind-electric devices produce direct current—not the alternating current we are used to. Hence, one occasionally hears the comment that the cost of a solar society should include the cost of replacing all our appliances with devices that run on direct current (as do appliances in many motor homes today). Ignoring the possible merits of converting to direct current, the issue is trifling. Many things—from incandescent light bulbs to stoves—can perform well on direct current. Devices to convert direct current into alternating current are on the market for $180 per kilowatt for home-size units. For large orders, the price can fall to $50 per kilowatt.

WHAT NEXT?

After four years of fumbling, the federal government appears to be on the verge of passing a National Energy Act. This legislative "cornerstone" of the Carter administration is—in essence—an attempt to squeak through 1985 without having to grant Saudi Arabia the mineral rights to Ft. Knox. What it lacks is what America most desperately wants: a vision of where we are going.

The transition to a sustainable, post-petroleum world will require some decades to complete. The National Energy Act—almost totally dependent on the expansion of conventional, centralized energy sources—is not even a step in the right direction. If solar energy is to play an important role in the future, several actions must be taken immediately.

First, there is no substitute for money. While competing energy sources have financially benefited from the diligent efforts of scores of high-paid lobbyists, solar energy has not. Since 1952, when the Paley Commission recommended to President Truman that solar energy be aggressively developed, solar technology has received less than 1 five-hundredth of federal energy funding. Although solar funding increased rapidly after the Arab oil embargo of 1973, it has now remained stalled for two years with less than 4 per cent of the federal energy budget.

For solar enthusiasts, the new Carter budget is a great disappointment. Solar, wind and biological energy sources combined will receive less than one-fifth as much as is directly spent on nuclear fission. Renewable energy resources will receive $200 million less than breeder reactors alone. In fact, after adjusting for inflation, the federal solar budget is $40 million lower this year than it was last year.

The current state of solar technology would justify a budget in the $1 billion range. There would be little public opposition to this $5 per capita investment in our most promising energy source. If our current energy crisis requires "the moral equivalent of war," surely the solar, wind and biological answers to that crisis deserve at least the financial equivalent of one small weapons system.

Of course, no one wants to see tax dollars shoveled out stupidly. A good solar program will require clear-eyed managers and sufficient staff to handle the load. The current solar effort is deficient in both respects. Consequently, research has emphasized small numbers of huge projects. It is far easier for an understaffed office to manage a few big projects than many small ones.

In addition to performing research and development, the federal government should actively encourage the commercialization of solar technologies. Such proposals always stick in the craw of people who would prefer to see commercialization handled in the free marketplace. Alas, the free marketplace for energy disappeared long ago, when mineral depletion allowances, investment tax credits, accelerated depreciation schedules, federal assumption of nuclear liability, federal ownership and subsidization of uranium enrichment facilities, federal underwriting of synthetic fuel development, oil and gas price controls, the rural electrification program, and dozens of other financial and regulatory actions were instituted. Without exception, these discriminated against decentralized technologies. Today's need is for policies that will put solar energy on an even footing with its competitors.

HELPING THE BUYER

Because the initial investment is the principal cost for solar technology, prospective consumers must have access to up-front money. Different residential solar tax credits have now passed both houses of Congress; the likeliest compromise will provide a credit of 30 percent on the first $2,500 investment and 20 per cent on the next $7,500. Businesses that install solar equipment will receive a 10 per cent credit above the existing investment tax credit.

Unfortunately, this will not begin to counterbalance the higher tax credit allowed for investments in nuclear and synthetic fuels facilities in the Senate version of the National Energy Act. Moreover, tax credits are of limited usefulness for millions on fixed incomes who are being ravaged by rising fuel prices. Poor people will require something like a Treasury rebate as a down payment before they will be able to afford solar investments.

A financing authority should be established to give the homeowner and small businessman access to investment capital on terms at least as attractive as those available to utilities to invest in centralized energy sources. This might take the form of the national Solar Development Bank proposed by Rep. Stephen Neal (D.-N.C.), making 30-year loans at very low rates of interest. States could supplement such a federal effort with state institutions funded with revenues from tax-free bonds; several such proposals are now before the California legislature.

Many homeowners are reluctant to purchase solar equipment because such merchandise often carries an inadequate warranty. Warranties are considered important because the initial cost of solar technologies is generally high. Solar investments make economic sense only because they have no fuel costs and low maintenance costs in future years. But if the performance of the equipment is not guaranteed for several years, the economics of solar technologies become more questionable.

However, a warranty system can discriminate against small manufacturers. In a nascent industry, warranties are meaningful only if they are backed by performance bonds. Otherwise, businesses can simply disappear, leaving the consumer holding the bag. But setting aside scarce capital to guarantee the performance of equipment for a decade can pose an unbearable burden on small entrepreneurs.

California Energy Commissioner Ronald Doctor has suggested a solar warranty fund, analogous to the oil spill liability fund. All solar manufacturers meeting certain standards would be allowed to contribute to the fund; if anyone's equipment proved faulty, the funds would guarantee remuneration. The state would be the warrantor of last resort.

The construction of a house or other building involves a 30-to-50-year commitment to energy usage levels. By 1981, it would be reasonable to require at least passive solar design features in all new buidings. At the very least, new buildings should be required to meet vigorous regional weatherization standards, and to be built and oriented in ways that facilitate eventual retrofitting with solar equipment.

A more direct role can be played by the federal government—the largest single purchaser of almost everything in the American economy—through its procurement policies. If, for example, the Defense Department were to make a concerted effort to provide solar heat where possible to its existing residences a market in excess of 50 million square feet would open up. The total U.S. market for solar collectors in 1977 was about 5 million square feet.

If Defense were to purchase 150 megawatts of photovoltaic capacity for $450 million (including storage batteries and power conditioning equipment), it would save $1.5 billion net over the next 25 years in fuel and maintenance costs for displaced gasoline generators. A 1977 FEA report found that such a Pentagon purchase would reduce the cost of commercial photovoltaics to $500 a kilowatt—a price that is competitive for many purposes with conventionally generated electricity.

HELPING THE THIRD WORLD

One of the most dramatic solar efforts the federal government could undertake would be in the realm of foreign assistance. Solar energy makes even more sense today in the Third World than it does domestically. Developing countries tend to be richly endowed with sunlight. Their population patterns lend themselves to decentralized energy sources: half the people in Latin America, 70 percent in South Asia and 85 percent in Africa still live in rural areas. And in remote Third World villages, the current high cost of conventional energy, especially electricity, makes virtually all solar options economically competitive today.

Last May, President Carter eloquently proclaimed our national interest in improving the prospects of the world's poor. Energy is vital to economic development. Since Carter is understandably cautious about the proliferation of nuclear power around the world, solar energy poses an obvious answer.

What would it cost to provide a minimum decent supply of energy to each of the world's 1 million rural villages before the end of the century? Quite a bit. If the United States were to shoulder the entire burden, it might amount to one-half of 1 percent of our gross national product annually.

That would be a very substantial pledge, but it must be placed in perspective. American aid to Europe under the post-World War II Marshall Plan amounted to 2.8 percent of GNP. By comparison, 0.5 percent for solar assistance is a pittance. Next year, it would amount to over $5 billion—a large figure, but not too intimidating when compared to annual Third World arms receipts of nearly $28 billion.

Much of this foreign assistance would be spent here at home. As American manufacturers begin to mass produce photovoltaic arrays, small wind turbines, etc., the domestic prices of these items should plummet. This would be a boon to U.S. consumers, and it would help American solar companies in the world solar market. As a way to incorporate his concern for poverty, human rights and nuclear proliferation in one package, a

"Carter Plan" to bring solar technology to the poor villages of the world may represent the President's most attractive opportunity.

A final area where federal assistance should aggressively harness renewable energy sources is on the farm. U.S. farmers are upset with the low prices their crops are now bringing. U.S. consumers are unwilling to see their food bills rise. One answer would be a major national effort to make America's firms independent of high-priced fuels—thus separating food prices from fuel-induced inflation. Solar, wind and biological sources can be easily tapped to meet the energy demands of American agriculture. A solar equivalent of President Roosevelt's rural electrification program, which provided subsidized loans at 2 per cent interest to extend the nation's electrical lines to the farm, could lead to energy self-sufficiency for the nation's farms by 1990.

THE SOLAR SOCIETY

Energy transitions always bring fundamental social change. In the 18th century, the substitution of coal for wood and for draft animals made possible the Industrial Revolution. The later shift to petroleum made possible the jet plane and the automobile, shrinking the world and reshaping its cities. The coming energy transition, whatever direction we take, will bring similarly far-reaching changes.

Tapping some energy sources demands ever-increasing centralization; solar resources are best used at dispersed locations. Some dangerous sources can be permitted widespread growth only under authoritarian regimes; solar energy can lead to nothing more dangerous than a leaky roof. Some energy sources invite profiteering cartels; solar sources would tend to narrow the gap between rich and poor—both within and among countries. Some energy sources will tend to reduce the size of the workforce; solar sources promise large numbers of new jobs. Some energy sources involve technologies that baffle all but a few specialists; solar energy can be harnessed by individual homeowners with simple devices built of local materials.

Of the possible futures we might choose, a solar-powered one appears most inviting. But the transition will not be smooth and painless. Competing energy sources will be vigorously championed by powerful vested interests. Bureaucractic inertia, political timidity, conflicting coroporate designs and the simple, understandable reluctance of people to face up to far-reaching change will all discourage a solar transition from occurring spontaneously.

If the solar transition is to be speedily undertaken, the federal government will have to play a strongly promotional role. But thus far the influence of national policy makers has probably been negative. For two years they have caused homeowners to delay solar purchases by promising eventual tax credits—and then failed to pass the necessary legislation. They have invested the lion's share of federal solar research in elephantine technologies to the detriment of the small-scale, decentralized options best suited to solar equipment. They have spared no pains to involve electric and gas utilities in solar applications, ignoring the fact that solar energy is a textbook case of an anti-monopolistic resource.

While still hoping for leadership from Washington, many Americans are no longer waiting for it. With the sure instincts displayed by innumerable inventors, tinkerers and entrepreneurs throughout our history, these citizens are in the vanguard of a nation that, in the years ahead, must increasingly turn toward the sun.●

THE CURRENT U.S. POPULATION

● Mr. PACKWOOD. Mr. President, I wish to report that, according to the U.S. Census Bureau estimates, the total population of the United States on April 1, 1978, was 218,575,974. In spite of widely publicized reductions in our fertility levels, this represents an increase of 1,785,513 in 1 year. It also represents an increase of 126,731 in 1 short month.

Over the year, therefore, we have added enough people to fill the combined cities of Milwaukee, Wis., Austin, Tex., Sacramento, Calif., Mobile, Ala., Knoxville, Tenn., and Springfield, Mo. And in the short space of 4 weeks, our population has grown enough to more than fill the city of Topeka, Kans.

The acute problems of an ever-expanding population are certainly not unique to the United States. In country after country, the pressures exerted on the birth rate and the accompanying overcrowding, malnutrition, disease, pollution, and other social ills continue relatively unchecked. Unchecked, but never unnoticed.

Since its founding in 1929, the Population Reference Bureau, Inc., located in Washington, D.C., has gathered, interpreted, and disseminated the best available information on the world's population trends. The bureau has again publicized its most current World Population Data Sheet. According to their estimates, by mid-1978, the world's population will be 4,219,000,000 and will take a quantum leap to 6,223 billion by the year 2000, or in just a little over two decades.

I should call particular attention to a new feature contained in the bureau's statistics entitled "Projected Labor Force Increase, 1978–2000." These figures show that over 800 million more individuals throughout the world will be looking for work in the next 22 years. That figure is roughly three times the estimated U.S. population by the year 2000.

As strongly as I feel about this global problem and the urgent need for the United States to again demonstrate its leadership in dealing constructively with the world's population explosion, I ask to have printed in the RECORD the "1978 World Population Data Sheet" of the Population Reference Bureau. I recommend this as essential reading for each of us.

The material follows:

1978 WORLD POPULATION DATA SHEET

Region or country [1]	Population estimate mid-1978 (millions) [2]	Birth rate [3]	Death rate [3]	Rate of natural increase (annual, percent) [4]	Number of years to double population [5]	Population projection to 2000 (millions) [6]	Infant mortality rate [7]	Population under 15 yr (percent) [8]	Population over 64 yr (percent) [8]	Life expectancy at birth (years)	Urban population (percent) [9]	Projected labor force increase 1978-2000 (millions) [10]	Per capita gross national product (U.S. dollars) [11]
World	4,219.0	29	12	1.7	41	6,233.0	99	36	6	60	39	811.0	6,154
Africa	436.0	46	19	2.7	26	813.0	146	44	3	46	25	121.0	440
Northern Africa	103.0	43	14	2.9	24	184.0	128	44	3	52	40	25.0	650
Algeria	18.4	48	14	3.4	20	36.4	145	48	3	53	52	4.7	990
Egypt	39.6	38	12	2.5	28	63.5	108	41	3	53	44	7.4	280
Libya	2.8	48	9	3.9	18	5.3	130	49	4	53	30	.6	6,310
Morocco	18.9	45	14	3.1	22	35.4	133	46	2	53	38	5.3	540
Sudan	17.1	48	16	3.1	22	33.3	141	45	3	49	20	5.8	290
Tunisia	6.0	36	13	2.3	30	10.5	135	45	4	55	50	1.3	840
Western Africa	128.0	49	22	2.7	26	243.0	158	45	3	42	19	36.0	350
Benin	3.4	49	22	2.7	26	6.0	149	46	4	41	14	1.1	130
Cape Verde	.3	28	9	1.8	38	.4	105	48	5	50	8	(*)	260
Gambia	.6	43	23	2.0	35	.9	165	41	2	40	16	.1	180
Ghana	10.9	49	20	2.9	24	21.4	115	47	4	49	31	3.5	580
Guinea	4.8	46	21	2.5	28	8.4	175	43	3	41	20	1.3	150

1978 WORLD POPULATION DATA SHEET—Continued

Region or country [1]	Population estimate mid-1978 (millions)[2]	Birth rate [3]	Dexth rate [3]	Rate of natural increase (annual, percent)[4]	Number of years to double population [5]	Population projection to 2000 (millions)[6]	Infant mortality rate [7]	Population under 15 yr (percent)[8]	Population over 64 yr (percent)[8]	Life expectancy at birth (years)	Urban population (percent)[9]	Projected labor force increase 1978–2000 (millions)[10]	Per capita gross national product (U.S. dollars)[11]
Australia	14.3	17	8	.8	87	19.9	14	28	8	72	86	2.7	6,100
Fiji	.6	29	7	2.2	32	.8	41	39	3	70	38	.1	1,150
New Zealand	3.2	18	8	1.0	69	4.3	16	30	9	72	81	.5	4,250
Papua New Guinea	3.0	41	16	2.5	28	5.1	106	44	4	48	13	.9	490
Samoa, Western	.2	37	7	3.0	23	.3	40	50	3	63	21	(*)	350
Solomon Islands	.2	36	13	2.3	30	.4	52	44	3	—	9	(*)	250

[1] The Data Sheet lists all U.N. members and all geopolitical entities with a population larger than 200,000.

[2] Except for the People's Republic of China, based on a population total from a very recent census or on the most recent official country or U.N. estimate; for almost all countries the estimate was for mid-1976. Each estimate was updated by the Population Reference Bureau to mid-1978 by applying the same rate of growth as indicated by population change during part or all of the period: since 1970.

[3] Annual number of births or deaths per thousand population. For the more developed countries with complete or nearly complete registration of births and deaths, nearly all the rates shown pertain to 1975 or 1976. For most developing countries with incomplete registration, the rates refer to 1976 and were obtained by interpolating the 1970–75 and 1975–80 estimates of the U.N. to 1976. The 1970–75 and 1975–80 rates were used in the medium variant estimates and projections as assessed by the U.N. in 1973 (U.N. Selected World Demographic Indicators . . .). The interpolated figures should be considered as rough approximations only.

[4] Birth rate minus the death rate. Since the rates were based on unrounded birth and death rates, some rates do not exactly equal the difference between the birth and death rates shown because of rounding.

[5] Based on the rate of natural increase shown and assuming no change in the rate.

[6] Except for the United States, estimated by the Population Reference Bureau by applying the percentage increase in the population 1978–2000 implied by the U.N. medium variant projections to the population total as estimated for mid-1978. For the United States, the figure shown is the series II projection given in the U.S. Bureau of the Census, Projections of the Population of the United States: 1977 to 2050, p. 25, No. 704, July 1977.

[7] Annual number of deaths to infants under 1 yr of age per thousand live births. For countries with complete or nearly complete registration of births and deaths, nearly all rates pertain to 1975 or 1976. For many developing countries with incomplete registration, rates are the latest available estimates generally obtained from the U.N. sources noted above; from World Health Organization, World Health Statistics Report vol. 29, No. 11, 1976; or from U.S. Bureau of the Census, World Population: 1975, and draft materials of the forthcoming world population: 1977.

[8] The "age dependency ratio" for each country or region can be derived by adding the percentages under 15 yr and over 64 yr and dividing by the complement. For the world as a whole, for example, 36 percent plus 6 percent divided by 58 percent gives a figure of 72 persons in the "dependent ages" for each 100 persons in the "working ages" of 15 to 64.

[9] The percentage of the total population living in areas defined as urban by each country.

[10] An asterisk (*) denotes a labor force increase of less than 50,000. Except for the People's Republic of China and Taiwan, the source for all figures is Labour Force Estimates and Projections, 1950–2000, 2d edition, International Labour Office (ILO), Geneva, 1977. These labor force projections are based on estimated and projected age-sex specific activity rates for each country and the U.N. medium variant projections of the total population of each country. The 1978 labor force figure was obtained by interpolating the ILO figures for 1975 and 1980. Figures for the People's Republic of China and Taiwan were obtained by applying the ILO's projected activity rates for China (including Taiwan) for 1978 (interpolated from 1975 and 1980 rates) and 2000 to the PRB's population totals for these dates. It was assumed that the activity rates for Taiwan would be the same as for the People's Republic of China.

[11] Data refer to 1976 except for 12 of the smaller countries for which the data refer to 1975. All data for the individual countries are from the World Bank Atlas: Population, Per Capita Product, and Growth Rates, World Bank, 1977.

[12] Recent reports of provincial population totals announced through Chinese radio and newspapers during the 1975–77 period indicate that the population of the People's Republic of China is much higher than previous estimates have shown. Consequently, most estimates of the PRC's population have been revised upward to take into account these higher provincial totals. Recent reports of the PRC's successful efforts in family planning and health care have also led to downward revisions in the estimated levels of fertility and mortality. After evaluating estimates from a variety of sources, the Population Reference Bureau considers the estimates shown here to be reasonable.

[13] The U.N. does not show figures for Taiwan. These figuers were separately estimated on the basis of official Taiwan data. The population was assumed to increase to 2000 at the same rate as that of the People's Republic of China.

GENERAL NOTES

World Population Data Sheets of various years should not be used as a time series. Because every attempt is made to use the most recent and most accurate information, data sources vary and radical changes in numbers and rates from year to year may reflect improved source material, revised data, or a later base year for computation, rather than yearly changes.

Sources of data: Aside from population estimates and projections (see footnotes 2 and 6), number of years to double population (footnote 5), projected labor force increase (footnote 10), and per capita gross national product (footnote 11), most of the data in this table were reported in the following United Nations (U.N.) publications: Demographic Yearbook, 1975 and 1976 editions; Population and Vital Statistics Report, Data Available as of Jan. 1, 1978, Statistical Papers, series A vol. XXX, No. 1; Selected World Demographic Indicators by Countries, 1950–2000, ESA/P/WP. 55, 28 May 1975; and Single-Year Population Estimates and Projections for Major Areas, Regions and Countries of the World, 1950–2000, ESA/P/WP. 56, 6 October 1975. A few figures shown were from other sources, including: draft materials for the forthcoming U.S. Bureau of the Census report, World Population: 1977; unpublished materials and reports of the Census Bureau's Foreign Demographic Analysis Division; D. Nortman and E. Hofstatter, Population and Family Planning Programs: A Factbook, 9th ed., The Population Council, forthcoming May 1978; various analytical studies; and official data reported by individual countries. The source for any figure shown on the Data Sheet may be obtained by writing or telephoning the Population Reference Bureau.

Figures for the regions and the world: Population totals take into account small areas not listed on the Data Sheet. Totals may also not equal the sums of their parts because of independent rounding. All other data are weighted averages for countries for which data are available.

Dashes indicate data are unavailable.

THE SCHOOL LUNCH PROGRAM

● Mr. TALMADGE. Mr. President, on Wednesday the Committee on Agriculture, Nutrition, and Forestry sent a letter to the Senator from Connecticut (Mr. RIBICOFF), chairman of the Committee on Governmental Affairs, expressing our vigorous opposition to the proposal to transfer the school lunch and other child nutrition programs from the Department of Agriculture to the proposed new Department of Education.

The depth of the committee's feeling on this crucial issue is demonstrated by the fact that the letter was signed by all 18 members—both Democrats and Republicans.

The action of our committee is not to be construed as opposition to the creation of the Department of Education itself. Indeed, I support such a department. I know that some other members of the committee do likewise.

But we are unanimous and emphatic in our opposition to the transfer of the school lunch program from the Department where it has been administered effectively from the inception to a new and untested agency. I can think of no activity of the Federal Government that has made a greater contribution over the years to the health and welfare of this country than the school lunch program.

As our letter states, the proposal to strip the child nutrition programs from USDA would be bad for the programs, bad for agriculture, and bad for the children of America.

Our committee also views this proposal as only the first step in a long-developing campaign to emasculate and dismember the Department of Agriculture. If this first move succeeds, efforts to strip away other functions will surely follow until the Department is reduced to sub-Cabinet status.

I and the members of the Committee on Agriculture, Nutrition, and Forestry do not intend to sit idly by and let this happen.

Mr. President, I submit the text of our letter for the RECORD.

The material follows:

WASHINGTON, D.C.,
April 18, 1978.

HON. ABRAHAM RIBICOFF,
Chairman, Governmental Affairs Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: We are writing with regard to the provision in S. 991 which would transfer the child nutrition programs, including the school lunch program, from the Department of Agriculture to a new Department of Education.

While many of us support the concept of a Department of Education, all of us believe that transferring the child nutrition programs to the Department of Education would be detrimental to the programs, to the children of the Nation and to American agriculture. It might well jeopardize the creation of the Department.

The school lunch program has grown and developed within the Department of Agriculture. It makes no sense at all to transfer the child nutrition programs out of the Department of Agriculture at the very time it is becoming increasingly clear that food, agriculture, and nutrition are interrelated.

Transferring the child nutrition programs would, in our opinion, lead to elimination of commodity support for the program, undercut the nutritional aspects of the program, and remove the school lunch program as a mechanism for the disposal of surplus commodities. In addition, it would greatly undercut the effectiveness of the Department of Agriculture.

The school lunch program today constitutes the only effective means through which the Secretary of Agriculture can provide price and market stability to those farm commodities that do not enjoy the protection of government price support programs. This is accomplished through direct USDA purchases of those commodities when in surplus supply—such as beef, pork, poultry, eggs, fruits, potatoes and other vegetables—for distribution through the school lunch program.

If this program is stripped from the Department of Agriculture and placed in the

new and untested hands of a Department of Education, this closely related and mutually beneficial agriculture and nutrition function will be greatly weakened, if not destroyed, and the children would suffer. The function should remain in a single Department that will have concern and jurisdiction for both. To divide the function would probably mean over a period of time that distribution of surplus commodities through the school lunch program would be replaced by a straight cash subsidy program. That would be highly detrimental to both the recipients and producers of farm commodities in temporary surplus.

The proposal to shift the child nutritional programs to a new Department of Education will, if successful, encourage further predatory raids on functions and activities of the Department of Agriculture. Indeed, such raids already are being organized. If the dismemberment of USDA is allowed to succeed, this century-old Department will become little more than an empty shell, incapable of serving either farmers or consumers.

The role of "food and nutrition" in our agriculture policy has increased dramatically in recent years. This interdependence will grow in future years. It must not be divided at this critical juncture.

The bounties of our land must be divided between the competing demands of foreign sale, foreign humanitarian donation, domestic sale, and our domestic food programs.

Nutrition is no longer viewed as a "fad" but as an important policy issue with major consequences for American agriculture as well as our Nation's health.

In short, it is of paramount importance that the United States have a coordinated food and agriculture policy—and to accomplish that goal these two areas must be united in the Department of Agriculture.

We believe this has always been the historic role of the Department of Agriculture.

The original mandate creating the Department in 1862 required it "to acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of terms . . ."

The first appropriation by the Congress to a Federal agency specifically for studies in human nutrition was made to the Department of Agriculture in 1893.

Later when the National School Lunch Act was passed in 1946 "to safeguard the health and well-being of the Nation's children and to encourage the domestic consumption of nutritious agricultural commodities", the Secretary of Agriculture was chosen to administer the program.

The Food and Agriculture Act of 1977 noted: "nutrition and health considerations are important to United States agriculture policy."

Most recently, the Secretary of Agriculture, Bob Bergland, told the Congress:

"We think this country must develop a policy around human nutrition, around which we build a food policy for this country and as much of this world as is interested. And in that framework we have to fashion a more rational farm policy. We've been going at it from the wrong end in the past."

Central to the development of a nutrition policy is the Nation's food programs: Food stamps, school lunch, school breakfast, and WIC. These programs, which represent the Nation's backbone in the fight against hunger, must not be taken from the Department of Agriculture just as we broaden our investigations in the area of nutrition and begin to address other emerging nutritional issues, including obesity, the relationship between diet and disease, nutrition research, food labelling, and nutrition education. Indeed, as we progress into these other issues the food programs may provide a valuable source of information for consumption data, a forum for nutrition education, and perhaps other research information.

GAO, in a recent report on nutrition research, found a "lack of central focus and coordination" to be the number one barrier to progress in the area.

We feel certain that progress in evolving a food and agricultural policy is equally dependent on having a central focus. If the development of a national energy policy demanded a new Department of Energy to coordinate and pull together all aspects of the problem, then we insist that the same principle applies to the development of a national food, nutrition, and agriculture policy. The nutrition programs should not be sent to other agencies or department; indeed the food-related functions of other departments should be consolidated within the Department of Agriculture.

We, therefore, strongly urge you, Mr. Chairman, to reconsider that provision of S. 991 and of the President's proposal which would transfer the child nutrition programs to a new Department of Education.

Sincerely,

Herman E. Talmadge, Chairman; George McGovern, John Melcher, Kaneaster Hodges, Jr., Richard G. Lugar, Henry Bellmon, Milton R. Young, Richard (Dick) Stone, Jesse Helms, S. I. Hayakawa, Bob Dole, James O. Eastland, James B. Allen, Walter D. Huddleston, Dick Clark, Patrick J. Leahy, Edward Zorinsky, and Carl T. Curtis.

WASHINGTON, D.C.
April 14, 1978.

Hon. HERMAN TALMADGE,
Chairman, Senate Commiteee on Agriculture, Nutrition, and Forestry, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The National Milk Producers Federation was greatly heartened by your strong statement in opposition to proposals which would seriously weaken the U.S. Department of Agriculture by transferring major functions to other agencies of government. As we indicated to you at the time of your December 27 statement on the issue, such moves are totally counter to the effort to develop a coordinated food policy and the maintenance of a strong agriculture. We continue to look to you for leadership in this area.

It is our understanding that the administration has now recommended that the Child Nutrition Programs administered by the Food and Nutrition Service of the USDA be shifted to the proposed Department of Education. Such a move has no more merit than earlier plans to shift these operations to the Department of Health, Education and Welfare.

The Federation will meet early next week with a number of farm commodity and other groups to consider means of countering this move. We will keep you informed of this effort. In view of the continued push on the part of some to move these programs from the Department of Agriculture, it has occurred to us that oversight hearings on the part of the Committee on Agriculture, Nutrition and Forestry might be helpful in demonstrating the effective functioning of these programs in their present status as well as establishing the case for retaining them in USDA.

Sincerely,

PATRICK B. HEALY,
Secretary,
National Milk Producers Federation.●

ENCOURAGING PROSPECTS FOR SOLAR ENERGY

● Mr. PERCY. Mr. President, Gus Speth, council member of the Council on Environmental Quality, recently delivered an excellent speech outlining the benefits and prospects of solar energy. The speech, entitled "The Sky Is Falling; New Prospects for Solar Energy" was given before the Environmental Industry Council on February 23, 1976. I highly commend this speech to my colleagues.

In his speech, Mr. Speth enumerates the many benefits of solar power. Included is the fact that it is environmentally benign, embargo proof, and that it provides more jobs than conventional technologies.

Drawing from a recent Department of Energy study indicating that the entire State of California could operate on solar energy in the year 2525, Mr. Speth is optimistic that solar could be a major energy source for this Nation, and not just a supplement.

As Mr. Speth rightly points out, the future prospects of solar boil down to simple economics. I am heartened that we, in the Congress, are taking important steps to assure that the economics of solar are favorable.

Recently, an informal group of Senators and Representatives introduced a package of legislation dedicated to promoting the widespread use of solar energy. As a member of this coalition, I introduced several pieces of legislation which directly benefit the economics of solar energy.

One, a bill to create an Office of Small Scale Technology within the Department of Energy, would provide grants, technical assistance and information to small businesses and community groups to promote conservation, solar, and other energy-renewable technologies and non-energy-renewable technologies.

The second is a bill authorizing the Commerce Department to conduct a global market survey for American solar industries to determine potential export markets. I share Mr. Speth's belief that U.S. solar technology equipment can develop into a sizable export industry. An important step in that direction would be a determination of where the best markets are.

To further enhance the ability of American solar industries to export, I introduced a bill (S. 2835) on Wednesday, April 5, which would amend the Export-Import Bank Act by creating an officer of the Bank whose exclusive task would be to promote the export of solar and other renewable energy technologies. The Eximbank has been a very important factor in the development and growth of America's nuclear export. I believe that American solar industries, given similar attention by the Bank, could also begin exporting.

Mr. President, I believe that these legislative initiatives, along with others introduced by my colleagues, would provide major assistance to this growing and vital industry and help assure its promi-

nence in America's future energy makeup.

Mr. President, I ask that Mr. Gus Speth's speech entitled "The Sky Is Falling: New Prospects for Solar Energy" be printed in the RECORD.

The statement follows:

THE SKY IS FALLING: NEW PROSPECTS FOR SOLAR ENERGY

Though I have not seen an advance copy of their remarks, I suspect my colleagues on this panel will cover thoroughly the environmental impacts of fossil-fuel development and combustion. I reserve, of course, my Constitutional right to nit-pick later on . . . but I want to devote my time to a single topic that may otherwise receive only passing mention: the prospects for solar energy.

The principal supply alternatives for the United States are coal, nuclear power, and solar, both direct and indirect. The National Energy Plan recognizes that all of these options will be used in the years ahead. Recent developments, however, have increased concern with both coal and nuclear as longer-term supply options and have provided the basis for far greater optimism regarding solar. The arguments are sufficiently compelling that many thoughtful persons now believe we should adopt national and international strategies aimed at shifting as rapidly as possible—perhaps within a few decades—to a society based predominantly on solar energy.

First, let's consider some of the benefits of power from the sun. While not completely free of adverse environmental effects, solar technologies should generally have a much smaller impact than conventional technologies that provide equivalent amounts of energy. Solar poses little risk to climate, and creates little direct air pollution, no radiation hazards, and no risk of nuclear weapons proliferation. It offers important economic opportunities: the U.S. is the acknowledged leader in solar technology, and can develop an important export market here if we get cracking on it. Further, solar could make a substantial dent in our nagging unemployment problem: preliminary data to be published this summer indicate that capital investment in solar heating systems will generate between 2 to 5 times as many jobs as the same expenditure for central station electric power plants.

Solar differs from other energy sources in its utter democracy: it falleth on the just and the unjust alike, on Arab and non-Arab. Hence it is not subject to embargoes. Its potential is immense: a recent study for the Department of Energy concludes that from the single standpoint of resource availability, it would be possible to operate an advanced, post-industrial society in California almost entirely on solar energy, even with major increases in population and per capital income. Solar energy thus has the potential to be a leading source of U.S. energy supply, not just a supplement. Indeed, from the standpoint of technology and resources, there appears to be no reason why solar energy cannot eventually meet most of our needs, given adequate efforts to increase energy efficiency. Whether and how soon solar energy in fact becomes the mainstay of U.S. supply depends principally on economic factors.

Happily, the economics of solar energy are improving with remarkable speed. In just the last five years, solar energy has advanced from its former status as a technical curiosity to become the subject of serious development. Among the companies interested in solar are Dow Corning, Grumman Aviation, Mobil, and Shell Oil, Texas Instruments, RCA, and Motorola. Out of curiosity, I checked the Washington, D.C. Yellow Pages yesterday for listings under solar energy. The May, 1975 edition had one such listing; the May, 1977 edition had seventeen. According to Science magazine, the number of solar-heated houses built in the U.S. has doubled every nine months since 1973.

Despite these evidences of interest, many of the comments I see—from officials in government as well as in private industry—assure us that the solar era is off in the distant future, if it exists at all. I think—and I hope my remarks will support this view—that solar energy can contribute in a major way in this century to meeting our energy needs. Consider the following:

Solar collectors can now produce hot water at costs generally competitive with electric water heaters, and the use of solar for heating homes and buildings, producing industrial steam and powering heat engines should begin to become competitive in the next few years.

Photovoltaics (or "solar") cells, which produce electricity directly from sunlight and have powered satellites, were roughly 100 times more expensive a few years ago than they are today. A number of applications are already economic; by 1985 solar cells are expected to be economically competitive for a wide range of applications. If the Department of Energy's price goals are met as expected, market forecasts suggest that photovoltaics could become a major source of new electrical generating capacity in the 1990's.

Biomass—which includes forest, crop and animal residues, as well as crops grown for their energy content—has an energy content comparable to Western lignite and can be burned directly or converted to a full range of storable liquid or gaseous fuels, such as methane and alcohol. One recent study suggests that such sources could provide an energy equivalent of about 1 million barrels of oil per day by the year 2000. More important is the growing agreement that, with appropriate government support, fuels from biomass can be economical on a large scale by the century's end.

Small-scale wind energy systems are already a practical reality. While some systems are cost-effective for specific applications today, projections for the cost of electricity generated from wind power range from 5¢ kwh for small (8 kw) machines, to 1.7¢ for large (1500 kw) machines. Recent studies for the Department of Energy suggest that wind energy could provide on the order of 10 percent of the nation's electrical energy demand by the year 2000.

Small-scale hydro systems are receiving increased attention. Studies indicate that more than 14,000 megawatts electric (MWe) of untapped hydro power potential exists at small, 3 to 5 MWe sites across the United States. In New England, for example, more than 100 hydro sites have been abandoned since 1941 because other sources of power become more economic; many have now regained economic viability. An additional 14,000 MWe is available in unfilled generation bays at existing dam sites.

Thus solar energy is not a far-out option; it is with us today in various forms, and the obstacles to its widespread application are falling rapidly. The outlook for solar is promising enough that, if we invest sufficient determination and resources now, we could find solar our primary replacement source of energy a decade hence.

A strong case can be made that a national commitment in the 1950's to develop solar technology—one comparable to the commitment we made then to nuclear power—would have led to the widespread economic feasibility of solar energy today. Whatever the worth of that speculation, it's critical that we recognize that a major national commitment to solar is no longer merely desirable; it is essential. Given the long lead-times necessary to convert our energy supply systems, we should make that commitment now.●

COMMUNITY DEVELOPMENT CORPORATIONS

● Mr. KENNEDY. Mr. President, the Human Resources Committee is now considering the reauthorization of the Economic Opportunity Act, through which the Community Services Administration operates. So, too, the Appropriations Committee is considering funding for the coming fiscal year for programs administered through CSA.

One of the most important of these programs is that embodied in title VII of the Economic Opportunity Act, which establishes a "special impact program" through which the Community Development Corporations are funded. These Community Development Corporations are extremely important vehicles in our efforts to revitalize low income neighborhoods. They are important because they use the entrepreneurial talents of those who live in the neighborhood and who know which operations are important in building the local economic infrastructure and which operations have the greatest social benefit to the community. They are important because they use and train local talent, giving the business skills which are necessary in a capitalist society. They are important because the local people know the comparative advantages of their community—they not only know what the community needs, they know what the community has for export. And, they are important because the results of the efforts made by those within the CDC's are returned to the community.

Mr. President, the flagship Community Development Cooperation is the Bedford-Stuyvesant Restoration Corporation, which was started in 1967. I am extremely proud of the efforts that Senator Robert F. Kennedy and Senator JACOB K. JAVITS made when they first established the community development program and when they focussed their attention on the first CDC, Bedford-Stuyvesant. There is no finer example of the successful regeneration of an area than in that community.

The successes of that CDC have recently been brought to our attention through articles by Michael Harrington in the New York Magazine and by Lee Lescaze in the Washington Post. I ask these articles be printed in the RECORD.

The articles follow:

THE SOUTH BRONX SHALL RISE AGAIN

(By Michael Harrington)

The streets are lined with elegant, well-kept, brownstones which could easily serve as a backdrop for a Henry James novel about upper-middle-class life at the turn of the century. Only they are located in the middle of the city's largest black ghetto (and the nation's second-largest black community). On the periphery of this Shangri-La—most dramatically in the Bushwick section to the

north—the scenery is more typical of the times, an urban war zone of burned-out and abandoned buildings rotting in the aftermath of the Great Blackout of the summer of 1977. But in Bedford-Stuyvesant, there was hardly any looting.

The Bedford-Stuyvesant restoration is a living remnant of the social imagination and innovation of the sixties—a dream, it would seem, that works. Or does it? That question is an important one in the discussion of President Carter's urban policy, which will be announced this week. For if there is even one neighborhood which was headed toward the fate of the South Bronx—New York's municipal Appalachia—and then reversed the disastrous trend, that is important news for the nation as a whole. It means that the prime domestic tragedy of recent years—the deterioration of the great cities—is not inevitable.

The South Bronx. It is a legendary symbol for the despair of the seventies. In the sixties, there was Pruitt-Igoe, the housing project in St. Louis that failed so badly that part of it was dynamited, not by vandals, but by the city fathers. Only the South Bronx is more menacing than Pruitt-Igoe. It is not a planner's mistake, a single development gone wrong, but the indictment of a civilization, a man-made lunarscape of empty fields where tenements once stood and hulking wrecks of buildings wait to be demolished.

Is Bedford-Stuyvesant an answer to this desolation? Jimmy Carter, whose casual trip to the South Bronx last fall committed the prestige of his administration to the daring proposition that something can be done, would like to know. And so would every American with a shred of decency.

To begin the outline of a response to that question, it is necessary to go back in the chronology of social time by one entire epoch, which in this case is twelve years back. This excursion into history is not in the least academic, for it raises the central question about the relevance of Bedford-Stuyvesant today: Granted that the Bed-Stuy restoration is a modest success—which, in the context of so many failures, is to say a remarkable success—is it the result of unique political and economic factors which will never again be repeated? In short, can Bed-Stuy be reproduced elsewhere?

In the mid-sixties, Bedford-Stuyvesant was on the well-greased road to economic and sociological hell. True enough, 90 percent of the houses had been built before 1920 and were—still are—first-rate structures. But the white middle class had long since left and the black migrations into the area, at first as a result of the desperation of the thirties which drove people out of the rural South and then because of the prosperity of the Brooklyn Navy Yard during World War II, had changed its character. With the decline of the navy yard, the economic base was disappearing. As a 1967 NYU study put it, "Bedford Stuyvesant is more depressed and impaired than Harlem—i.e., fewer unified families, more unemployment, lower incomes, less job history. . . ."

In all of this accelerating misery, there were, however, a few extremely hopeful facts. About 22 percent of the brownstones were owner-occupied; homeowners had lived in the area for fifteen years on the average; and another 9.7 percent of the houses were owned by people who lived in close proximity to them.

Enter Robert Kennedy, then moving farther to the left than any major American politician before or since. It was almost inevitable that he would want to do something basic about black poverty, an issue which combined two of the central social concerns of the decade. And there were other, non-ideological reasons for his trying to do something about Bedford-Stuyvesant. It had become painfully clear that we could not have both guns and butter, because of the war in Vietnam; tapping private funds in an economic-development project thus might deal with a serious new problem. Not so incidentally, it might also provide Kennedy with a pro-business image for a presidential campaign, something sorely needed by the man who had sent FBI agents to wake up steel-corporation executives during a crisis in his brother's administration. Indeed, there was a peculiar convergence of left and right in the notion of community development, and that too must have been politically attractive. To militant black-power advocates it meant local control of local resources and, in some of the extreme images, a kind of socialism in one neighborhood. Those themes also spoke to a significant section of the radicalizing, college-educated young, the members of Students for a Democratic Society, who were becoming more and more suspicious of liberal, technocratic planning from Washington. At the same time, the notion fit in with new theories of black capitalism. So William Buckley responded to some Kennedy bills articulating the Bed-Stuy philosophy by calling the program "so sensible that it made recommendations I made three years ago."

Thanks to Kennedy, then the junior senator from New York, a special impact program was written into the Economic Opportunity Act in 1966 which offered specific support for the Bedford-Stuyvesant project.

In 1967, the first funds began to flow into Bedford-Stuyvesant: a modest $6.9 million. That, to be sure, did not happen automatically, not the least because Lyndon Johnson was not interested in having his administration finance successful projects promoted by Robert Kennedy. Still, there was another reason. A debate was raging within the Office of Economic Opportunity: Should the government seek to make life supportable for the poor and the minorities where they were living—the central cities—or should it encourage their dispersal?

Kennedy won enough of that debate to get Bedford-Stuyvesant started in April 1967. Two organizations were set up: the Restoration Corporation, which was run by a board of twenty people from the neighborhood, most lower-income and one third of them female, and the Development and Services Corporation, which was to give Establishment support to the locals. That second organization enrolled New York's *haute bourgeoise* in its efforts—people like Thomas Watson of IBM; Douglas Dillon, the former Treasury secretary; William Paley of CBS; George Moore of First National City Bank; and a man, who would become a key figure over the years, Benno Schmidt of J. H. Whitney & Company.

Predictably, the whole idea met with intense hostility from elements in the community. There was, remembers Franklin Thomas, the man who was to head the program for a decade, a "terrible suspicion." The militants were suspicious of the black middle class and the white bourgeoise; some of the black men, resentful of what they took to be matriarchal patterns of power in their world, were suspicious of the women on the board; local officials from other poverty programs were suspicious of an effort which pulled an end run on their own work; and so on. There were stormy meetings and the community corporation had to be broadened to include militants and representatives of the Puerto Rican minority in the area. Some of the middle-class people tried to maintain the old corporation, but Kennedy, after intense personal involvement, had achieved the beginnings of his alliance.

A successful social experiment should look and feel successful. The Bedford-Stuyvesant restoration does.

You walk down Fulton Street and there is a red tenement façade floating alongside a modern building. Next door there is a converted milk-bottling plant which had been abandoned for eight years before the planners took it over. Banners flap in the wind and you pass through an entryway which opens under the façade into a courtyard ringed by a new structure which contains shops and offices. The mood is not unlike that of a suburban shopping center, only more restrained and tasteful. That space flows into another plaza, with a skating rink. Beyond that, there is a low-rise housing developmtnt, also put up by the Restoration Corporation. In good weather, all of these public spaces can be, and are, used for picnicking, concerts, and the like. Across the street, a series of apartments encircle a courtyard. Solar equipment is being installed. In the neighborhood around the center, there are those blocks of marvelous, intact brownstones.

Franklin Thomas remembers starting the center on spec with an analysis that projected a 50–50 chance of succeeding. That was enough to persuade the Ford Foundation to put up a 70 percent guarantee on a construction loan; Chemical Bank came across with the money and the project was on. But its secret, says Thomas, is not in its striking physical success. Rather, it is that the Bedford-Stuyvesant effort—unlike many other attempts at community development—combined physical rehabilitation with economic growth and social services. Others did one or another of those jobs; no one integrated them as comprehensively as the Bed-Stuy planners.

It was the existing home-ownership pattern that allowed Bed-Stuy to go ahead with the obviously successful rehabilitation program. From the start, the residents were chary and suspicious. But after a few blocks were fixed up, young blacks from the neighborhood, taught by older blacks mainly from the neighborhood as well—and at a fraction of the commercial cost—became so proud of their efforts that they started wearing their hard hats outside of working hours, as a kind of status symbol. The physical upgrading of the entire neighborhood tied into the economic drive. On the one hand, the rehabilitation provided work. Thomas was in touch with Peter Brennan, the building-trades leader, who was quite cooperative. The instructors in the rehab program were often union members and the young trainees were doing jobs created only because of the program; they were not, therefore, competing with other unionists. At the same time, the corporation aggressively went out to stimulate new employment. It brought IBM into the area, and it is now keeping it there. That meant a factory and 400 jobs (and will soon mean a new factory which will push the job total to 500).

And finally, there were social services as well as economic development and physical rehabilitation: employment programs, a summer camp, parties for the children, a project dealing with sickle-cell anemia—and more. So it was that a neighborhood was saved and then passed its final exam by remaining calm during a time when surrounding areas were looted and burned. That, clearly, is a substantial and important success. But, again, is it transferable? Is anything that was learned there relevant to the South Bronx, where Jimmy Carter is committed to doing something, however unspecific at this point?

Yes and no.

The "no," alas, is easier to document and perhaps more important to state, since the unwary tourist of misery could be misled by passing through the ruins of Bushwick and entering into the calm and beauty of Bedford-Stuyvesant. Indeed, the physical beauty is part of the problem of transferring the experience. Bed-Stuy began with the advantages of the brownstones and, even more important, the social presence of their owners. In 1976, according to a recent city report, in the South Bronx—an area with more than 3,000 vacant lots and buildings spread over 500 acres—one out of three people was on welfare. Indeed, even 30 or 40 years ago, when the South Bronx was a Jewish working-class community, it was already one of the poorest of those areas. It did not have the middle class that persisted in Bedford-Stuyvesant because of those lovely houses; it certainly does not have it now.

Second, there is another advantage enjoyed by Bedford-Stuyvesant which, by its very nature, is limited and perhaps unique: that support from the haute bourgeoisie of New York. The single most important source of new jobs was that IBM plant. More recently, when there were problems with mortgages, it was possible to make contact with the banks through some of the powerful figures involved in backing the program. And last fall, when some of the Bed-Stuy executives complained of a lack of publicity at a meeting with a group of their prestigious sponsors, their comments led, within a week, to a Times editorial and a picture of the Fulton Street center in Time magazine.

Third, and most important, even with the success of the restoration, Bedford-Stuyvesant has had a very limited record in generating new jobs. The rehabilitation work for the young people is temporary (although it is useful in many other respects). There have been a certain number of jobs generated by the businesses which have been brought into the neighborhood, but what would that mean in the South Bronx, where approximately 30 percent of the work force is on the streets? Indeed, even the outstanding Bed-Stuy accomplishment in this area—the IBM plant—is not without is ambiguities.

IBM had installed the plant at Nostrand and Gates avenues ten years ago. It turned out to be a very good investment as well as the source of 400 jobs for the community. The computer-cable-construction factory was located in a renovated 68-year-old building which also happens to be architecturally pleasing, even charming. It became one of IBM's top-ten plants in efficiency and productivity. But then the company had to relocate for technical reasons. The Restoration Corporation obviously wanted to keep those jobs in the neighborhood, so it set out to convince IBM that it should stay. The operation was a model of the kind of efficiency and competence the corporation has been demonstrating all along.

First, the corporation found four sites which it offered to IBM for its consideration. One was chosen and it was agreed that it would be delivered to the company at a certain price per square foot. But the same area had already been picked for a new school and a model-city project. Neither of those was likely to ever be built, but they placed the land in a legal limbo. So the corporation assembled the political leaders, put pressure on City Hall, and finally, six months after the original search, was able to tell IBM that it had its deal.

What is ambiguous in this success is that it took such an incredible mobilization of energy and imagination to hold on to the only major plant which had located in Bedford-Stuyvesant during the decade. There have been other such successes here and there: The Harlem Commonwealth Council managed to retain the Washburn Wire Company in 1976. But what this means is that major battles are required to win skirmishes. It is not that the corporations involved are vicious. They are, after all, engaged in making money. So they have to be bribed into staying—legally, honestly, openly bribed. The communities involved have to go to work, in effect, for the corporations that are supposed to help them.

This problem relates to an even larger difficulty. If the Carter administration doesn't improve its efforts to reduce unemployment, the successes within a neighborhood like Bedford-Stuyvesant will be menaced, and even subverted, by the failures of the larger economy.

And it is quite possible that Carter has already effectively sabotaged the urban program which he will unveil this week. In his budget proposals, the president came up with an investment tax credit with a new wrinkle: If passed by Congress, it will apply to structures as well as to capital equipment. The old investment tax credit was already a handsome subsidy to companies that wanted to move out of New York, since it meant that the feds paid a significant portion of the cost of new machinery. Now, if that largess is extended to structures—if a corporation can deduct from its taxes a chunk of the price of that new, linear plant in the Sunbelt or the suburbs—there will be one more reason for companies to flee depressed areas. In effect, Washington will have mobilized the Treasury to fight against groups like the Restoration Corporation.

However, even if Carter makes a dramatic turnaround, the problem with areas like the South Bronx is that even in good times they do not make gains. The vast exodus of jobs from New York over the past ten years has gone on during booms as well as in the midst of busts. There have to be mechanisms, planned mechanisms, to make sure that the poor areas get a piece of the governmentally induced prosperity.

And this is where the "good side" of the Bedford-Stuyvesant effort emerges. If it is conceived of not as a panacea which will bring capitalist wealth or socialist justice to the poor, but as an important technique to mobilize people on their own behalf in the context of a booming national economy, then it has a relevance.

Bedford-Stuyvesant proves that there are community energies which people, given half a chance, can use to help themselves. But that is going to take a much wider base than the one achieved in Bed-Stuy. The corporate rich will support one or two such efforts, out of noblesse oblige; but they do not have the time, the money, or the political inclination to enlist in a national struggle. The banks did not redline Bedford-Stuyvesant, not least because some of their board members were patrons of the experiment. Yet at the same time that they were engaged in what was a laudable, but minor, act of decency, they were redlining much of the rest of New York City, unloading municipal paper, and engaging in all the rest of the vile practices designed to shift the burden of the crisis to the backs of those least able to pay. So the network of support has to be extended far beyond the lords and ladies bountiful.

Unions, for instance, have been involved in some of the community-development projects; so have the churches. And there is an important grid of community-organizing groups emerging in the United States, often led by the veterans of the sixties movements, people who the press and the public think have disappeared.

They can bring some money and even organized political power; they could use the techniques pioneered in Brooklyn. And if they do, they would be well advised to follow a central principle of the Restoration Corporation's effort: to look for comprehensive solutions which provide housing and jobs and services according to an integrated plan.

It is at this grim point that a shocking fact emerges: The South Bronx—and all the neighborhoods of lesser desolation—can be saved.

For that to happen, the nation will have to care about such concentrations of urban misery. It doesn't now. But that callousness need not be terminal, since it rests upon an eminently rebuttable myth. It is one of the prime tasks of the Koch administration to challenge that belief. A carefully documented case, showing how this city—and many others in the Northeast and Middle West—has been victimized by federal policy, is an essential element in a program for genuine revival.

In the popular imagination, the South Bronx and like areas of municipal decay are the result of Great Society failures and bleeding-heart politics in general. New York's mushy liberalism, it is thought, priced the city out of a market which went on dutifully transmitting the desires of many people to move from Snowbelt to Sunbelt, or at least from central city to suburbia. In fact, the sweeping urban plans of the sixties were never implemented. They glittered in Lyndon Johnson's rhetoric, they were passed into law, and then, under the Nixon administration, they were administered by the "true disbelievers," as Robert Wood has labeled them.

As for the market, a de facto federal anti-urban policy rigged it against New York. Billions in agricultural subsidies to wealthy corporate farmers enabled them to mechanize jobs out of existence and send millions of systematically undereducated poor people to the cities. The Puerto Rican development programs had a similar effect. At the same time, federally funded highways were speeding jobs and the middle class out of town, taking them to suburban houses and factories built with subsidized credit and tax deductions. Adam Smith's invisible had had almost nothing to do with this publicly funded social calamity.

Many people generalize this experience and come to an understandable, and completely wrong, conclusion: The old cities, like New York, are not worth helping. That is the rational deduction made from the irrational premises of a political system which paid billions to make the traditional urban centers unattractive when compared with the new possibilities. It leads to a serious underestimation of the value of those cities. We have to deal with "people, not places," said HEW Secretary Joseph Califano recently. In part, that is probably just a bureaucratic ploy in Califano's battle with Patricia Harris over at HUD. But it also treats cities as mere geographical coordinates—as places—rather than as living entities which are crucial for culture, for ideas, and, for that matter, for commerce.

If Koch and company could educate the people, and even Senator Proxmire, on this point, that would be the beginning of hope. And, to reiterate my shocking proposition, that applies even to the South Bronx.

If that area lacks all the advantages of Bed-Stuy, if it is empty lots and decaying tenements rather than brownstones, it also has some pluses. It is, for instance, ideally located within the most impressive rail complex to be found in the United States, and, for intolerable reasons, it has empty space. It has physical potential for industrial development; if has, God knows, an abundant unemployed labor force. Something could be

done if Carter gets much more aggressive in the fight for full employment; if the administration stops paying corporations to leave New York; if there were imaginative plans and government moneys and community organizers to make sure that the outcasts are not, as usual, cast out of the prosperity; if . . . Looking at all of these qualifications coldly and soberly, one is not permitted to hope too much. The likelihood, on this eve of the government's new urban policy, is that the human and physical agony of the poor of this city will go on.

And yet, for all the criticisms and limitations of the Bed-Stuy experiment, it is extremely satisfying to witness a social idea that works. Passing through the tenement facade into the artful space of the center on Fulton Street, driving past the brownstones, savoring the calm of the place, one can see an immense and important fact: The blight of urban decay is not inevitable; there are alternatives.

Something good is happening in Bedford-Stuyvesant.

[From the Washington Post, Apr. 22, 1978]

THE SUCCESS OF BED-STUY—INNER-CITY COMMUNITY DEVELOPMENT AT ITS BEST

(By Lee Lescaze)

NEW YORK.—The effort to aid Bedford-Stuyvesant, born of a walking trip through the large, desperately poor section of Brooklyn by then-Sen. Robert F. Kennedy, is now the grandfather of community development programs.

That it is called a grandfather at age 11 reflects on the transitory nature of programs in the business of fighting poverty.

The pressure to kill off a program mounts with each failure—and the landscape is littered with failures—while public officials and philanthropic foundations have always been on the lookout for new approaches.

"There has been an insistence and a persistent need to try something new without giving a fair chance to fragile experiments that have been launched out of great expectations and great hopes," Ron Gault of the Ford Foundation remarked of the phenomenon.

Community development like the Bedford-Stuyvesant Restoration Corp. means minority development and its first decade has been a process of trial and error.

"Black people," Gault said, "have not had the privilege of trying something and not succeeding."

Even for those community development corporations like Bedford-Stuyvesant that have shown achievements, it is a time of uncertainty.

The Carter administration's urban policy has not been announced; the Community Services Administration has been raked over the coals for management weaknesses by the House Government Operations Committee, and the projected federal budget figures for fiscal 1979 community development corporations are sharply lower than in the past.

The House committee wants several of the community development corporations canceled. "These are the ones that better pull off some spectacular plays or get off the team," a congressional staffer said. "There's money going out every damn day."

Of 36 existing community development corporations, the CSA lists six as 'probationary"—in danger of losing federal funding.

If the projected fiscal 1979 budget for the community agencies remains at the present $21 million, down from a present $35 million, there won't be any new ones begun, a CSA official said.

Bedford-Stuyvesant is not in danger of losing its federal funding, but the prodigal reputations of some of its brother community development corporations don't help. "It's the best of the bunch," Gault said. Federal officials agree that Bed-Stuy's performance has been impressive.

Any reduction would be a blow to an organization that in its 11 years has established a presence and accomplished some impressive construction, and rehabilitation projects in the nation's second largest concentration of blacks. Only Chicago's South Side is larger.

If Bed-Stuy were a city it would be the 29th largest in the country. More than 270,000 people live in an area of about 5½ square miles, or 653 city blocks.

It is a long ride on the train from Manhattan and when Robert Kennedy saw it in 1966, Bed-Stuy was a place to get out of, if you had anyplace to go.

What had been a white middle-class community at the turn of the century had been deserted by white citizens and white businessmen, and federal urban renewal funds of the 1950s and early '60s had been spent elsewhere.

The federal program that became the community development corporation plan was an initiative of Kennedy and Sen. Jacob K. Javits (R-N.Y.) and in 1967, the Bedford-Stuyvesant effort began.

Bed- Stuy has received more than $56 million in Federal funds and about $75 million from other sources, including $20 million that has been committed from a $65 million mortgage pool formed by 80 banks and nine insurance companies.

The foreclosure rate is less than 1 percent on these mortgages, and they have been given Veterans Administration- and Federal Housing Administration-insured status.

"Fifty million, considering the needs of that community, is really a pittance," a CSA official who oversees community development corporations said.

Bernard McDonald, a vice president of Bedford-Stuyvesant Restoration, says "this project has been underfunded for some time."

The Nixon administration housing freeze in 1972–73 paralyzed plans in Bed-Stuy for a time. "We viewed that as a period of harassment," McDonald said.

The highest national one-year level of appropriations for community development was $48 million. "How many airplane wings can you buy for that?" McDonald asked.

The legislation governing community development corporations requires that they have "an appreciable impact" in their community. Impact in a community as large as Bed-Stuy is difficult to measure.

If a walking tour of Bed-Stuy began today at the $6 million Commercial Center designed by Washington architect Arthur Cotton Moore and visited the rehabilitated shop fronts and new apartment buildings in the area, the walkers could only call the impact impressive.

The Commercial Center contains Bedford Stuyvesant Restoration Corp. offices and a number of paying tenants. It resembles Georgetown's Canal Square, which Moore designed.

One tenant is Plaza Exchange, a small discount department store which the corporation started after six department store chains refused to come into the area. It marks up goods about 22 percent, roughly half the usual increase.

A joint venture with Supermarkets General Corp. is under construction at one end of the center. It will be a 30,000 square-foot supermarket, the first to be built in Bedford-Stuyvesant in years.

The Commercial Center itself is built around one of the largest buildings in Bed-Stuy, one that was a milk bottling plant until its owner, Sheffield, moved to Long Island in the 1950s. Sheffield's cows are still on the facade.

In all, homes on 106 blocks of Bedford-Stuyvesant have had their facades renovated under the corporation's improvement program.

Owners are charged $50 for painting, patching masonry, fixing glass and ironwork that actually costs from $800 to $1,200 a house. Block associations apply for the program and the winners are chosen by lot.

The work is done in large part by teenagers who earn summer money and pick up a skill under the supervision of experienced workers. They do about 10 blocks each summer.

After years during which banks refused mortgage loans in Bed-Stuy, conventional mortgage money is now available for the kind of renovation of houses that goes on in many Washington neighborhoods.

Redlining (the refusal by lending institutions to lend in an area) is easing, McDonald said, but he calls it "a glacial process."

As a result of Bedford-Stuyvesant Restoration projects, the area is dotted with new apartment projects with rents held within reach of local residents.

"Nothing they've done has fallen apart," said one outside admirer. "It's quality work."

There are still about 2,000 vacant lots and 2,000 abandoned buildings in Bed-Stuy. About 40 percent of all working-age people are not employed, according to McDonald's estimate, and median family income is still about $6,300 for a family of four.

About 6,000 jobs in some 1,235 businesses left Bed-Stuy between 1969 and 1974. The most notable success in attracting outside business was IBM's 1968 move to a Bed-Stuy site that brought 420 jobs. IBM is now moving to another location, but still in Bed-Stuy.

The impact on Bed-Stuy's spirit is hardest of all to measure, but there are some clues. When the corporation held its 10th birthday party last summer, 15,000 people came. While poverty officials in other parts of Brooklyn have been indicted with appalling frequency for mishandling funds, the restoration corporation has never been accused of any corruption.

"You will find truly in that community a respect for restoration," a federal official said. "They've had a lot of problems, but they wouldn't wither away tomorrow if we pulled out our support."

During New York's blackout last July, there was no damage to the Commercial Center or other restoration corporation properties. The fires that destroyed city blocks were elsewhere.●

A TALE OF ONE CITY

● Mr. MATHIAS. Mr. President, last week I introduced several bills as a first installment in what I believe will be a comprehensive legislative attack on the problems of our cities. In my statement on those bills, I called attention to the failures of many of our urban areas.

Now, I would like to strike a more positive note. I want to call my colleagues' attention to an urban success story. The city I have in mind is Hagerstown, Md., located in nearby Washington County.

Two years ago, Hagerstown was in trouble. The unemployment rate topped

14 percent. Industry was stagnating. People were moving away. Today, the situation has turned around completely. Unemployment is down to 4.8 percent—well below the national average. Business is booming and the citizens of Hagerstown are busy restoring the downtown area. New people are moving to Hagerstown to settle and enjoy a pleasant urban environment.

Much of the credit for this upturn in Hagerstown's fortunes must go to Mayor Varner L. (Pat) Paddack, a Republican, who in the bravest tradition of the Republican Party, has led a predominately Democratic constituency in an effective public-private cooperative effort to revive the city.

Mr. President, Hagerstown's rejuvenation was described in full detail in an article by John B. Willmann in the Washington Post real estate section on April 14, 1978. I ask that this article be printed in the RECORD.

The article follows:

HAGERSTOWN HOUSING MARKET REBOUNDING

(By John B. Willmann)

HAGERSTOWN, MD.—In 1740, Capt. Jonathan Hager built a two-story, fieldstone house on 200 acres that was to become the centerpiece of this western Maryland city when it was founded 22 years later.

Hager House still stands in a mid-town park in Washington County's seat (population 35,862), which is participating in the residential real estate boom now shaking up much of urban America.

Housing prices in Hagerstown, whose general area encompasses 75,000 persons, are not Washington prices. But they've been rising recently at the rate of more than 10 per cent annually. A small, single-family house priced under $40,000 goes fast and a nice rambler tagged at $41,500 is likely to be sold before the multiple listing cards are distributed.

"Our hot market is between $45,000 and $70,000 for existing houses," said Roland G. Hebb, president of the Hagerstown Board of Realtors.

Two years ago, Hagerstown was experiencing an unemployment rate of 14 percent and was losing population. The economy there has since turned around—the unemployment rate has dropped to 4.8 percent—with a rise in fortune of the area's industries. While the population of Hagerstown proper has remained unchanged for three to four decades, the area around it is now growing.

Hebb and several other active realtors said the relatively low unemployment rate and an increasing number of two-income families have triggered the current, higer-than-usual interest in home ownership.

Broker Harry Van Mater said that, for instance, a 1½-story masonry house with four rooms in Hamilton Park near the Fountain Head Country Club can sell quickly for $35,000. Those small, well-kept houses—many of which have been improved with additions—originally sold for less than $8,000 during the war years when Fairchild Republic Co. was going full blast in the production of boxcar airplanes for the government.

Van Mater said Hamilton Park houses commonly sold for around $12,000 10 years ago, but improved houses there now sell for up to $35,000. "They really go fast," he added.

Joseph N. Rowe, a veteran Hagerstown broker who also plays bass fiddle in a jazz band on Saturday nights, said the local board of realtors had about 1,500 listing last year, three-fourths of which were sold. He added that 447 new houses were started last year, along with 220 rental apartments. Most of the apartments are in 10 moderately sized developments where rents range from $160 for an efficiency to $275 for three bedrooms—considerably below the level in the D.C. area. Vacancies are estimated at 5 percent in Hagerstown.

What about condominiums? Five leading brokers agreed that this increasingly popular form of home ownership of apartments and town houses has not caught on in Hagerstown. "Our market is the single house," said broker Guy L. Smith.

"And it seems that in recent years more people are wanting a house on three to five acres with a stream running through the property. That's a scarce commodity," commented broker Sidney Machat, who does business out of Boonsboro, Md., a tiny and increasingly chic town eight miles southeast of Hagerstown where antique shops proliferate.

As Hagerstown enjoys its revived prosperity—which stems from the vitality of leading industries such as Fairchild, Mack Trucks, Inc. (the largest employer with 4,600 jobs) and the Pangborn division of the Carborundum Co.—the center city area has been undergoing needed rejuvenation.

Realtor Varner L. (Pat) Paddack, Republican who is serving his second term as mayor in a city that is predominantly Democrat, helped to spark a combined municipal-private effort to update the old square and put new life in midtown business places. There's a big hole in the ground at one downtown corner (formerly the site of the railway passenger station) for a new building where the city's two newspapers (The Morning Mail and the Daily Herald) will relocate from an old building up the street.

The lovingly rebuilt Maryland Theater will reopen later this month as a center for cultural activities. One downtown movie theater is still operating. And there are plans to make the former landmark Alexander Hotel, now idle, into apartments for the elderly. A large apartment building for the elderly was completed three years ago within three blocks of the center square.

Hagerstown realtors are also encouraged by a recent survey by the Marketing Economics Institute showing that 1,600 households in Washington County had annual incomes over $25,000 and that 190 had incomes over $50,000. More than three-fourths of the county's households have two incomes, and a third are run on three incomes.

Those figures indicate to some degree why the Hagerstown area is experiencing a strong period of residential resales. The mayor and his fellow realtors noted that new home construction inside the city limits has been retarded by lack of undeveloped land.

Areas that have been annexed and given sewer and water service are now feeling the strain. However, some new housing developments are being done on one-acre lots with septic tanks and wells. They are usually large and higher priced.

"The urge to spread out somewhere is evident among many home-seekers," commented realtor Rowe, who said that many persons are selling existing house and moving up in class. "For a long-timer like myself, it's sort of scary to see the effects of unusual inflation in resale houses, some of which have doubled in price in five years.

Rowe's Maryland General Realty Co. currently has a listing on a 33-acre tract zoned for apartments and with sewer and water service available. It's priced at $11,300 an acre, which Rowe said is not out of line.

Because the real estate business is thriving, there now are 38 realty brokerage offices and 200 agents (a number of which do not work full time.)

A recent growth in resales and the number of agents has tended to heat up the competition for obtaining listings and that has helped drive up asking prices. In a hot realty market, asking prices tend to be selling prices more often than not.

As befits a city old as Hagerstown, there's a large stock of older houses. Some of the large old mansions in the heart of the city have been converted into apartments or offices. Some young couples are buying older houses and redoing them—part of a national trend in large cities. Also, the city midway between the Pennsylvania and West Virginia state lines (six miles from each) has a stock of older double-houses, which are called semi-detached in the Nation's Capital.

Hagerstown's modest supply of public housing for lower-income persons includes one new project (Bethel Gardens), an attractive addition to the older west end, where housing prices are lowest. Highest housing prices are in the area to the north, followed by those to the east and south.

Not unlike other small U.S. cities with aged downtowns, Hagerstown has been growing outward for the last generation. One big complex is the 3,500-pupil Hagerstown Junior College on a fine campus east of the city. There's also a growing industrial complex of new buildings to the southwest. The airport north of the city is adjacent to the Fairchild plant now turning out low-level fighter planes for the Air Force and not far from the big Mack Truck plant that recently dedicated an addition.

Once a minor rail center and still with freight service from several railroads, Hagerstown now ascribes some of its new prosperity to the strategic location of a crossing of two major interstate highways just west of the city limits. There Rte. 81, going north and south, crosses 70N, which moves northwest and southeast. Distribution centers have found the location to their advantage.

Just west of 81, a fine old mansion on an estate owned by a building contractor and north of it is the area's main covey of mobile houses that provide the only real-low-cost housing in the area.

Because Hagerstown is the only city in Washington County and the largest within a big trading area, it has been the site of several large new shopping centers. Valley Mall has 72 stores on 60 acres and Long Meadow has 31 stores. Both were preceded by South End Shopping Center.

Once plagued by high unemployment and a tired image of a city of yesteryear, Hagerstown shows strong signs of rejuvenation that are borne out by home sales. About 15 per cent of sales are made to persons moving into the area. Some area residents commute to jobs in the Washington area but realtors get even more upbeat because some Washington area residents are going up that week to find future retirement homes. Comparable taxes on homes are 25 per cent lower in Hagerstown than in the District or its suburban jurisdictions.

Washington County, which includes Hancock to the far west and other towns named Williamsport, Keedysville, Boonsboro, Sharpsburg, Funkstown, Clear Spring and Smithburg, boasts a heap of beautiful rural and mountain scenery. A latter day Jonathan Hager might decide to set up a residence in the Hagerstown area because it's still beautiful, conveniently located and has some attractive single-family houses selling for less than $60,000.

What's more, there's a McDonald's, a plant that makes pipe organs, a tennis club under a "bubble" and a downtown adult book store.●

COMMUNITY APPROACH TO GASOHOL

● Mr. BAYH. Mr. President, last January, after months of construction and

administrative preparation, the Southwest Alabama Farmers Cooperative Association of Selma (SWAFCA), headed by Albert Turner, began producing alcohol fuel made from farm products in their own still. Their production now is small—only about 500 gallons to date—but it is a good beginning. For 65 cents a gallon SWAFCA is making 180 proof alcohol which can be burned straight or blended with gasoline to make a high octane, low polluting, and reliable auto fuel. The SWAFCA project demonstrates a practical and efficient example of an alternative energy source. Jack Anderson, in the April 20 edition of the Washington Post, described the SWAFCA operation and I ask to submit the article be printed in the RECORD at the conclusion of my remarks.

I hope the Department of Energy which has been spinning its wheels for the past few months, will take a close look at this project—a small scale, relatively inexpensive facility—tailored to the needs of the community in which it is located. Albert's still can make use of agricultural waste and distressed crops, as well as surplus commodities, thus adding to farmers' incomes while providing them with a secure and inexpensive source of fuel. This integrated system approach, of small production facilities located in areas in which they make good sense, is an approach DOE has ignored in its rush to build large, capital intensive, "hard technology" facilities. I hope DOE's revised alcohol fuels program plan will correct this oversight.

In light of all the objections the oil companies and others have raised to discredit alcohol fuels, it is very encouraging to know a man like Albert Turner who just went out and did it. Albert Turner has shown that fuel grade alcohol can be made at a reasonable price when production facilities are designed to meet the needs of a particular community. Albert came to Washington for the Gasohol Caravan which I hosted in October of last year to share his message with the Nation. He drove his own farm tractor, which runs on 100 percent alcohol, right up to the Capitol steps. In January, Albert returned to testify at Appropriations Committee oversight hearings to provide firsthand information on alcohol fuel production. I would like to share his story with my colleagues. I ask that this very helpful statement and comments also be printed in the RECORD.

The material follows:

[From the Washington Post, Apr. 20, 1978]

EX-MOONSHINER MAKING AUTO FUEL

(By Jack Anderson)

While the nation's big brains fuddle over the energy crisis, a reformed Alabama moonshiner and a former civil rights worker have teamed up to build a different kind of still that is beginning to provide their neighbors with a cheap and efficient substitute for gasoline.

Albert Turner, a black man once close to Martin Luther King Jr., and Albert Hubbard, a white man formerly in the bootleg business, have demonstrated on a minor scale the feasibility of producing auto fuel from corn alcohol—an idea that has been opposed by the oil tycoons and shrugged off by federal energy czar James Schlesinger.

The product from this jerrybuilt still in the Alabama piney woods country has been tested with excellent results. And the backwoods entrepreneurs intend to market their alcohol fuel soon for 65 cents a gallon.

This will confound the ivory tower experts in Washington who have insisted that such fuel couldn't be produced for less than $1 a gallon and was, therefore, economically impractical.

Furthermore, in these days of multimillion-dollar government boondoggles, Turner and Hubard built their pilot plant and began production for less than $12,000 out of a federal grant of $82,000 from the Office of Minority Business Enterprises.

We sent our investigative reporter, Hal Bernton, to work on the still and report back how it's doing. It was constructed primarily of junkyard materials not far from Selma, Ala.

Turner heads a small black cooperative that will operate the backwoods distillery. He evolved the idea in consultation with a Minnesota scientist named Alan Zithamer.

A private firm offered to build the still for Turner for $60,000. Instead, Turner and his associate constructed it for one-fifth that cost. A piece of old steel pipe was used as a column; an old garbage container was converted into a giant boiling pot for the corn mash, and a large gas storage tank became the fermenting vat.

Treasury agents, who monitor the project to make sure it doesn't produce cheap rotgut for people, were skeptical that it would ever produce the high-proof alcohol necessary for auto fuel.

But last November, Hubbard happened on the scene. The 47-year-old ex-moonshiner from the piney woods hadn't practiced his illegal craft for 20 years, but he hadn't forgotten it. Intrigued with the idea of providing inexpensive fuel for farmers, he suggested several major design changes. He was hired on as a consultant.

Our reporter found the experimental plant off a main highway leading out of Selma. Hubbard was hard at work, testing a batch of fermenting mash that would be run through the still.

He inspected the thick mixture of corn, yeast, enzymes and water, perhaps out of past habit, pronounced it unpalatable for drinking purposes. But his moonshine was intended for car engines.

Using large slabs of discarded cuttings from the local saw mill as firewood, Hubbard heated up the still. The alcohol in the corn brew began steaming off through a series of pipes to an old car radiator salvaged from the junkyard. Then the water-cooled alcohol condensed back into liquid and ran down to a storage tank.

The tank is securely locked and can be opened only by Treasury agents and a security guard. Samples of the final brew are tested daily for strength; it tests out about 180 proof.

For the moment, Turner dispenses his experimental fuel in informal, country store fashion. A local minister drove up to the still in his green Impala Chevy. Turner cried out in mock alarm: "Preacher, you caught me in the act. Come on up and try some."

The visitor agreed to test the product, and a gallon was blended with the regular gasoline in his tank. As he purred away, Turner grinned at our reporter and predicted: "Once the preacher gets hooked on this stuff, the whole congregation will go for it."

Those who have tested the brew in their cars insist it increases the engine power noticeably and makes the motor "sound like it had a tuneup." Barring hitches, Turner intends to erect a one-pump filling station on the property, and begin selling the alcohol fuel on a limited scale. Eventually, he hopes to expand the distillery.

[Southwestern Alabama Farmers Cooperative Association]

STATEMENT OF ALBERT TURNER, MANAGER, SOUTHWESTERN ALABAMA FARMERS COOPERATIVE ASSOCIATION, SELMA, ALA.

COMMUNITY APPROACH TO ENERGY ISSUE

Senator BAYH. The next witness will be Mr. Albert Turner, manager of the Alabama Southwestern Farmers Cooperative Association, Selma, Ala.

Mr. TURNER. Senator Bayh, my name is Albert Turner.

Senator BAYH. Good to see you again. Did you bring your John Deere with you this time?

Mr. TURNER. I left it at home. [Laughter.]

I am the manager of the Southwest Alabama Farmers Cooperative. It is a small farm cooperative that is located in the black belt of Alabama.

I come today not to place the blame on you fellows who do all the reports. I am here for another side of the coin. Presently, we are for the urban pilot project to produce alcohol and to see just what can we do with it opposed to just studying it.

Of course, as you may know, I do not have with me any prepared notes to turn in after my presentation, because we are very informal to a certain extent in what we are doing. We feel that this has a very, very great impact on the possibility of using alcohol as a fuel economically.

I will approach my testimony from the view of a small city, with a very small distillery, and with all the raw material in very close proximity to the plant. Also with distribution of this alcohol or this motor fuel, not being considered at all in terms of alternates.

But it is there, distribution will be directly from the plant. I feel very strongly that this approach to the energy issue is very important. If you want to call it some type of name, I would guess I would call it the community approach.

I would like to speak from that experience and I would also like to give you a few examples of the experiences that I have had. We have made some alcohol, and I have with me a little bit of the alcohol that we made as a motor fuel simply to prove that we made some and that what we have made is burning in automobiles and tractors.

Of course, we have proof. We had open house last Thursday. We had open house at our small plant, which is a plant that produces about, roughly, 100 gallons of alcohol within a 6-hour period.

We have a plant with a batch capacity of 1,000 gallons of mash. This 1,000 gallons of mash will produce about 90 gallons of alcohol. This is a very small plant. Of course, we did not have adequate funds when we first began our plant, because the idea did not have very much support.

We would like to be looked upon as we are. Of course, when other funds become available so that we can have a larger plant, a more up-to-date plant, we will be very glad to be looked at from that level.

But we felt a lot of questions needed to be asked, and somebody needed to get out and do something to check into some of these things because, personally, I feel that there is quite a bit of research already done on using alcohol as an energy source.

It has been very surprising that none of the speakers today have referred to the research that has been done. For instance, eight States in the Midwest in the thirties actually produced alcohol and sold it to each other. In my research, I did not find

that there was any serious problems in terms of the alcohol for farming. There may have been a few problems in other fields that caused this plant to go out of existence, but the alcohol performed very well and, of course, nobody ever mentions these types of things.

WOOD USED AS FUEL

We also found we would use wood as a fuel to convert our alcohol into a vapor. We find that this is very economical from our way of analyzing it. Of course, I may not raise all the scientific things that everybody else would consider; but we use wood that has no value in the area where we live.

We would call it slabs. We can obtain this wood for little or no cost. We put a wood value on it of $7. This is enough heat to convert 1 ton of corn into 90 gallons of alcohol.

This is not theory. This is what we are actually doing. So we take 7 dollars worth of energy to make 90 gallons of alcohol from 1 ton of corn.

We also use about 1 dollar's worth of yeast, 1 dollar's worth of ore, 2 dollar's worth of enzymes and 2 dollar's worth of acids.

The corn itself is based on $2.50 a bushel and this is ground corn when we receive it in the form that it comes in. When we put those factors into the equation, trying to arrive at some type of cost, the cost of producing it at 90 gallons of alcohol turns out to be $113.

LABOR COSTS

Of course, we didn't pad into it the cost of labor. But adding the cost of labor, I estimate it takes about 6 hours to produce this amount of alcohol. So giving a man $4 an hour to produce it, we are talking about $25 at the most.

One man could do this operation once it is organized.

So we still haven't arrived at any more than maybe, at the most, $135 to produce 90 gallons of alcohol. Of course, we did not consider going anyplace to get our material. When I have to carry my cows from the stockyard, nobody pays me to carry them. I have to carry them myself.

If we assume we put a plant in the proximity of where the product is grown, then the farmer would be happy to bring his crop to the plant. We have to carry our soybeans to the plant and everything else.

We didn't consider that because we are talking about being in a general area where people could bring their crops, not that we add a figure in for actually distributing our alcohol to the farmer or to the buyer.

We will give the consumer, when they come by the plant, a pump that would mix alcohol and gasoline as you want it. In other words, you could push a button and get $2 or get $10 of gasoline out of our pump.

We would do that, or the farmer could pick up his alcohol as he brings his products in. This approach eliminates the cost of distribution of the raw material.

But using that as a means of arriving at a cost of production, 90 gallons of alcohol, this is ethanol alcohol, given the formula of $2 a bushel for preground corn, would cost us $135 to produce.

We could sell sour mash back as a feed and the sour mash would bring for a ton of corn $108, selling at the rate of $6 a hundred pounds; that is, the dry biomass back as feed.

I am sure we would sell it for that inasmuch as we pay $5 for the corn in the beginning.

So we have $108 for that ton of corn, then we subtract that from the $135. So the biomass itself would pay for the cost with the exception of roughly $25. All we need to do is make $25 off of the 90 gallons of alcohol and we will have broken even at least and all of the rest of the cost of the alcohol in my opinion could be applied to the cost of the plant or some cost of the profit.

I am willing to be questioned, but this is the analysis that I made. It is a true analysis and it will stand up if you consider the things that I have considered in cost.

So what I am saying, if we sold alcohol, that we made today for 60 cents a gallon, we would obtain $54 for the 90 gallons of alcohol that would be put with the $108 for the biomass of byproduct that we resell. That total combination of things would come to us a total price of $172 for biomass and alcohol sold at 60 cents a gallon and the cost of producing that, the way we talk about it, is $135.

This is not a big factory approach, but I think we have got to consider this approach also and if we do consider this approach, we will find that a lot of people will be helped.

WASTE CROPS

We also have to consider that there are numerous crops in my area in particular that have no value to us at all. They are waste crops. For instance, corn gets wet, molds; corn is diseased or watermelons or peaches or grapes; and all of these types of things happen because of various weather conditions, and so forth. They cannot be used for anything.

If we would create a situation whereas the farmer could simply use these type crops as the swap out, if nothing else, for his energy, bring two bushels of corn and get two gallons of alcohol and leave us half a gallon. These type of approaches could be used to help small farmers in particular or farmers in the type of situation that I am in.

In fact, this approach could even work in the Midwest where there are large farmers who could take their waste crops and swap them at least, for their fuel they use in their vehicles.

All of this research is for the hogs. Really and truly, the men may not know it, but I have got a John Deere tractor that I own personally that is 40 years old and we did nothing to that tractor, but cranked it up on some gasoline and one tank and had alcohol in another tank that they made from the factory like that 40 years ago and switched it when the tractor got to running and we have been able to burn alcohol that is 100 proof in that tractor, with no modifications at all.

I have also been able to burn alcohol in a 1975 Ford pickup truck that I personally own that is 100 proof by simply pouring it in the tank of the car with no type of modification to the engine at all. And I haven't had any trouble at all burning that alcohol.

I think a lot of the studies and a lot of the theories, I don't know what happens if I did this for 100,000 miles, but I do know Nebraska has done a 2-million-mile study also and, according to their study, they find no problems in alcohol as a blend.

I think what we need to do is go ahead and convince this country that if they want to alleviate that deficit that was created by imported fuel, that they should go about now and immediately start burning some alcohol that can be immediately made.

It does not need to take till 1985. We received a small grant in July and, of course, we are presently now making alcohol, not being delayed 3 months trying to get some legal documents from the AFT and we are burning the alcohol we are making.

We could immediately start doing something about the energy problem by setting up small plants that could easily be set up, easily be operated and that cost very little money.

I doubt that our plant cost $2,000. The way we constructed it, we made it ourself and we are making alcohol in that plant. They can make better plants than we have got, plants that are more efficient.

But then these type of plants could also serve a very valuable need in low income areas where people need fuel and can make it themselves.

ALCOHOL, TOBACCO, AND FIREARMS REGULATIONS

One other thing that nobody addressed today, and I don't know if these figures take this into consideration, but there is a problem with ATF, the alcohol, tobacco, and firearms people.

These people regulate alcohol very viciously and I think if you ever get into real alcohol production, someone is going to have to deal with the ATF regulations in order to produce alcohol that can be used as a motor fuel.

This is probably one of the biggest hassles I have. It was trying to obtain the legal permission to produce the alcohol because I had to meet so many ATF standards and they were afraid we were going to make alcohol for human consumption.

So this is one thing that I think will be a serious problem. We have to be bothered. It takes excessive money. I don't know if the professors have considered the cost of bonding in their figures or not when they talk about producing alcohol as a motor fuel or whether they feel it will be large enough that ATF does not regulate. I don't know. I am just speaking from experiences that I have run into trying to operate a small plant.

FOREIGN USE OF ALCOHOL FUELS

A lot of the questions at this time cannot be answered by our operation because we simply got started, we just got started. But personally, I think of most of the persons already announced that all the foreign countries are using alcohol now.

Brazil, Germany, and the International Harvester made a tractor that would burn off alcohol completely for the Filipinos. So they made one that was doable for the Filipinos. They can make one that we can use, too. All of these things are being done in other countries.

We are supposed to be a superior country with superior brains. I see no reason why Germany has been able to produce alcohol as a motor fuel and use it very effectively, along with small, undeveloped countries, and we are still sitting here debating about whether it is feasible, whether it is practical or whether or not it is economical. I think when you consider what medicine should cost a certain amount, you consider all of the factors in it; not consider just the factors of producing that physical medicine.

I come to Washington basically to tell my story, not to give a report in writing, because I haven't had any time. I have been making alcohol. [Laughter.]

And I can write, if I have to write, but I just wanted to simply be here today to let people know that there is somebody doing more in this field than simply sitting in laboratories trying to find a way that alcohol will not work, instead of talking about all of the pluses.

Senator BAYH. Mr. Turner, I find it rather refreshing to see someone like yourself, sort of following the philosophy that I recall first having presented to me, I think, in about the first grade. It might have been in kindergarten. There was a story of a little train that said, "I think I can, I think I can, I think I can," and this positive approach, I think, is what we are going to have to have; not only in this area, but in the wide variety of al-

ternative areas that compose our energy problem and opportunity.

Let me ask you just a few very specific questions to try to take advantage of your operational experience in the field.

SUPPLY PROBLEMS FOR CURRENT DISTILLERY

Have you had any problem or do you anticipate any problem in getting a constant supply of whatever is necessary to keep your distillery operating?

Mr. TURNER. Presently our volume is so small it is difficult to answer that question specifically. But with a general knowledge of the area that I live in, my personal assessment of the raw material would be that we will have more that we could digest unless somebody would put up a multimillion dollar plant there.

We could find enough cucumbers, for instance, that we already grow, that have no value, to probably make all the alcohol we are making at the present point. In addition there are so many crops that are there, that man just considers a waste. That is just a fact of life.

These guys could be preserving these raw materials for a profit and to make alcohol. But we live in an area where there is plenty of water, there is plenty of wood, where there is plenty of land and there are plenty of people.

We have got a lot of labor, cheap labor, if it is necessary. We have got a lot of what you call small farmers who own their own land and their own manpower, what have you, which makes this type of approach a great approach.

MARKET POTENTIAL OF ALCOHOL FUEL

Senator BAYH. Let's look again at your approach right there is Selma. Let's not talk about the million dollar plant. Let's talk about the Albert Turner baby. You will get enough supply.

Do you think you will be able to find enough people to buy the product? If you can get a consistent supply, a consistent demand, then it seems to me you have the two indispensable ingredients.

Mr. TURNER. We had our open house Thursday. We had four probate judges visit us from the surrounding counties. We had also the mayors of the small towns and people from the school boards. These people have very large needs for fuel, police departments, where we could simply drive 10 miles maybe, and put 100 gallons of alcohol into their 1,000-gallon tank that they already have.

These type of people are very willing to buy. Presently, to be honest with you, the big problem I have now is everybody is wanting to know when I am going to put some on the market.

Personally, I think the demand for alcohol in that general area, is a new idea I would like to say. They don't know if you go back to the thirties it was used, and so forth. They think this is a new venture.

Of course, people are very enthused at this point and I foresee no problem at all marketing the alcohol within a very reasonable distance because so many people there will use this product and people from the street.

Our general membership will be glad to put this alcohol into their own farm vehicles and a lot of farmers have those 40-year-old tractors like I have got, that they simply could burn alcohol as a fuel to farm without any motor conversion whatsoever.

There is one other thing I would like to point out while I am stating this. People talked today about the fact that we would use too much land or so much land would be necessary to produce this alcohol that the fertility of the soil would be run down.

CROP ROTATION

But I think what they have not taken into consideration is that we could use rotation crops. For instance, we could use a soybean crop or legume type crop that would build the ground and follow that crop with the wheat at winter, that needs fertilizer.

So what I am saying is, even though we would be taking something away from the crop, we also could run a cycle of crops that would by nature put nitrogen into the earth.

Another thing that most people have evaded today is the fact that we can grow sweet potatoes, white potatoes, or sugarcane, beets or something that would produce probably 20 or 30 tons of products per acre where corn would produce but maybe 5 tons, whatever the tonnages are.

But what I am saying, there are many crops that would take little land and have high density production, along with the fact that if a farmer really was able to market this crop instead of him going, growing soybeans for 3 months out of the year, this land being out the rest of the year, he probably could produce three crops off that same acre of land if he had somewhere to sell it.

So we really don't have all of these problems that people seem to be putting up about the fact that we have run out of land, we have run out of these kinds of things because so many things we are not producing and there is so much land that is in production part of the time that could be in production all of the time if there was money value to it.

I wanted to point this out today while I had this opportunity because nobody has alluded to that fact that there are crops like sweet potatoes, artichokes, white potatoes, or crops like soybeans, that are soil builders that could be followed by another crop that is a soil tearer down.

So we don't need to put the residue of the stalk back into fertilizer, just alternate crops and then the ground will build the ground back up and these crops could still be used for fertilizer.

Senator BAYH. Your project is presently funded under the Office of Minority Business Enterprises in Commerce.

Mr. TURNER. That is right.

CURRENT PLANT POTENTIAL

Senator BAYH. Is it your plan or do you anticipate that from what you now know in the early stages that you will be able to make this plant function in a way that you can get the return on investment and repay the capital as an organization might if it did not have the support of OMBE?

Mr. TURNER. At the present time, the project in its present stage has not been funded to a tune that would allow it to be large enough to produce any matter that would bring the return back necessary.

It will be necessary, we hope, and anticipate the fact that his plant will be expanded to a size that be large enough to produce enough, what we might say volume, to make a return.

We feel that it is very necessary for us to have accepted a small amount of money that we did accept to get the ball rolling. But we anticipate and we hope that as a result of these type hearings, and so forth, that we can get a plant that will be economical, feasible in terms of size and volume.

But 100 gallons of alcohol a day would not bring a return back sufficient to retire the type of capital that is necessary at this point even though we have got very little money invested in the equipment, or what have you, but in order to really have a plant that is large enough to be feasible in terms of dollars, we need additional funding to make a larger plant.●

DEUTCH REPORT ON NUCLEAR WASTE

● Mr. PERCY. Mr. President, I recently submitted a statement to the distinguished chairman and ranking minority member of the Subcommittee on Nuclear Regulation, Senators HART and MCCLURE, in their hearings on nuclear waste disposal. I wish to share that statement with my colleagues.

These hearings provided an excellent record of public and private opinions on nuclear waste issues. I commend the subcommittee for having assembled a superb base for further legislative work.

I am currently working with a number of experts on this subject in Illinois and in the rest of the country to produce legislation on nuclear waste. The goals of this legislation will be to set specified target dates for decisions by the Department of Energy in its waste program, and to make provision for congressional and State review of DOE decisions. I am also working with Senators MATHIAS and GLENN to set up hearings on these and other organizational aspects of solving nuclear waste.

Mr. President, I ask that the text of my statement before the Subcommittee on Nuclear Regulation be printed in the RECORD.

The statement follows:

STATEMENT OF SENATOR CHARLES H. PERCY

Chairman Hart, and distinguished ranking minority member Mr. McClure, I thank you for this opportunity to testify before you today on the pressing question of nuclear waste management.

This nation is committed to the use of light water nuclear reactors for production of electricity. Nuclear power is now an essential part of the mix of generating capacity many electric companies employ. Nuclear plants have performed admirably when needed recently during the coal emergency.

The generation of atomic power entails the production of highly toxic and long lived wastes. Unfortunately, our energy officials and the industry have yet to show the same ability to deal with these wastes that they have shown in running nuclear power plants. We have postponed a solution to waste disposal for twenty and more years, as the wastes from defense programs and commercial programs accumulated.

It is no longer possible to wait. A well-justified sense of alarm about nuclear wastes has surfaced in California, Illinois, New England, and other locations. If the Congress and the Administration do not move ahead and set the framework for a waste disposal industry in the next year or two, growing public concern may lead us to a wrenching confrontation on this issue.

I myself became alerted to the consequences of the waste issue in Illinois last fall, thanks to the efforts of Illinois Attorney-General William Scott. Attorney General Scott pointed out numerous deficiencies at low level waste and spent fuel storage sites in Illinois.

In December, the House Subcommittee on Environment, Energy, and Natural Resources held a day of hearings in Chicago. At that time I pledged to hold Government Affairs Committee hearings on waste, and to develop comprehensive waste legislation. Since that time I have developed an outline for legis-

lation, and have begun work with Senator Mathias to set those hearings.

I wish to take the opportunity presented by this hearing today to evaluate the recent report of the Department of Energy Task Force for Review of Nuclear Waste Management in light of our own developing recommendations.

John Deutch, Director of Energy Research at the Department of Energy, has produced a valuable and informative report on the waste issue. He and his task force have been able to define the major issues before us.

However, I myself feel, and I detect among many associated with the waste issue, a growing sense of frustration at the lack of final decisions on a waste program from this and earlier Administrations. I find myself disappointed that the Deutch Task Force has raised questions but not answered them. The Task Force produced no major legislative recommendations. Its major findings are that the target date for an operational waste repository will slip three or more years to 1988, and that DOE will need additional funds to handle waste. There is no final decision on the October spent fuel policy, no policy on international fuel storage, no discussion of the role Congress should play, and indecision concerning who in DOE is to run the waste program.

I appreciate the time constraints of this review, and I applaud DOE's wish to maximize public, agency, and Congressional input into policymaking. But some may construe this task force report as showing an inability by energy officials to make the decisions on waste. It may bring into question the resolve of the Administration to finally get the government moving on nuclear waste.

In the face of the current situation, I believe the Congress needs to start its own policy initiatives. For that reason I am developing legislation containing the following major provisions:

Waste responsibility must rest at a high administrative level.

Waste activities should rest with an Assistant Secretary of Energy, and not with a Deputy Assistant as the Deutch report proposes. Congressional confirmation of the top wate official will elevate the importance of the waste task.

DOE should meet legislatively specified targets for waste decisions.

In another few years this or another Administration may wish to start again with a basic waste policy review, as the President has done with the Deutch task force. The way around indecision is for Congress to mandate that DOE develop by set dates plans for decisions on site selection, technical criteria, and financial arrangements.

Congress must have a decisionmaking, not a consultative role in waste decisions.

The Deutch report does not address Congress' role. I propose that DOE plans be submitted to Congress for review and veto under a mechanism similar to the legislative Reorganization Act. Waste is a national issue, and the ultimate decision on waste must be national, not local. Congress is better suited than the Executive Branch to respond to state and local views and reach decisions that reflect a national consensus.

States should receive decisionmaking roles in important aspects of a waste program.

DOE's attitude may be that of a project manager concentrating on technical details, with states seen as public-relations problems. States can and should be given more of a management role in deciding specifics of a project within their borders once a siting decision is reached. The debate on the states' role has focused singlemindedly on the question of ultimate Federal preemption. We have forgotten that states know far better than Washington does about land use, transport, and geological conditions within their borders. The Department should allow states not just to review DOE plans, but to lay out plans for repositories within their borders, within the scope of DOE and Nuclear Regulatory Commission criteria. To deprive states of authority is to force them into an adversarial and obstructionist role, to the detriment of the overall program.

The Federal government should assert responsibility for long-term care of all wastes.

The Deutch task force has taken this step. In one of their few legislative recommendations, they suggest that DOE take responsibility for commercial low-level waste sites (the only operating facilities not now under DOE control). As Senator from a state whose residents have had reason to worry about perpetual care of low-level waste at the Sheffield facility, I praise this recommendation.

Taxpayers should not have to pay for waste-related costs.

The Deutch task force recognizes that users should pay all the anticipated costs of waste disposal, and I wholeheartedly agree with this finding. The best way to implement it is to establish a dedicated trust fund to pay for all waste costs. Only establishment of such a fund can ensure the Treasury is not left holding the bag at some future point. In addition, users should pay for all relevant costs, including research and development.

Mr. Chairman, I thank you for the opportunity to participate in this hearing. I look forward to seeing the results of your Committee's review, and to working with you on development of waste legislation this session.●

LIBRARY OF CONGRESS ANALYSIS OF TAXATION OF AMERICANS WORKING OVERSEAS

● Mr. KENNEDY. Mr. President, the Library of Congress has recently completed an analysis of pending proposals for tax relief for Americans working overseas. The analysis shows that many of the pending proposals are excessive compared to the relief that could be justified on the basis of cost-of-living differentials between the United States and foreign nations.

I welcome the study as a useful and impartial economic analysis that will help the Senate deal with this complex tax issue. It is a good example of the sort of factual economic analysis needed on many other subsidies in the tax laws. Far too many tax-spending programs are simply a waste of scarce Federal dollars.

Prior to 1976, section 911 of the Internal Revenue Code allowed Americans working overseas to exclude up to $25,000 of income a year from tax. Under the Tax Reform Act of 1976, the exclusion was reduced to $15,000 and other aspects of the prior law were tightened. In 1977, as a result of lobbying pressure from overseas groups affected by the tax, Congress delayed the effective date of the changes for a year. H.R. 9251, the bill reported recently by the Senate Finance Committee and now awaiting action by the full Senate, would soften the 1976 reforms by granting a general deduction to overseas American workers for living costs and special additional deductions for housing and education costs.

The cost to the Treasury of the tax relief provided in the pre-1976 law is $498 million a year. The 1976 reforms reduced the revenue loss to $180 million. H.R. 9251 would increase the revenue loss to $310 million. A modified version suggested by the Treasury Department would produce a revenue loss of $255 million.

The Library of Congress economists compared each of the alternatives to a "neutral" standard under which the U.S. tax laws would neither encourage nor discourage workers fom accepting jobs overseas. By this standard, there would be no tax inducements for workers to take jobs overseas. But if they chose to accept such jobs, they would suffer no tax penalties because of higher foreign living costs.

Using the neutral standard, the study found that each of the alternatives being discussed would produce lower U.S. tax liabilities for overseas Americans, thereby encouraging American workers to take overseas jobs. According to the study, providing no tax relief at all for such cases would come closer to the neutral standard than any of the alternatives analyzed.

The study was particularly critical of an aspect of the proposals which keyed tax relief to cost of living differentials between foreign nations and average U.S. costs. To avoid discriminating against domestic workers assigned to jobs in high cost American cities, the study said that differentials for foreign workers should be based on the highest cost regions of the United States.

The study noted, for example, that the cost of living is essentially the same in New York City, Boston, Hong Kong, and Tehran, Iran. Yet the pending proposals would grant thousands of dollars in tax deductions for workers in Hong Kong and Tehran that would be denied to workers in New York City and Boston. The study said:

> Allowing deduction of living costs in excess of average costs in the U.S. would be unfair to the large number of Americans who live in areas or cities within the U.S. where the cost of living is higher than the average.
>
> A provision which allows a $5,060 deduction based on cost of living for a family in Tehran and which does not allow a similar deduction for a family in Boston with an equal income and facing similar living costs, or for a similar family in New York, Honolulu or Anchorage where living costs are even higher, is inconsistent with standards of horizontal equity.

The study was also critical of a feature of H.R. 9251 which would allow a full tax deduction equal to the foreign cost of living differential. The result, said the economists, would be to leave foreign workers better off than domestic workers. The experts said that the cost of living deduction should be taken against the worker's average tax rate, rather than allowing a deduction from

the worker's top tax bracket rate. For a $25,000-a-year wage earner, said the analysts, a U.S. worker will have "real" after tax income of $15,000. Under the Senate Finance Committee deduction, his real after tax income would rise to nearly $17,000 if he accepted employment overseas.

The study was also critical of the bill for allowing "double dip" deductions by providing separate tax adjustments for housing costs as well as the cost of living. Housing costs should be included in the overall cost of living adjustment, the study said.

In addition, the study rejected arguments that additional tax relief for overseas workers was necessary to achieve other economic goals such as reducing unemployment, promoting U.S. exports, or protecting the competitiveness of U.S. firms operating overseas. As the study concluded:

There is no clear evidence that artificially encouraging Americans to work abroad through the tax code serves any identifiable national purpose. Therefore, the resulting increased "competitiveness" of American firms and citizens in foreign locations appears to be at the expense of other Americans—through higher and more inequitable taxes and through less efficient allocation of economic resources.

Mr. President, I ask that the study, prepared by Jane G. Gravelle and Donald W. Kiefer, Specialists in Taxation and Fiscal Policy in the Economics Division of the Library of Congress, may be printed in the RECORD.

The study follows:

U.S. TAXATION OF CITIZENS WORKING IN OTHER COUNTRIES: AN ECONOMIC ANALYSIS

(By Jane G. Gravelle and Donald W. Kiefer, Specialists in Taxation and Fiscal Policy, Economics Division, Congressional Research Service, Library of Congress, April 20, 1978)

(The Congressional Research Service works exclusively for the Congress, conducting research, analyzing legislation, and providing information at the request of Committees, Members and their staffs.

The Service makes such research available, without partisan bias, in many forms including studies, reports, compilations, digests, and background briefings. Upon request, the CRS assists Committees in analyzing legislative proposals and issues, and in assessing the possible effects of these proposals and their alternatives. The Service's senior specialists and subject analysts are also available for personal consultations in their respective fields of expertise.)

SUMMARY

The combination of changes to section 911 of the Internal Revenue Code in the Tax Reform Act of 1976 and a recent Tax Court ruling that certain cost of living allowances are fully taxable has increased the U.S. tax liabilities of some citizens working abroad, and in some cases by substantial amounts. The resulting controversy has led to the delayed implementation of the section 911 revisions, and both the Senate Finance Committee and the Treasury have proposed changing the tax provision affecting foreign Americans from an income exclusion to a cost of living adjustment. This study evaluates the alternative policies according to the principles of tax neutrality, tax equity, and the achievement of national economic goals.

The principle of tax neutrality would recommend taxing overseas workers in such a way that the U.S. tax system provides neither an inducement nor a discouragement to U.S. workers in deciding whether to accept employment abroad and to U.S. employers in deciding whether to employ American workers abroad. This principle requires a tax adjustment for Americans working in foreign locations with very high living costs because of the progressive rate structure of the U.S. tax system. However, to achieve neutrality the tax adjustment for overseas workers should not be a deduction equal to the foreign cost of living differential, because such a provision would make a foreign worker better off than a domestic worker. The tax neutrality concept requires that a foreign worker's compensation for higher living costs should be taxed at the effective tax rate which would apply to the worker ignoring the cost of living compensation. Furthermore, the adjustment should be made only for the cost of living in excess of the highest cost locale in the United States.

By this standard all of the present alternative tax treatments of U.S. citizens living abroad are nonneutral. The prior and present versions of section 911 are nonneutral because they provide flat across-the-board allowances to foreign taxpayers which are unrelated to foreign cost of living differentials. The Senate Finance Committee proposal (H.R. 9251) is also nonneutral because it provides a separate tax adjustment for housing costs rather than a single cost of living adjustment, allows outright deductions of cost of living allowances rather than applying the appropriate effective tax rate to the allowance amount, bases the allowances on the average cost of living in the U.S. rather than on the highest cost of living locale, and also bases the allowances on an assumed salary of $22,000 rather than on actual salary. The Administration's proposal is also nonneutral because it would make no general cost of living adjustment, and its allowances for housing costs and travel would not be based on the highest cost U.S. locale, nor would they be subject to the appropriate effective tax rate of the taxpayer. Example calculations show that, with the exception of the present section 911 with regard to upper income taxpayers in higher cost of living foreign locations, all of the alternative policies yield lower U.S. tax liabilities for overseas Americans than would a neutral tax adjustment. Of the five alternative policies examined, disallowing any tax adjustment for foreign taxpayers appears to most closely approximate the tax neutrality result overall, although the present section 911 produces results closer to the tax neutrality standard in higher cost foreign locations.

There are two aspects of tax equity which are usually considered: horizontal equity, or the equal treatment of those in equal circumstances (generally defined as those with equal incomes), and vertical equity, which is concerned with how the tax burden is distributed across income classes. In general, the points regarding tax neutrality also pertain to the consideration of tax equity. Thus, to avoid discriminating among taxpayers with equal abilities to pay taxes, any cost of living adjustment for citizens working abroad should be based on the highest cost locale within the U.S., and the amount of the deduction should be subjected to the appropriate effective tax rate. Specifically, a provision allowing deduction of living costs in excess of average costs in the U.S. would be unfair to the large number of Americans who live in areas or cities within the U.S. where the cost of living is higher than the average. Example calculations and data illustrate the degree of this inequity with regard to a general cost of living allowance, and also with regard to specific allowances for housing costs and travel. With regard to vertical equity considerations, because citizens working abroad have comparatively high incomes, tax provisions benefitting them tend to reduce the progressivity of the U.S. income tax structure.

The alternative tax treatments for overseas Americans are also evaluated in terms of achieving other economic goals, specifically in terms of achieving other economic goals, specifically in terms of their impact on foreign trade and employment. First, it must be observed that the relationship between U.S. tax treatment of citizens working in other countries and the quantity of U.S. exports is indirect and uncertain. However, even if there were a direct relationship, a tax subsidy would not have a permanent effect on the balance of payments because, under a system of flexible exchange rates, international currency price adjustments will render ineffective policies which attempt to have a long-term impact on a nation's balance of payments. With regard to employment and unemployment policy goals, tax subsidies for overseas Americans do not contribute directly to solving the causes of either cyclical or structural unemployment problems. Even if preferential tax treatment for Americans working in other countries creates jobs in the export industries, under a system of flexible exchange rates this policy will likely accelerate the decline of import competing industries and lead to less employment in those sectors. A recent study by the General Accounting Office performed an economic analysis to estimate the maximum impact on U.S. trade and employment which could be anticipated from the 1976 changes in section 911 and calculated that the impacts would be very small.

An additional argument which has been used in support of section 911 is the impact of U.S. taxes on foreign "competitiveness" of U.S. industries and workers. However, the standard of tax policy with respect to business and employee location decisions should be to achieve neutrality so that tax provisions do not cause distortions in location decisions unless some clear national purpose is served by such nonneutralities. As indicated in the analysis, there is no clear evidence that artificially encouraging Americans to work abroad through the tax code serves any identifiable national purpose. Therefore, the resulting increased "competitiveness" of American firms and citizens in foreign locations appears to be at the expense of other Americans.

I. Introduction

The Tax Reform Act of 1976 amended section 911 of the Internal Revenue Code to reduce the benefits from allowing certain exclusions of income earned abroad under the Federal individual income tax. In addition, the Tax Court has ruled that certain allowances paid by employers on behalf of employees working abroad, which heretofore had been excluded from income by some employees, were subject to taxation. These allowances generally relate to housing, education and travel. The combination of these changes increased the tax liabilities of some Americans working abroad, and in some cases by substantial amounts.

As a result of this effect, considerable controversy has been generated over the issue of the tax treatment of U.S. citizens working abroad. Americans working abroad and their employers have argued that more liberal tax treatment is justified because of high costs of living abroad, particularly for housing, and because of the potential effect of the tax changes on U.S. foreign trade and investment. Proposals have been made to return to the

pre-1976 version of the law; in fact, the implementation of the 1976 changes has already been delayed for one year and may be delayed again. Other proposals have been made to restructure the allowance from an income exclusion to a cost of living adjustment, a change which would alter the level of benefits and the distribution across different groups of taxpayers. This type of proposal has been adopted in the Senate Finance Committee and a similar, although more limited, proposal has been made by the Treasury Department.

Others propose that the present version of the law, reflecting the 1976 changes, be retained, or that no provision at all be made for lower taxation of Americans abroad. These proposals reflect the view that reduced taxation of Americans abroad is unfair to taxpayers living in the United States and that the provision is a nonneutral tax adjustment.

The Treasury Department has estimated the revenue loss from the version of the law prior to the 1976 changes and Tax Court decisions at $563 million. The Tax Court changes reduced this amount by $65 million to $498 million. The 1976 changes reduced that loss by $318 million for a total loss of $180 million. The Senate Finance Committee bill is estimated to cost $310 million, while the Treasury proposals would involve a revenue loss of $255 million.[1] Therefore, in aggregate revenue loss terms, the prior law is the most liberal, followed by the Senate Finance Committee proposal, the Treasury Department proposal and the present law, which is the most restrictive.

In response to the legislative issues, the General Accounting Office prepared a report which focused on the impact of the tax changes on U.S. trade,[2] and the Treasury Department has prepared an extensive statistical study of the current and proposed revisions of the law.[3] The present study, while relying in part on the GAO and Treasury studies, is more general in nature and focuses on evaluation of the alternative policies according to the basic principles of tax policy: neutrality, equity, and achievement of national economic goals.

II. Past and Present Law and Current Proposals

There are four specific tax alternatives which must be considered in an evaluation of U.S. taxation of Americans working in other countries. Section 911, "Earned Income From Sources Without the United States," is the relevant section of the Internal Revenue Code. This section was amended substantially by the Tax Reform Act of 1976; thus, the first two tax provisions which necessitate consideration are section 911 prior to the Tax Reform Act of 1976, and the present section 911. The 1976 amendments to section 911 generated controversy because they resulted in higher tax bills for many overseas Americans. Because of the controversy, implementation of the new section 911 was delayed until January 1, 1977 (the 1976 Tax Reform Act would have made the change effective January 1, 1976) and may be delayed further. Also, alternative tax treatments of Americans working abroad have been proposed. The two most prominent alternative proposals are the Senate Finance Committee proposal which the Committee amended into H.R. 9251 and generally follows the form of S. 2115, introduced by Senator Ribicoff, and secondly the Administration proposal, presented by Donald Lubick, Acting Assistant Secretary of Treasury for Tax Policy, to the Ways and Means Committee on February 23, 1978. These four alternative tax treatments of U.S. citizens living in other countries are described below.

Footnotes at end of article.

A. Prior section 911 [4]

U.S. citizens are generally taxed by the United States on their worldwide income with the allowance of a foreign tax credit for foreign taxes paid. However, for years prior to 1977, U.S. citizens (other than employees of the U.S. Government) who were working abroad could exclude up to $20,000 of income earned during a period in which they were present in a foreign country for 17 out of 18 months or during a period in which they were bona fide residents of a foreign country (sec. 911). In the case of individuals who had been bona fide residents of foreign countries for three years or more, the exclusion was increased to $25,000 of earned income. Further income tax savings could be obtained where foreign taxes were paid on the excluded income because those taxes could be credited against the U.S. tax on any foreign income above the $20,000 (or $25,000) limits.

Under prior law individuals claiming the standard deduction were not entitled to claim the foreign tax credit.

B. Present section 911

The Tax Reform Act of 1976 generally reduces the earned income exclusion for individuals working abroad to $15,000 per year. However, the Act retained a $20,000 exclusion for employees of charitable organizations. In addition, the Act made three modifications in the computation of the exclusion.

First, the Act provided that any individual entitled to the earned income exclusion is not to be allowed a foreign tax credit with respect to foreign taxes allocable to the excluded income.

Second, the Act provided that any additional income derived by individuals beyond the income eligible for the earned income exclusion is subject to U.S. tax at the higher rate brackets which apply if no exclusion were allowed.

Third, the Act made ineligible for the exclusion any income earned abroad which is received outside the country in which earned if one of the purposes of receiving such income outside of the country is to avoid tax in that country.

In addition to the changes made in the computation of the exclusion, the Act provided an election for an individual not to have the earned income exclusion apply. The election is binding for all subsequent years and may be revoked only with the consent of the Internal Revenue Service.

Finally, the Act provided that individuals taking the standard deduction are to be allowed the foreign tax credit.

Under the 1976 Act as originally enacted, the changes in the taxation of Americans working abroad would have become effective for taxable years beginning in 1976. However, implementation of the new section 911 in the 1976 Act was delayed for one year by the Tax Reduction and Simplification Act of 1977. Implementation of the provision would be further delayed by enactment of H.R. 9251, the Tax Treatment Extension Act. This bill is presently pending in the Senate. The House version of the bill would delay effectiveness of the new section 911 for an additional year, until January 1, 1978. The Senate Finance Committee version of the bill would extend the application of the prior section 911 until January 1, 1979, and then would change the nature of the allowances for Americans working abroad to a series of deductions for "excess" living costs as described below.

C. Senate Finance Committee proposal

H.R. 9251 (the Tax Treatment Extension Act) was amended by the Senate Finance Committee to revise the treatment of income earned abroad. Special itemized deductions for excess foreign living costs would be provided in three areas: cost of living, housing, and education. The deductions would be adjustments to gross income and thus would be allowed in addition to the standard deduction. The deductions would generally be allowed only to the extent that the employer pays directly or provides reimbursement for the employee's excess cost-of-living, housing, and education expenses. In addition, employees would be required to file with their returns an employer certification attesting to the fact that the reimbursements are in addition to normal compensation.

Specifically, the bill would allow special deductions as follows:

Cost of living.—The cost-of-living deduction would be limited to amounts set forth in tables prepared by the IRS showing the excess of the cost of living (excluding housing and education) in the particular foreign place over the average cost of living in the U.S. for families of various sizes with an income of $22,000, which will be adjusted for inflation.

Housing.—The excess housing costs deduction would be limited to the excess of the amount expended on housing in the foreign place over an amount representing the housing cost the individual typically would have incurred if he were working in the U.S. For this purpose, typical U.S. housing costs are considered to be an amount equal to one-sixth of the individual's base salary (earned income less excess housing, cost of living, and educational costs).

Educational expenses.—The deduction for reimbursed educational expenses would cover the cost of tuition, fees, books, and local transportation for elementary and secondary education of dependent children at local American-type schools. Reimbursed expenses for room and board would be allowed in situations where no local American-type schools are available.

Charitable employees and employees furnished lodging.—The principal exception to these rules involves employees of charitable organizations, employees who reside in camps because of their employment, and employees who would qualify under section 119 for exclusion of employer-supplied housing (the special deductions are available only if an election is made not to claim the sec. 119 exclusion). These employees are required to deduct, in lieu of their actual reimbursed excess foreign living costs, an amount equal to the average deductions claimed for cost of living, housing, and education by all other taxpayers in that foreign place for the previous year (the educational deduction is limited to the amount actually expended). Appropriate average deduction tables would be issued by the IRS.

Self-employed and employees of foreign businesses.—Special rules are also provided for self-employed individuals and employees of foreign businesses (other than U.S. controlled foreign corporations). Because employer reimbursements are either not possible or not meaningful in these situations, the deductions are not limited to employer reimbursements but rather to the average amount deducted by employees of U.S. companies for the foreign place for the previous year.

D. Administration Proposal

The Administration proposal would allow Americans working abroad three special deductions for costs associated with housing, education, and home travel. The total amount of the deductions would be limited to the amount of earned income from foreign sources. The deduction for housing costs would be nearly identical to the housing deduction under the Senate Finance Commit-

tee proposal. The educational expense deduction would also be similar under the Administration proposal to that in the Finance Committee bill, except that the amount of the deduction would be limited to $4,000 per student per year, and the Administration proposal would allow deduction for two round trips per year between the school and the foreign residence. The transportation deduction, but not the deduction for other educational costs, would also be available for college students.

The Administration proposal would not allow an adjustment for general costs of living. However, it would allow a deduction for one economy round trip fare every other year for each member of the taxpayer's family between a foreign post and the taxpayer's residence, or last place of residence, in the United States.

The Administration's proposal also includes changes in Internal Revenue Code sections 119 (employer furnished meals or lodging), 217 (moving expenses), and 1034 (sale or exchange of residence) to adapt these provisions to the special circumstances of overseas Americans. These changes, primarily affecting the eligibility criteria for the tax benefits under these sections, are not analyzed in this study.

III. *Evaluation in terms of tax neutrality and equity*

Over the years a number of principles or canons of taxation have been developed to offer guidance in developing and evaluating tax policy. As with all such guiding principles, they are primarily ethical and subjective in nature; they cannot be proved or disproved, but they seem to have wide a priori appeal.[5] These principles include concepts such as the tax system should be simple to administer, simple for taxpayers to understand and comply with, should cause minimum interferences in the economy, should raise revenue on an equitable basis, should operate in a manner consistent with attainment of other goals, for example, maximizing employment, and real incomes and minimizing inflation, and, of course, in addition to these other objectives the tax structure should raise the necessary revenue for the operation of government. One of the difficulties of policy making is that it is frequently impossible to satisfy all of these principles simultaneously. For example, a tax provision designed to be the most equitable may be very complicated, necessitating some compromise between the competing objectives. Nonetheless, the various principles serve as useful abstract goals in designing and evaluating tax policy, and they may be employed in the study of the taxation of citizens living abroad.

The two taxation principles which would seem to be the most relevant to this analysis are the principles of tax neutrality and tax equity. The principle of tax neutrality maintains that the tax system should be structured to minimize unintended economic effects. Any tax, of course, will reduce after tax income and thereby affect economic activity, but tax neutrality counsels avoidance of unintended changes in relative prices which would induce substitution of one economic activity for another.[6] The principle of tax equity, of course, prescribes that the tax system should be fair both horizontally (that is, treating people in equal circumstances equally) and vertically (i.e., achieving appropriate relative treatment of those in different circumstances). Obviously, the concept of horizontal equity provides a more objective (although not entirely objective) criteria for judgment; regarding vertical equity, objective analysis can measure impacts but usually cannot offer judgments.

Footnotes at end of article.

A. TAX NEUTRALITY

1. The principle:

The principle of tax neutrality would recommend taxing overseas workers in such a way that the U.S. tax system provides neither an inducement nor a discouragement to U.S. workers in deciding whether to accept employment abroad and to U.S. employers in deciding whether to employ American workers abroad. This principle requires looking at two aspects of foreign employment: foreign taxes and foreign costs of living.

The present U.S. tax treatment of citizens living abroad under section 911 clearly does not achieve neutrality with regard to foreign taxes (for the moment ignoring foreign living costs) because there are tax benefits to working in a low tax foreign country.[7] The low taxes of the foreign host country, combined with the exclusions of section 911, yield a lower tax liability than would be experienced by remaining and working in the United States. Thus, the U.S. tax system provides an inducement to U.S. workers to accept jobs in low tax foreign countries. Because of the operation of the foreign tax credit, the U.S. tax system does not provide incentives or disincentives to U.S. workers with regard to employment in high tax foreign countries.[8]

Examining the neutrality aspects of taxing income of individuals earned abroad in light of widely varying foreign costs of living is less straightforward. In the first place, it must be observed that considering costs of living in a discussion of appropriate treatment under the U.S. tax code is itself unusual. The U.S. tax system is not inflation-indexed to account for rising costs of living each year, nor is the system indexed to account for variation in costs of living among areas within the United States, though such variation is considerable. In the substantial literature on the taxation of foreign earned income of corporations there is no suggestion that U.S. taxes should be lower on income earned in countries where the cost of doing business is higher. Additionally, the legislative history of section 911 suggests that consideration of foreign costs of living is a relatively recent issue in the discussion.[9] Nonetheless, considerable attention has been focused on the high cost of living in foreign countries in the recent discussions of section 911.

To be strictly consistent with the remainder of the U.S. tax code, no special tax treatment should be accorded foreign individual income on the basis of living costs. However, it may be countered that the variation in living costs abroad is larger than the variation within the U.S. (see discussion on pages 37 and 38 for evidence of this fact) and, therefore, the lack of an adjustment for domestic cost of living variations may not be compelling. The question of whether special treatment of income earned abroad to adjust for high costs of living can be defended without also extending such treatment to domestic workers is, thus, an empirical and judgmental question regarding relative variability of living costs.

If costs of living abroad are extremely high compared to the U.S., the combination of cost of living reimbursement for foreign employees and the progressive rate structure of the U.S. tax system may suggest a tax adjustment based on the principle of tax neutrality. The neutrality concept would require that if, in the absence of tax considerations, it would cost, say, 50 percent more to employ a U.S. worker in a given foreign location than in the U.S., then this relative cost differential should also exist when taxes are considered. If the tax structure reduces the differential it would provide an incentive to foreign employment; if the tax structure increases the differential, it would discourage working abroad. If no adjustment were made to the tax liabilities of foreign workers in high cost areas this would increase the cost differential, and thus discourage employment in such areas, due to the progressive tax rate structure. This is because the 50 percent higher wages paid by the employer to the foreign worker to compensate for the higher living costs become part of taxable income. This taxable income will be taxed at higher marginal tax rates under the progressive tax rate structure. Thus, an employer must increase an employee's salary by more than 50 percent to leave the employee with an after tax income which is 50 percent higher.[10] In this sense disallowing an adjustment for high costs of living in foreign locations may be nonneutral.

Given this consideration, how should an adjustment for foreign living costs be structured to achieve locational neutrality? Clearly the adjustment should not be a deduction of an amount equal to the compensation for higher living costs, because such a procedure would make the foreign worker better off than the domestic worker. Consider a domestic worker earning a $20,000 income and paying $5,000 in tax, for an effective tax rate of 25 percent. A U.S. citizen working abroad in an area with a 50 percent higher cost of living would require a $30,000 income to have the same real income before taxes. If the $10,000 cost of living salary adjustment were allowed as a deduction, the foreign worker would pay only $5,000 in U.S. taxes for an effective tax rate of 16.7 percent ($5,000/$30,000). Thus, the foreign worker's after tax income is 83.3 percent of his before tax income and the domestic worker's is only 75 percent even though their real before tax incomes are the same. Their real after tax incomes would be $15,000 for the domestic worker and $16,666.66 for the foreign worker.[11] As an alternative way of looking at the relationship, if the foreign employee is allowed to deduct the cost of living allowance, his employer can pay him a salary in his foreign location of $27,000 (still assuming a 25 percent effective tax rate on income after adjustment) and leave the employee with the same real after tax income.[12] Thus, the tax system would reduce the cost differential to the employer of employing the individual in the foreign location from a 50 percent higher cost to a 35 percent difference.

2. The Tax Neutrality Standard:

To achieve tax neutrality, i.e., a condition in which the percentage differential in after tax employment costs is equal to the before tax differential, the compensation for higher living costs should be taxed at the effective tax rate which would apply to the worker ignoring the cost of living compensation. Under this system, if the cost of living in a foreign location is 50 percent higher than in the U.S., an American citizen who moves to the locality and receives a 50 percent higher salary would pay a 50 percent higher U.S. income tax (rather than more than a 50 percent higher tax in the absence of any adjustment). Another way of perceiving the system is that whatever a worker's effective tax rate in the U.S., if he takes a foreign job and is compensated for the cost of living differential, his effective tax rate would remain constant. Thus, for example, a U.S. citizen who pays 25 percent of his income in Federal income taxes would still pay 25 percent of income in U.S. income taxes if he accepted a foreign job with cost

of living compensation.[12] This system would preserve the relative before tax costs of U.S. versus foreign locations; thus, a location in which living costs are 50 percent higher, ignoring taxes, would also be 50 percent more expensive when taxes are considered.

For illustrative purposes, and for reference in the remainder of this report, it will be useful to specify the mechanics involved in a hypothetical tax provision which would allow neutral adjustments for foreign living costs as described above. This hypothetical tax provision is offered not as a proposal or recommended policy, but merely as a specific reference for measuring the neutrality aspects of the alternative proposals. Such a provision would work as follows:

1. Special deductions from total income would be allowed foreign taxpayers for the costs of elementary and secondary education of dependent children at English language schools. The amount of the deduction would be the minimum cost associated with attaining such educational services at each location (which may be zero in certain English-speaking countries) to include transportation and room and board in areas where no English-language schools are available locally. A specially deduction is required for educational expenses because they will generally not be included in normal cost of living indices and because public primary and secondary education is provided free of charge in the U.S.; thus, a percentage adjustment for costs abroad is unworkable. A special deduction for educational expenses is also more neutral because the tax benefit will be conferred only on those who incur the additional expenses.

2. The Treasury would be responsible for determining each year the amount by which costs of living in relevant foreign locations exceed the living costs in the highest cost of living location in the United States.[14] Based on these determinations the Treasury would devise adjustment factors for each foreign location to be used by taxpayers in determining their "equivalent U.S. income." For example, if the cost of living in a given foreign location exceeded by 50 percent the highest cost locale in the U.S., the adjustment factor for that location would be 66⅔.[15]

3. Foreign taxpayers would multiply their actual adjusted gross income, after subtraction of any foreign educational expense deduction, by the Treasury cost of living adjustment factor to determine their "equivalent U.S. adjusted gross income." Taxpayers who itemize deductions would also multiply their total itemized deductions by the cost of living adjustment factor. They would then compute their U.S. income tax liability based on their "equivalent U.S. adjusted gross income" and adjusted itemized deductions. Their total U.S. income tax liability would then be determined by the following formula: [16]

$$\left(\begin{array}{c}\text{Total U.S.}\\ \text{income tax}\end{array}\right)=\left(\frac{\begin{array}{c}\text{income tax based on}\\ \text{"equivalent U.S.}\\ \text{adjusted gross income"}\end{array}}{\begin{array}{c}\text{"equivalent U.S.}\\ \text{adjusted gross income"}\end{array}}\right)\times\left(\begin{array}{c}\text{Total adjusted gross}\\ \text{income after foreign}\\ \text{educational ex-}\\ \text{pense deduction}\end{array}\right)-\left(\begin{array}{c}\text{Foreign}\\ \text{tax}\\ \text{credit}\end{array}\right)$$

A simple example will serve to illustrate this hypothetical neutral tax adjustment for foreign living costs. Assume a family of two adults and a child has an income, earned by one of the adults and consisting entirely of wages and salary, of $20,000 in the U.S. They move abroad to assume a foreign job with the same company and are exactly compensated for their higher living costs. General living costs are 50 percent higher in their foreign location, and American-type education for the child will cost $2,000; therefore, their income in the foreign location is $32,000.

Under tax law applicable to calendar year 1977, the family's U.S. income tax on its $20,000 income earned in the U.S. would be $2,711 (assuming use of the standard deduction and no special deductions or exemptions). Under the hypothetical neutral tax adjustment provision outlined above its U.S. tax liability in the foreign location would be computed as follows:

Total foreign income	$32,000
Minus foreign educational expense deduction	2,000
Total adjusted gross income	30,000
Equivalent U.S. adjusted gross income ($30,000 x .66⅔) [17]	20,000
U.S. income tax on equivalent U.S. adjusted gross income	2,711
Total U.S. income tax before foreign tax credit (.13555 x $30,000) [18]	$4,066.50

Ignoring the special foreign educational costs, this U.S. tax liability leaves the family with an after tax income of $25,933.50 ($30,000 − $4,066.50). Since this is exactly 1.5 times the family's after tax income in the U.S. of $17,289 ($20,000 − $2,711), the family is left with the same after tax real income. Thus, under this system the U.S. tax structure would introduce no distortion in the relationships between foreign and domestic costs to a company of employee location, and relationships between foreign and domestic incomes to employees. The pre-tax relationships in these quantities would be preserved by the tax system; the tax structure would offer neither an incentive nor a disincentive with regard to foreign location of employees.

3. Evaluation of the Alternatives

Since this hypothetical tax provision would make the U.S. tax system locationally neutral with regard to both foreign taxes and foreign living costs, it may be used as a standard for evaluating the neutrality of other adjustment provisions for overseas Americans. To the extent that taxes in a given location or under specified circumstances under another provision would be less than or greater than the hypothetical neutrality adjustment would suggest, the tax provision would provide an incentive or disincentive to foreign employment.

The prior and present versions of section 911 outlined in section II above clearly are not neutral by this standard. Neutrality requires tax adjustments based on foreign living costs. The past and present versions of section 911 provide flat across-the-board allowances to foreign taxpayers which are unrelated to living costs. Thus, these provisions would make neutral adjustments for foreign living costs only by change in isolated circumstances.

The foreign tax provision in H.R. 9251 is also nonneutral by the above measure, although it may be less arbitrary in impact than the past and present section 911. In particular it would not bestow benefits on low cost foreign locations as do these provisions.

H.R. 9251 includes a general cost of living adjustment and two specialized separate allowances: housing and education for elementary and secondary students.

It is not clear why housing costs should be adjusted for separately rather than built into a single cost of living adjustment as suggested in the hypothetical neutral tax adjustment provision outlined above. A separate adjustment could potentially lead to overcompensation for cost of living differentials because the overall cost of living in a given locale may not be high, but there may be a relatively higher cost of housing as compared with, say, food or local transportation. Since there is no penalty in the proposal for a lower cost of living on non-housing items, an individual could receive a deduction for housing where the overall cost of living is not higher than—or is even lower than—the U.S.

However, if separate treatment is desirable for measurement or administrative reasons, a more neutral provision would allow a deduction based on the housing cost differential between the foreign location and the highest cost location within the U.S., and the amount of the deduction would be taxed at the taxpayer's effective tax rate based on "equivalent U.S. income." To allow an outright deduction overcompensates for the higher foreign living cost, as explained above on page 17.

The cost of living adjustment in H.R. 9251 is also nonneutral because it is based on average cost of living within the U.S. rather than the highest cost locale, and because it also does not apply the taxpayer's effective tax rate based on "equivalent U.S. income" to the amount of the deduction. These aspects of the provision tend to overcompensate for foreign living costs. At the same time, however, the cost of living adjustment is based on an assumed salary of $22,000 rather than the actual salary. Thus, although the adjustment varies by locale, it does not vary by income class, and this factor, looked at in isolation, tends to undercompensate for higher foreign living costs for upper income people. The result of this variety of circumstances is that the cost of living adjustment contained in H.R. 9251 has substantial elements of arbitrariness which, in theory, could overcompensate some individuals and have the potential for undercompensating others.[19]

An additional observation on the tax neutrality aspects of H.R. 9251 is warranted regarding a provision which is primarily administrative in nature. With the exception of employees of charitable organizations, self-employed persons, and employees of foreign corporations (other than U.S. controlled foreign corporations), the bill would allow deductions for higher living costs only to the extent that the taxpayer's employer pays directly or provides reimbursement for the higher costs For purposes of tax neutrality, in attempting to minimize locational incentives or disincentives in the tax system, direct payment or reimbursement by the employer is immaterial. The interaction of the higher foreign living costs and the U.S. progressive income tax are the factors which necessitate an adjustment to achieve locational neutrality; the method of compensating for the higher living costs, or whether they are compensated for, does not affect the appropriate neutrality adjustment.

The Administration's proposal would make adjustments for educational expenses and housing costs similar to those in H.R. 9251, and, therefore, the comments above regarding H.R. 9251 also apply to the Administration proposal. The proposal does not include a general cost of living adjustment for two stated reasons: (1) it would be difficult to administer because of measurement problems, would lead to demands for more tax relief, and add complexity to the tax laws; and (2) a cost of living adjustment for Americans living abroad would be unfair to taxpayers at home who receive no tax relief for wide variations in living costs.[20]

With regard to the first stated reasons, of course, simplicity is frequently one of the tax policy goals with which the goals of tax equity and efficiency conflict and, therefore,

Footnotes at end of article.

some policy tradeoffs are inevitable. It is correct that administration of a general cost of living adjustment might be somewhat complicated; however, the other proposals made by the Treasury also involve complexity. With regard to the second criticism, the element of unfairness (and nonneutrality) with respect to U.S. residents also applies to the housing cost adjustment and to the Administration's proposed travel allowance discussed below. However, under the neutral tax adjustment standard outlined above this problem does not exist because the basis for adjustment is the highest cost locale in the United States, rather than average costs.

The Administration proposal would allow a deduction for the cost of one round trip visit to the most recent place of residence in the U.S. for each family member every two years (two round trip fares per year between school and home are also allowed for college students and pre-college students in boarding schools). This aspect of the proposal seems inconsistent with the Administration's second reason stated above for rejecting the general cost of living adjustment, namely that no such allowance is provided domestic taxpayers even though they may travel considerable distance to and from their place of employment or schooling and "home" to visit relatives. In many cases the domestic trips would cost more than the foreign travel (see discussion on p. 42).

Thus, overall, all of the provisions would result in a nonneutral allowance for the cost of living abroad. The prior and current versions of section 911 tend to favor lower cost of living, low tax countries as compared to the neutral standard and the other proposals. The Senate Finance proposal would tend to favor high cost of living jurisdictions and particularly those which have high housing costs. The Treasury proposal also favors jurisdictions with high housing costs.

4. Illustrative Examples:

In order to explore these relative effects of the different tax provisions more fully, a series of hypothetical examples has been prepared. Table 1 compares tax liabilities under the prior section 911, current section 911, allowing no benefits, applying the tax neutrality standard previously described, and the Senate Finance Committee proposal. This table assumes that housing costs are in line with other costs of living and, therefore, the Treasury proposal will have no impact. Education and travel expenses are not considered because of their special nature. The tables cover income levels equivalent to $25,000,-$50,000 and $100,000 for the highest cost U.S. location of Anchorage.

The table covers five countries with varying cost of living situations: Japan (the highest cost of living area), Frankfurt (which is also a high cost area), Riyadh, Saudi Arabia (whose cost of living is approximately the same as Anchorage), Rome (whose cost of living is lower than Anchorage but higher than the U.S. average) and London (where the cost of living is relatively close to the U.S. average).

The following results can be gleaned from the table:

(1) Prior section 911 departs most from the neutral standard, particularly for lower cost of living locations. It provides substantial tax benefits in every example.

TABLE 1.—COMPARATIVE U.S. TAX LIABILITIES BEFORE FOREIGN TAX CREDIT UNDER ALTERNATIVE PROPOSALS (ANCHORAGE INCOME EQUALS 100)[1]

	Anchorage income levels—					
	$25,000		$50,000		$100,000

No provision[2]	2,898	15.3	8,117	21.5	23,420	31.0
Neutral standard	2 898	15.3	8,117	21.5	23,420	31.0
Senate finance (H.R. 9251)[3]	2,698	14.3	7,803	20.7	23,010	30.5

[1] Assumes joint return, 2 exemptions, itemized deduction equal to 15 percent of actual income. The calculations also ignore the general tax credit since it would be the same under each alternative and, therefore, does not affect the relationships. Housing costs are assumed equal to 16.7 percent of income (average for United States) so that no benefits occur under Treasury proposal. Assumes no travel or education expenses. Equivalent indexes for U.S. urban average equals 100 are: Anchorage, 140; Tokyo, 172; Frankfurt, 156; Riyadh, 142; Rome, 128; and London, 106.

[2] Equal to Treasury proposal under assumptions.

[3] Assumes implementation of proposal will index for cost of living equal to one-half of statutory amount ($11,000).

Source: Indexes are taken from State Department Index, April 1977, Labor Department Index, Autumn, 1976. State Department Index excludes housing.

(2) Current section 911 leads to beneficial taxation at the lower end of the income scale and for lower cost of living jurisdictions as compared with the Senate Finance Committee proposal which tends to favor individuals in the higher cost locations. Both current section 911 and the Senate Finance proposal confer benefits in every case as compared with the neutral standard.

(3) Overall, a policy of no adjustment provision tends to match the neutrality standard more closely than any other alternative.

(4) After the no exclusion option, current section 911 tends to match the neutrality standard most closely at high income levels where the cost of living is higher than the cost in the highest cost U.S. locale. The Senate Finance Committee proposal tends to come closer at lower income levels in lower cost jurisdictions.

Table 2 provides examples for the same income levels and jurisdictions under the alternative assumption that housing costs are twice the percentage of income as housing costs in the United States. This assumption, while somewhat arbitrary, allows analysis of the impact of the proposals, including the Treasury proposal, in the circumstance which has generated the most controversy, namely, the situation of very high foreign housing costs.

The following results can be gleaned from Table 2:

(1) Prior section 911 departs most from the neutral tax standard for the $25,000 income in every case and for other income levels in lower cost of living jurisdictions. The Senate Finance Committee proposal departs from the neutral standard most for the high cost jurisdictions and higher income cases. The Treasury proposal results in lower tax liabilities than prior section 911 in the highest income cases ($100,000 equivalent) in the higher cost jurisdictions.

(2) Prior section 911, the Senate Finance proposal and the Treasury proposal confer benefits in every case, as compared with the neutral standard. Current section 911 also confers benefits except in higher income level, higher cost jurisdictions.

(3) Overall, the no provision alternative comes closest to the neutrality standard in the lower cost areas, whereas current section 911 more closely approximates the neutrality standard in the higher cost areas.

TABLE 2.—COMPARATIVE U.S. TAX LIABILITIES BEFORE FOREIGN TAX CREDIT UNDER ALTERNATIVE PROPOSALS ASSUMING HIGH HOUSING COSTS (ANCHORAGE INCOME EQUALS 100)[1]

	Anchorage income levels					
	$25,000		$50,000		$100,000

	Rome, Italy (114) income level					
	($28,453)		($56,978)		($113,957)	
Prior 911	$400	1.4	$6,715	11.8	$29,742	26.0
Current 911	2,792	9.8	13,078	23.0	37,294	32.7
No provision	5,239	18.4	15,526	27.2	39,741	34.9
Neutral standard	4,894	17.2	14,358	25.2	38,517	33.8
Senate finance (H.R. 9251)[2]	2,578	9.1	8,579	15.1	26,452	23.2
Treasury proposal	3,801	13.4	10,977	19.2	30,227	26.5
	London, England (95) income level					
	($23,625)		($47,250)		($94,535)	
Prior 911	0	0	$4,005	8.5	$21,487	22.7
Current 911	$1,536	6.5	9,090	19.2	29,040	30.7
No exclusion	3,982	16.9	11,537	24.4	31,487	33.3
Neutral standard	3,982	16.9	11,537	24.4	31,487	33.3
Senate finance (H.R. 9251)[2]	2,521	10.7	7,248	15.3	21,600	22.8
Treasury	2,919	12.4	8,181	17.3	23,594	25.0

[1] Assumes joint return, 2 exemptions, itemized deductions, equal to 15 percent of actual income. The calulation also ignore the general tax credit since it would be the same under each alternative and, therefore, does not affect the relationships. Housing costs are assumed to be 33.4 percent of ncome (tcwice U.S. average) (assumed no travel or education expenses). Equivalent indexes for U.S. urban average equals 100 are: Anchorage, 140; Frankfurt, 195; Rome, 160; Tokyo, 214; Riyadh, 177; London, 132.

[2] Assumes implementation of proposal will index for cost of living equal to ½ of statutory amount ($11,000).

Source: Indexes recomputed from State Department Index, April 1977, Labor Department Index, Autumn 1976.

While it is difficult to generalize from these examples, they do suggest certain results. If it were decided to account for greater variability in foreign living costs by reducing taxation in those jurisdictions where costs of living were higher than the United States, a tax neutrality standard has been developed. If this neutrality standard is not a legislative option, then the closest approximation to it among the five alternatives examined would be to repeal section 911 and allow no adjustments for Americans living abroad. This result is substantiated in part by the examples, and also by the fact that the examples are weighted toward high cost of living locations. If this option were not adopted, current section 911 appears to come closer to the neutrality standard than the other options, especially in the case of the higher income levels and higher cost of living locations.

In every case examined, prior section 911 and the Senate Finance Committee proposals confer benefits compared to the tax neutrality standard and therefore provide an incentive to Americans to work abroad. In general, the Senate Finance Committee proposal, and the Treasury proposal to a lesser extent, tend to favor higher income taxpayers. Current section 911 tends to favor lower income taxpayers more than the Finance Committee and Treasury proposals.

As suggested earlier, the Senate Finance Committee and Treasury proposals tend to favor upper income individuals in higher cost jurisdictions as compared to prior and current versions of section 911.

B. Tax Equity

The second major tax policy principle applicable to an evaluation of the tax treatment of overseas Americans is that of tax equity. There are two aspects of tax equity which are generally considered: horizontal equity, or the equal treatment of those in equal circumstances (generally defined as those with equal incomes), and vertical equity, which is concerned with how the tax burden is distributed across income classes.

1. Horizontal equity:

The basic idea behind the concept of horizontal equity is that people with equal income and who are equal in other characteristics deemed relevant (such as family size) have an equal ability to pay taxes. The decision as to what constitutes a relevant characteristic is a subjective one; however, the horizontal equity standard tends in most respects to have a basic intuitive attraction to most people. For example, family size and income are generally accepted as relevant characteristics on intuitive grounds, while hair or skin color is rejected.

Horizontal equity tends in most cases to be consistent with tax neutrality since it generally suggests that individuals not be taxed differently due to, among other things, their patterns of consumption or their choices of investment or employment. Those provisions which violate horizontal equity standards usually tend to violate tax neutrality standards as well, although this result is not always the case.

Whether residence abroad should be considered as a relevant characteristic for horizontal equity considerations is, of course, a subjective question. In general, location has not been viewed as a relevant characteristic in the United States in terms of horizontal tax equity. Thus, it would seem initially that a person earning an income abroad should be regarded as having an ability to pay taxes equal to that of an individual earning the same income in the United States, a view consistent with fully taxing income earned abroad and allowing a foreign tax credit. Under this standard, the past and present versions of section 911 are inconsistent with horizontal equity. In both cases, they allow substantial tax benefits to individuals living abroad which are not available to those in equal positions in the United States. The past version of section 911 allowed tax savings up to a maximum of $12,500 ($25,000 times the 50 percent maximum tax rate). The present version provides savings up to approximately $3,000—a saving not available to people in the United States with similar real incomes.

There are two arguments which have been advanced to counter this general view. The first is based on cost of living differentials. The second suggests that another standard of tax equity, the benefits received principle should govern, or partially govern, in the case of income earned abroad.

(a) General Cost of Living Differentials

Location and the differences in cost of living which result from location choice have generally not been treated as relevant characteristics to the standard of horizontal tax equity in the U.S., and thus a family of four with an income of $15,000 would pay the same Federal income tax whether they lived in different States, in urban rather than rural areas, etc.[21] This approach has obvious administrative advantages, and adjusting taxable incomes for cost of living differentials within the United States has never been seriously considered. Arguments have been made, however, for making such adjustments for those living abroad.

The argument is often made that the variability of cost of living abroad is greater than the variability in the United States. Data from various sources tend to support this argument although they asume that the "basket of goods" purchased abroad will be the same as that purchased in the United States. This method of measurement might tend to increase the apparent cost of living abroad if it includes goods which are in scarce supply or are expensive because they are imported (e.g., Western-style housing in Japan). Using this standard, however, it would appear that there are some very high cost countries and some very low cost ones, and the higher variability of cost of living argument cannot be rejected outright.[22]

Footnotes at end of article.

In general, the points made above regarding tax neutrality also pertain to the consideration of tax equity. Thus, to avoid discriminating among taxpayers with equal abilities to pay taxes, any cost of living adjustment for citizens living abroad should be based on the highest cost locale within the U.S., and the amount of the deduction should be subjected to the taxpayer's effective tax rate based on his "equivalent U.S. income." The latter point was demonstrated by example above (see page 17). The first point can be illustrated by sample cost of living adjustment calculations.

A provision allowing deduction of cost of living in excess of average costs in the U.S. would be unfair to the large number of Americans who live in areas or cities within the U.S. where the cost of living is higher than the average. This effect can be substantial as illustrated by the following paired U.S. and foreign cities where the cost of living is roughly equal, listed with the deduction which would be allowed foreign taxpayers under a cost of living adjustment based on the U.S. average. The comparisons assume an average cost of living in the U.S. of $22,000, which is the statutory basis for determining the cost of living adjustments in H.R. 9251 (although the deduction will actually be figured in a different manner under the bill and could be larger or smaller).

DEDUCTION ALLOWED WITH A COST-OF-LIVING EXCLUSION BASED ON THE U.S. AVERAGE COST: PAIRED U.S. AND FOREIGN CITIES

Foreign city	Cost-of-living index [1]	U.S. city	Cost-of-living index [1]	Deduction allowed foreign resident not allowed U.S. resident [2]
Riyadh, Saudi Arabia.	142	Anchorage	140	$9,240
Rome, Italy	128	Honolulu	127	6,160
Hong Kong	125	New York	125	5,500
Tehran, Iran	123	Boston	123	5,060

[1] Based on Department of State Index for April 1977; Department of Labor Urban High Budget Index for August 1978. The foreign indexes exclude housing.

[2] This is the deduction which would result from a straight cost-of-living allowance. It is not equivalent to the expected allowance in H.R. 9251, which is comprised of a general cost-of-living allowance relating to consumption outside of housing, plus a separate housing allowance.

A provision which allows a $5,060 deduction based on cost of living for a family in Tehran and which does not allow a similar deduction for a family in Boston with an equal income and facing similar living costs, or for a similar family in New York, Honolulu or Anchorage where living costs are even higher, is inconsistent with standards of horizontal equity.

To avoid this violation of the horizontal equity standard would require a cost of living adjustment limited to amounts in excess of the most expensive place in the United States.

(b) *Relief for Specified Extraordinary Expenses*

Horizontal equity as practiced in the United States has allowed tax relief for particular expenses or circumstances which are deemed to involuntarily reduce the ability to pay taxes. Examples of provisions embodying this principle include the deductions for excess medical expenses and casualty losses. Some proposals for reducing the tax liability of individuals living abroad are similarly couched in terms of an adjustment for extraordinary specified expenses or excess financial burden. Examples are the special deductions included in the Treasury proposal and H.R. 9251 for the "excess" cost of housing abroad, and in the Treasury proposal for the cost of traveling home.

However, the housing and travel costs experienced by foreign employees are distinguished from the present hardship deductions for medical expenses and casualty losses by the fact that foreign employment and its concomitant expenses are a matter of choice, whereas medical expenses or casualty losses represent involuntary reductions in ability to pay taxes. Thus, the same principles of tax equity are not applicable to the two categories of expenses.

Nonetheless, if the decision is made to provide tax relief for specified extraordinary expenses rather than, or in conjunction with, a general cost of living adjustment, two additional points should be made. First, the mechanism of making separate adjustments for specified categories of expenses may, itself, fail to provide appropriate cost of living adjustment when considered on an overall basis. This is clear in the Treasury proposal which provides adjustments for specified extraordinary expenses but allows no general cost of living adjustment. It also may be true in some cases under the provisions of H.R. 9251 if a separate housing cost adjustment leads to larger allowances than would be suggested if overall living costs are considered. (See discussion on p. 23.)

The second additional point about relief for specified expenses is, as mentioned above for general allowances: any relief should be for expenses exceeding the highest levels in the U.S., not average levels. Relief based on average levels of domestic expenditures would discriminate against domestic taxpayers. This was demonstrated for a general cost of living adjustment above; it can also be illustrated for specific adjustments for housing and foreign travel. There is a variation among locations in the U.S. in the average percent of a family's budget spent for housing. According to family budget data from the Department of Labor, Boston appears to have the highest ratio of average housing cost to income in the U.S. at approximately 22 percent.[23] Thus, for example, if an allowance for "excess" housing costs were provided to overseas Americans based on housing costs exceeding one-sixth of their incomes, this provision would discriminate against the residents of Boston by denying them equal treatment despite experiencing similar "extraordinary" expenses. The denied tax benefit would be a deduction averaging 5 percent of Bostonians' incomes.

Similarly, the allowance of a deduction for the cost of travel home in the Treasury proposal would seem to violate the principle of horizontal equity. This proposal, or some modification of it, would be less violative of equity principles if the U.S. were small geographically so that foreign travel almost always involved comparatively high costs. However, this is not the case. Under the Treasury proposal a family living and working in Toronto visiting relatives in New York could deduct the cost of the trip, while a family working in San Francisco also visiting relatives in New York would receive no such deduction. Even when overseas travel is involved, the costs do not necessarily exceed the costs of domestic travel within the U.S. Round trip coach air fare between Boston and London is $409, Boston to Paris is $409, and Boston to Bonn is $434; on the other hand, round trip fare Boston to San Francisco is $462, Boston to Anchorage is $524, and Boston to Honolulu is $584.[24] Given the mobility of the American population, millions of people within the U.S. live and work long distances from their close relatives. Therefore, providing a tax benefit for home travel for people who choose to work in foreign location may be especially difficult to defend against complaints of unfair treatment from Americans who work far away from "home" but within the U.S.

(c) *Taxes as Payments for Benefits Received*

The concept of judging the horizontal equity of a tax system based on the ability to pay taxes is one of the two common approaches to the equity issue and the one most appropriate to analysis of the Federal income tax. A second approach to tax equity issues is called the "benefits received" concept, and measures the equity of tax payments by comparing the amount of tax to the amount of direct benefit the taxpayer receives from government services financed by the taxes. This concept thus attempts to view taxes as being like prices in the private sector of the economy, i.e., direct payments for goods and services received. While this approach to the equity issue has a certain intuitive appeal, it is obviously limited to the financing of government services which produce benefits which are primarily direct in nature rather than social or humanitarian. For example, judging the appropriate level of taxes to be paid by each taxpayer for support of government services on the basis of their consumption of the services may be appropriate when considering fees to pay for public swimming pool usage or gasoline taxes which are used to finance highways; it is obviously inappropriate when considering the financing of welfare payments and inapplicable for national defense (how are personal benefits measured?).

The argument is occasionally made that individuals living abroad receive smaller benefits from U.S. Government services than those living in the United States, and therefore overseas Americans should be exempt or partially exempt from the Federal income tax. However, no one seriously argues that the U.S. Federal income tax is based on the benefits received principle of taxation. It is clearly based on the ability to pay principle because most of the expenditures funded by the income tax are services which produce primarily social or humanitarian benefits—national defense, income maintenance, general government, foreign affairs and foreign aid, basic research, natural resource development, health care, and contributions to culture and arts. All of these expenditures primarily provide general benefits to all Americans rather than private benefits to specific individuals who could be charged for the services. Although this issue is obviously more judgmental than others, there seems no strong reason to argue that American citizens living abroad do not share in these general benefits.

2. Vertical equity:

Another equity standard for judging tax policy is that of vertical equity. Judgment of a tax provision on this ground usually involves the examination of tax levels by income class. The U.S. tax system is progressive, based on the notion of ability to pay and reflecting the idea that a wealthy individual can afford to pay in taxes a larger fraction of marginal earnings than a poor individual.

Overall the tax provisions benefitting individuals living abroad tend to reduce the progressivity of the U.S. income tax structure. This effect occurs because, by and large, those individuals living abroad tend to have much higher incomes than those in the United States. According to a recent Treasury study,[25] 47 percent of the individuals claiming a deduction for the prior section 911 had adjusted gross incomes of more than $20,000, as compared with 14 percent in the United States. Taxpayers with incomes of over $50,000 account for 10 percent of section 911 taxpayers while accounting for only 1 percent of U.S. taxpayers. This study indicates that 84 percent of the tax benefit under prior section 911 accrued to individuals earning over $20,000, 65 percent accrued to those with incomes over $30,000, and 31 percent accrued to those with incomes of over $50,000. Therefore the bulk of the tax reduction accrues to individuals in the richest 15 percent of the population.

The 1976 tax increase on overseas Americans which resulted from the revision of sec-

Footnotes at end of article.

tion 911 tended to fall more heavily on high income individuals; 96 percent of the increased taxes accrued to those earning over $20,000, 79 percent accrued to those earning over $30,000 and 40 percent accrued to those earning over $50,000. Thus, the current version of section 911 favors lower income taxpayers relative to the prior version.

IV. Effects on Trade and Employment

A. Tax incidence and relationship to U.S. exports

Although the basic policy principles most appropriate for evaluation of the tax treatment of Americans working in other countries are neutrality and equity, provisions which violate those standards may still be desirable policies if they achieve some other beneficial public purposes. The other public purposes most often related to the taxation of Americans living abroad are the effects of the tax treatment on international trade and American "competitiveness"—generally expressed in terms of seeking employment and balance of payments objectives via increasing exports. However, since the link between the level of taxation of Americans working abroad and the level of U.S. exports is somewhat indirect, it is useful to discuss the relationship and the related issue of the incidence of taxes on overseas Americans.

Tax incidence refers to the final burden of taxes after they have been shifted among economic agents, e.g., through higher prices, lower wages, or reduced profits. The shifting process has effects on economic behavior. For example, if taxes are increased on U.S. citizens working abroad, the initial burden of those increased taxes will fall on the employees reducing their after-tax income. This will diminish the willingness of those employees to work abroad, thus, reducing the supply and increasing the cost of American workers to foreign employers. In this manner some of the burden of the higher taxes is shifted to employers.

The process may also occur in another manner. Many U.S. companies operating abroad have tax protection or tax equalization programs designed to shelter their employees from any higher taxes associated with foreign employment. If the employer has such a practice and pays the employee higher wages following a tax increase, the initial burden of the tax is shifted immediately to the employer. However, if the resultant increase in employment costs (and decrease in profits) leads the employer to hire fewer American workers, then the wages paid to these workers may decline, thus shifting some of the increased tax burden back onto the employees. The employer may also attempt to pass part of the tax increase on to customers by raising prices. This will likely result in reduced sales and output.

Therefore, U.S. tax benefits to citizens working in foreign countries beyond the treatment which would be suggested by the tax neutrality principle serve to subsidize the operations of business located in foreign countries which employ American workers. Since foreign investment and production by U.S. multinationals is in many cases a substitute for domestic production and exporting to the foreign markets, it seems ironic that subsidizing foreign operations should be perceived as stimulating U.S. exports. The argument is made that foreign operation by U.S. multinationals expands their foreign sales and, because their foreign production uses U.S. produced inputs, thereby expands U.S. exports. Whether this effect outweighs the effect of foreign production substituting for U.S. produced exports is unknown and cannot be assumed without supporting evidence.

Thus, the relationship between U.S. tax treatment of citizens working in other countries and the quantity of U.S. exports is indirect and uncertain. The GAO report on the trade impact of section 911 suggested that a more direct relationship may exist because "it is essential to maintain a large force of U.S. citizens abroad to promote and service U.S. products and operations";[26] however, there seems to be no specific evidence in the export experience of the United States or other countries to support this assertion (e.g., the substantial success of imported automobiles, televisions, calculators, etc., in this country has not been accompanied by an influx of foreign nationals to sell and service them).

B. Balance of payment and employment effects

Even if there were a direct relationship between U.S. tax treatment of citizens working abroad and U.S. exports, a tax subsidy would not have a permanent effect on the balance of payments. This is because a flexible exchange rate system will automatically move, through market adjustments in exchange rates, toward a position of balance in the international payments accounts of each country. This movement may be somewhat unsteady and protracted, and may be moderated or retarded by the policies of interested governments (as the world is presently experiencing), but in the long run any policy which attempts to increase permanently net export receipts without also increasing exports of investment capital will be rendered ineffectual by market forces. For example, if a tax subsidy were successful in temporarily increasing U.S. exports, under flexible exchange rates this initial effect would eventually cause an increase in the price of the dollar on foreign exchange markets. This exchange rate change would reduce U.S. exports and increase imports, thus offsetting the effects of the original incentive as far as the balance of payments is concerned. Thus, under a system of flexible exchange rates, international currency price adjustments will render ineffective policies which attempt to have a long-term impact on a nation's balance of payments.

These adjustments are part of the normal economic process by which supply and demand adjustments in international markets occur under a system of flexible exchange rates. There might occasionally be reasons a country would wish to intervene on a short-term basis in the foreign exchange market. First, all countries have an interest in smooth adjustments in the exchange markets because erratic adjustments erode planning capabilities and cause a deterioration in trade and investment conditions. This concern for stable adjustments is particularly strong with regard to the U.S. dollar, not only within the U.S. but abroad, because the dollar is the exchange medium for much of the world's trade. Secondly, net exports (exports minus imports) enter into the aggregate demand of a nation's economy which determines levels of income and employment. Thus, for example, the U.S. may be concerned about an initial deficit in the trade account and wish the price of the dollar to fall more quickly, while foreign countries may be concerned, once the price of the dollar begins to fall, about the effect on their export sector and wish it to fall more slowly. In the case of some foreign countries whose economies are heavily dependent on the international trade sector, this concern may be greater than in the United States.

These reasons for intervening in the foreign exchange markets are short term in nature. They require policies which are temporary, easily controlled, quick acting, and capable of coordination with the policies of other nations. Market adjustment mechanisms such as the buying and selling of foreign currencies meet these criteria; tax subsidies for Americans working in foreign countries do not.

Another argument which has been used in support of tax preferences for foreign employment is the effect of these provisions on employment in the United States through the impact on exports. It is argued that, because tax subsidies for citizens working abroad lead to higher exports (which, as discussed above, is a questionable assertion on at least two grounds), the tax policy will increase domestic employment and thereby help solve the unemployment problems. Unemployment is generally considered to result from structural and cyclical problems. The structural problems may be considered long term in nature and the cyclical problems short term, although even the short term may be somewhat protracted as demonstrated by current economic conditions. Cyclical unemployment results from a greater number of job seekers than job openings and can result from a number of factors such as a recession (or "growth recession"), an unusually large influx of new labor force entrants, and downwardly rigid wages. Appropriate policy responses to cyclical unemployment include countercyclical fiscal and monetary policy and programmatic responses such as job programs, public works projects, and countercyclical revenue sharing. Tax subsidies for overseas Americans are not candidates for short-term countercyclical policies because they are not amenable to increasing or decreasing as the cyclical patterns of the economy may require, nor can their impact be targetted toward the unemployed.

The structural unemployment problems involve the distribution of skills and the location of the labor force compared to the requirements of the job market. Policy responses to structural unemployment include training, relocation programs, and income maintenance programs. Tax subsidies for overseas workers do not contribute directly to a solution to these structural unemployment problems. Additionally, even if preferential tax treatment for Americans working in other countries creates jobs in the export industries, under a system of flexible exchange rates this policy will likely accelerate the decline of import competing industries and lead to less employment in those sectors.

Despite these points it is true that expansion or contraction of exports can have temporary impacts on employment and the balance of payments. These impacts were the focus of the recent GAO Report on section 911. The GAO study employed the Data Resources, Inc. (DRI) econometric model of the U.S. economy to estimate the effects on U.S. trade and employment of the 1976 amendments to section 911. The chapter of the GAO Report which gives the results of this analysis is reproduced as an appendix to this report. Basically, the GAO Report concludes that the impact of the tax change on U.S. exports and employment is extremely small. With regard to employment, the report states:

The largest effect on domestic employment is produced in 1981, when approximately 21,000 jobs are lost. To give some perspective to this number, it should be noted that the average growth rate of the United States creates 30,000 jobs a *week*. Thus, the largest effect on employment will be about two thirds of a normal week's job creation. In 1978, the estimated job loss is only 4,000 or about the number of jobs added to the U.S. economy in one normal day.[27]

The effect of the increased taxes on the balance of payments is actually to improve it due to the elasticities of demand for exports contained in the DRI model. The improvement is, however, very small.[28]

Despite the small impact of the tax changes estimated by the GAO study, the

Footnotes at end of article.

methodology employed can be regarded as yielding a maximum, or worst case estimate, because the assumptions made in the analysis bias the results in this direction [29] (this is not necessarily a criticism; in doing this type of analysis assumptions must be made and, where uncertainty exists, it is often desirable that the assumptions be biased in the opposite direction of the results).

The first assumption in the GAO analysis is that all Americans affected by the revision in section 911 are occupied in selling U.S. produced exports. This is unlikely since at least some Americans abroad are involved in foreign production which might act to substitute for U.S. exports or to increase U.S. imports. To the extent this effect occurs, section 911 acts like a subsidy, not to exports, but to foreign investment.

The GAO simulation also assumes that overseas taxpayers are totally reimbursed by their employer for the higher U.S. tax and do not bear any of the burden of the tax themselves, an assumption which tends to maximize the effect of section 911 on wage costs. GAO's survey of business firms operating board indicates that only about one-half of individuals working abroad receive tax allowances from their employers. While the GAO Report notes that the results of the survey cannot be used as input to the simulations because of its non-random nature, nevertheless the survey results and tax incidence theory suggest that this assumption overstates the wage impact of the section 911 change.

The GAO study assumes that the increased wage costs resulting from compensating employees for their higher U.S. taxes are completely passed through to foreign customers in the form of price increases for exports, which, in effect, assumes a perfectly horizontal supply curve.

Finally, the GAO analysis assumes a marginal tax rate of 50 percent, which is the maximum tax rate on earned income.

The GAO Report also points out that the estimates do not include two other effects which would tend to offset the impacts of the tax policy changes. The first is the effects of flexible exchange rate adjustments which are not included in the DRI model and which would tend to mitigate the impact of the changes in section 911, as discussed above. The second is the assumption of an absolute tax increase, rather than an increase in taxes on employees in foreign countries and a decrease in taxes in other areas. Given the Congressional budget process, one would expect an offsetting tax reduction which would reduce the impact of the policy change on employment.

These assumptions could act to significantly overstate the quantitative results in the GAO study. The possible magnitude of this overstatement can be illustrated by changing two assumptions in entirely reasonable ways. First assume that only one-half of the foreign firms reimburse their employees for high taxes, consistent with the GAO survey data. Secondly, assume the average marginal tax rate on U.S. citizens abroad is 40 percent rather than 50 percent, a rate consistent with distributions of the tax benefit across income classes. If these assumptions are more realistic, the effect of the original assumption was to overstate the price effect by 140 percent.[30] If the first assumption were also modified—only one-half of U.S. citizens abroad in jobs related to export sales, plus one-half of higher taxes reimbursed, plus the 40 percent marginal tax rate—the overstatement would be 380 percent. However, as noted earlier, since the resultant effects are so minor, it is useful to have maximum impact assumptions, since they provide assurance that the true effect will be smaller, and therefore also insignificant.

C. Effects on competitiveness

An argument which has been used in support of section 911 and which is related both to the effects on trade and employment and to tax neutrality is the issue of competitiveness. U.S. firms operating abroad maintain that increasing U.S. taxes on their employees will increase their wage costs, thus forcing their prices up and reducing their competitiveness. Similarly, U.S. citizens working in other countries claim that higher U.S. taxes will make them less competitive in the foreign job market with foreign nationals who are not taxed by their home countries.

The argument that reduction of tax benefits for overseas Americans would lead to a small reduction in U.S. business activities abroad is correct, and is viewed by firms as reducing their "competitiveness". Similarly, the argument that increased taxation of Americans working abroad would tend to lead to a substitution of foreign for U.S. employees (a substitution which has been occurring for years for other reasons) is also correct—and viewed by U.S. employees as a reduced ability to compete. The implications of this argument must be considered carefully, however.

The standard of tax policy with respect to business and employee location decisions should be to achieve neutrality so that tax provisions do not cause distortions in location decisions unless some clear national purpose is served by such nonneutralities. As indicated in the analysis above, there is no clear evidence that artificially encouraging Americans to work abroad through the tax code serves any identifiable national purpose. Therefore, the resulting increased "competitiveness" of American firms and citizens in foreign locations appears to be at the expense of other Americans—through higher and more inequitable taxes and through less efficient allocation of economic resources.

APPENDIX

Chapter 3, "Impact of 1976 tax changes on U.S. Balance of Payments and Domestic Economy," General Accounting Office, Impact on Trade of Changes in Taxation of U.S. Citizens Employed Overseas, February 21, 1978. (Not included in RECORD.)

FOOTNOTES

[1] Estimates provided to CRS by the Office of Tax Analysis, U.S. Department of the Treasury. All of these revenue loss figures are compared to full taxation of foreign income and imputed in-kind income.

[2] General Accounting Office, Impact on Trade of Changes in Taxation of U.S. Citizens Employed Overseas, February 21, 1978. Hereafter referred to as the GAO Report.

[3] U.S. Department of the Treasury, Taxation of Americans Working Overseas, Revenue Aspect of Recent Legislative Changes and Proposals, February, 1978.

[4] The descriptions of the provisions, except for the Administration proposal, are taken, mostly verbatim, from Proposals for Taxation of Americans Working Overseas, Prepared for Use by the House Ways and Means Committee at Hearings on February 23–24, 1978, by the Staff of the Joint Committee on Taxation.

[5] The principles are, of course, subject to differing interpretation and application with regard to specific issues. See, for example, Karegeorgas, Dionisios, Taxation of Foreign Firms: Discriminative and Allocative Effects, Public Finance Quarterly, Vol. 1, No. 3, July 1973, pp. 239–265, which disagrees with the standard application of the neutrality principle in taxation of foreign corporate income.

[6] Of course, some tax provisions, such as the investment tax credit, are intended to change relative prices and induce economic substitutions, in this case to stimulate higher investment in qualifying assets.

[7] In this discussion, "low tax" foreign country and "high tax" foreign country refer to foreign tax systems which produce tax liabilities lower and higher, respectively, than the U.S. tax system.

[8] If the concern were the neutrality aspects of the worldwide tax structure, rather than just the U.S. tax system, attention would have to be focused on foreign taxes which are higher than U.S. taxes and thereby discourage foreign employment by U.S. workers in high tax countries. To achieve worldwide neutrality, such "excess" tax liabilities would have to be refunded.

[9] See Levine, Mel, Section 911: The Foreign Earned Income Exclusion—Death Blow or Recovery? Taxes—The Tax Magazine, March 1978, pp. 169–178. Apparently the original reason for adopting the predecessor to section 911 in 1926 was to insure that U.S. citizens working abroad had the same overall tax burden as citizens living in the U.S. Later reasons for changes in section 911 were to stimulate U.S. exports and to put U.S. expatriots in a similar tax position to foreign workers from other countries who enjoy home country tax benefits. Since the late 1950s the legislative direction has been toward reducing the benefits available under section 911 to tax overseas American workers more similarly to domestic workers.

[10] This statement is, of course, true whether the salary increase is to compensate for higher foreign living costs or merely to provide a salary increase. However, the issue of locational neutrality arises only with the former purpose.

[11] The foreign worker's after tax income is $25,000, which equals $16,666.66 in real terms after adjustment for the 50 percent higher foreign living costs.

[12] The worker's taxable income would be $18,000 ($27,000 × ⅔) producing a tax liability of $4,500; his after tax income of $22,500 equals $15,000 in real terms after adjustment for the 50 percent higher living costs.

[13] Of course, his effective tax rate would increase if his foreign salary more than compensated for the cost of living differential.

[14] The approach of most of the cost of living adjustment proposals is to peg the adjustment to an average cost of living in the United States. This is clearly inappropriate since the provision would be nonneutral, inequitable, and inconsistent wtih regard to the tax treatment of citizens living within the U.S. who live in locations of above average living costs. See further discussion of this point in the Equity section below (especially pp. 37–43).

[15] To be perfectly neutral with regard to cost of living in foreign locations, the adjustment should also account for locations which have lower costs of living than the lowest cost of living locale within the U.S. This adjustment would require an *addition* to the actual income (rather than a deduction from income) to determine U.S. tax liability on the basis of an equivalent real income.

[16] This adjustment mechanism would achieve the same thing as indexing the income tax for the appropriate cost of living adjustment specific to each foreign location.

[17] Ignores any difference in the cost of living adjustment due to the adjustment being pegged to the highest cost of living location in the U.S.

[18] $\frac{\$2,711}{\$20,000} = .13555$

[19] In fact, H.R. 9251 would overcompensate in most circumstances compared to the neutrality standard. See analysis in next subsection, pp. 27–34.

[20] See statement of Donald C. Lubick, Acting Assistant Secretary for Tax Policy on Taxation of Americans Working Outside the

United States, before the Committee on Ways and Means, February 23, 1978, p. 7.

[21] Assuming other tax characteristics were the same.

[22] Based on Washington, D.C. = 100, costs of living for the nineteen largest cities in the U.S. vary from 122 to 86 (Department of Labor, Autumn, 1976 Index). Using the same base, costs of living for the twenty cities in countries with the largest number of Americans working abroad vary from 165 to 78 (State Department Index, April 1, 1977). See discussion in the GAO report, op. cit., p. 99.

[23] Labor Department Cost of Living Index, August 1976.

[24] Trip fares provided by Library of Congress Travel Office.

[25] Taxation of Americans Working Overseas, Department of the Treasury, February 1978. The Treasury study notes that higher salaries abroad may reflect higher living costs which would mean real income may be lower than nominal income. However, the reported income levels are net of in-kind allowances for excess housing, education and travel, partially offsetting this effect.

[26] GAO Report, op. cit., p. 1.

[27] GAO Report, op. cit., pp. 22–23.

[28] These results seem inconsistent with the policy recommendation in the GAO Report which was "that consideration be given to continuing some type of incentive, at least until more effective policy instruments for promoting exports and commercial competitiveness abroad are identified and implemented."

[29] The GAO Report, op. cit., p. 14, states:

"Our approach to estimating the effect of changes in Section 911 on the U.S. balance of payments, domestic employment, gross national product, and Federal budget position is to make several assumptions that are apt, if anything, to exaggerate the number of Americans abroad engaged in promoting U.S. exports; to compute the maximum effect that the tax increase might have on the prices of U.S. products sold abroad; and to trace the effects of the subsequent decline in export demand back to the domestic economy."

[30] To illustrate this effect, assume the higher taxes on overseas Americans amounted to $100. Under the GAO assumptions the price increase would be twice that amount or $200. Under the new assumptions only one-half, or $50 would affect firms. Furthermore, because the marginal tax rate is 40 percent rather than 50 percent, wages would be increased only by $83.33. The percentage overstatement is then $200/$83.33, or 2.4 times as large, or a 140 percent overstatement.

THE PRIZE: A FREE EDUCATION WORTH $85,000

● Mr. MATHIAS. Mr. President, on April 2, 1978, the Baltimore Sun magazine carried a story by Carleton Jones on the rigid selection process faced by young men and women who are candidates for nomination to our service academies.

Carleton Jones has captured the essence of this intricate process in his excellent analysis of the academy selection program I have established.

Mr. President, I ask that Carleton Jones' article entitled "The Prize: A Free Education Worth $85,000" be printed in the RECORD.

The article follows:

THE PRIZE: A FREE EDUCATION WORTH $85,000

(By Carleton Jones)

One misty, gusty Saturday, many young people could be seen hustling up the steps of the normally (on weekends) deserted Fallon federal building in Hopkins Plaza.

Each one, as they entered the grim-looking highrise, clutched a form letter from Senator Charles McC. Mathias (R., Md.). It praised their "excellent academic profile" and asked them to show up at a certain time that day.

Guards herded them into elevators for a trip to the dark and crowded 16th floor lobby where they wandered, sometimes with a somewhat lost air of anticipation and always with questions.

"We're looking for Air Force One," said one visitor. "Check in right over there," answered a seated attendant.

Air Force One in this case was not the plane that took Senator Humphrey home to Minnesota or JFK back to Washington, but merely a group designation for one of Maryland's most unusual academic competitions.

The prize is the world's best free education, at one of the nation's four service academies, a prize worth $85,000 on today's educational market, according to Dan Zaccagnini, one of the Senator's aides. About 800 young Marylanders every year apply for one of the service academy openings. Usually about 12 to 20 make it. This accounts for the tense sessions, the scared faces, the chewed fingernails and the downright glum looks of almost everyone at the January tryouts.

The service derby for a Maryland aspirant, the Merchant Marine academy excepted, may be at best about a 10 to 1 shot, with even longer odds if you are applying for the Naval Academy. (It's much easier to get into Harvard where about one out of every six who apply get in.) At the service academy eliminations this year, Senator Mathias had 156 candidates for Annapolis, 10 of whom will be put on a list sent to the academy for a single senatorial opening. There were 63 applicants vying for 2 Air Force openings, 28 for one West Point place and 18 people interested in the Merchant Marine. (Merchant Marine nominations are handled different. Senator Mathias submits 10 candidates who will compete for 6 openings statewide, along with nominations from other members of Congress.)

Congressionally sponsored openings depend in some degree on how well previous candidates from Maryland do. If four Marylanders become plebes and three drop out, four years later the senatorial quota is only one opening. If all finish, then there are four openings for the state. Senator Sarbanes, for instance, has only one Air Force opening this year because that was all that started through for this academy four years ago under a Senator Beall nomination.

At the annual Hopkins Plaza semifinals, 25 volunteer specialists in education interview aspirants to select them for a final senatorial selection made at the end of January. Two housewives, two union presidents, three private school administrators, seven active or retired service men and women and three businessmen make up part of the group. Most other members of the Maryland congressional delegation and the Congress use less formalized selection methods. This month most of the candidates should learn whether they have made it or not and virtually all should have had their physicals.

Few candidates are unaware that their chances are slim. Most pre-register at alternate schools, just in case, and here they have the advantage over Maryland preppies trying to get into big-name Ivy League colleges, for they may register for as many schools as they can afford to finance a registration fee. Many of the more uppity private high schools in the East, in fact, limit the number of schools their seniors can apply for, in part to keep their acceptance average high with the "seven sisters" colleges and Harvard, Yale, Princeton and assorted counterparts.

However, even if a service academy candidate makes it, they can flunk West Point or Annapolis physicals for things as picayune as buck teeth or minor eye defects.

At a big U-shaped table in the offices of the Federal Highway Administration, borrowed for the mammoth, all-day interviews, a television set, almost unnoticed, sends out the pink and green cartoons of Saturday morning kiddie shows. A cartoon gremlin bounds across the screen but almost nobody watches. Overhead on the walls are the gaudy state seals of the operating area of FHA. Names are called and candidates file out into narrow hallways where they wait in line in turn for the interview panels.

The groups fan out and fill the floor of the building as a sort of continuing pep talk goes on in the conference room:

"I want to at least look at you before you go into the pressure cooker . . . Don't try to con them [the interviewers] . . . just be yourself," cautions Mr. Zaccagnini, a former high school teacher-coach and counselor for Essex Community College. There's a thing about those SAT (Scholastic Aptitude Test) scores, he says, and you need 1,050 in a composite score, say 450 on verbal tests and 600 on math. Not everybody present has it.

"You might only be a 900 plus and still be here. That's because something about you caught our eye . . . your activities, community involvement, elective office, Eagle Scout or athletics. Remember, all the SAT's prove is that you can read and write and remember. There's nothing there to do with a combat situation," says the test supervisor.

Mr. Zaccagnini spends part of the quietly hectic session plumping for the Merchant Marine academy. Low score people, he says, should apply there first, then try the Navy later, after they have proved themselves academically. "You can still be an admiral if that's what you want to be," he says to the Merchant Marine aspirants.

"Everybody wants to go to the Naval Academy . . . I don't understand it . . . it's eight to one," says Zaccagnini, a shade hopelessly.

One of them is Joseph (Jody) Osterman, of Edgewater, near Annapolis, scrubbed and shining and 17, an all-county offensive tackle who hopes to be a Marine Corps officer. He waits patiently in one of the narrow halls for interview time. "I've always studied military history," says the academy aspirant.

Another Annapolis hopeful is Dave Frazier, 17, a hulking 6-foot-1-inch tall 190-pound linebacker for Friendly High of Oxon Hill who has already been scouted by VPI and thought he was in the Virginia school, except that they "fired all the coaches . . . everybody." Dave made the first string suburban high school team in the Washington newspapers and also the National Honor Society. Annapolis, to him, "sounds like a good education . . . It'll be worthwhile," he adds.

"The academies have a 40 percent dropout rate . . . It used to be 30 percent in the Sixties . . . it's a tragedy," runs Mr. Zaccagnini's monologue as the candidates continue to pile in and then leave as their names are called.

(One wonders how this can be as the quietly restless young people just sit there and the soundless TV goes into a noonhour newsbreak—how all these superb people in vested suits, school blazers, uniforms of the academy prep schools, armed with all the sacrifice their parents have given, could go through what is ahead, and not finish. One thinks that only 10 or 20 of about 300 finalists will make it, maybe less, and if national averages hold up, 6 or 8 of them will not finish. Then a congressional aide assures us that of the 10 or so Maryland appointments in each service academy class, few ever drop out. The average is high.)

Robert K. Baumbach, 18, of Pasadena, near Annapolis, is the umpteenth Naval

Academy aspirant waiting in line. An engineering student at Anne Arundel Community College, the Navy just "seems like a great career" to him. "The Naval Academy seems like the best way to go," he adds.

Behind one of the closed doors a three-member panel, a union president and two retired career officers, interviews candidates one by one.

Mrs. Barbara Wiggins, former Fort Meade post adjutant, now a retired lieutenant colonel with 20 years personnel experience in the Army, is one of them. She is human resources director for Commercial Credit Corporation.

Mrs. Wiggins, married to a retired lieutenant colonel who served with the medical service corps, is a *new wave* woman professional and *new Army*. "I'm so many minorities . . . I'm a majority," she says, adding: "I'm black, I'm a woman, I'm retired Army and I work."

She was rather startled by one of her other military panelist's "outdated" outlook on what the new Army involved. "I don't picture today's military people as trained killers. I think of them as soldier-diplomats. The military man has a key role today in the search for peace," she says.

The candidates were so good and so assured, that a final choice of 2 or 3 out of about 15 became almost a "subjective" thing for the panelists, said Mrs. Wiggins. "They have mature views of the world. We weren't dealing with highly studious, academic types of people." Each candidate was asked point blank what they would do if the country got into another non-publicly sanctioned fight like Vietnam, and part of the evaluation was based on their answers to this question.

Mrs. Wiggins was pleased to see a strong turnout of women candidates, but was a little surprised that her group did not include a minority candidate or a black.

There were black candidates, however. One was Cheryl Marie Taylor, 17, poised and vivaciously pretty, daughter of a Howard University professor who died last year, and the cheerleader for varsity sports at Montgomery County's Paint Branch high school. You ask her what academy she hopes for. Out pops Annapolis. "I didn't have the eyes for the Air Force," she says, explaining that the tight visual standards for Colorado Springs are necessary so that pilots can be qualified.

Another woman candidate is Linda Mary Tussing, 18, of Catonsville, who is usually smiling but today is serious and sober like most everyone else.

Behind one of the doors, as Linda prepares to go on, one of the interviewers who has been at it all day, George E. Surgeon, Brooklyn Park elementary principal, is not glum, but happy and proud for America.

He is, in fact, so impressed he is bubbling over with admiration:

"If a person ever has a doubt about young people of today, he should go on a panel like this. They really have it. They have really put it together," he says of the almost endless stream of "excellent" students. Like Mrs. Wiggins, he finds choices tough, almost insoluble. "They're so evenly matched you could almost put the names in a hat and know you would draw out somebody who would make it."

Many of the students tell panelists they will go to college this year and try again for an academy in 1979 if they don't make it.

Linda wants to be an engineer like her father. She has her eye on VPI and Georgia Tech and, of course, Annapolis. Her father is assistant chief of design for the Baltimore District Corps of Engineers, and inherited family talent may have helped out with her favorite high school course, calculus, where she only got a "B" from a "tough grader."

A handsome young Colombian from Bogota escorts her into the tryouts, but he is not her steady boyfriend, who is another young man, studying chemical engineering at the University of Delaware, Linda says.

"It's strange to have friends in other parts of the world," says Linda, who explains that she spent last summer as an American Field Service exchange student in the South American capital where she was surprised by the "British English" people spoke and by the heady trial of playing basketball at 9,000 feet up. "I almost had a heart attack."

Linda is here because her father showed her a news article one day that played up the first batch of lady middies at Annapolis with photos and quotes. "It looked sort of interesting. It's not sort of as if I'd wanted to go to the academy ever since I was young. The Naval Academy has added Rickover Hall and now has one of the best labs in the country."

As Linda waits, Mr. Zaccagnini keeps plumping for the Mathias selection program, which changes a bit each year, with refinements and now requires a 500-words-or-more-essay explaining the candidate's service goals.

"Last year 6 out of 10 Maryland candidates made the Merchant Marine," he says. "This program is so non-political it's hard to believe. None of us are political hacks. We don't go and get Joe Brown's grandson's name for the Naval Academy. That's why the process is so good. There's no politics.

"What I have to offer stands a very good chance," concludes young Linda, perhaps summarizing a theme for Maryland's 1978 high school seniors who want to don the cadet gray, the Navy blue or combat fatigues.●

NATIONAL GRANGE WEEK

● Mr. LEAHY. Mr. President, today marks the beginning of National Grange Week—April 23–29—which not only recognizes the Nation's oldest farm organization, but also honors the National Grange's 111th year of service to agriculture and rural America.

The first permanent grange organization was formed in Vermont on August 12, 1871, in St. Johnsbury and appropriately named Green Mountain One.

The Vermont State Grange was temporarily organized July 4, 1872. It was the first State grange in New England and the seventh in the United States. At that time, 13 granges existed in Vermont, located principally in Caledonia, Essex, Lamoille, Orleans, and Washington Counties.

The first annual session of Vermont State Grange took place on December 10, 1872, and made the State organization permanent.

The grange in Vermont has long been in the forefront advocating and promoting enlightened programs that would benefit and enhance the fortunes of farmers, not only in Vermont, but throughout the United States.

In the early 1800's the antirailroad movement had reached Vermont. The annual meeting of 1885 squarely went on record for a railroad commission and the following resolution was adopted:

Resolve, that the State Grange of Vermont will use its influence in obtaining from the next Legislature a railroad commission with full power to establish and regulate rates of transportation and traffic when those of the railroads are exorbitant and such as to cripple the industries of the State, and to adjust any difficulties which may arise between the people and the roads.

Of this and the earnest labors of patrons, the Railroad Commission was born in 1886.

Worthy Master Franklin in his annual address to the State Grange in 1880, spoke with the real spirit of his Western brothers:

It is clear from experience that in order that exact justice may be done and corporate greed may be restrained within proper bounds, legislative enactment should determine the basis on which transportation should be regulated. When we contemplate the power which transportation companies have assumed; the encroachment on rights which clearly belong to the people, and its entire forgetfulness of the dignity and respect of innocent people from which it eminated; its utter disregard of the role of the people and its warnings against attempts to recover rights carelessly and heedlessly yielded by the people, taxing the products of labor at will only because they have the power to do so; that it is not subject to public control on the ground and plea of private property; it challenges the power of the people and defies legislatures in any attempt to impose restraints; how, then shall we free ourselves from the incubus which is laid upon us?

Two years later the rising tide brought the Vermont "short haul" law.

In many cases the issues do not really change with time. Dairy and poultry farmers in New England are still at odds with the ICC with respect to discriminatory feed grain rates imposed by our Nation's railroads and once again the grange is in the forefront opposing these rate increases in a case before the ICC.

It would be difficult to list every area where the grange has been instrumental in leading the national attitude. Yet, let me highlight a few.

Seventy-one years ago the grange secured initial action establishing our system of agricultural experiment stations.

It championed the Soil Conservation Service, Farmers Home Administration, upstream small waterways, school lunch and milk programs, rural area development, food for peace programs.

One has only to look at the National Grange's legislative policies for 1978 in the areas of agriculture, energy, transportation, national welfare, conservation, education, and health to recognize that this organization is still in the forefront advocating progressive policies for rural America. Mr. President, I not only salute the National Grange as an organization, but in particular salute the 7,066 Vermonters who are members of the grange organization.●

SENSIBLE ECONOMIC REFORMS: TWO PROPOSALS

● Mr. McCLURE. Mr. President, two timely and provocative articles were published in the April 8 issue of National Review which I call to the attention of the Senate. Both articles are by respected economists whose discussion of current economic issues and administration programs merit serious consideration by my colleagues.

In the first article, Paul Craig Roberts, who is on the staff of Senator ORRIN HATCH, explodes a few popular myths concerning taxes and inflation—myths which I often hear repeated in the

Budget Committee and on the floor of the Senate.

Dr. Roberts does a superb job of destroying the notions that tax inflation hurts the rich more than it does the poor and that those earning the least pay the bulk of the taxes while the wealthy manage, through tax loopholes, to avoid paying taxes altogether. The bitter truth is that the top 10 percent of U.S. taxpayers—those earning $23,420 a year or more—pay almost half the total income taxes while the bottom 10 percent pay only one-tenth of 1 percent of the taxes.

Roberts demonstrates that it is the middle- and low-income taxpayers, not the rich as widely believed, who benefit most from the various tax deductions that President Carter wants to do away with as part of his "tax reform" package. However, as Roberts points out:

The largest loophole of all in our income tax system works for the benefit of government. It is the loophole that allows government to use inflation to increase its tax bite on constant—and even on declining—levels of purchasing power without having to legislate higher tax rates. The central issue of tax reform is the closing of this loophole.

Roberts concludes that, because of the tax system's increasing progressivity and the increasingly great tax burden borne by Americans, "in relative terms, our position is worse than that of a medieval serf who owed the state only one-third of his working time." In this regard, Mr. President, the U.S. Chamber of Commerce has calculated that this year the average taxpayer must work 131 days just to pay his share of the costs of government at all levels and only after May 10 will he (or she) start working to support himself and his family.

In the same issue of National Review, Yale Brozen argues persuasively against enactment of the so-called Full Employment and Balanced Growth Act and discusses "what Humphrey-Hawkins won't do." In an article adapted from his recent speech to the Chicago Association of Commerce and Industry, the distinguished University of Chicago professor of business economics suggests that if the Congress were really concerned about high unemployment in the country, it would revise the minimum wage laws and the Davis-Bacon Act and adopt strict eligibility requirements for receiving jobless and welfare benefits.

Mr. President, I request that the complete text of these articles from National Review by Paul Craig Roberts and Yale Brozen be printed in the RECORD.

The articles follow:

SOME TAX MYTHS: WHO PAYS WHAT?

(By Paul Craig Roberts)

In the debate on tax reform, we are going to hear so much nonsense from the White House, the Treasury, the Congress, the Brookings Institution, Harvard, and People of Sensibility that I would like to head off some of it by getting some facts on record before it begins.

First, let's look at the impact of inflation on the taxpayer and on government revenues. Who can imagine a jar of peanut butter costing $11.23, a gallon of milk costing $12.49, a pair of work pants costing $80.69? Yet that is exactly what these things will cost 45 years from now if prices rise by 5 per cent a year—and how many of us have heard it said that if we could just get inflation down to 5 per cent a year and keep it there we would have the beast back in the box?

What happens, though, to a person whose income rises along with inflation by 5 per cent a year? Doesn't he maintain his purchasing power and standard of living? Absolutely not.

To show that it is not just the upper-income taxpayers who are harmed, let's take for an example someone earning $6,240 a year. In 1976 he would have paid no taxes. Instead, he would have received a $155 check from the Treasury, thanks to the earned income credit. After 45 years of 5 per cent pay raises, he would be earning about $56,000 a year—on which he would have to pay about $18,000 in taxes. His after-tax money income would have risen from $6,395 in 1976 to about $38,000 in 2021, or by substantially less than the rate of inflation. His after-tax income in 2021 would have a purchasing power equal to about $4,350 in 1976 terms. In spite of his much larger money income, this person would have experienced a decline in his living standard of nearly one-third. This is the result of progressive income taxation plus inflation, which together caused taxes on the same amount of purchasing power—$6,240 in 1976 terms—to rise from a refund of 2.5 per cent in 1976 to a tax of 30 per cent in 2021.

Indexing the tax structure (adjusting it to offset inflation) would prevent this deterioration that is occurring in the living standards of all Americans. One might think that this would make indexing an important issue in tax reform. Yet, it is not part of the Administration's proposals. Opponents of indexation have argued that inflation causes government's costs to rise, so that it also needs more revenues. However, the way it is now, the government's revenues don't simply rise by the amount of the inflation, they rise by 1.65 times the rate of inflation. A 10 per cent rate of inflation means a 16.5 per cent increase in revenues. That is why governments prefer to fight unemployment.

WHO PAYS?

How much faster than the rate of inflation would an individual's income have to rise for his after-tax income to maintain the same purchasing power? That depends on his tax rate. Professor Dan Throop Smith, a tax expert at the Hoover Institution at Stanford University, has calculated that a person at the lower end of the income distribution, who is paying an average income tax of 10 per cent and a marginal tax rate of 20 per cent, can keep his purchasing power constant only if his income rises by 11 per cent above the rate of inflation. A person with an average tax rate of 30 per cent and a marginal rate of 50 per cent would have to have his income increased by 40 per cent above the rate of inflation to maintain constant purchasing power. A person in the upper brackets, paying an average tax rate of 50 per cent and a marginal rate of 70 per cent, would have to have a 67 per cent increase in income above the rate of inflation in order to stay even. The idea that inflation hurts the lower income brackets more than the upper income brackets is clearly erroneous. What inflation really does is to push everyone into higher tax brackets. Government speeds this process along by designing tax cuts that reduce the bottom brackets by more than the top brackets. The result is to make the income tax system more steeply progressive, thus magnifying the ravages of inflation.

Another myth that bounces around the Congress is that the bulk of the taxes are paid by lower income earners, while the rich largely escape taxation. If we look at the IRS's *Statistics of Income*, we discover that this myth, which is so assiduously kept alive, is not even a half-truth. It is a whole lie. Look at the table opposite, which was prepared by the Tax Foundation, and be amazed at the distribution of the tax burden.

This table shows that taxpayers with incomes in the top 5 per cent—those with adjusted gross income of $29,272 or more—paid over one-third of the total personal income taxes collected by the Federal Government in 1975. The top 10 per cent of taxpayers—those earning $23,420 or more—picked up the tab for nearly half the total tax bill. In contrast, the lowest 10 per cent of taxpayers paid only one-tenth of 1 per cent of the total tax bill. Similarly, taxpayers with adjusted gross incomes of $15,898 or more—those in the top 25 per cent—paid 72 per cent of total personal income taxes. Taxpayers in the lowest 25 per cent did not even pay 1 per cent of total income taxes. Even the bottom 50 per cent accounted for only 7 per cent of total tax collections. Yet those in the top 1 per cent paid almost 20 per cent of the total revenues that the government collects from the personal income tax.

Although much has been said about high-income taxpayers with little or no tax liability and about the poor paying the way for the rich, the Tax Foundation notes: "The latest *Statistics of Income* showed that the 1,149 taxpayers earning $1,000,000 or more in 1975 paid an average tax of $1,011,317. The total tax paid by these few high-income taxpayers added up to $1.15 billion." (What public services, one might ask, does a taxpayer receive in return for a million dollars in income taxes?)

WHO DEDUCTS?

The table shows another interesting fact. Since 1970 the tax burden has been placed more and more firmly on the upper brackets. In 1970 the lowest 50 per cent paid 10.3 per cent of the total taxes paid, and the highest 50 per cent paid 89.7 per cent. By 1975 the percentage paid by the lowest 50 per cent had declined to 7.1, and the burden carried by the highest 50 per cent had risen to 92.9 per cent. In addition, the Tax Foundation reports that "several million taxpayers disappeared from the tax rolls altogether as a result of legislative changes benefiting those with lower incomes during the period 1970–75." Treasury figures for 1976 show that the tax burden carried by the top 50 per cent increased to 94 per cent.

This brings us to the myth that obscures our vision of the facts of deductions. These are everywhere denounced as loopholes for the rich. However, the bulk of deductions benefit those in the middle to lower income tax brackets, and the percentage difference between adjusted gross income and taxable income is greater the lower the income bracket. For example, in the under $10,000 adjusted gross income class, deductions come to 48.9 per cent of adjusted gross income. In the $10,000 to $24,999 class, deductions are 31.1 per cent of adjusted gross income, and in the $25,000 and over class they are only 22.8 per cent.

According to Treasury figures in 1976, the upper-income group benefited from about $16 billion in deductions, exclusions, and other privileges, about half of which resulted from recognizing the difference between capital gains and ordinary income. Lower- and middle-income groups, on the other hand, benefited from about $50 billion in deductions and exclusions, such as the exclusion of unemployment benefits, Social Security payments, workers' compensation benefits, pension contributions and earnings, employer-paid medical insurance premiums and medical care, the deductions of interest on

consumer credit and home mortgages, property taxes, medical expenses, and state and local taxes, and the deferral of capital gain on the sale of a home plus credit for the purchase of a new home. For every dollar of upper-bracket tax savings, the lower and middle brackets saved three dollars.

In a recent speech in the U.S. Senate, Senator Curtis, the ranking Republican on the Senate Finance Committee, examined the Treasury's list of 69 tax loopholes for the 1977 fiscal year. The Senator pointed out that the Treasury's loophole list consists primarily of the fringe benefits and deductions that pertain to the middle and lower income groups. On the Treasury's loophole list of untaxed income are such items as veterans' disability compensation, disabled coal miner's benefits, GI bill benefits, and Social Security benefits. Senator Curtis pointed out that two of the biggest loopholes on the Treasury's list are the contributions that employers make to pension plans and medical insurance for their employees. Said Senator Curtis: "When I see that the great majority of these benefits go to people who are not rich, I wonder what the tax reformers are up to."

Roger Freeman of the Hoover Institution summed up his book on tax loopholes as follows: "The literature of the tax reform drive usually asserts that most of the loopholes were designed for and worked to the benefit of the rich, that poor and middle-income taxpayers are taxed on all of their income, with no escape possibilities, and that most of the income that avoids taxation is to be found in the very high income brackets. The facts, however, suggest the opposite: much or most of the untaxed income is in the low and medium income brackets." One of the Administration's tax reform proposals is to tax fringe benefits, by which they claim to mean "the three-martini lunch." But the unions are concerned rather than fooled. They know where the untaxed benefits are that would yield substantial tax revenues.

At the beginning of this article, I showed how inflation and progressive taxation combine to reduce the purchasing power of rising incomes. Dale W. Sommer, in the September 26, 1977 issue of Industry Week, presents some interesting statistics from the Department of Commerce's 1976 National Income and Products Accounts that illustrate the extent to which American incomes have been undone by tax-flation. Over the past ten years the average wage has risen 77.3 per cent, whereas the Consumer Price Index has risen 75.4 per cent. So the average worker seems to have kept up with inflation. But the total tax burden has risen 144 per cent during the same period. The 144 per cent growth in the total tax bite exceeded the 126.6 per cent growth in total production of goods and services (GNP) and the 119.2 per cent growth in total national income. On a per-capita basis, Americans paid $2,261 in taxes in 1976, compared to $1,014 in 1966.

Last year Americans paid $16.7 billion more in taxes than they spent on the three basic necessities of food, clothing, and housing. The total tax bill came to $486.4 billion, whereas the total spent on food, clothing, and housing came to $469.7 billion. Per capita, $2,261 was spent on taxes, whereas $1,048 was spent on food, $354 on clothing, and $780 on shelter. Added together, the three necessities still come to $79 less than per-capita taxes paid by the American people.

Taxes far outpace the growth in real income. In 1976, federal taxes grew 20.8 per cent. The entire economy grew 11.6 per cent, and 5.3 per cent of that growth was the result of inflation rather than an actual increase in the production of goods and services.

The largest loophole of all in our income tax system works for the benefit of government. It is the loophole that allows government to use inflation to increase its tax bite on constant—and even on declining—levels of purchasing power without having to legislate higher tax rates. The central issue of tax reform is the closing of this loophole.

But in its proposal to tax so-called capital gains as ordinary income, the Carter Administration shows every intention of enlarging it. During inflationary periods, the taxation of capital gains as ordinary income can amount to confiscation of people's assets. Suppose you invest $10,000 in an income-producing asset and inflation drives the price of that asset to $15,000. Suppose that family educational or medical expenses force you to sell the asset. Even though its replacement cost is $15,000—the $15,000 you receive will not buy any more than the $10,000 you paid—the government will claim that you have a $5,000 capital gain and tax it. Suppose you are in the 25 per cent bracket. That means $1,250 of your assets will be confiscated by the government.

If the Administration widens government's tax loophole under the guise of tax reform, it will be confiscating assets in addition to taxing the income from the assets. People who face such a situation are likely to invest less. It is better to consume than to be expropriated. And as investment falls, the growth in real income will fall even further behind the growth in taxation. We are already 79 dollars' worth along the way to per-capita taxes being twice as great as per-capita expenditures on the three necessities.

We have come a long way since the 1940s, when the intellectual community got terribly upset because F. A. Hayek said something about the road to serfdom. A serf was a person who did not own his own labor. Although he was not himself owned by another—that is, he could not be bought and sold like a slave—the feudal nobility, which constituted the state of that period, had rights over the serf's labor. When we say that a peasant was enserfed, we mean that he owed a certain amount of his working time to the state. Over time and regions, this obligation seems to have averaged about one-third of a serf's working life.

WORSE THAN THE SERF

The serf's position provides a perspective that lets us sum up the success of reactionary forces in this century in simple economic terms. At the turn of the century, government in the U.S. had a claim to only one-eighth of the national income. By 1976, government had a claim to 42 percent of the national income. In relative terms, our position is worse than that of a medieval serf who owed the state only one-third of his working time.

Many may reject this parallel. They may say that we have a democratic government controlled by the people, and that high taxes and big government merely reflect the voters' demands for public goods in the public interest. Such an argument is reassuring but problematical. The income tax was voted in under one guise and retained under another. Furthermore, it was the action of a past generation. For us it is an inherited obligation, as were feudal dues, and it is seen that way by the Internal Revenue Service. All of us have been born to the statist gospels. Any clamors for tax reduction are quickly translated into proposals for tax reform, which are further transformed into proposals for securing more revenue for government. As we hear the talk about tax reform and "equity," we might pause to consider, if our cultivated progressive image will allow, that "equity" means more taxes on the productive in order to provide the revenues that build the spending constituencies of the Congress and the federal bureaucracy. What is operating is not equity, but the self-interest of government.

PERCENTAGE OF TOTAL TAXES PAID BY HIGH- AND LOW-INCOME TAXPAYERS, 1970 AND 1975

Adjusted gross income class	Income level (dollars) 1970	1975	Percentage of total taxes paid 1970	1975
Highest:				
1 percent	43,249 or more	59,338 or more	17.6	18.7
5 percent	20,867 or more	29,272 or more	34.1	36.6
10 percent	16,965 or more	23,420 or more	45.0	48.7
25 percent	11,467 or more	15,898 or more	68.3	72.0
50 percent	6,919 or more	8,931 or more	89.7	92.9
Lowest:				
50 percent	6,918 or less	8,930 or less	10.3	7.1
25 percent	3,157 or less	4,044 or less	.9	.4
10 percent	1,259 or less	1,527 or less	.1	.1

WHAT HUMPHREY-HAWKINS WON'T DO

(By Yale Brozen)

The much revised Humphrey-Hawkins Full Employment and Balanced Growth Act (H.R. 50 and S-50) provides that the President must include in his annual Economic Report:

1. Current and future economic trends in the U.S.;

2. Five-year numerical goals for employment, production, real income, productivity, and balanced growth;

3. Programs to achieve "reasonable" price stability.

These, plus an annual monetary policy statement from the Federal Reserve, are the only specific actions mandated by the bill.

Title I declares that Humphrey-Hawkins' goal is to fulfill "the right of all Americans able, willing, and seeking to work to full opportunities for useful paid employment at fair rates of compensation." Now, no one quarrels with this goal. And that is *why* the bill should be opposed: because it starts us on a road that leads in the opposite direction.

DANGEROUS RELATIONSHIP

The bill sets an interim goal of 3 per cent adult unemployment, and 4 per cent total unemployment; these numerical goals are ridiculous. The required statement from the Federal Reserve on monetary policy and the relationship of that policy to the short-term goals in the President's Economic Report are dangerous. And the numerical goals to be set in the Economic Report itself are potentially lethal.

I think the unemployment goals are ridiculous for two sets of reasons. The first set derives from the fact that Congress does not mean to do what is truly required to meet them. If Congress were serious about unemployment, it would not be enacting another law. Instead, it would *repeal* some laws.

First, it would repeal the minimum-wage provisions of the Fair Labor Standards Act. That in itself would, within two years, halve the unemployment rate among minority teenagers, which now stands at almost 40 per cent.

Second, it would repeal the Davis-Bacon Act, which requires proportional minority hiring. That Act inflates the cost of federal and federally assisted construction projects by 10 to 15 per cent. Also, it indirectly inflates the cost of private construction by about 5 per cent. Repeal of Davis-Bacon would eliminate the $5-billion drain that is currently placed on capital markets in order to finance the excessive portion of the cost of federal projects. The new availability of this $5 billion in the capital market would directly create an additional 250,000 jobs in private-sector capital-formation industries

(e.g., the machinery and construction industries).

Current rates of purchase of plant, equipment, and homes are about $20 billion below what would normally be expected at the end of a third year of recovery from a cyclical low. Normally, we would be at a rate of capital formation 10 per cent above the previous peak (fourth quarter of 1973). Instead, we are 2 per cent below that peak. The reason for this is the unprecedented behavior of the Federal Government. It is running a bigger deficit in this third year of recovery ($60 billion) than it did in the second year ($45 billion). Normally, the deficit should by now be vanishing, and the capital that had been absorbed by the deficit should be becoming available for private capital formation. Instead, the rising deficit has forced up interest rates, and funds are being drained from the financial markets that otherwise would go into capital-goods industries. Repealing Davis-Bacon isn't the whole answer, of course, but that one action alone would cut the drain by $5 billion—without any reduction of federal activity!

A GOAL ALREADY MET

Third, if Congress were really interested in reducing the unemployment rate, it would mandate the enforcement of eligibility standards for receiving unemployment compensation. That one action would reduce the unemployment rate by one to 1.5 percentage points, bringing it down to 5 per cent.

The second set of reasons that make a 4 per cent unemployment goal ridiculous is that the reported unemployment rate is partly fictitious and partly a consequence of changes in demographics. The fictitious portion is contributed by the relatively new job registration requirements for people receiving food stamps and Aid to Families with Dependent Children. Under these requirements, all able-bodied persons between the ages of 18 and 65 in families receiving such aid must register for employment in order to continue their eligibility. Ninety per cent of these compulsory registrants never take a job or enter a training program. This contrasts with the normal experience of unemployed persons, who generally find a job within eight to ten weeks after starting to look for one. These compulsory registrants have, within the past few years, added up to 2 percentage points to the reported unemployment rate. If there were no compulsory registration requirements, the current reported unemployment rate would be at a level which today would be regarded as showing full employment.

MORE UNEMPLOYMENT

The current full-employment unemployment rate, removing the fictional element, is approximately 4.9 per cent. The full-employment unemployment rate in 1960 was 4 per cent. The difference between those two figures is where the changes in demographics come in. A higher proportion of job-seekers today are new entrants or reentrants into the labor force than was the case in 1960. Those newly entering or re-entering the labor force take more time searching for a desirable job and receive more job offers before finally selecting one than people who have voluntarily quit or who have been permanently laid off. There is always some unemployment in a full-employment economy in America, because each year about one-fifth to one-quarter of all workers voluntarily quit to search for better jobs. On the average, they take six to eight weeks between jobs. That in itself creates an average unemployment rate of 3 per cent at full-employment levels. Add in workers who prefer to take seasonal employment and then report themselves as unemployed in the off-season so as to collect unemployment compensation; workers permanently laid off who take time to choose among alternative jobs; and the new entrants and re-entrants—and we have a full-employment unemployment rate of 4.9 per cent. That is why a 4 per cent target is ridiculous. Such an imprudent goal will only give Congress and the Administration an excuse to add more government employment programs and to fund more useless public projects such as the water projects which President Carter tried, and failed, to kill last year.

Humphrey-Hawkins' provision that the Federal Reserve must issue an annual statemen on monetary policy and on the relationship of that policy to the goals in the President's Economic Report is exceedingly dangerous. It perpetuates the fiction—enshrined in the Phillips Curve, which has been totally discredited by modern economic research—that unemployment can be cured by creating a little more money and a little more inflation. In fact, the result will be a lot more inflation and probably more, not less, unemployment.

THE CAMEL'S NOSE

Finally, the addition of five-year numerical goals to the Economic Report is potentially lethal. It is another step down the road to national planning. Why we should take such a step when five-year plans have earned such ill repute in other countries surpasses all understanding. Even the Russians have, semantically at least, abandoned five-year planning: they have shifted to six-year plans in the hope that this will wipe the egg off their faces.

The trouble with five-year plans is that people, or at least politicians and bureaucrats, will come to believe that they should try to make them come true. What little planning the government has done for some industries has already led to several disasters. For years, the government set goals for agricultural output, applied various controls to try to make these goals come true—and was constantly surprised by what actually happened. It applied indicative planning in tin and aluminum and then tried to make its indications come true by supplying financing subsidies, special tax breaks, and stand-by purchase contracts We ended with a glut of tin-smelter and aluminum capacity. Our government, alarmed by a potential shortage of helium, again applied indicative planning. It signed purchase contracts for helium on the basis of its projections. Now it has more helium on its hands than anyone knows what to do with and has been trying to wriggle out of its contracts for years.

Indicative planning or the setting of goals is the camel's nose under the tent. It has created havoc nearly every time we have done it. It's easy to bet the taxpayer's shirt on some presumed national need. But why not let the people who are betting their own shirts do the planning? Their mistakes are self-limiting, and their vision is more realistic.●

PROPOSED ARMS SALES

● Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask to have printed in the RECORD at this point the notification I have just received.

The notification follows:

WASHINGTON, D.C.,
April 20, 1978.

In reply refer to: I–13419/77ct.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78–31, concerning the Department of the Navy's proposed Letter of Offer to the Federal Republic of Germany for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $80.5 million and support costs of $5.1 million for a total estimated cost of $85.6 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Acting Director, Defense Security Assistance Agency.

[Transmittal No. 78–31]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Federal Republic of Germany.

(ii) Total Estimated Value:

	Million
Major Defense Equipment*	$80.5
Other	5.1
Total	85.6

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: One hundred thirty-two (132) Harpoon missiles, ten (10) test Harpoon missiles, launch canisters, blast test vehicle and support.

(iv) Military Department: Navy.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 20, 1978.●

A DISTRICT OF COLUMBIA MOTHER'S LETTER ON D.C. REPRESENTATION IN CONGRESS

● Mr. KENNEDY. Mr. President, at last week's hearing on the pending constitutional amendment to grant full voting representation in Congress for the District of Columbia, one of the most dramatic and moving moments came in the testimony by our distinguished colleague from Missouri, Senator EAGLETON.

In his testimony, he told of a letter he had received from a District of Columbia mother whose son had been killed in the Vietnam war. Yet, as she told Senator EAGLETON, she had no one in Congress to represent her views in decisions on the war.

That letter sums up very eloquently what this issue is all about. The House has already approved a constitutional amendment to grant to the people of the District of Columbia the full voting representation they deserve in Congress. I am very hopeful that before Congress adjourns this year, the Senate will also approve the amendment, and that it will be ratified by the States.

I ask that an excerpt from Senator EAGLETON's testimony may be printed in the RECORD.

The excerpt follows:

EXCERPT FROM TESTIMONY OF SENATOR THOMAS F. EAGLETON

I should have brought with me, but I was unable to find, a letter I received from a resident of the District of Columbia back in 1971. I think it was 1971 because that was when I became chairman of the powerful Senate District of Columbia Committee.

This letter was from a mother who had two sons in the army. 1971, as the Chairman will recall, was still a very high point in the Vietnam War. Her elder son had been killed, and naturally that had had a traumatic impact on her, her thinking, et cetera, and she wrote me a very moving but simple letter saying, in essence, "I have lost one son. I may well lose another. Yet I have no voice in voting on how far this war should go, or how long it should go on, or how much expanded it should be—into the Parrot's Beak, or how many bombs we should drop on the Ho Chi Minh Trail. I am hopeless, and in that sense I am voiceless."

I think that one letter did more to shape my thinking than a million words or a 200-page memorandum. The appeal is not simplistic, it is just fair and equitable.●

QUEEN ISABELLA DAY

● Mrs. HUMPHREY. Mr. President, it is appropriate that Queen Isabella be honored for her vision in accepting and supporting Christopher Columbus's unorthodox plan to journey to the East Indies by sailing west. Remembering Queen Isabella's birthday, April 22, would be a fitting tribute to the woman who facilitated the discovery of the New World she never saw. For this reason, I am pleased to bring to the attention of my colleagues a Proclamation by Gov. Rudy Perpich of Minnesota, declaring April 22, 1978 to be Queen Isabella Day.

Mr. President, I ask that the text of this proclamation be printed in the RECORD.

The text follows:

PROCLAMATION

Whereas: throughout the ages, man's course has often been guided and altered by great rulers who have left indelible marks upon their areas; and

Whereas, Queen Isabella, wife of Ferdinand of Aragon, exercised great wisdom and valiant courage throughout her reign, changing the course of history for all mankind; and

Whereas: said ruler enabled Christopher Columbus to make his daring voyage that resulted in the discovery of the New World, thus laying open a new chapter in the history of mankind's progress; and

Whereas: the history of America has direct linkage to the birth of Queen Isabella on April 22, 1451; and

Whereas; the 527th birthday of Isabella, Queen of Castile, occurs on Aprill 22, 1978;

Now, Therefore, I, Rudy Perpich, Governor of the State of Minnesota, do hereby proclaim Saturday, Queen Isabella Day in Minnesota, and do urge all citizens to pay homage to the memory of said queen whose daring vision and fervent support for explorer's dreams made possible the epoch-making discovery of the New World.●

WHAT'S RIGHT WITH AMERICA

● Mr. BAYH. Mr. President, the Kokomo Board of Realtors recently sponsored a letterwriting contest entitled "What's Right With America." Approximately 2,700 students from Kokomo and Howard County wrote to their Senators and Representatives affirming their pride in our country.

A panel of judges, which consisted of members of the local Indiana University campus, determined what they felt to be the best letters in five pre-determined categories. At the April meeting, the board awarded $25 U.S. series "E" savings bonds to the winners.

Ronald L. Tomlinson, president of the Kokomo Board of Realtors, forwarded to me several hundred of these letters. It was indeed refreshing to review the thoughts of the students and to know that so many young people are sincerely interested in the future of our Nation. I commend the Kokomo Board of Realtors for sponsoring this worthwhile project. If there are no objections, I welcome this opportunity to print the two winning letters I received in the RECORD.

The letters follow:

KOKOMO, IND.,
March 20, 1978.

DEAR SENATOR BIRCH E. BAYH: America is a great country to live in because of all the opportunities available.

In America we have a lot of jobs, freedom of speech and religion.

In addition, America is beautiful. There are endless opportunities for culture and travel.

I wouldn't want to live anywhere else.

Sincerely,

LORI DOWNHOUR.

KOKOMO, IND.,
March 17, 1978.

U.S. SENATOR BIRCH E. BAYH,
Russell Office Building,
Washington, D.C.

DEAR SENATOR BAYH: I feel that popular sovereignty is one of the best features of our system. The government is created to serve the people and we have the right to see that it does.

Very truly yours,

CAROLINE LANDIS.●

UNITED STATES-ROMANIAN COMMUNIQUES DURING PRESIDENT CEAUSESCU'S VISIT

● Mr. KENNEDY. Mr. President, last week the President of Romania, Nicolae Ceausescu, concluded his fourth visit to the United States, further strengthening relations between Romania and the United States.

I had the privilege to meet with President Ceausescu and to discuss many of the issues that tie our two nations. I know in his meetings with other Members of Congress, and with President Carter and members of his administration, he impressed all with his thoughtful comments on a number of urgent diplomatic and international problems that confront our countries.

This is strongly reflected in his statements and exchange of toasts with President Carter, and in the joint declaration signed at the conclusion of his visit in Washington. Mr. President, I would like to share these important communiques with my colleagues, and I ask that they be printed in the RECORD.

The communiques follow:

JOINT DECLARATION OF THE PRESIDENT OF THE UNITED STATES OF AMERICA, JIMMY CARTER, AND OF THE PRESIDENT OF THE SOCIALIST REPUBLIC OF ROMANIA, NICOLAE CEAUSESCU

The President of the United States of America, Jimmy Carter, and the President of the Socialist Republic of Romania, Nicolae Ceausescu,

Having noted with satisfaction that the political, economic, scientific, cultural and other relations between the two countries have developed significantly in recent years,

Having determined to take further steps to expand bilateral relations and cooperation, to build security and develop cooperation in Europe, to strengthen international peace and security, and to seek solutions for the manifold issues confronting the world,

Agreed on the following Declaration:

I. They reaffirmed the commitment to continue the development and expansion of relations between the two countries on the basis of the Joint Statement signed in Washington on December 5, 1973 and of the Joint Statement on Economic, Industrial and Technical Cooperation between the United States of America and the Socialist Republic of Romania of the same date. These relations are based on the purposes and principles of the United Nations Charter and of the Declaration on Principles Guiding Relations Between Participating States of the Final Act of the Conference on Security and Cooperation in Europe, and consistent with these, particularly on the following interrelated principles:

The right of each state to existence, freedom, independence and national sovereignty;

The equal rights of all states, irrespective of their size, level of development, and political, economic and social systems;

The right of each state freely to choose and develop its political, social, economic and cultural system;

The right of each people to decide its own destiny;

Refraining from the threat or use of force inconsistent with the purpose of the United Nations;

Respect for territorial integrity and inviolability of frontiers;

Non-intervention, direct or indirect, for any reason whatever, in the internal affairs of any other state;

Peaceful settlement of international disputes;

Observance of and promotion of respect for human rights and fundamental freedoms, including all the conditions required for a free, dignified and prosperous life;

Cooperation among states in order to promote world peace and security and economic and social progress.

II. They stated their joint determination:

1. To continue meetings at the highest level and consultations at other levels, and to encourage interchanges between members of legislatures and representatives of local administration.

2. To promote and facilitate the expansion of trade and economic cooperation between the two countries, taking into account Romania's present status as a developing country;

3. To promote the reduction of tariffs and non-tariff barriers to trade in conformity with the Agreement on Trade Relations between the two countries, and to seek to increase the volume and diversify the structure of bilateral trade.

4. To seek ways to put existing non-discriminatory trade relations on a more stable and long-term basis, in particular through the renewal of the Agreement on Trade Relations.

5. To encourage the development of cooperation activities, including joint ventures and cooperation in third markets, contracts and interchanges between American firms and Romanian economic organizations, participation in specialized exhibitions in both countries, increased exchange of economic information and data, and other measures for the implementation of the Long-Term Agreement on Economic, Industrial and Technical Cooperation, signed in 1976; and to support in this respect the activities of the Joint American-Romanian

Economic Commission and of the United States-Romanian Economic Council.

6. To cooperate in the settlement of humanitarian issues, including family reunification, in the spirit of mutual understanding and good will.

7. To promote cultural and scientific exchanges under the terms of the Agreement on Cooperation and Exchanges in the Cultural, Educational, Scientific and Technological Fields of 1974, as well as regulations and contacts between institutions, organizations and citizens of the two countries, and to encourage tourism, in order to increase mutual understanding and friendship between the two peoples.

III. They also expressed their joint determination.

1. To strengthen and make irreversible the process of detente in Europe and throughout the world.

2. To work for ensuring opportunities for all countries, big or small, to contribute to the settlement of complex world issues on the basis of equality.

3. To promote the settlement of all disputes among states by peaceful means and the elimination of the threat or use of force.

4. To contribute actively to the full implementation of all the provisions of the Final Act of the Conference on Security and Cooperation in Europe and to promot the multilateral process initiated by the Conference. They agreed that the Belgrade Meeting provided a firm basis for continuation of this process; at the same time, they expressed disappointment that it had not been possible to reach agreement on the numerous useful proposals which had been put forward. They agreed to cooperate closely so that the 1980 Madrid Meeting should take effective steps toward strengthening security and developing cooperation in Europe in the fields of economic cooperation, of cultural exchanges and humanitarian problems, and of military disengagement and disarmament. They also agreed that the development of friendly and neighborly relations among Balkan countries will be a positive contribution to re-enforcing security and expanding cooperation in Europe.

5. To act resolutely for the adoption of a wide range of disarmament measures, including nuclear disarmament, such as halting the build-up of armaments and reducing military budgets, armed forces and armaments leading utimately to general and complete disarmament under effective international control. They endorsed a more effective role for the United Nations in dealing with international disarmament issues and underlined their active support for the Special Session on Disarmament of the United Nations General Assembly.

6. To work toward a more just and equitable international economic order, which should promote the accelerated economic development of developing countries; and to intensify dialogue and cooperation among all countries, directed toward solving major economic problems, on the basis of the principles of equality, equity and mutual benefit.

7. To encourage efforts aimed at a just, comprehensive and lasting peaceful settlement in the Middle East, based on Israel's withdrawal from territories occupied as a result of the 1967 war, respect for legitimate rights of the Palestinian people, and insurance of the independence, territorial integrity and security of all states in the region. To this end, they expressed themselves in favor of negotiation among all the interested parties for solving the Middle East situation, with appropriate representation of the Palestinian people.

8. To support the legitimate aspirations of the African peoples for peace, freedom and independence. They reaffirmed the inalienable right of the peoples of Zimbabwe and Namibia to sovereignty and independent development, and the necessity of ensuring, as soon as possible, the transfer of power to the African majority, in the spirit of pertinent United Nations resolutions. They also expressed deep concern about the South African policy of apartheid and racial discrimination and stood for the abolition of these practices.

9. To strengthen the role of the United Nations in the maintenance and consolidation of world peace, in the development of cooperation among all nations, and in furtherance of the principles of international law in the relations among states, through reforming and restructuring the UN system in order to make it stronger and more effective; and to strengthen cooperation between their two countries within the United Nations and other international organizations and conferences.

IV. The two Presidents expressed their conviction that friendly relations between the United States of America and the Socialist Republic of Romania, based on equality, mutual respect and due consideration for their respective interests, serve the cause of world peace, security and cooperation. They reaffirmed their commitment to expand and deepen, both through diplomatic channels and meetings at all levels, the consultations, contacts and exchanges that have become an important and lasting element of their cooperation.

Done in Washington on the thirteenth of April, 1978.

JOINT COMMUNIQUE

At the invitation of President Jimmy Carter and Mrs. Carter, the President of the Socialist Republic of Romania, Nicolae Ceausescu, accompanied by Mrs. Elena Ceausescu, paid a state visit to the United States of America between April 12–17, 1978.

President Carter and President Ceausescu conducted official talks on the current state of relations between the United States and Romania as well as on the possibilities for their further development. They also had a broad exchange of views on a series of major world problems of common concern. The talks were held in a cordial atmosphere of openness, esteem, and mutual respect which reflects the positive evolution in United States-Romanian relations.

President Ceausescu met with members of the House of Representatives and the Senate. The talks showed that both sides desire to contribute to the deepening of understanding and to the growth of contacts between the American and Romanian peoples.

President Ceausescu also met with leading personalities in the business, financial, scientific, engineering and cultural life of the United States.

The two Presidents noted with satisfaction that the relations between the two countries have further developed and broadened in the spirit of the principles embodied in the Joint Declaration signed in Washington, D.C., on December 5, 1973. They expressed their common determination and interest to encourage and promote the continuing expansion of ties of cooperation and friendship between the two countries and peoples.

In order to further develop and diversify the relations between the two countries as well as to contribute to the strengthening of international peace and security, President Carter and President Ceausescu signed a Joint Declaration.

The two Presidents, expressed their satisfaction at the results of their talks and agreed to continue the bilateral dialogue at the highest level as well as at other levels and through diplomatic channels.

President Ceausescu and Mrs. Elena Ceausescu also visited, in addition to Washington, D.C., Chattanooga, Dallas, Houston, New Orleans and New York.

President Ceausescu and Mrs. Elena Ceausescu expressed their cordial thanks to President and Mrs. Carter for the friendly and hospitable reception extended to them during their visit which is a natural expression of the traditional friendship and mutual respect between the American and Romanian peoples.

President Nicolae Ceausescu and Mrs. Elena Ceausescu invited President Jimmy Carter and Mrs. Rosalynn Carter to pay an official visit to the Socialist Republic of Romania. The invitation was accepted with pleasure.

EXCHANGE OF TOASTS BETWEEN THE PRESIDENT AND HIS EXCELLENCY NICOLAE CEAUSEAU, PRESIDENT OF THE SOCIALIST REPUBLIC OF ROMANIA

The PRESIDENT. I think it is the guests that we have, but I believe the Strolling Strings sounded better tonight than any time I have ever heard them, and I want to thank you for bringing out the best in them. I thought it was very wonderful.

How many of you here either came from a foreign country to our nation or had your parents or grandparents come from a foreign country? Raise your hand, if you would.

Mr. President, you can see more than half. It is obviously more than half of the people here have come to the United States from a foreign country, most of you from Europe. And I think this in itself demonstrates vividly to our distinguished guests how close the ties are between our nation and his and those nations that are neighbors of his.

We are indeed honored to have all of you here tonight, and particularly honored to have President Ceausescu and his wife, Elena, and the distinguished Ministers of his Government come to visit the White House, the First Family of our country, and the people of our country.

Mr. President, you are welcome to our country.

We paid him a special honor today, perhaps unprecedented in the history of our nation. We played two different national anthems to Romania—(laughter)—the incorrect one this morning and the correct one tonight. (Applause) And I think this gives us an excellent opportunity to judge the tremendous progress that has been made in Romania—(laughter)—because I like the one tonight much better, Mr. President.

It is always an exciting thing for us to have distinguished leaders from other nations come to visit us, and we always like to put our best foot forward and not only entertain our guests, but let them know what a great country we have.

I was particularly eager to impress the President's wife tonight because she, on her own, is a distinguished scientist, a chemist, has done great research work. And I was very careful to place on her left someone who could speak her language about science and about whom I could brag as a distinguished American to show how superior our country was. As a matter of fact, Dr. Palade is a Nobel laureate, and I wanted to let Mrs. Ceausescu know how advanced we were in training Americans to win the foremost prize in all the world. So I was explaining it to her very carefully and in the middle of my dissertation he pointed out to me he was born, raised and trained in Romania.

So we learned a lot about each other.

I have had a delightful day with the President of this great country. I think it is accurate to point out that as the leader of his great nation, he has not only brought tremendous progress to Romania, but also has taken on a role of leadership in the entire international community that is notable.

He has been dedicated to the proposition that a nation was sovereign, that its territorial integrity should be honored, that its

people should be independent, and that in spite of this complete commitment to the pride of one's own nation, that there should be bridges built, not only to other countries from your own, but between other countries who have difficulty in commuicating because of different political and economic organizations within their own countries.

He was one of the first leaders, I think, who saw the benefits, economically, politically, militarily, in detente, and he has been a foremost proponent in trying to bridge the gap between the Warsaw Pact nations and the NATO countries. He has a unique ability to relate easily to leaders of nations, regardless of their political commitment or orientation or background or history or conviction about the present or future status of their countries.

He has been very helpful to me and my predecessors in the White House in trying to bring messages directly from leaders with whom we don't communicate because of absence of diplomatic interrelationships; and has provided a bridge for the easing of tensions and the better understanding on a worldwide basis.

As a member of the developing nations of the world, he has been able to be an evocative and a very effective spokesman in acquainting the industrial nations of the world with how we could interrelate more easily and more effectively with a group of countries who quite often are not well organized or not willing to sit down and calmly negotiate the way to alleviate the wide disparity in economic benefits.

He is the leader of one of the few Eastern European nations who is a member of the Group of 77, now comprising about 95 countries, and I think this shows the breadth of his vision and the commitment he has to bridge those gaps that I have just described.

We have got an excellent relationship with Romania. I think it has been growing steadily and on a very sound basis for the last ten years or more.

This is the President's fourth trip to our country, and after he leaves Washington shortly, he will be going to other places in the United States. He will be going to Chattanooga, to Dallas, to Houston, to Orlando. He will also be visiting New York. Unfortunately he won't get to Georgia—(laughter)—on this trip. He is going to save that for dessert when he comes back on his next trip.

But he knows our country. He has studied it with a great deal of interest, and he has been one of the people who have made notable progress among other countries that are in the most intense disputes at this point.

I would say more than any other leader, certainly including myself, he was responsible for the historic visit of President Sadat of Egypt to Jerusalem and Israel.

By the way, the capital of Israel is Tel Aviv and not Jerusalem.

And we have seen that this ability of his has paid rich dividends to us. Romania was one of those countries instrumental in evolving the Conference on Security and Cooperation in Europe that we refer to in our country most often as the Helsinki Agreement. And at Belgrade, which he described this morning as a disappointment, he was very eager to try to move forward to a much more substantive accomplishment that might be realized at the next meeting scheduled to be in Madrid.

We are very proud that the Helsinki Conference Agreement includes the Third Basket, which covers more deeply than ever before the question that is of profound importance to our country, that is, basic human rights. And we have an ability, President Ceausescu and myself, his Ministers and mine, to discuss ways by which we might move, perhaps in different means and at different rates of advance, to bring about those basic human rights that our people so urgently need—the reunification of families and the basic freedoms that are important to us.

I have enjoyed being with him. He is a very good adviser. He is a man who in the past has suffered greatly in prison, tortured, but because of his courage and because of his belief in the future of his own country, notable achievements have been brought to the people who have confidence in him.

It is a great pleasure for me again to express my welcome to him to our country, and I would like to propose a toast to a great leader, President Ceausescu, and to the brave and friendly people of Romania.

Mr. President, to you and your people. (Applause)

President CEAUSESCU. Mr. President, Mrs. Carter, ladies and gentlemen: It is for myself, for my wife and for the members of my party a reason of special pleasure to be your guests here tonight, to be again here in the United States to meet again many citizens of your lovely country.

Today we had the first round of talks on a rather large sphere of problems, and we have also reached a number of common conclusions. The first regards the need to establish broader cooperation between our two countries and to take more sustained efforts towards peace, towards more democratic international relations, and towards insuring to each and every nation the right to live in freedom and to develop according to their own aspirations.

You said, Mr. President, that many people here in the United States have come from Europe or other parts of the world. I cannot boast that many Romanians have come from other parts of the world, because for almost 2,050 years—because in 1980 we are going to celebrate the 2050th Anniversary of the first centralized Nation State of Romania—Romanians have been there, and they are going to stay there. They fought to be free, and they want to be always free.

In many ways the history of our two respective countries are different, and the present is also different from a number of viewpoints. The United States is a developed country and a big country. Romania is a smaller country and a still developing country. But it is our wish by relying on the labors and efforts of our own people to develop on broader lines to gain access to modern science, to civilization and to live a life of dignity, freedom and independence.

I think that despite all differences, including differences in social systems, there are many things that can be common to our two countries and to our two peoples, and mainly our common wish for progress, our wish to see that the accomplishments of human genius are put in the service of happiness of all peoples. No doubt, also, we have a common determination to do everything we can in order to see to it the wonderful achievements of science should not serve destruction and war, but the progress, well-being and happiness of each people and of all peoples.

I think that that is precisely the supreme rationale of human existence, and that is also the fundamental problem, the core of human rights—the right to be free, the right and the duty to respect the freedom of others, and the duty to work in such a way in order to enjoy himself or herself and let others enjoy the benefits of civilization. (Applause) Maybe on certain aspects of human rights we might have different philosophical concepts, and there is nothing in that. But we in Romania set out from the premise that everything we do should serve the well-being of the people, should help all people live life with more dignity and more freedom. And we have a saying in Romania that the little we have, we should distribute fairly for all to enjoy.

You told me tonight, Mr. President, about your Presidential campaign in the early stages and how you really got elected President. It is wonderful that you could win over all obstacles, and now to have a farmer at the head of the United States, and also a farmer's son, and that I used to work in the field, I used to work in factories, and we have there in Romania a farmer's son who has worked all his life with his hands and he is now a President, too. (Applause)

Maybe that helps our people also understand that whatever we do is for the people to benefit and for them to live life with more dignity.

As a matter of fact, if I remember right, either the first or the second President of the United States used to be a worker, and the founding father of scientific socialism, Marx, used to say and to quote that as an example of how a working man can rise to the highest dignity of office.

Now when we talk about human rights, it is good to remember all these things, because the rights of all human beings begin with the right to work, with the right to learn, with the right to have access to culture, with the right to live in freedom and also with the right to participate in the management of all national affairs without discrimination.

And this also includes the right to have any creed, either religious or philosophical.

We endeavor to respect such rights fully, and we regard them as sacred. We think that everything should be done and no effort should be spared in order to have those rights asserted in all countries, so that they become a basis for equal cooperation among all nations. That is why we take a stand against all wars and for disarmament, first of all for nuclear disarmament. That is why we believe that the world should cease to be divided into opposing military blocs and new relations should be built in a world without military blocs. That is why we stand for a political solution in the Middle East. That is why we welcomed President Sadat's initiative and now we are hopeful that his efforts will, and the others will, lead to a just and lasting peace in the area.

That is also the reason why we wish to see new relations in Europe and the document signed in Helsinki implemented in full.

As there are more baskets than one, we would wish that all should be implemented and more progress should be made in particular on the military side of it, considering that in Europe, where many Americans of today have come from, we have to deal with the highest concentration of forces and modern armaments.

You know Europe. You know Europe is not such a big place, and little place is now left for anything but arms. So we shall have to remove them to make place for people. That is why, while giving attention to the Third Basket, we should also give more attention to military disengagement and disarmament.

These are the same reasons why we support the liberation movements in Rhodesia and Namibia and the majority in South Africa, their right to be free, to decide their own future, and to participate in the management of their own affairs.

Finally, I shouldn't fail to mention the fact that two-thirds of mankind is poor, and one-third is relatively rich, because not all are rich in that one-third. That makes it necessary, in our view, to join the efforts with these people, with the developing nations, in order to secure their more rapid economic and social progress. Without this we can hardly say that all nations can enjoy the fruits of modern civilization.

We would certainly welcome with great satisfaction more active support from the United States to the solution of these worldwide problems, if more is done for these two-thirds of mankind that live in poverty.

Of course, I have in mind not only the United States but all developed countries, all those who are able to take action in

order to bring new solutions to the vital problems of mankind.

We know well that just a few countries, even if they are as big as the United States, cannot solve all these problems. What is needed is for all people, all nations, to join their efforts in order to bring about solutions that would be up to the expectations and aspirations of all people.

I am convinced that despite the difficulties, that all the nations of the world will be able to bring about new solutions to the problems we are facing and to build together a better world with more justice.

We wish that our visit here and our talks together should help us identify new fields for cooperation between Romania and the United States, but at the same time should provide new opportunities for cooperation with a view to solving the problems that confront humanity today.

I should like to propose this toast for better cooperation between Romania and the United States, for a more democratic international policy. I wish the people of America prosperity and peace for all.

To your health, President Carter, Mrs. Carter. We are looking forward to seeing you in Romania. To your health, everybody. (Applause.)

EXCHANGE OF REMARKS BETWEEN THE PRESIDENT AND HIS EXCELLENCY NICOLAE CEAUSESCU, PRESIDENT OF THE SOCIALIST REPUBLIC OF ROMANIA

The PRESIDENT. This morning the people of the United States are honored by having as our guest a great leader of a great country, President Ceausescu, who is here from Romania with his wife, Elena. And it is a great personal pleasure for me on behalf of our country to welcome them.

This is the fourth visit by President Ceausescu to the United States, and my predecessors have honored themselves by visiting the nation of Romania.

It is accurate to say that in the last ten years or more the friendly relationships between the United States and Romania have increased and improved rapidly to the satisfaction and to the benefit of our people.

Trade between our two countries in the last ten years has been multiplied ten times over. And because of the rapidly improving relations that still exist, we expect the volume of trade to more than double in the next three years.

It is also of great benefit to me as President to have a chance to consult with a national and an international leader like our guest today. Their influence as Romanian leaders throughout the international world is exceptional. Because of the strong commitments of the President and the independence of the people, Romania has been able to serve as a bridge among nations with highly divergent views and interests and among leaders who would find it difficult under some circumstances to negotiate directly with each other.

One recent notable achievement of President Ceausescu was to be instrumental in arranging the historic visit of President Sadat of Egypt to the capital of Israel in Jerusalem. Both of those countries have found in Romania an avenue of communication and understanding that has been very valuable to them, to the Middle East, and to world peace.

There are differences, obviously, between the United States and Romania, in our political system, and also in our military alliances. But the factors which bind us together are much more profound and of much greater benefit to our countries. We share common beliefs. We believe in strong national sovereignty. We believe in preserving the independence of our nations, and also of our people. We believe in the importance of honoring territorial integrity throughout the world. We believe in equality among nations in bilateral dealings, one with another, and also in international councils. We believe in the right of every country to be free from interference in its own internal affairs by another country. And we believe that world peace can come, which we both devoutly hope to see, through mutual respect, even among those who have some differences between us.

Our goals are also the same, to have a just system of economics and politics, to let the people of the world share in growth, in peace, and personal freedom, and in the benefits to be derived from the proper utilization of natural resources.

We believe in enhancing human rights. We believe that we should enhance, as independent nations, the freedom of our own people. And Romania has been instrumental in pursuing the goals of the Helsinki Conference, in particular building the mutual confidence factors that can let the nations of Eastern Europe and the nations of Western Europe understand one another better and build up legitimate trust through that understanding.

We also believe in a common goal—which President Ceausescu has endorsed forcefully and publicly—in the principle of world disarmament, based on mutually beneficial agreements and based on an enhanced prospect for peace.

Mr. President, Mrs. Ceausescu, on behalf of the American people, I want to extend my expression of honor that you are here and the warmest welcome to the United States.

Thank you very much. (Applause)

President CEAUSESCU. Mr. President, esteemed Mrs. Carter: It is with particular pleasure that myself, my wife, and the associates accompanying me are visiting again the United States at the kind invitation extended by you, Mr. President, and by Mrs. Carter.

I should like to begin by addressing to you and to the people of America the warmest greetings of the people of Romania, who are most desirous to entertain and to develop friendly relations and cooperation with the great people of the United States.

Our visit here takes place at a time when the relations between Romania and the United States have seen continuous progress. Indeed, in the last ten years, there was a significant growth in our economic exchanges, which have increased almost ten times over, as well as in our cooperation in the field of science, culture, and in the exchange of citizens between our two countries.

I do hope that in the course of our talks these days we shall be able to identify new opportunities so that in the forthcoming years we shall make even more significant progress in our relationship, in full accord with the basic interests of our two nations and with the interests of cooperation and peace throughout the world.

It is true, as you mentioned, sir, that our two countries have different social systems. But I believe that in the world of today this should not be an obstacle in the way of more active cooperation in all fields based on mutual respect of each country's independence and sovereignty, renunciation of the use of threat or force, and mutually advantageous cooperation.

I would like to mention with satisfaction, as well, that it is precisely on that basis that the relations between Romania and the United States have been established and are now developing.

So, Mr. President, I think we can be satisfied with the present level of the relations between our two countries. As for the state of international affairs, unfortunately we are still facing events which are both complex and complicated.

The world is now confronted with severe economic problems. In many areas of the world there are still conflicts and threatening clouds are menacing the peace of the world with very severe consequences.

In the face of this situation, it is now necessary for all countries, irrespective of their size, of their military might, of their social system, to take action and to uphold the principles of peaceful coexistence in order to build a kind of cooperation based on equal rights and mutual respect, and to insure to each nation the right to develop in freedom without any outside interference.

As participants and signatories of the Helsinki documents on European security, both Romania and the United States are working for the implementation of those documents, which we both see as one whole in the economic, cultural, scientific, humanitarian fields, as well as in the field of military engagement.

Unfortunately, at Belgrade, no significant progress was made. That is why we believe it necessary now that before our next meeting in Madrid, new efforts should be made in order to meet the people's aspirations for peace cooperation.

It is also true that no effort should be spared in order to bring peace to the Middle East, leading to the withdrawal of Israel from the territories occupied as a result of the 1967 War, the settlement of the Palestinian question, including the establishment of an independent Palestinian state, and by guaranteeing the independence, sovereignty and integrity of all the states in the area, which should establish their relations on the principles of good neighborly relations and cooperation.

We would like to work together closely on such matters as disarmament. We are hopeful that at the forthcoming Special Session of the United Nations General Assembly, practical results will be worked out, leading to actual disarmament and in particular nuclear disarmament, enabling us to build a world of cooperation and peace for all.

Although the United States is a developed country—I would say highly developed country—and Romania is still a developing one, such problems as the elimination of underdevelopment and the establishment of a new international economic order are matters of equal concern for both our countries, because without insuring new relations, new democratic relations based on equal rights and mutual advantage, we shall not be able to eliminate underdevelopment and to insure economic stability and progress to the world.

It is also true that there are many problems on which our two countries can well work together and with good results, too. And I hope that our talks will further strengthen the basis for our mutual cooperation aimed at meeting their common interests of our two nations and also meeting the aim of a better world, a world with more justice in which each and every people should be able to dedicate their efforts to their happiness, to their well-being, to their freedom.

It is my conviction that all this will come true. And once again, I should like to express my wish to see good cooperation develop between our two nations and our wish to the friendly people of America every success and peace.● [Applause]

THE NUTRITION EDUCATION PROGRAM

● Mr. EAGLETON. Mr. President, few Americans are immune to the ravages of inflation and most Americans believe that one of the causes of inflation is the continuing growth of Federal spending. "When are you going to do something to cut Federal spending?" is a question all of my colleagues hear often when they return to their home States.

Of course, as my colleagues know, it is one thing to talk about cutting Federal spending and quite another thing to actually do it. Fully 75 percent of Presi-

dent Carter's proposed $500 billion budget is comprised of so-called "uncontrollable" expenditures. Nearly $375 billion will go to meeting pension obligations, contracts already committed, social security benefits and programs funded through entitlements. These are Federal expenditures the Congress could not eliminate or reduce immediately even if we were of a mind to do so.

But these uncontrollable expenses notwithstanding, there are some things the Congress can and must do to get a better handle on the growth of Federal spending. One of the easiest and most sensible such things would be to simply stop creating new "uncontrollable" expenses. For every time we start a new program using entitlement funding, we are starting an inexorable process of continuing, uncontrolled spending increases, a process which cannot help but feed inflation.

This is an opinion shared by the General Accounting Office, which recently reported to me in connection with entitlement funding of the special supplemental feeding program for women, infants, and children. In the report, GAO stated (in regard to the general practice of entitlement) that:

> Our main concern on entitlement programs centers on the weakening of Congressional budgetary control inherent in these types of programs . . . The key characteristic of entitlement programs is that, once enacted, the authorizing legislation automatically creates legally enforceable claims to benefits and thus effectively preempts the Congress' formal process of deliberating funding levels and appropriating funds . . . Any action which permits a Federal activity or program to operate without a related requirement for regular Congressional reviews on planned programs and financing needs—equivalent to that which characterizes the appropriations process—should be viewed as a lessening of Congressional control. Departures from this standard should be permitted only on a clear showing that an activity or program cannot be successfully and effectively operated in the public interest within the Congressional appropriations process or that the demonstrated advantages attributable to the departure clearly outweigh the disadvantages of lessened Congressional control, preferably with a Congressional expression to that effect.

Clearly, it is the feeling of the GAO that the entitlement route should be followed only as last resort, and only after thorough study and analysis of a given program. Unfortunately, this often is not the philosophy followed in actual practice.

My colleagues will recall the enactment of last year's child nutrition amendments, a bill I supported. In its deliberations on that bill, the Agriculture Committee considered the question of entitlement funding, and very responsibly voted to eliminate the entitlement feature for the new nutrition education program. When the measure came to the floor, however, some of my colleagues moved to revive the entitlement feature with an unprinted amendment. By the time Senator MUSKIE and I could object in the name of the budget process, the amendment had already been adopted on a voice vote.

This is the kind of uncontrolled free-spending which feeds inflation. For that reason, I was very pleased last month to receive a letter from Assistant Secretary of Agriculture Carol Tucker Foreman, in which the Department acknowledged problems with the entitlement process. In her letter, Ms. Foreman unequivocally stated the Department's intention to support a return to appropriated-funding status for the program this year.

Now, however, I am distressed to learn that the Department of Agriculture has reversed its position, and wants to continue entitlement funding for the nutrition education program. I do not know what brought about this change of heart. Assistant Secretary Foreman's testimony, which discussed this, provides no compelling reason for this about-face. I do know that this action, and the congressional action in approving entitlement funding last year, simply is not consistent with President Carter's recent speech on inflation. In that speech, President Carter urged Congress to exercise restraint, and to report regularly on the inflationary effect of pending legislation. Clearly, creating new entitlement programs is inflationary, because such programs inevitably build in large spending increases in future years.

I am confident that I cannot be characterized as an "antinutrition" Senator. I have voted for every major nutrition program in the Senate since I came here 10 years ago. However, I cannot in good conscience support some of the proposals which would engrave these programs in stone, eliminate meaningful congressional review and lock the taxpayers of this country into an unalterable commitment to pay for these programs regardless of whether they are doing what they are supposed to do.

I will continue to oppose the indiscriminate use of entitlement funding for nutrition and other programs, and I urge my colleagues to study the opinion of the General Accounting Office on this matter.

Mr. President, I ask that the following documents be printed in the RECORD at this point:

(1) Letter from Senator Eagleton to Comptroller General Staats, 1/30/78.

(2) Report of the Comptroller General #B0176994, 4/13/78.

(3) Letter from Senator Eagleton to Secretary Bergland, 2/14/78.

(4) Letter from Assistant Secretary Foreman to Senator Eagleton, 3/13/78.

(5) Excerpt from Statement of Carol Tucker Foreman, 4/12/78.

The material follows:

HON. ELMER B. STAATS,
Comptroller General of the United States, General Accounting Office, Washington, D.C.

DEAR MR. STAATS: The Senate Appropriations Subcommittee on Agriculture, Rural Development and Related Agencies will hold hearings on March 14–15, 1978, to consider program funding for various Federal feeding programs, including the Special Supplemental Food Program for Women, Infants and Children (WIC). To assist in the review of the WIC program, the Subcommittee requests that GAO, based on discussions with knowledgeable people and an analysis of existing studies, prepare and transmit to us a summary of issues and questions for use in our hearings. Coverage should include a consideration of studies on the benefits of nutritional assistance; information on Federal and State program management evaluations; views on the potential impact of significant program expansion; and GAO views on whether the use of entitlement funding on the WIC program is appropriate, especially in view of the intent of the 1974 Budget and Impoundment Act. GAO's formal views on entitlement funding should be provided in writing to us by April 15, 1978.

After this initial effort is completed, the Subcommittee may request GAO to conduct a more comprehensive review of the WIC program to help in considering the 1980 budget request. Agreement on the matters to be reviewed and the timing of this work can be worked out by our respective staffs at a later date.

Sincerely,

THOMAS F. EAGLETON,
Chairman, Subcommittee on Agriculture, Rural Development and Related Agencies.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C., April 13, 1978.

HON. THOMAS F. EAGLETON,
Chairman, Subcommittee on Agriculture, Rural Development, and Related Agencies, Committee on Appropriations, U.S. Senate.

DEAR MR. CHAIRMAN: In response to your January 30, 1978, letter, we are providing our views on the authorizing and financing of entitlement-type programs and whether such funding for the Special Supplemental Food Program for Women, Infants, and Children would seem appropriate, given the intent of section 401 of the Congressional Budget and Impoundment Control Act of 1974 (31 U.S.C. 1351). Our main concern on entitlement programs centers on the weakening of congressional budgetary control inherent in these types of programs.

In general, entitlement legislation requires the payment of benefits to any person, State, or local government meeting the requirements established by law. The key characteristic of entitlement programs is that, once enacted, the authorizing legislation automatically creates legally enforceable claims to benefits and thus effectively preempts the Congress' formal process of deliberating funding levels and appropriating funds.

Entitlement programs may be financed through various mechanisms, such as general funds, trust funds, and revolving funds. Also, some may be permanent funds that are automatically replenished and require no current action by the Congress. Entitlement programs are generally open-ended; thus, the determination of outlays at any given time is a function of variables—such as the number of beneficiaries or the rate of inflation—outside the control of the Appropriations Committees. By authorizing entitlement programs, the Congress effectively relieves the Appropriations Committees of their responsibility for determining spending levels.

Entitlement programs usually are created by the Congress because of the desire to give certain programs secure or preferred access to Federal funds. For example, the Congress has sought to provide workers assurance about future social security payments by making social security an entitlement program. In this and other instances, the absence of effective control through the appropriations process has been deemed to be outweighed by the public interest of certainty of the benefits.

We have consistently taken the position that the public interest is best served when congressional control over activities is exercised through periodic reviews, affirmative action on planned programs, and financing requirements through the appropriations process. We have, therefore, advocated (1) that programs be financed through periodic direct appropriations or (2) that legislation authorizing financing through other means provide for adequate and continuing congressional control.

Any action which permits a Federal activity or program to operate without a related requirement for regular congressional reviews on planned programs and financing needs—equivalent to that which characterizes the appropriations process—should be viewed as a lessening of congressional control. Departures from this standard should be permitted only on a clear showing that an activity or program cannot be successfully and effectively operated in the public interest within the congressional appropriations process or that the demonstrated advantages attributable to the departure clearly outweigh the disadvantages of lessened congressional control, preferably with a congressional expression to that effect.

The fundamental objective of the 1974 act was to establish a process through which the Congress could systematically consider the total Federal budget and determine priorities for the allocation of budgetary resources. It included procedures to reintegrate "backdoor" spending—financing by means other than by direct appropriations—into the formal budget process.

Section 401 of the act applies new procedures to entitlement legislation to provide a more comprehensive and consistent control over spending actions. The act makes entitlement programs fully subject to the budgetary process by providing that entitlement legislation cannot be considered in either the House or Senate if it would have an effective date before the start of the new fiscal year.

FINANCING OF THE SPECIAL SUPPLEMENTAL FOOD PROGRAM FOR WOMEN, INFANTS, AND CHILDREN

According to officials of the Department of Agriculture's Food and Nutrition Service, the Program is not considered an entitlement program because it operates within a funding ceiling and cannot serve all areas or health clinics that desire to administer those types of projects.

The Program was created in 1972 as an amendment to the Child Nutrition Act of 1966 (42 U.S.C. 1786). Agriculture officials told us that, because the amendment was introduced after the Department's 1973 appropriations act was passed, the Congress decided to finance the Program through "backdoor" funding made available from section 32 of the Act of August 24, 1935, as amended (7 U.S.C. 612c), instead of by direct appropriations. Under section 32, 30 percent of custom receipts collected by the Treasury Department's Customs Service during the preceding calendar year plus unused balances of up to $300 million are available to the Secretary of Agriculture for use at his discretion. Service officials explained that using these funds was probably the quickest and easiest way to get the Program started.

In fiscal year 1978 the use of section 32 funds for the Program was eliminated. Service officials explained that the section 32 provision is no longer needed because the Program is receiving direct appropriations and the present Administration seems committed to its continuation. A description of the Program's financing, from its inception through fiscal year 1978, is provided in the enclosure.

CONCLUSIONS

The Program was created before the passage of the Budget and Impoundment Control Act of 1974 and the increased concern and awareness for budgetary control that has resulted from it. We have continually favored the financing of Government programs through direct appropriations because the appropriations process provides for periodic scrutiny and affirmative congressional action. Such scrutiny is not so readily available to the Congress, through entitlement, or other "backdoor" financing methods, such as the use of section 32 funds, which avoid the appropriations process. In addition, we are unaware of any study results that effectively demonstrate that the loss of budgetary control that would occur if the Program was made an entitlement program would be in the public's best interest.

A similar view on entitlement funding has been expressed by the House Committee on Appropriations, which apparently considers the practice to be undesirable and counter to the philosophy of the recent efforts of the Congress to strengthen legislative budgetary control. In a report (H. Rept. 94–1165, May 27, 1976) on a bill to extend and amend the State and Local Fiscal Assistance Act of 1972, the Committee stated:

"Entitlement provisions * * * make a mockery of the legislative budget and the appropriations process. The Congress is placed in the position of having absolutely no choice but to make an appropriation for entitlement programs even though the basic legislation technically might contain an authorization for appropriations. This results because if the Congress did not make such an appropriation then it could conceivably be subject to a judgment issued by the courts. This approach removes such entitlement programs from any effective annual fiscal control by the Congress."

We believe it is necessary for the Congress to be fully aware of, and to affirmatively sanction, the effect entitlement programs have on congressional budgetary control before authorizing them. When the Congress passes legislation authorizing entitlement programs, we must assume that, in most cases, it has decided to relinquish budgetary control of these programs via the appropriations process. It would be preferable if the Congress took this action only after explicitly considering the advantages and needs justified in each case in relation to the decreased congressional control.

As arranged with your office, we will make this report available to anyone requesting it 10 days after issuance.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

APPROPRIATIONS HISTORY OF THE SPECIAL SUPPLEMENTAL FOOD PROGRAM FOR WOMEN, INFANTS, AND CHILDREN FROM FISCAL YEARS 1973 TO 1978

[Dollars in millions; fiscal years]

	1973	1974	1975	1976	Transition quarter	1977	1978
Sec. 32 funds	$20	$40	$100	$144	$62.5		
Direct appropriations from general funds				106		$250	$250
Total (program authorization)	[1] 20	[2] 40	100	[3] 250	62.5	250	[4] 250

[1] None of the $20,000,000 authorized for fiscal year 1973 was spent; however, it was again made available for the program in fiscal year 1974.
[2] Includes the $20,000,000 of unspent funds from fiscal year 1973.
[3] Service officials explained that sec. 32 funds were used in 1976 because the Department was (and still is) under a court order (Durham vs. Butz) to spend all moneys made available for the program (including all unspent money carried over from previous fiscal years) during the 27-mo. period from July 1, 1976, to Sept. 30, 1978. Because only $106,000,000 was directly appropriated from general funds, the Department used the sec. 32 funds to obtain the full $250,000,000 authorized.
[4] The fiscal year 1978 amount includes $247,000,000 directly appropriated for the program and a separate appropriation of $3,000,000 for operating expenses.

COMMITTEE ON APPROPRIATIONS,
Washington, D.C., February 14, 1978.

Hon. BOB BERGLAND,
Secretary of Agriculture,
U.S. Department of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: The Congress recently enacted amendments to the National School Lunch and Child Nutrition Acts (P.L. 95–166, dated November 10, 1977). Included as part of this legislation was Section 15, providing for nutrition education and training grants funded as an entitlement program during fiscal years 1978 and 1979, and a legal authorization for appropriations during fiscal year 1980.

In preliminary conversations with representatives of the Food and Nutrition Service, and preliminary review of the FY 1979 budget justifications, the Subcommittee has noted an apparent administrative problem resulting from the entitlement nature of the program coupled with the provisions of Section 15 (h) (1), (2) and (3) of the Act. The latter three sections provide for a nine month period during which a state nutrition coordination shall be afforded an opportunity to develop, prepare and furnish a comprehensive plan for nutrition education within each state.

According to the information furnished the Subcommittee, most states will be unable to utilize anything near the full amount of the grant (which is based on an entitlement of 50¢ per child but not less than $75,000 per state per year) during fiscal year 1978. Actual obligations are projected to be only about $5 million against a total availability of $26.2 million. Accordingly, USDA is proposing to carry over the unobligated balance, and apply it to the fiscal year 1979 nutrition education grant program. Since an additional $26.2 million becomes available for nutrition education grants in fiscal year 1979 because of the entitlement nature of the program, the effective FY 1979 program level would amount to $47.2 million, far more than the Congress intended when it enacted the legislation establishing this program.

In order to address this problem, it is the Subcommittee's understanding that USDA will propose legislation that will eliminate the entitlement nature of the fiscal year 1979 program. This would then permit the unobligated FY 1978 balance of $21.2 million to be used to operate the program during FY 1979. In addition, we have been advised that USDA will propose certain technical corrections that have been noted in PL 95–166.

As is evident, the late passage of the law (November 10, 1977), the lack of a fully planned program at either the USDA or state level, the sections of the law permitting the states nine months to plan their programs, plus the entitlement in FY 1978 and FY 1979, seems to have resulted in a situation where it will be difficult for the USDA to carry out the current law at the program level intended by the Congress.

In order to assist the Department in its

implementation of this important program of nutrition education, the Subcommittee would appreciate receiving the Department's views on the following aspects of this situation:

1. What is the estimated amount of funds for nutrition education grants that will be obligated by the states during FY 1978? What is the estimated amount that will be expended during the same fiscal year?

2. Under the administration's proposed FY 1979 budget and legislative program, what will be the effective funding level of this program during FY 1978 and FY 1979?

3. To what extent does the Department believe that the somewhat tangled financial situation of this program is a result of providing entitlement funding during FY 1978 and 1979, in lieu of a simple authorization for appropriation?

4. Does the Department continue to oppose entitlement funding for nutrition education, as it did last year during Congressional consideration of the legislation?

5. Will the Department recommend elimination of entitlement authority as part of its FY 1979 legislative program, and if so, when will the draft legislation be submitted to the Congress?

6. Would the Department support an effort to make a change in the law early in this session of Congress, that would eliminate the entitlement features, and convert the nutrition education grant program to a simple authorization of appropriations, in order to ameliorate the problems discussed earlier in this letter.

Your response to these questions within the next week will greatly facilitate the work of this subcommittee in clarifying this situation.

Yours very truly,

THOMAS F. EAGLETON,
Chairman, Subcommittee on Agriculture, Rural Development and Related Agencies.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 13, 1978.

Hon. THOMAS F. EAGLETON,
Chairman, Subcommittee on Agriculture, Rural Development and Related Agencies, U.S. Senate, Washington, D.C.

DEAR SENATOR EAGLETON: The Department is now making plans to issue regulations to establish the Nutrition Education and Training Program established by Public Law 95–166. Interim regulations to be published next week will cover the responsibilities of the State agency, the qualifications of the coordinator, application procedures, use and availability of funds for (1) hiring the State coordinator for nutrition education and training, and (2) conducting the needs assessment and developing the State plan. A comment period of 30 days is specified for the interim regulations. If comments are received which significantly impact on the Program, the interim regulations will be amended immediately following the comment period.

On or about April 15 additional regulations will be published. These regulations will cover all remaining areas of the Program not addressed in the interim regulations. The later regulations will provide State agencies details on the conduct of the needs assessment, criteria for the State plan and additional program operational requirements.

Although the legislation states that a State may take up to nine months to conduct the needs assessment and submit a State plan, some States may be able to submit their State plan earlier. The Department will accept State plans after the regulations are published on April 15.

Comments on all regulations received will be considered in the promulgation of final regulations. Final regulations addressing all aspects of the Program will be published on or about June 15, 1978.

In regard to the specific questions posed in your letter, the Department views are as follows:

1. What is the estimated amount of funds for nutrition education grants that will be obligated by the States during FY 1978? What is the estimated amount that will be expended during the same fiscal year?

The interim regulations will specify that each State may receive funds for the expenses related to hiring of the coordinator and up to $100,000 for assessment and planning. These expenses may total about $5 million in FY 1978. Some additional funds may be used in the last few months of FY 1978 as States begin implementation of their state plans. The Department anticipates that all or nearly all of the remaining funds will be obligated by States in FY 1978 and expended in FY 1979.

For the purposes of this Program, obligated funds are those funds for which orders have been placed, contracts and/or grants awarded, services received, and similar transactions for which the State agency has incurred a commitment. Expenditures are considered to be the requirement for providing funds in administration of the program for goods and other tangible property received and/or services performed by employees, contractors, subgrantees, and other payees.

Any funds unobligated by a State will revert back to the Department for use in all child nutrition programs. The use of these carry over funds will be subject to the executive budgetary process.

2. Under the Administration's proposed FY 1979 budget and legislative program, what will be the effective funding level of this program during FY 1978 and FY 1979?

We estimate that all or nearly all of the $26.2 million will be obligated during FY 1978. It is difficult to predict just how much will be expended, but it would likely be in the range of $5–$8 million. As a result, the funds available during FY 1979 will probably exceed $40 million.

3. To what extent does the Department believe that the somewhat tangled financial situation of this Program is a result of providing entitlement funding during FY 1978 and 1979, in lieu of a simple authorization for appropriation?

The entitlement funding of this Program has contributed to a somewhat tangled financial situation. The law requires that the States initially conduct a needs assessment and develop a State plan. States have up to nine months to develop this plan, and States are then to receive the funds to implement the plan after the plan is approved. Thus, the statute requires entitlement funding to implement the program this fiscal year even though the program cannot be implemented until after plans and needs assessments are developed and approved. Since the plans are likely to presume expenditures at each State's entitlement level, this will likely lead to a situation where some FY 1978 entitlement funds are obligated in FY 1978 and expended in FY 1979, and where some FY 1979 entitlement funds are obligated in FY 1979 for expenditure in FY 1980.

4. Does the Department continue to oppose entitlement funding for nutrition education, as it did last year during Congressional consideration of the legislation?

Yes, the Department continues to oppose this entitlement funding. The entitlement funding has created the situation where a State may not be able to expend FY 1978 funds it has obligated. In states where this situation occurs, a State would have available FY 1978 and FY 1979 funds for this Program to expend in FY 1979. In addition, the Department believes the Program should not start as an entitlement program before it has been tested. Entitlements are generally used for programs where cash or in-kind benefits are being provided to individuals or families, rather than where funds for education and training services are being provided to states.

5. Will the Department recommend elimination of entitlement authority as part of its FY 1979 legislative program, and if so, when will the draft legislation be submitted to the Congress?

The Department will submit legislation next month recommending the elimination of the entitlement provisions of this Program. This proposed legislation will attempt to consolidate, into one piece of legislation, various nutrition education and training authorities under the National School Lunch Act and Child Nutrition Act.

6. Would the Department support an effort to make a change in the law early in this session of Congress, that would eliminate the entitlement features, and convert the nutrition education grant program to a simple authorization of appropriations, in order to ameliorate the problems discussed earlier in this letter?

The elimination of entitlement is not the only modification the Department is seeking in the nutrition education and training provisions of P.L. 95–166. The Department will soon submit proposed legislation that makes a number of modifications in the nutrition education and training programs now authorized under the Child Nutrition Act (and that also revises a number of other programs authorized under this Act or the National School Lunch Act). We would expect the proposed end of entitlement funding for nutrition education and training to be considered in conjunction with our other proposed legislative changes. In addition, any legislation to modify P.L. 95–166 must go through both the Senate Agriculture Committee and the House Education and Labor Committee. The only legislation over which these two particular committees share jurisdiction is child nutrition legislation, and we know of no child nutrition bills these Committees plan to consider in advance of the more comprehensive child nutrition legislation we will soon submit. Therefore, we anticipate that the nutrition education entitlement issue will be considered when more comprehensive child nutrition legislation is taken up next month.

We hope the foregoing information satisfactorily answers your concerns.

Sincerely,

CAROL TUCKER FOREMAN,
Assistant Secretary for Food and Consumer Services.●

EXCERPT FROM STATEMENT OF CAROL TUCKER FOREMAN

Mr. Chairman and Members of the Subcommittee:

I am pleased to be here this morning to present the Administration's child nutrition legislation. I know how deeply you and other members of the Subcommittee have been involved over the years in fashioning our child nutrition programs, and I look forward to working with you on this major and important bill.

Before addressing the substance of our proposal, there is one new development I would like to share with you. As you know, P.L. 95–166 established an entitlement structure during fiscal years 1978 and 1979 for a new nutrition education program. The Administration's budget proposed to end the entitlement status for fiscal 1979, and to consolidate Sections 18 and 19 of the Child Nutrition Act under one authority. During recent weeks, we have thought long and hard about this matter and have decided that due to the uncertainty our proposal has generated, removal of entitlement status for fiscal 1979 would not be in the best interests

of getting this new program off the ground. I wish to acknowledge that we made a mistake. The Administration is now changing its position on this issue, and the bill I present to you today maintains both the fiscal 1979 entitlement for nutrition education and the separate authority for research and development in nutrition education under what has been Section 18 of the Child Nutrition Act.

THINK BEFORE REGULATING DNA RESEARCH

● Mr. SCHMITT. Mr. President, the Senate may soon have to decide whether or not the Federal Government should take a major new step in the regulation of public, private, and industrial research. The precedents would be set, if we choose to do so, over the issue of recombinant DNA research, its benefits versus its imagined dangers.

Bernard D. Davis in his article "The DNA Research Scare" from the April 5, 1978, Wall Street Journal, sets the perspective of this issue very well. As he points out, it is extremely important that we develop a general approach to serious policy relative to issues of this type before we regulate present and future generations out of the benefits of new science and the application of such science.

In this regard, I call my colleagues' attention to S. 2267, a bill to establish a 2-year National Science Policy Commission to study and recommend alternative approaches to policies dealing with potentially hazardous materials.

I request that Dr. Davis' article be printed in the RECORD.

The article follows:

THE DNA RESEARCH SCARE

(By Bernard D. Davis)

Four years ago a group of molecular biologists publicly expressed grave concern over the potential dangers of research with recombinant DNA, a novel technique that allowed a small amount of DNA, the material of which genes are made, from any organism to be incorporated into a bacterium. At their urging the National Institutes of Health issued an elaborate set of guidelines, forbidding the formation of certain kinds of recombinants and placing various restrictions on others. And last spring Congress was framing legislation carrying additional restrictions and harsh penalties.

But the NIH is now considering substantial relaxation of the guidelines, congressional committees are considering much milder legislation, and the need for any legislation is increasingly questioned. It is important to know why the dangers seem so much smaller today.

First, people for several years have been making recombinants in many laboratories, without a single resulting illness. It is clear that the predicted dangers remain entirely hypothetical.

Second, the recombinant technique is increasingly recognized as a tool of great versatility, comparable to the use radioactively labeled molecules in studying the chemical processes in living systems. For example, recombinants make it possible to isolate human genes. Moreover, they also make it possible to study the action and the regulation of these genes in the thousandfold simpler background of a bacterial cell. And gene regulation—the selective turning on of some genes and turning off of others—is a crucial problem in modern biomedical science.

It is the key to the normal development of a fertilized egg into a human being, and also to the abnormal development of a cancer (a line of cells that have escaped from normal growth regulation). Other uses of recombinants, of more immediate medical and industrial importance, will include the manufacture of innumerable useful human products, such as insulin, other hormones, antibodies and antiviral agents. With such benefits in sight we will be paying an extravagant price if we perpetuate restrictions that are not justified by the hazards. Moreover, if this price involved only money, like the tens of millions of dollars wasted on lunar quarantine, it would be bad enough. But it also involves a greater, hidden cost: hindrance of research on diseases that are meanwhile taking human lives.

A DIFFERENT SCIENCE

Third, though the development of these novel recombinant organisms was created by specialists in molecular biology, the assessment of the possible hazard is a problem in quite a different area of science: infectious disease. Unfortunately, few professionals in this field were included in the early discussions, though they might have kept the scenarios within realistic bounds. The NIH finally assembled a world-wide group of such experts last summer, and they agreed that the proposed recombinants could not be as dangerous as many known disease-producing organisms, which are cultured in thousands of medical laboratories every day.

Fourth, the bacteria being used in this work are special, weakened strains, carefully developed to require nutrients that are not encountered in natural environments. Moreover, in the absence of these required compounds the cells not only fail to grow, they are rapidly suicidal: If they accidentally infected a laboratory worker they would all die within a few hours. Hence recombinants made with such strains could not conceivably spread. Moreover, experiments in the past year have shown that the chance of escape of the recombinant genes from these dying bacteria into healthy ones is infinitesimal.

Fifth, the present guidelines consider incorporation of the DNA of a virus into bacteria especially dangerous. But to cause disease, that DNA would have to be released from the host bacterium as naked DNA, which would then have to infect a human cell. This probability is also exceedingly low, for we know that the naked DNA of a virus is less infectious than the same DNA inside the viral coat, by as much as a million-fold. Recognizing these facts, European biologists are recommending great relaxation of the guidelines for virus-bacterial recombinants—much greater than that contemplated in this country. Hence excessive restrictions may cause this country to fall behind rapidly in this important area of medical research.

My sixth point concerns the class of recombinants containing human DNA. These have particularly broad promise for medical research; but they have been classified as particularly dangerous, because of fear that they might pick up and spread the genes of human viruses. But this fear is based on the additional assumption that these recombinants would be an entirely novel class of organisms, never encountered before in nature. With further discussion this assumption has become exceedingly unlikely. We know that bacteria can take up DNA (though infrequently); and since bacteria have been growing in the colons of our ancestors for millions of years, it is virtually certain that they have often taken up human DNA, released from dying cells of the surrounding intestinal wall. Accordingly, mankind must have long been exposed to recombinants of this kind.

Finally, the initial discussions not only neglected relevant principles of infectious disease, they also failed to take into account well-established evolutionary principles, which are essential for understanding the spread of any novel organisms.

Specifically, bacteria in great variety compete for survival and multiplication on various parts of our body, on plants and in the soil. The successful strains are those that are best adapted to a given location, and to be well-adapted they must have a well-balanced set of genes.

NATURAL SELECTION

This adaptation, and this balance, have been evolved over billions of years, by natural selection; it is a process that moves in small steps and that perpetuates only the tiniest fraction of all the genetic novelty that appears. Hence splicing DNA from a distant source into a bacterium is not at all likely to produce a well-balanced, competitive set of genes, any more than inserting a random radio part would be likely to improve a watch.

With these developments, the initially very cautious attitude of the scientific community has shifted dramatically. The bluntest critique has come from James Watson (who triggered the development of molecular biology by his discovery, with Francis Crick, of the structure of DNA). Though he was one of those who first voiced caution, he now urges that we abandon the whole expensive bureaucracy of guidelines and release the wasted time and money for solving real health problems. It seems almost certain that Watson will prove right. But meanwhile it also seems clear that public anxiety, generated initially by scientists, cannot be reversed until the true nature of recombinant DNA research is widely understood.

The recombinant DNA story illustrates a broader problem: how to handle public policy issues that have a large technical content. If we wish to maximize beneficial research, without jeopardizing either public welfare or public confidence, we must find ways to work out more clearly the role of the community of experts in ascertaining the facts as objectively as possible, and the subsequent role of the broader public in making value judgments and policy decisions. For while the public has a right to know, it also has a right to be protected from false alarms. A useful model may be that of the medical profession, which often has to consider alternative diagnoses in a case but also exercises discretion in avoiding premature discussion of unproved possibilities that would unduly alarm the patient. Perhaps the scientific profession and the public are groping for a similar code.●

APPOINTMENT BY THE VICE PRESIDENT

The PRESIDING OFFICER. The Chair, on behalf of the Vice President, pursuant to Public Law 95–45, appoints the Senator from Alabama (Mr. SPARKMAN), Chairman, and the Senator from Vermont (Mr. STAFFORD), vice Chairman, to the 65th Interparliamentary Conference, to be held in Bonn, Germany, September 5–13, 1978.

FRAUD AND EMBEZZLEMENT IN GENERAL SERVICES ADMINISTRATION PROCUREMENT OPERATIONS

Mr. CHILES. Recently, the Senate Subcommittee on Federal Spending Practices and Open Government of which I am chairman, was called upon to conduct an oversight investigation into recent reports that a procurement scandal involving the General Services Administration (GSA) was not receiving the full attention of Federal law enforcement authorities.

The request resulted from newspaper

reports alluding to an ongoing investigation of contracting activities in the GSA's Region III offices. (Region III encompasses the Washington, D.C., area and surrounding States.) Charges have been made that millions of dollars have been paid over the years to Government contractors for repair and alteration work on Government owned and leased facilities which was only partially done, or never done at all. The proceeds from these operations were disbursed to contractors as unearned profits and to GSA officers as bribes.

As the chairman of the Senate subcommittee which has principal jurisdiction over Government procurement practices, I am naturally most concerned both with the frauds themselves and the possibility that faults in our present and proposed procurement mechanisms have permitted this to happen. It would appear that things have come to their present sorry state, because many GSA procurement officers ignore all relevant rules and procedures, while their superiors choose to look the other way. Indeed, it appears in many cases that the inventors of these illegal schemes were GSA officials, not contractors.

Given these concerns, I directed the subcommittee staff to conduct a series of interviews with appropriate Justice Department and GSA officials. To date, we have learned that—

The frauds, defalcations, and embezzlements run into the millions of dollars and involve contracts which, over the years, may have involved hundreds of millions of dollars.

The pattern of bribery and corruption stretches back in time for at least 10 years.

A goodly number of FBI agents, assisted by a GSA task force, are conducting a vigorous investigation of the dozens of GSA officials and contractors who appear to be involved in these activities.

Justice Department officials are now in the process of considering the appeals of certain contractors and GSA officials that they be extended some measure of leniency in return for testimony against others.

Justice Department officials are well aware of the possibility that great sums of money may be involved and are in no way limiting the scope of their inquiries.

I am satisfied that Mr. Earl Silbert, U.S. attorney for the District of Columbia, fully comprehends the potentially vast size and importance of the case he is now pursuing. General Services Administration authorities are cooperating with the Justice Department, and steps are being taken to preclude future disasters. While I do not wish to impede the successful conclusion of a well-advanced criminal investigation by launching a parallel investigation at this particular time, I will be looking into the procurement practices which lead to these abuses and any reforms underway within GSA.

I intend to continue to monitor the Justice Department investigation to learn how many should be in jail, and how many will be dismissed from the Federal service, and how much the IRS and Justice's Civil Division can recover from the plunderers. Additionally, the subcommittee is in the process of preparing an oversight review of GSA procurement mechanisms as they relate to the major systems acquisition policies embodied in the Office of Management and Budget's policy circular A–109. So, we will be in the neighborhood and within earshot as the investigation proceeds.

Should the Justice Department investigation show any sign of faltering at all, I shall give vigorous counsel and public advice, whether or not said advice has been solicited. I find it incredible that the basic pattern of these frauds was brought to GSA's attention almost 3 years ago, and yet nothing happened until a fortuitous incident gave strong support to the original allegations. Accordingly I will be looking particularly closely at GSA reform efforts and at what steps they take to insure that such massive perversions do not recur.

COMMITTEE MEETINGS

Mr. MUSKIE. Mr. President, at the request of the majority leader, I ask unanimous consent that the Permanent Subcommittee on Investigations of the Governmental Affairs Committee be authorized to meet during the sessions of the Senate on Monday, April 24, and Tuesday, April 25, 1978, to conduct organized crime labor racketeering investigations; that the Select Committee on Small Business be authorized to meet during the session of the Senate on Tuesday, April 25, 1978, from 1 p.m. until 4 p.m. to hold hearings on the nomination of Mr. Milton D. Stewart for the position of chief counsel for advocacy at the Small Business Administration; and that the Foreign Relations Committee be authorized to meet during the session of the Senate on Wednesday, April 26, 1978, to consider committee business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Immigration Subcommittee of the Judiciary Committee be authorized to meet during the sessions of the Senate on Wednesday, May 3; Thursday, May 4; Tuesday, May 9; Wednesday, May 10; Thursday, May 11; Tuesday, May 16; Wednesday, May 17; and Thursday, May 18, 1978 to consider S. 2252, to amend the Immigration and Nationality Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL OCEAN POLLUTION RESEARCH AND DEVELOPMENT AND MONITORING PLANNING ACT OF 1978

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on S. 1617.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the bill from the Senate (S. 1617) entitled "An Act to establish a program of ocean pollution research and monitoring, and for other purposes", do pass with the following amendments:

Strike out all after the enacting clause, and insert: *That this Act may be cited as the "National Ocean Pollution Research and Development and Monitoring Planning Act of 1978".*

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—The Congress finds and declares the following:

(1) Man's activities in the marine environment can have a profound short-term and long-term impact on such environment and greatly affect ocean and coastal resources therein.

(2) There is a need to establish a comprehensive Federal plan for ocean pollution research and development and monitoring, with particular attention being given to the inputs, fates, and effects of pollutants in the marine environment.

(3) Man will increasingly be forced to rely on ocean and coastal resources as other resources are depleted. Our ability to protect, preserve, develop, and utilize these ocean and coastal resources is directly related to our understanding of the effects which ocean pollution has upon such resources.

(4) Numerous departments, agencies, and instrumentalities of the Federal Government sponsor, support, or fund activities relating to ocean pollution research and development and monitoring. However, such activities are often uncoordinated and can result in unnecessary duplication.

(5) Better planning and more effective use of available funds, personnel, vessels, facilities, and equipment is the key to effective Federal action regarding ocean pollution research and development and monitoring.

(b) PURPOSES.—It is therefore the purpose of the Congress in this Act—

(1) to establish a comprehensive 5-year plan for Federal ocean pollution research and development and monitoring programs in order to provide planning for, coordination of, and dissemination of information with respect to such programs within the Federal Government;

(2) to develop the necessary base of information to support, and to provide for, the rational, efficient, and equitable utilization, conservation, and development of ocean and coastal resources; and

(3) to designate the National Oceanic and Atmospheric Administration as the lead Federal agency for preparing the plan referred to in paragraph (1) and to require the Administration to carry out a comprehensive program of ocean pollution research and development and monitoring under the plan.

SEC. 3. DEFINITIONS.

As used in this Act, unless the context otherwise requires—

(1) The term "Administration" means the National Oceanic and Atmospheric Administration.

(2) The term "Administrator" means the Administrator of the Administration.

(3) The term "Director" means the Director of the Office of Science and Technology Policy in the Executive Office of the President.

(4) The term "marine environment" means the coastal zone (as defined in section 304(1) of the Coastal Zone Management Act of 1972 (16 U.S.C. 1453(1)); the seabed, subsoil, and waters of the territorial sea of the United States; the waters of any zone over which the United States asserts exclusive fishery management authority; the waters of the high seas; and the seabed and subsoil of and beyond the Outer Continental Shelf.

(5) The term "ocean and coastal resource" has the same meaning as is given such term in section 203(7) of the National Sea Grant Program Act (33 U.S.C. 1122(7)).

(6) The term "ocean pollution" means any short-term or long-term change in the marine environment.

SEC. 4. COMPREHENSIVE FEDERAL PLAN RELATING TO OCEAN POLLUTION.

(a) LEAD AGENCY FOR PLAN.—The Administrator, in consultation with the Director and

other appropriate Federal officials having authority over ocean pollution research and development and monitoring programs, shall prepare, in accordance with this section, a comprehensive 5-year plan (hereinafter in this Act referred to as the "Plan") for the overall Federal effort in ocean pollution research and development and monitoring. The Plan shall be prepared and submitted to Congress and the President on or before February 15, 1979, and a revision of the Plan shall be prepared and so submitted by February 15 of each odd-numbered year occurring after 1979.

(b) CONTENT OF PLAN.—The Plan shall contain, but need not be limited to, the following elements:

(1) ASSESSMENT AND ORDERING OF NATIONAL NEEDS AND PROBLEMS.—The Plan shall—

(A) identify those national needs and problems, which relate to specific aspects of ocean pollution (including, but not limited to, the effects of ocean pollution on the economic, social, and environmental values of ocean and coastal resources), which exist and will arise during the Plan period;

(B) establish the priority, based upon the value and cost of information which can be obtained from specific ocean pollution research and development and monitoring programs and projects, in which such needs should be met, and such problems should be solved, during the Plan period; and

(C) contain, if pursuant to the preparation of any revision of the Plan required under subsection (a) it is determined that any national need or problem or priority set forth in the preceding version of the Plan should be changed, a detailed explanation of the reasons for the change.

(2) EXISTING FEDERAL CAPABILITY.—The Plan shall contain—

(A) a detailed listing of all existing Federal programs relating to ocean pollution research and development and monitoring (including, but not limited to, general research on marine ecosystems), which listing shall include, with respect to each such program—

(i) a catalogue of the Federal personnel, facilities, vessels and other equipment currently assigned to, or used for, the program, and

(ii) a detailed description of the existing goals and costs of the program, including, but not limited to, a categorical breakdown of the funds currently being expended, and planned to be expended, to conduct the program; and

(B) an analysis of the extent to which each such program, if continued on the basis and at the funding level described pursuant to subparagraph (A)(ii), will assist in meeting the priorities set forth pursuant to paragraph (1)(B) during the Plan period.

(3) POLICY RECOMMENDATIONS.—If it is determined, as a result of the analysis required to be made under paragraph (2)(B), that the priorities set forth pursuant to paragraph (1)(B) will not be adequately met during the Plan period using the existing Federal capability described pursuant to paragraph (2)(A), the Plan shall contain those recommendations for changes in the overall Federal effort in ocean pollution research and development and monitoring which would ensure that those priorities are adequately met during the Plan period. Such recommendations may include, but need not be limited to—

(A) changes in the goals to be achieved under various existing Federal ocean pollution research and development and monitoring programs;

(B) suggested increases and decreases in the funding for any such existing program consistent with the extent to which such program contributes to the meeting of such priorities;

(C) specific proposals for interagency cooperation in cases in which the pooling of the resources of two or more Federal departments, agencies, or instrumentalities under existing programs could further efforts to meet such priorities or would eliminate duplication of effort; and

(D) suggested legislation to establish new Federal programs considered to be necessary if such priorities are to be met.

(4) BUDGET REVIEW.—The Plan shall contain a description of actions taken by the Administrator and the Director to coordinate the budget review process for the purposes of ensuring interagency coordination and cooperation in (A) the carrying out of Federal ocean pollution research and development and monitoring programs; and (B) eliminating unnecessary duplication of effort among such programs.

(c) For purposes of this section, the term "Plan period" means—

(1) with respect to the Plan as required to be submitted on February 15, 1979, the period of 5 fiscal years beginning on October 1, 1978; and

(2) with respect to each revision of the Plan, the period of 5 fiscal years beginning on October 1 of the year before the year in which the revision is required to be prepared under subsection (a).

SEC. 5. COMPREHENSIVE OCEAN POLLUTION PROGRAM IN THE ADMINISTRATION.

(a) ESTABLISHMENT OF PROGRAM.—The Administrator shall establish within the Administration a comprehensive coordinated, and effective ocean pollution research and development and monitoring program. The Administrator shall carry out all projects and activities under the program in a manner consistent with the Plan.

(b) CONTENT OF THE PROGRAM.—The program required to be established under subsection (a) shall include, but not be limited to—

(1) all projects and activities relating to ocean pollution research and development and monitoring for which the Administrator has responsibility under provisions of law (including, but not limited to, title II of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1441–1444)) other than paragraph (2);

(2) such projects and activities addressed to the priorities set forth in the Plan pursuant to section 4(b)(1)(B) that can be appropriately conducted within the Administration; and

(3) the provision of financial assistance under section 6.

SEC. 6. FINANCIAL ASSISTANCE.

(a) GRANTS AND CONTRACTS.—The Administrator may provide financial assistance in the form of grants or contracts for research and development and monitoring projects or activities which are needed to meet priorities set forth in the Plan pursuant to section 4(b)(1)(B), if such priorities are not being adequately addressed by any Federal department, agency, or instrumentality.

(b) APPLICATIONS FOR ASSISTANCE.—Any person, including institutions of higher education and departments, agencies, and instrumentalities of the Federal Government or of any State or political subdivision thereof, may apply for financial assistance under this section for the conduct of projects and activities described in subsection (a), and, in addition, specific proposals may be invited. Each application for financial assistance shall be made in writing in such form and manner, and contain such information, as the Administrator may require. The Administrator may enter into contracts under this section without regard to section 3709 of the Revised Statutes of the United States (41 U.S.C. 5).

(c) EXISTING PROGRAMS.—The projects and activities supported by grants or contracts made or entered into under this section shall, to the maximum extent practicable, be administered through existing Federal programs (including, but not limited to, the National Sea Grant Program) concerned with ocean pollution research and development and monitoring.

(d) ACTION BY ADMINISTRATOR.—The Administrator shall act upon each application for a grant or contract under this section within six months after the date on which all required information is received by the Administrator from the applicant. Each grant made or contract entered into under this section shall be subject to such terms and conditions as the Secretary deems necessary in order to protect the interests of the United States. The total amount paid pursuant to any such grant or contract may, in the discretion of the Administrator, be up to 100 percent of the total cost of the project or activity involved.

(e) RECORDS.—Each recipient of financial assistance under this section shall keep such records as the Administrator shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the total cost of the project or activity in connection with which such assistance was given or used, the amount of that portion of the cost of the project or activity which was supplied by other sources, and such other records as will facilitate an effective audit. Such records shall be maintained for three years after the completion of such project or activity. The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access, for the purpose of audit and examination, to any books, documents, papers, and records of receipts which, in the opinion of the Administrator or of the Comptroller General, may be related or pertinent to such financial assistance.

SEC. 7. INTERAGENCY COOPERATION.

The head of each department, agency, or other instrumentality of the Federal Government which is engaged in or concerned with, or which has authority over, programs relating to ocean pollution research and development and monitoring—

(1) shall cooperate with the Administrator in carrying out the purposes of this Act;

(2) may, upon written request from the Administrator or Director, make available to the Administrator or Director, on a reimbursable basis or otherwise, such personnel (with their consent and without prejudice to their position and rating), services, or facilities as may be necessary to assist the Administrator or the Director to achieve the purposes of this Act; and

(3) shall, upon a written request from the Administrator or Director, furnish such data or other information as the Administrator or Director deems necessary to fulfill the purposes of this Act.

SEC. 8. DISSEMINATION OF INFORMATION.

The Administrator shall ensure that the results, findings, and information regarding ocean pollution research and development and monitoring programs conducted or sponsored by the Federal Government be disseminated in a timely manner, and in useful forms, to relevant departments, agencies, and instrumentalities of the Federal Government, and to other persons having an interest in ocean pollution research and development and monitoring.

SEC. 9. EFFECT ON OTHER LAWS.

Nothing in this Act shall be construed to amend, restrict, or otherwise alter the authority of any Federal department, agency, or instrumentality, under any law, to undertake research and development and monitoring relating to ocean pollution.

SEC. 10. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated to the Administration for the purposes of carrying out this Act not to exceed $5,000,000 for the fiscal year ending September 30, 1979.

Amend the title so as to read: "An Act to

establish a program of ocean pollution research, development, and monitoring, and for other purposes."

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate concur in the House amendments en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Nos. 675, 676, and 678, which have been cleared on the other side.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL CLIMATE ACT

The Senate proceeded to consider the bill (H.R. 6669) to establish a national climate program, and for other purposes, which had been reported from the Committee on Commerce, Science, and Transportation with an amendment to strike all after the enacting clause and insert the following:

That this Act may be cited as the "National Climate Act".

SEC. 2. FINDINGS.

The Congress finds and declares the following:

(1) Weather and climate change affect food production, energy use, water resources and other factors vital to national security and human welfare.

(2) An ability to anticipate natural and man-induced changes in climate would contribute to the soundness of policy decisions in the public and private sectors.

(3) Significant improvements in the ability to forecast climate on an intermediate and long-term basis are possible.

(4) Information regarding climate is not being fully disseminated or used, and Federal efforts have given insuffcient attention to assessing and applying this information.

(5) Climate fluctuation and change occur on a global basis, and deficiencies exist in the system for monitoring global climate changes. International cooperation for the purpose of sharing the benefits and costs of a global effort to understand climate is essential.

(6) The United States lacks a well-defined and coordinated program in climate-related research, monitoring, assessment of effects, and information utilization.

SEC. 3. PURPOSE.

It is the purpose of the Congress in this Act to establish a national climate program that will assist the Nation and the world to understand and adapt to natural and man-induced climate processes and their implications.

SEC. 4. DEFINITIONS.

As used in this Act, unless the context otherwise requires:

(1) The term "Office" means the National Climate Program Office.

(2) The term "Program" means the National Climate Program.

(3) The term "Secretary" means the Secretary of Commerce.

SEC. 5. NATIONAL CLIMATE PROGRAM.

(a) ESTABLISHMENT.—The President shall establish a National Climate Program in accordance with the provisions, findings and purposes of this Act.

(b) DUTIES.—The President shall—

(1) establish Program priorities:

(2) define the roles in the Program of Federal officers, departments, and agencies, including the Departments of Agriculture, Commerce, Defense, Energy, Interior, State, and Transportation; the Environmental Protection Agency; the National Aeronautics and Space Administration; the Council on Environmental Quality; the National Science Foundation; and the Office of Science and Technology Policy; and

(3) provide for Program coordination.

(c) NATIONAL CLIMATE PROGRAM OFFICE.—The Secretary shall establish within the Department of Commerce a National Climate Program Office. The Office shall be responsible for administering the Program. Each Federal officer, employee, department and agency involved in the Program shall cooperate with the Secretary in carrying out the provisions of this Act.

(d) PROGRAM ELEMENTS.—The Program shall include, but not be limited to, the following elements:

(1) procedures for assessing the effect of climate on agricultural production, energy use, water resources, transportation, human health and national security;

(2) basic and applied research to improve the understanding of climate processes, natural and man induced, and the social, economic, and political implications of climate change;

(3) methods for improving climate forecasts on a monthly, seasonal, yearly, and longer basis;

(4) global data collection and climate monitoring activities to provide reliable information on a continuing basis;

(5) systems for the dissemination of climatological data and information;

(6) measures for increasing international cooperation in climate research, monitoring, analysis and data dissemination;

(7) mechanisms for intergovernmental climate-related research and services including participation by universities in applied research and advisory services; and

(8) a 5-year-plan, with annual reviews, for the implementation of this Act.

(e) ADVISORY COMMITTEES AND INTERAGENCY GROUPS.—The Secretary may establish and maintain advisory committees and interagency groups as are necessary or appropriate to assist in carrying out responsibilities under this Act. Members of such committees who are not employed by the Federal Government may receive compensation at the daily rate for GS–16 of the General Schedule for each day engaged in the actual performance of his duties for the committee and while so serving away from their homes or regular place of business may be allowed travel expenses, including per diem in lieu of subsistence.

(f) INTERNATIONAL COORDINATION AND COOPERATION.—The Secretary and the Secretary of State shall cooperate in (1) providing representation at climate-related international meetings and conferences in which the United States participates, and (2) coordinating the activities of the Program with the climate programs of other nations and international agencies and organizations, including the World Meteorological Organization, the International Council of Scientific Unions, the United Nations Environment Program, the United Nations Educational, Scientific, and Cultural Organization, the World Health Organization, and Food and Agriculture Organization.

(g) BUDGETING.—Each Federal agency and department participating in the Program, shall prepare and submit to the Office of Management and Budget, on or before the date of submission of departmental requests for appropriations to the Office of Management and Budget, an annual request for appropriations for the Program for the subsequent fiscal year. The Office of Management and Budget shall review the request for appropriations as an integrated, coherent, multiagency request.

SEC. 6. INTERGOVERNMENTAL CLIMATE PROGRAMS.

(a) ESTABLISHMENT.—The Secretary shall establish a program for Federal and State cooperative activities in climate research and advisory services. The Secretary is authorized to make annual grants to any State or group of States, such grants to be made available to public or private educational institutions and to other persons qualified to conduct climate-related research or services. Such grants may be made for not more than 50 percent of the costs, in any one year, of the research conducted or services provided under the grant. Federal funds received from other sources shall not be used to pay the remaining share of the cost of such research or services.

(b) DETAIL OF THE PROGRAM.—The intergovernmental program shall provide, among others, the following State and regional services and functions:

(1) research relating to and analyses of climatic effects on agricultural production, water resources, energy needs and other critical sectors of the economy;

(2) atmospheric data collection and monitoring on a statewide and regional basis;

(3) advice to regional, State, and local government agencies regarding climate-related issues;

(4) information to users within the State regarding climate and climatic effects; and

(5) information to the Secretary regarding the needs of persons within the State for climate-related services and data.

(c) PROGRAM REQUIREMENTS.—Prior to making a grant to any State or group of States under this section, the Secretary shall find that—

(1) the State, or each of the States in a group, has adopted a State climate program in accordance with the provisions of this Act and rules and regulations promulgated by the Secretary; and

(2) the State, or each of the States in a group has—

(A) integrated its climate program with the program; and

(B) established an effective mechanism for consultation and coordination with Federal and local governmental officials and users within the State.

The Secretary shall insure that grants made to a State or group of States under this section are made on an equitable basis.

SEC. 7. EXPERIMENTAL CLIMATE FORECAST CENTERS.

The Secretary shall establish experimental climate forecast centers. Such centers shall—

(1) be responsible for making and routinely updating experimental climate forecasts of a monthly, seasonal, annual, and longer nature, based on a variety of experimental techniques;

(2) establish procedures to have forecasts reviewed; and

(3) protect against premature reliance on such experimental forecasts.

SEC. 8. ANNUAL REPORT.

The Secretary shall prepare and submit to the President and the authorizing committees of the Congress, not later than January 30 of each year, a report on the activities conducted pursuant to this Act during the preceding fiscal year, including—

(a) a summary of the achievements of the Program during the previous fiscal year;

(b) an analysis of the progress made toward achieving the goals and objectives of the Program;

(c) a copy of the 5-year plan and annual reviews; and

(d) any recommendations for additional legislation which may be required to assist in achieving the purposes of the Act.

SEC. 9. AUTHORIZATION FOR APPROPRIATIONS.

(a) GENERAL AUTHORIZATION OF APPROPRIATION.—In addition to any other funds otherwise authorized to be appropriated for the

purpose of conducting climate-related programs, there are authorized to be appropriated to the Secretary for the purpose of carrying out the provisions of this Act, not to exceed $50,000,000 for the fiscal year ending September 30, 1979, and not to exceed $65,000,000 for the fiscal year ending September 30, 1980.

(b) AUTHORIZATION OF APPROPRIATION FOR GRANTS.—There are authorized to be appropriated to the Secretary sums not to exceed $10,000,000 for the fiscal year ending September 30, 1979, and not to exceed $10,000,000 for the fiscal year ending September 30, 1980, as may be necessary for grants under section 6 of this Act to remain available until expended.

● Mr. PEARSON. Mr. President, I am convinced of the need for Federal legislation to establish a national climate program and I urge my colleagues to support H.R. 6669, the National Climate Act, as reported by the Committee on Commerce, Science, and Transportation.

As the original sponsor of climate legislation in the Senate, S. 421, the National Climate Program Act, I have had a longstanding interest in the development of legislation that would provide the mechanism for a comprehensive coordinated national program of climate research, monitoring, and analysis.

The need for legislation in this area has been highlighted by the climate conditions of the past several years. After two decades of relatively mild weather and above average rainfall, the trends shifted suddenly to periods of extreme cold and severe drought. The effect on major sectors of the economy has been dramatic. Food production, energy supplies, and water resources have all been affected. No better example of the sensitivity of the United States to climate fluctuations can be given than the severe disruption in natural gas supplies during the winter of 1977.

Despite the obvious relationship between climatic conditions and man's well-being, our present ability to predict changes in climate is insufficient to provide meaningful contributions to policy formulations affecting critical sectors of the economy. Climate problems and processes recognize no national boundaries, and if we are to make real progress in our ability to understand the climate process, we must increase both our own atmospheric research efforts and our efforts to coordinate the activities of our national climate program.

The costs of our lack of knowledge of the workings of the natural climatic system, to say nothing of our ignorance of man's effect on climate change and variability, are unacceptably high. We simply cannot continue to assume that the relatively favorable climatic conditions of the past several decades will continue indefinitely. The climatic events of the past several centuries, with associated changes in climatic patterns and increased climate variability, are quite likely to recur in the future. Establishment of a national climate program is a much needed step to provide us with the knowledge necessary to minimize the potentially high costs associated with such changes and to provide us with the basic knowledge necessary to understand both natural and man-induced climate changes and climatic processes.

Mr. President, I would like to point out one aspect of the bill which I feel is especially important. I am referring to section 6, which provides for intergovernmental climate programs. This feature of the legislation reflects the views of many of the witnesses who stressed the need for a focus for the national program at the State level. User group climate services have declined in recent years and are insufficient to meet the growing demand for climate-related information, particularly in the agricultural sector. Under this bill, the Secretary of Commerce would be authorized to provide matching grants to States to conduct climate research and provide climate services aimed at regional, State, and local needs. It is intended to be a joint Federal-State effort that assists user groups throughout the Nation and, at the same time, provides incentive for States to develop a climate program compatible with the national climate program.

The bill before the Senate today is the result of much discussion and deliberation. Under the capable leadership of Senators STEVENSON and SCHMITT, the Subcommittee on Science, Technology, and Space held 6 days of hearings on the climate issue and received testimony from more than 50 witnesses. The bill incorporates features from the various bill introduced in the Senate. The committee staff has worked closely with the administration and it is my understanding that the administration now supports the bill.

Mr. President, the development and implementation of a national climate program is long overdue. I am hopeful the Senate will take immediate action to approve H.R. 6669.●

● Mr. STEVENSON. Mr. President, the severe winters of 1977 and 1978 and droughts in 1976 and 1977 indicate possible changes in weather and climate patterns which could have major economic and social consequences. By the same token, the ability to forecast longer term climatic fluctuations would produce significant benefits in many sectors of our economy and in protecting humans from adverse weather conditions. We need to expand our knowledge of the human activities which, like natural forces, can affect climate patterns. In short, we need to understand climate so we can adapt to it.

The period, 1957 to 1972, was characterized by stable and favorable worldwide weather patterns. Since 1972, however, drought has occurred in the Sahel area of the Sahara Desert. A freeze in 1972 resulted in a major loss of grain production in the U.S.S.R., and the collapse of the Peruvian anchovy harvest in 1972 and 1973 was also attributable to climatic variations. What the future holds we cannot now say.

Last year the Subcommittee on Science, Technology and Space of the Committee on Commerce, Science and Transportation, conducted hearings on climate. The hearings considered two bills, S. 421, introduced by Senators PEARSON, GOLDWATER, and SCHMITT, and S. 1652, introduced by Senators HUMPHREY, ABOUREZK, ANDERSON, BENTSEN, CULVER, HART, HASKELL, MCGOVERN, MELCHER, and TOWER. Six days of hearings were held in Washington, D.C. and other sections of the country. Based on the hearings, two additional bills were introduced, S. 1980 by Senator PEARSON with Senators GOLDWATER and SCHMITT and S. 2092, which I introduced with Senators HUMPHREY and CRANSTON.

The bill before the Senate today endeavors to combine the best features of these bills. H.R. 6669, as amended by the Senate substitute, would establish the following objectives:

First. To develop more reliable knowledge about climate processes and improve the capability to forecast climate change;

Second. To use climate-related information to determine the effect of climate change on agriculure, water, energy, and other areas; and

Third. To organize more effectively the Federal Government's planning, management, and budgeting functions for climate research and advisory services.

The elements of the national climate program would include: A comprehensive and coordinated program in basic and applied research; methods to improve climate forecasts on a monthly, seasonal, yearly, and longer bases; improved global data collection and climate monitoring activities; climate data and information dissemination systems; procedures to assess the effect of climate on agricultural production; energy use, water resources, transportation, human health and other sectors; measures for international cooperation; and mechanisms for intergovernmental climate-related research and services.

The bill directs the President to establish program priorities, define the roles of various departments, agencies, and offices, and provide for program coordination. The bill establishes the Department of Commerce and the National Oceanic and Atmospheric Administration (NOAA) as the lead agency to administer the national climate program. Other departments and agencies would cooperate, including the Departments of Agriculture, Defense, Energy, Interior, State, and Transportation; the Environmental Protection Agency; National Aeronautics and Space Administration; Council on Environmental Quality; National Science Foundation; and the Office of Science and Technology Policy.

Mr. President, this bill, if enacted, would establish a national program with Federal Government leadership and participation by State and local governments, the private sector, universities and the public. An effective national climate program must rely on the best scientific expertise available. The bill provides for a comprehensive, basic and applied research program, including the establishment of experimental climate forecast centers.

The effective use of climate-related information is also important. To make information on climate available as widely as possible and to provide research reflecting State and local needs, the bill established an intergovernmental cooperative program. A Federal/State program of matching grants in climate research and advisory services is established within NOAA; the Secre-

tary of Commerce is authorized to make Federal grants of up to 50 percent of the cost of such intergovernmental programs.

Piecemeal and uncoordinated funding of climate research by the Federal Government is a principal reason why this legislation should be enacted. Mission agencies are supporting climate-related programs without broader goals or a commonality of purpose. The establishment of a lead Federal agency in the Commerce Department, the requirement of a 5-year plan, an OMB review of the climate program as a unified activity, and the requirement for an annual report will point us in the direction of a more unified and productive national effort. I expect that the Office of Science and Technology Policy will be particularly helpful in focusing and coordinating climate activities.

This is a time for action. There have been numerous reports by advisory committees and Federal agencies on the need for a national climate program. The former Domestic Council issued a report in December 1974 entitled "A U.S. Climate Program" which recommended increased funding for climate research, monitoring, and warning systems. A report in 1974 by the Central Intelligence Agency entitled "A Study of Climatological Research As It Pertains to Intelligence Problems" dealt with the importance of climate forecasting for the intelligence community.

In 1975 the National Academy of Sciences issued a report setting a research agenda for the United States. The National Advisory Committee on Oceans and Atmosphere periodically has recommended the establishment of a national climate program. Most recently, in July 1977, the President's science adviser issued a report prepared by the Interagency Committee on Atmospheric Sciences which also recommended a national climate program.

With all these reports, hearings, and bills as the foundation, the Committee on Commerce, Science, and Transportation favorably reported this bill. We have worked closely with the administration in drafting this bill, and an Executive order to implement this legislation is in preparation.

The House of Representatives has already passed a climate bill under the able leadership of Representative GEORGE BROWN of California. While the House version differs somewhat from this bill, I do not believe the differences are major. I expect that the Senate and House will be able to resolve their differences without much difficulty. I urge my colleagues to support H.R. 6669. I am hopeful that a bill can be sent to the President by early summer.●

● Mr. SCHMITT. Mr. President, pending on the unanimous consent calendar is H.R. 6669, the National Climate Act, recently reported out of the Commerce, Science, and Transportation Committee.

As a member of the Commerce Committee, I was pleased to participate in the series of climate hearings and to chair those conducted in Albuquerque. My home State of New Mexico, as well as the entire Southwestern United States, has as great, if not greater, interest in climate prediction as most other areas of the Nation. Our basic climate is compatible with ranching and farming, but just barely. The more often and the more accurately we can predict annual and multiannual climate variations, particularly, the adverse years, the more economical will be our agricultural and community service activities.

These lessons from New Mexico have more general applications. The industrial nations of the world are pushing the limits of the availability of energy. Thus, annual and multiannual variations in climate, specifically heat and cold. can cause major crises of energy supply. We have seen this demonstrated the last two winters in this country.

The rapidly increasing populations of the developing nations of the world are pushing the limits of the availability of food supplies. Thus, small annual and multi-annual variations in climate, specifically snowfall and rainfall, can cause major seasonal shortages of food. We see these crises each year in many parts of the world.

For the future, technology offers major relief, but for the next several decades improved climate prediction is absolutely necessary if we are to buy time for politics and technology to expand the limits we now face.

This is as true for the United States as it is for the world. Therefore, I hope the Senate will act immediately to pass the National Climate Act in order to establish the organizational framework for research in climate prediction.●

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read:

An Act to establish a comprehensive and coordinated national climate policy and program, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–740), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purposes of the National Climate Act are to expand the Nation's understanding of natural and man-induced climate processes, to relate knowledge of climate and its implications and effects to human welfare and the environment, and to respond more effectively to climate-induced problems. Climate fluctuations and change can have serious and disruptive effects on food production, water resources, energy use and other important human activities. An effective climate policy and program would help reduce the Nation's vulnerability to such disruptions.

BRIEF DESCRIPTION

Climatic conditions during the past two decades have been relatively mild, but more severe weather conditions in the last few years may be indicative of significant climate fluctuations and change in the future. Such changes would likely cause serious problems for the United States in a number of critical areas, such as food production, energy supplies, water resources, and maintenance of human health. The United States must be prepared to adapt to future climate fluctuations should they occur.

The objectives of the national climate program are: (1) to develop more reliable knowledge about climate and to improve the capability to forecast climatic change, (2) to organize more effectively the Federal Government's planning, management and budgeting functions for climate research and advisory services, and (3) to use existing and future climate information to determine the effect of climate change on agriculture, water, and other areas.

The program includes several elements: a comprehensive and coordinated program in basic and applied research; methods to improve climate forecasts on a monthly, seasonable, yearly, and longer basis; improved global data collection and climate monitoring activities; climate data and information dissemination systems; procedures to assess the effect of climate on agricultural production, energy use, water resources, transportation, human health and other sectors; measures for international cooperation; and mechanisms for intergovernmental climate-related research and services.

The President is directed to establish the national climate program and (1) to establish program priorities, (2) define the roles in the program of the various departments, agencies and offices, and (3) provide for program coordination.

The Secretary of the Department of Commerce is directed to establish a national climate program office. The office shall be responsible for administering the program. The program requires that a number of Federal agencies be involved and cooperate with the Secretary of Commerce in carrying out the provisions of the act. These departments and agencies include the Departments of Agriculture, Defense, Energy, Interior, State, and Transportation; the Environmental Protection Agency; the National Aeronautics and Space Administration; the Council on Environmental Quality; the National Science Foundation; and the Office of Science and Technology Policy.

The Secretary of Commerce is authorized to establish any necessary or appropriate advisory committees and interagency groups in carrying out responsibility under the act. The Secretary of Commerce and the Secretary of State shall be responsible for coordinating U.S. activities with those of other nations and provide U.S. representation at climate-related international meetings.

Certain specific activities are required under the bill: (1) program planning and budgeting, (2) an intergovernmental climate program, (3) experimental climate forecast centers, and (4) an annual report.

The act mandates the preparation of a national 5-year climate plan, with annual updates, for implementing the provisions of the act. This plan would include a statement of priorities among various elements of the program, responsibilities of the Federal agencies involved in the program, and program coordination. Each participating agency shall prepare an annual request for appropriations for the program. The Office of Management and Budget is directed to review the plan and request for appropriations as a coherent and integrated multiagency request.

The intergovernmental climate program provides that the Secretary of Commerce establish Federal /State cooperative activities in climate research and advisory services. The intergovernmental program includes applied research designed to meet State, regional and local needs, and an advisery

service to provide research results and information to individuals concerned with agricultural production, water resources, energy use and other sectors of the State and regional economy. The Secretary is authorized to make grants of up to 50 percent of the costs in any one year of research and services provided at the State or regional level. States or groups of States are required to develop their own climate program in order to obtain grants under the program. The Secretary is required to make grants available to States or groups of States on an equitable basis.

Experimental climate forecast centers are authorized for the purpose of directing research efforts toward improving the capability to forecast climate and weather on a monthly, seasonal and longer basis. This research effort is to complement the basic and applied research under the national program. The centers shall make climate forecasts on an experimental basis, insure that forecast efforts are appropriately reviewed, and guard against premature reliance on the experimental forecasts.

The Secretary of Commerce also is required to prepare and submit to the President and the authorizing committees of the Congress an annual report that outlines achievements of the Program during the previous fiscal year and describes and evaluates any difficulties encountered under the act.

The bill contains total authorizations for appropriations, in addition to any other funds otherwise authorized to Federal departments and agencies of $60 million and $75 million for fiscal years 1979 and 1980, respectively, to the Secretary of Commerce.

MARITIME AUTHORIZATIONS ACT, 1979

The Senate proceeded to consider the bill (S. 2553) a bill to authorize appropriations for the fiscal year 1979 for certain maritime programs of the Department of Commerce, and for other purposes, which had been reported from the Committee on Commerce, Science, and Transportation with amendments as follows:

On page 2, line 11, strike "$5,220,000" and insert "$5,370,000";

On page 3, beginning with line 3, insert the following:

SEC. 4. Section 1103(f) of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1273(f)), is amended by striking out "7,000,000,000", and inserting in lieu thereof "$10,000,000,000".

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Maritime Appropriation Authorization Act for Fiscal Year 1979".

SEC. 2. Funds are authorized to be appropriated without fiscal year limitation as the appropriation Act may provide for the use of the Department of Commerce, for the fiscal year 1979, as follows:

(1) For acquisition, construction, or reconstruction of vessels and construction-differential subsidy and cost of national defense features incident to the construction, reconstruction, or reconditioning of ships, not to exceed $157,000,000;

(2) For payment of obligations incurred for operating-differential subsidy, not to exceed $262,800,000;

(3) For expenses necessary for research and development activities, not to exceed $17,500,000;

(4) For maritime education and training expenses, not to exceed $22,483,000, including not to exceed $15,359,000 for maritime training at the Merchant Marine Academy at Kings Point, New York, $5,370,000 for financial assistance to State marine schools, and $1,904,000 for supplementary training courses authorized under section 216(c) of the Merchant Marine Act, 1936; and

(5) For operating expenses, not to exceed $34,845,000, including not to exceed $5,516,000 for reserve fleet expenses, and $29,329,000 for other operating expenses.

SEC. 3. There are authorized to be appropriated for the fiscal year 1979, in addition to the amounts authorized by section 2 of this Act, such additional supplemental amounts for the activities for which appropriations are authorized under section 2 of this Act, as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law, and for increased costs for public utilities, food service, and other expenses of the Merchant Marine Academy at Kings Point, New York.

SEC. 4. Section 1103(f) of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1273(f)), is amended by striking out "$7,000,000,000", and inserting in lieu thereof "$10,000,000,000".

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–741), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE LEGISLATION

This legislation would authorize funding for the fiscal year 1979 of certain maritime programs of the Department of Commerce.

Section 209 of the Merchant Marine Act, 1936, provides that after December 31, 1967, there are authorized to be appropriated for certain maritime activities of the Department of Commerce only such sums as the Congress may specifically authorize by law. The bill thus authorizes appropriations for those activities listed in section 209 for which the administration propcses to seek appropriations.

For the first time, in accordance with the Maritime Appropriation Authorization Act for fiscal year 1978, the legislation would also authorize appropriations for the operating expenses of the Maritime Administration.

The requests in the bill as amended, for 1979 appropriations authority total $494,778,000.

The requests by activity are:

$517,000,000 for ship construction;

$262,800,000 for operating-differential subsidies;

$17,400,000 for research and development activities; and

$22,483,000 for maritime education and training expenses. This includes $15,359,000 for maritime training at the U.S. Merchant Marine Academy at Kings Point, N.Y., $5,370,000 for assistance to State marine schools, and $1,904,000 for supplementary training authorized under section 216(c) of the Merchant Marine Act, 1936; and, $34,845,000 for Maritime Administration operating expenses. This amount will provide $5,516,000 for the National Defense Reserve Fleet, and $29,329,000 for operating expenses related to the development and use of waterborne transportation systems and to general administration.

Added to that amount is $164,704,000 in carryover and deferral funds so that the program level for the Maritime Administration for fiscal year 1979 totals $659,332,000.

BACKGROUND AND NEED

Our national shipping policy is intended to establish and maintain a strong merchant fleet built and owned by American citizens, operated by American crews, and fully capable of serving our international economic, military, and political commitments under all foreseeable circumstances. It recognizes that even in times of peace, economic and political tensions and other unforeseen contingencies may seriously disrupt or distort traditional patterns of commercial intercourse on international trade routes. As such, it reflects the realization that an international power such as the United States cannot be dependent upon ocean transportation media owing allegiance to alien flags without threatening its national security.

The primary objective of the Maritime Administration and its programs therefore is to assure a strong U.S. merchant marine by promoting the U.S.-flag merchant marine and private shipbuilding industry in our country in times of peace and to insure the defense readiness of both in the event of war or other national emergency.

In the judgment of this committee, the money spent on the programs of the Maritime Administration is money wisely spent in the national interest.

According to one source, the United States is giving its maritime industry about $2.47 a year per capita in total assistance and aid through operating differential subsidy, construction differential subsidy, and financing assistance. Norway, on the other hand, gives assistance to its maritime industry equal to $78.86 per capita; Sweden spends about $15.90; and Great Britain gives $5.81 per capita in total assistance and aid.[1]

Our program to promote the U.S. merchant fleet is vital to the Nation's economy and security.

In recommending the instant legislation to accomplish this objective, however, the committee would be remiss if it failed to recognize the existence of other circumstances and policies which contradict and frustrate what S. 2553 is intended to achieve.

It makes no sense, logically or financially, as a Government to spend money to promote the merchant fleet on the one hand, and to permit practices in our trades which undermine and weaken the fleet on the other.

Hearings on S. 2553 were held on March 10, and the Assistant Secretary of Commerce for Maritime Affairs and five maritime industry witnesses testified in support of the authorization levels in the bill as essential for the Maritime Administration to carry out its statutory directives.

Industry witnesses also recommended an amendment which would raise the ceiling on the amount of indebtedness the Government could guarantee under the Federal ship financing program. (Title XI) from $7 billion to $10 billion.

JEAN LAFITTE NATIONAL HISTORICAL PARK AND PRESERVE

The Senate proceeded to consider the bill (S. 1829) to provide for the establishment of the Jean Lafitte National Historical Park in the State of Louisiana, and for other purposes which had been reported from the Committee on Energy and Natural Resources with an amendment to strike all after the enacting clause and insert the following:

[1] American Shipper, January 1978, p. 5.

That in order to preserve for the education, inspiration, and benefit of present and future generations significant examples of natural and historical resources of the Mississippi Delta region and to provide for their interpretation in such manner as to portray the development of cultural diversity in the region, there is authorized to be established in the State of Louisiana the Jean Lafitte National Historical Park and Preserve (hereinafter referred to as the "park"). The park shall consist of (1) the area of approximately twenty thousand acres generally depicted on the map entitled "Barataria Marsh Unit-Jean Lafitte National Historical Park and Preserve" numbered 90,000B and dated April 1978, which shall be on file and available for public inspection in the office of the National Park Service, Department of the Interior; (2) the area known as Big Oak Island; (3) an area or areas within the French Quarter section of the city of New Orleans as may be designated by the Secretary of the Interior for an interpretive and administrative facility; (4) the Chalmette National Historical Park; and (5) such additional natural, cultural, and historical resources in the French Quarter and Garden District of New Orleans, forts in the delta region, plantations, and Acadian towns and villages in the Saint Martinville area and such other areas and sites as are subject to cooperative agreements in accordance with the provisions of this Act.

SEC. 2. (a) Within the Barataria Marsh Unit the Secretary of the Interior (hereinafter referred to as the "Secretary") is authorized to acquire not to exceed eight thousand acres of lands, waters, and interests therein (hereinafter referred to as the "core area"), as depicted on the map referred to in the first section of this Act, by donation, purchase with donated or appropriated funds, or exchange. The Secretary may also acquire by any of the foregoing methods such lands and interests therein, including leasehold interests, as he may designate in the French Quarter of New Orleans for development and operation as an interpretive and administrative facility. Lands, waters, and interests therein owned by the State of Louisiana or any political subdivision thereof may be acquired only by donation. In acquiring property pursuant to this Act, the Secretary may not acquire rights to oil and gas without the consent of the owner, but the exercise of such rights shall be subject to such regulations as the Secretary may promulgate in furtherance of the purposes of this Act.

(b) With respect to the lands, waters, and interests therein generally depicted as the "park protection zone" on the map referred to in the first section of this Act, the Secretary shall, no later than six months from the date of enactment of this Act, in consultation with the affected State and local units of government, develop a set of guidelines or criteria applicable to the use and development of properties within the park protection zone to be enacted and enforced by the State or local units of government.

(c) The purpose of any guideline developed pursuant to subsection (b) of this section shall be to preserve and protect the following values within the core area:

(1) fresh water drainage patterns from the park protection zone into the core area;

(2) vegetative cover;

(3) integrity of ecological and biological systems; and

(4) water and air quality.

(d) Where the State or local units of government deem it appropriate, they may cede to the Secretary, and the Secretary is authorized to accept, the power and authority to confect and enforce a program or set of rules pursuant to the guidelines established under subsection (b) of this section for the purpose of protecting the values described in subsection (c) of this section.

(e) The Secretary, upon the failure of the State or local units of government to enact rules pursuant to subsection (b) of this section or enforce such rules so as to protect the values enumerated in subsection (c) of this section, may acquire such lands, servitudes, or interests in lands within the park protection zone as he deems necessary to protect the values enumerated in subsection (c) of this section.

(f) The Secretary may revise the boundaries of the park protection zone, notwithstanding any other provision of law, to include or exclude properties, but only with the consent of Jefferson Parish.

SEC. 3. Within the Barataria Marsh Unit, the owner or owners of improved property used for noncommercial residential purposes on a year-round basis may, as a condition of the acquisition of such property by the Secretary, elect to retain a right of use and occupancy of such property for noncommercial residential purposes if, in the judgment of the Secretary, the continued use of such property for a limited period would not unduly interfere with the development or management of the park. Such right of use and occupancy may be either a period ending on the death of the owner or his spouse, whichever occurs first, or a term of not more than twenty-five years, at the election of the owner. Unless the property is donated, the Secretary shall pay to the owner the fair market value of the property less the fair market value of the right retained by the owner. Such right may be transferred or assigned and may be terminated by the Secretary, if he finds that the property is not used for noncommercial residential purposes, upon tender to the holder of the right an amount equal to the fair market value of the unexpired term. As used in this section, the term "improved property" means a single-family, year-round dwelling, the construction of which was begun before January 1, 1977, which serves as the owner's permanent place of abode at the time of its acquisition by the United States, together with not more than three acres of land on which the dwelling and appurtenant buildings are located which the Secretary finds is reasonably necessary for the owner's continued use and occupancy of the dwelling.

SEC. 4. In furtherance of the purposes of this Act, and after consultation with the Commission created by section 7 of this Act, the Secretary is authorized to enter into cooperative agreements with the owners of properties of natural, historical, or cultural significance, including but not limited to the resources described in paragraphs (1) through (5) of the first section of this Act, pursuant to which the Secretary may mark, interpret, restore, and/or provide technical assistance for the preservation and interpretation of such properties, and pursuant to which the Secretary may provide assistance including management services, program implementation, and incremental financial assistance in furtherance of the standards for administration of the park pursuant to section 6 of this Act. Such agreements shall contain, but need not be limited to, provisions that the Secretary, through the National Park Service, shall have the right of access at all reasonable times to all public portions of the property covered by such agreement for the purpose of conducting visitors through such properties and interpreting them to the public, and that no changes or alterations shall be made in such properties except by mutual agreement between the Secretary and the other parties to such agreements. The agreements may contain specific provisions which outline in detail the extent of the participation by the Secretary in the restoration, preservation, interpretation, and maintenance of such properties.

SEC. 5. Within the Barataria Marsh Unit, the Secretary shall permit hunting, fishing (including commercial fishing), and trapping in accordance with applicable Federal and State laws, except that within the core area and on those lands acquired by the Secretary pursuant to section 2(c) of this Act, he may designate zones where and establish periods when no hunting, fishing, or trapping shall be permitted for reasons of public safety. Except in emergencies, any regulations of the Secretary promulgated under this section shall be put into effect only after consultation with the appropriate fish and game agency of Louisiana.

SEC. 6. The Secretary shall establish the park by publication of a notice to that effect in the Federal Register at such time as he finds that, consistent with the general management plan referred to in section 8, sufficient lands and interests therein (i) have been acquired for interpretive and administrative facilities, (ii) are being protected in the core area, and (iii) have been made the subject of cooperative agreements pursuant to section 4. Pending such establishment and thereafter the Secretary shall administer the park in accordance with the provisions of this Act, the Act of August 25, 1916 (39 Stat. 535), the Act of August 21, 1935 (49 Stat. 666), and any other statutory authorities available to him for the conservation and management of natural, historical, and cultural resources.

SEC. 7. (a) There is established the Delta Region Preservation Commission (hereinafter referred to as the "Commission"), which shall consist of the following:

(1) two members appointed by the Governor of the State of Louisiana;

(2) two members appointed by the Secretary from recommendations submitted by the President of Jefferson Parish;

(3) two members appointed by the Secretary from recommendations submitted by the Jefferson Parish Council;

(4) two members appointed by the Secretary from recommendations submitted by the mayor of the city of New Orleans;

(5) one member appointed by the Secretary from recommendations submitted by the commercial fishing industry;

(6) three members appointed by the Secretary from recommendations submitted by the commercial fishing industry;

(7) one member appointed by the Chairman of the National Endowment for the Arts.

(b) Members of the Commission shall serve without compensation as such. The Secretary is authorized to pay the expenses reasonably incurred by the non-Federal members of the Commission in carrying out their duties.

(c) The function of the Commission shall be to assist and advise the Secretary in the selection of sites for inclusion in the park, in the development and implementation of a general management plan, and in the development and implementation of a comprehensive interpretive program of the natural, historic, and cultural resources of the region. The Commission shall inform interested members of the public, the State of Louisiana and its political subdivisions, and interested Federal agencies with respect to existing and proposed actions and programs having a material effect on the perpetuation of a high-quality natural and cultural environment in the delta region.

(d) the Commission shall act and advise by affirmative vote of a majority of its members: *Provided*, That any recommendation of the Commission that affects the use or development, or lack thereof, of property located solely within a single parish or municipality shall have the concurrence of a majority of the members appointed from recommendations submitted by such parish or municipality.

(e) The Directors of the Heritage Conservation and Recreation Service and the National Park Service shall serve as ex officio members of the Commission and provide

such staff support and technical services as may be necessary to carry out the functions of the Commission.

SEC. 8. (a) There is authorized to be appropriated, to carry out the provisions of this Act, not to exceed $50,000,000 from the Land and Water Conservation Fund for acquisition of lands, waters, and interests therein and such sums as necessary for the development of essential facilities: *Provided*, That no funds for the development of essential facilities shall be authorized prior to October 1, 1978.

(b) Within three years from the date of enactment of this Act, the Secretary, after consultation with the Commission, shall submit to the Committee on Interior and Insular Affairs of the House of Representatives, and the Committee on Energy and Natural Resources of the Senate a general management plan for the park indicating—

(1) transportation alternatives for public access to the park;

(2) the number of visitors and types of public use within the park which can be accommodated in accordance with the protection of its resources;

(3) the location and estimated cost of facilities deemed necessary to accommodate such visitors and uses; and

(4) a statement setting forth the actions which have been and should be taken to assure appropriate protection, interpretation, and management of the areas known as Big Oak Island and Couba Island.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read:

A bill to provide for the establishment of the Jean Lafitte National Historical Park and Preserve in the State of Louisiana, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–743), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of S. 1829, as ordered reported, is to establish the Jean Lafitte National Historical Park and Preserve in the State of Louisiana. The park would be patterned after the "satellite" concept developed in recent years for the designation of several national parks in or near urban areas. Rather than comprising a single unit, the Jean Lafitte National Historical Park and Preserve would consist of several distinct elements, which taken together, represent the rich historical, natural and cultural resources of the Mississippi Delta Region. The Jean Lafitte Park and Preserve, as ordered reported, would include the following:

(a) A 20,000-acre Barataria Marsh Unit consisting of an 8,000-acre core area and a 12,000-acre park protection zone;

(b) French Quarter interpretative and administrative facilities;

(c) Big Oak Island;

(d) Chalmette National Historical Park; and

(e) Subject to cooperative agreements, additional natural, cultural and historical properties in and around the city of New Orleans and surrounding parishes.

BACKGROUND AND NEED

The Delta Region of Louisiana possesses a blend of cultural and natural elements justifiably termed unique. This region of Louisiana encompasses approximately 8,900 square miles of land, water, and marsh—an area about the size of the State of Massachusetts. The region is characterized by verdant lushness and a semi-solid landform which reflect the natural evolution of a delta interacting with scattered human settlements and a major metropolitan center. Within this area. French, Spanish, Anglo-American, Irish, German, Black, Indian and Latin-American cultures have been fused into a whole while retaining the best features of each.

These cultural remnants are manifested in the area's ethnic composition, lifeways, and traditions. They are expressed too in geographical and manmade features; for example, this delta, bayous, marshes, forts, plantations, homes, churches, and public places. The national significance of many individual properties in and around the New Orleans area has been established through their designation as national historic landmarks. Although most of them are in good hands and accessible to the public to varying degrees, their preservation and public appreciation could be significantly enhanced by National Park Service coordination and assistance.

The committee feels that the preservation and interpretation of the marsh area and related sites will provide future recreation and educational opportunities for the people in and around the New Orleans area as well as visitors to the area.

LEGISLATIVE HISTORY

A Jean Lafitte National Park proposal was first introduced in the Senate by Senator Johnston on June 10, 1976. Field hearings were held by the Subcommittee on Parks and Recreation in Gretna, La., on December 6, 1976, but no further action was taken during the 94th Congress. Senator Johnston reintroduced the proposal as S. 1829 on July 11, 1977. The subcommittee conducted another hearing in Gretna on December 17, 1977, and an additional hearing in Washington, D.C. on February 3, 1978.

CHANGE IN ORDERS FOR RECOGNITION OF SENATORS

Mr. ROBERT C. BYRD. Mr. President, do we have any special orders for recognition of Senators on tomorrow?

The PRESIDING OFFICER. No.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, I believe there are four special orders for Thursday, they being for the recognition of Messrs. JAVITS, PERCY, STAFFORD, and MATHIAS. I ask unanimous consent that those orders be transferred to Wednesday.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, we cannot start them at 10 a.m. That request has been made. It depends upon what progress the Senate is making at that time. So I am not going to ask at this time that we begin those orders at 10 o'clock. It may be that we will have to agree to begin them at 9, depending on the progress in the meantime.

So I suggest that the Senators be advised accordingly.

ORDER FOR RECOGNITION OF SENATOR MARK O. HATFIELD AND SENATOR STEVENS ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Senator MARK O. HATFIELD and Senator STEVENS be recognized on tomorrow, each for not to exceed 15 minutes, after the prayer.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 10 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF THE BUDGET RESOLUTION ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the recognition of Senator MARK O. HATFIELD and Senator STEVENS on tomorrow, the Senate resume consideration of the Budget Resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF AMENDMENT BY SENATOR McGOVERN ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate resumes consideration of the Congressional Budget Resolution tomorrow, Mr. McGOVERN's amendment be made pending at that time.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 10 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 10 a.m. tomorrow morning.

The motion was agreed to; and at 5:30 p.m., the Senate recessed until Tuesday, April 25, 1978, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate April 24, 1978:

INTERNATIONAL JOINT COMMISSION, UNITED STATES AND CANADA

Kenneth M. Curtis, of Maine, to be a Commissioner on the part of the United States on the International Joint Commission, United States and Canada, vice Victor L. Smith, resigned.

THE JUDICIARY

Adrian G. Duplantier, of Louisiana, to be United States District Judge for the Eastern District of Louisiana, vice R. Blake West, deceased.

DEPARTMENT OF JUSTICE

George H. Lowe, of New York, to be United States Attorney for the Northern District of New York for the term of four years, vice James M. Sullivan, Jr., resigned.

IN THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Subject to qualifications provided by law, the following for permanent appointment to the grades indicated in the National Oceanic and Atmospheric Administration:

To be lieutenants

Joseph G. Gofus III
Ted I. Lillestolen
Mark F. Sullivan
John C. Osborn, Jr.
Alan R. Bunn
Maureen R. Kenny
John M. Tokar
Edward M. Clark, Jr.
David L. Gardner
Robert G. Mann
Roger L. Parsons
Michael J. Kretsch
Bryce M. Scott
Kent A. Doggett
Kenneth G. Vadnais
Warren T. Dewhurst
Neal G. Millett
Dean L. Smehil
Stanton M. Ramsey
James F. McGough, Jr.
Hubert M. Kirch
George E. Leigh
Michael S. Sagalow
David K. Howard
William W. Pearson II
Virginia E. Newell
David M. Goodrich
John C. Person
Donald R. Rice
Patrick J. Rutten
Charles E. Gross
Gerald E. Wheaton

To be lieutenant (junior grade)

Gary M. Barone

To be ensigns

Lyman M. C. Burk, Jr.
John C. Clary III
Peter M. Connors
Federico R. Diaz
Daniel R. Herlihy
Paul S. Morton
Timothy A. Peasley
Wayne E. Porter
Jay T. Rodstein
Andrew N. Shepard, Jr.
Elizabeth A. Van Etten
Arthur W. Wenderoth
Charles I. Zigelman

IN THE NAVY

The following-named commanders of the reserve of the U.S. Navy for permanent promotion in the grade of commander in the line and staff corps, as indicated, pursuant to title 10, United States Code, section 5911, subject to qualifications therefore as provided by law:

LINE

EXTENSIONS OF REMARKS

A TRIBUTE TO THE HONORABLE ROY E. GRANTHAM

HON. GLENN ENGLISH

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. ENGLISH. Mr. Speaker, I want to bring to my colleagues' attention the outstanding record of service of Senator Roy Grantham, who is retiring from office this year after 28 years of commitment to the needs of the people of Oklahoma.

I can say without hesitation that no member of the Oklahoma Senate commands greater respect than Senator Grantham, who has been variously selected by his own colleagues as the most helpful senator, the best committee chairman, and the member best liked by those with whom he has served.

Roy Emery Grantham was born in 1907 in Oklahoma territory. He has earned three degrees from Oklahoma University, has served in the Army and the Army Reserve, and has been county attorney for Kay County, Okla.

He was first elected to the Oklahoma State Senate in 1950, and has served in that body continuously since that time. As chairman of the senate's judiciary committee for the past decade, he has been able to combine his varied talents as teacher, attorney, and lawmaker. "Every committee meeting is like attending a legal seminar," commented one committee member. Under Grantham's leadership, the judiciary committee has become one of the most productive committees and its meetings have become the best attended in the entire senate.

Senator Grantham is perhaps best known for presiding over the impeachment trial of a member of the Oklahoma Supreme Court. During the proceedings, both sides were ample in their praise of his evenhanded performance. Subsequently, the Ponca City lawmaker has headed special committees investigating allegations of wrongdoing in the Oklahoma Corporation Commission, the Highway Commission, and the personnel administration system. In every case, his leadership has meant fairness and equity for all involved—whether the inquiry lead to resignations and corrective legislation, or a clean bill of health for those under investigation.

Another measure of Senator Grantham's effectiveness is his overwhelming popularity among his own constituents. On the rare occasions that Grantham was opposed for reelection by a member of either party, the voters of district 20 responded by giving him decisive margins of victory.

Roy Grantham has for many years provided the Oklahoma legislature, and the State as a whole, with a model of absolute integrity—an integrity which crosses party lines and seeks no personal or political advantage.

As he voluntarily leaves the arena in which he has performed so well, Roy Grantham leaves a record of accomplishment which typifies all that is best in the tradition of American public service. I am pleased to join with his many friends and colleagues in expressing our deepest appreciation to Senator Grantham for his years of dedication to the needs of our State.●

TRUE INTENT OF VETERANS PREFERENCE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. EILBERG. Mr. Speaker, I want to voice my strong personal objection to the reduction in veterans preference proposed by President Carter.

In his recent message to Congress, the President asked that we enact legislation which would sharply limit the advantages that veterans receive in civil service hiring and firing procedures. Before the Post Office and Civil Service Committee votes on the President's proposal—contained in legislation numbered H.R. 11280—the committee should examine closely the true meaning and intent of the veterans preference.

The veterans preference in civil service hiring does not give veterans an advantage in the job market; rather, it is an attempt to makeup for the disadvantage they face because of time spent out of the work force. In particular, when the veteran leaves the service, he or she is far behind his or her contemporaries in terms of work experience, skills, and seniority. Thus, the veterans preference is an effort to compensate them for their disadvantage in getting a job and advancing in that job.

Mr. Speaker, I must also oppose the provisions of the bill that limit the veterans preference in reduction-in-force situations. Under the President's proposal, after 3 years of Government service a veteran would be entitled to only an additional 5 years seniority for purposes of determining his or her rights in reduction-in-force situations.

Franklin D. Roosevelt clearly stated his ideas on the veterans preference in reduction-in-force situations. In a letter dated February 26, 1944, Roosevelt wrote to the chairman of the Civil Service Committee of the House:

> Veterans should be accorded special consideration in connection with any reductions in total personnel which it may be necessary for federal agencies to work out from time to time.

I see no reason for the Congress to stray from the fundamental concept that Roosevelt expressed so forthrightly.

Let me emphasize, Mr. Speaker, that I sympathize with the President's goal of bringing more women and minorities into Government service. I do not believe, however, that this goal should be achieved at the expense of the men and women who have served our country in the military.

It is my hope that Congress will not take any steps toward changing the veterans preference in civil service procedures. Civil service reform is a worthy undertaking for President Carter and this Congress, but I personally cannot support any measures that would be detrimental to the interests of our veterans.●

FEDERAL SALARY INCREASE SHOULD BE 5.5 PERCENT

HON. JIM MATTOX

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MATTOX. Mr. Speaker, the first-target budget resolution, which will be considered on the floor of the House of Representatives on May 2 and 3, should be amended to target a pay increase for all Federal employees not to exceed 5.5 percent. The budget resolution as reported out of the committee assumes 6-percent funding for increases in Federal salaries.

Specifically, my amendment will target a reduction of $255 million in budget authority and outlays in order to roll back the Federal salary increase to the 5.5-percent level. The President's recommendation for this action came after our committee had finished its deliberations, otherwise I woud have offered it then. I hope, however, it can be accepted as a committee amendment.

This is one of the major recommendations of the President of the United States as a first step toward abating the extreme inflationary pressures we are currenty experiencing. It has been set forth by the President as an example of essential Federal restraint, which, hopefully, will serve as a guideline for State and local governments and business and labor groups.

In the battle against inflation, which involves every man, woman, and child in the United States, someone must be willing to take the first step.

The President's recommendation is a very modest one that the Congress can endorse and support without inflicting undue harm on anyone. Federal employees will still receive a 5.5 percent upward salary adjustment.

If our example is followed throughout our vast economy, the benefits to individuals will in the long run, be far greater than the temporary sacrifice we call upon them to make at this critical time.

I urge you to support my amendment so that the Nation as a whole will know that the Congress pledges its support to all effective initiatives to reduce inflation.

Thank you.●

HOUSE MEMBERS URGE EXTENSION OF DEADLINE FOR ALLOCATING FUEL ASSISTANCE FUNDS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. FRASER. Mr. Speaker, many low-income people throughout the country have been hard hit by high home heating costs during this past winter. In order to deal with this problem, funds were provided in the fiscal year 1978 supplemental appropriations bill for the Community Services Administration to defray fuel costs for low-income families.

Under agency regulations, the funds must be allocated by May 1, 1978. Many of us in the House believe this deadline to be unworkable and have sent a letter to Community Services Administration Director Olivarez, urging the agency to seek an extension of this deadline. A copy of that letter and its cosigners now follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 11, 1978.

DR. GRACIELA OLIVAREZ,
Director, Community Services Administration, Washington, D.C.

DEAR DR. OLIVAREZ: We are writing to urge that CSA extend the May 1, 1978, spending deadline for the EEAP program to help defray fuel costs for low-income families and elderly people hardest hit by this winter's prolonged cold spell.

As you know, the FY 1978 Supplemental Appropriations Bill was signed into law on March 7, after a delay of several months. This delay has had an especially serious effect on the much needed fuel assistance program since the program's principal goal is to assist low-income people with energy related emergencies arising as the result of the winter season.

Even though final approval of the fuel assistance program experienced considerable delay, final CSA rules stipulate that no funds under the EEAP program can be obligated after May 1, 1978. We now have a situation similar to last year's when the assistance also came late and was available only for a limited period of time.

To avoid a repetition of last year's difficulties in administering this program, we urge that the May 1, deadline be extended so that CSA can indeed meet its mandate of assisting eligible households with energy related emergencies arising as a result of the winter season.

Thank you for your consideration. We are looking forward to your response.

With best wishes.

Sincerely,

Bruce Vento, Peter Rodino, John Conyers, Helen Meyner, Joshua Eilberg, Donald Fraser, Harold Ford, Parren Mitchell, Joe Moakley, Rick Nolan, William Brodhead, John Duncan, Mark Andrews, Robert Roe, James Hanley, Stewart McKinney, Joseph Addabbo, Lee Hamilton, Don Mitchell, John Anderson, Michael Blouin, Richard Ottinger, Max Baucus, Charles Rangel, Ronald Mottl, William Moorhead, Fernard St Germain, Toby Moffett, and David Obey.

THE PEOPLE WANT TAX CREDITS

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. CORCORAN of Illinois. Mr. Speaker, the New York Times, in an article on April 20, reported on two surveys which were currently conducted regarding tax relief for families who pay college tuition. The first survey was conducted by the New York Times and CBS News and the second by the Gallup organization. The Times survey found that 83 percent of the respondents questioned favored a tax break for college tuition costs, while only 13 percent were opposed and 4 percent replied, "Don't know." The second survey by Gallup found that 51 percent of those questioned favored tax credits for college tuition as opposed to 34 percent who supported the Carter-Califano plan for expanding existing Federal scholarships and loans. Fifteen percent responded, "Don't know."

As the principal House sponsor of the "College Tuition Relief Act," I am, of course, pleased with the findings of these opinion surveys. Hopefully, the Carter administration will soon get the message that people are more interested in tax relief at home, than in added bureaucracy in Washington.

Mr. Speaker, at this time, I would like to insert this article into the RECORD:

TWO POLLS FIND MOST ADULTS FAVOR TUITION TAX BREAK

(By Marjorie Hunter)

WASHINGTON.—Two new national polls reported that a majority of this nation's adults favor some form of tax relief for families who pay college tuitions.

A New York Times-CBS News survey, conducted April 3–7, found that 83 percent of those questioned favored a tax break for college tuition costs, while only 13 percent were opposed and 4 percent replied "don't know."

A Gallup Poll, taken March 20–April 3 and made public today, found that 51 percent of those questioned favored tax credits for college tuition as opposed to 34 percent who supported the Carter Administration's plan for expanding existing Federal scholarships and loans to aid college students from middle-class families. Fifteen percent replied "don't know."

The Gallup Poll gave those questioned an option between tuition tax credits and the Administration's scholarship-loan program. The Times-CBS News survey simply asked whether parents should get a tax break for part of the college tuition.

A tuition tax credit would permit taxpayers to subtract a certain part of tuition costs from the amount of Federal income tax owed.

On Feb. 23 the Senate Finance Committee approved, by a vote of 14 to 1, a bill that would allow parents of students in college or postsecondary vocational schools to subtract up to $250 from taxes owed on this year's income. In 1980, coverage would be expanded to include tuition for private elementary and secondary schools, and the maximum write-off would be raised to $500 per student.

The House Ways and Means Committee approved a bill April 11 that limits tax credits to college tuitions. Parents would be allowed to subtract from taxes owed up to $100 for each dependent college student this year, up to $150 next year and up to $250 in 1980. The bill may reach the House floor next week.

Neither the New York Times-CBS News survey nor the Gallup Poll asked whether tuition tax credits should be given to parents of students in private elementary or secondary schools.●

RURAL RESIDENTS ELIGIBLE FOR HEALTH INSURANCE

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. CRANE. Mr. Speaker. With continued public and private focus on the health care sector and the growing frequency of Government criticism of the private sector for its alleged lack of ingenuity regarding coverage of persons who might not have available to them adequate or existing health insurance coverage, I would like to share with my colleagues the following article. In my home State of Illinois, the Blue Cross and Blue Shield Association has for the past 30 years made available what is called the Health Improvement Association (HIA's). Originally intended to cover rural Illinois citizens, self-employed, and those working for companies with less than five full-time employees, the program has been extended to others and has been successful in covering about 250,000 who might otherwise not have had adequate health insurance coverage. Our neighboring State, Iowa, also has a similar HIA program.

The article follows:

RURAL RESIDENTS ELIGIBLE FOR HEALTH INSURANCE

For 30 years, Health Improvement Associations (HIAs) have made available Blue Cross and Blue Shield health insurance to rural Illinois citizens who might otherwise find it hard to obtain.

The HIA program started immediately following World War II when rural residents found it difficult to obtain adequate health insurance. Farmers, small town businessmen and the self-employed were not eligible for the more economical group health benefit plan.

"To help rural people, we had to start by finding a substitute for the employer-based group concept," says George Starkey, assistant vice president of state sales for the Chicago-based Blue Cross and Blue Shield Plan.

"Farmers and other rural residents had to be brought together into an organization that would qualify them as a group," he says.

Rural residents, who were accustomed to banding together to help neighbors, responded favorably to the idea of forming such an organization. The effort resulted in the chartering of the first Illinois HIA in 1948.

The not-for-profit HIA program now has 94 local associations in the state under a parent organization, called the Illinois Health Improvement Association. About

250,000 people have Blue Cross and Blue Shield coverage through the program. The Plan considers the program its largest enrolled group.

Initially, HIA coverage was limited to the self-employed and those who worked for firms with less than five full-time employees. Members could not live in towns with more than 5,000 people.

The population limit has since been dropped and businesses with as many as 21 employees now can purchase coverage for their workers.

Benefit levels also have been revised. Members can select a plan that pays 100 percent of all eligible charges and includes a special major medical program. There is another plan that pays 80 percent of eligible charges. HIAs also offer a Medicare supplemental program and in some counties a health maintenance organization type coverage. Members also have the option of selecting a special guaranteed decreasing term life insurance plan.

The HIA concept is based on volunteerism. Volunteers seek out new members, run the parent association and assume leadership roles in community programs.

"HIA members believe in traditional values like volunteerism and helping out neighbors. And they prove it daily by giving so unselfishly of their own time," says Starkey.

Most individual contracts are sold by HIA volunteers. The Illinois Plan maintains a rural marketing staff to help the HIAs sell coverage to groups. This staff also helps HIAs on servicing problems, such as untangling snarls in submitted claims.

While the main thrust of the concept has been the enrollment of members in Blue Cross and Blue Shield, HIAs also are engaged in community oriented projects.

Individuals may join an HIA without taking the Blue Cross and Blue Shield coverage. Their membership dues, which run around six dollars, are used to support the various community projects and scholarships.

Blue Cross and Blue Shield of Iowa also supports a similar HIA program within its state.●

LET COOLER HEADS PREVAIL

HON. L. H. FOUNTAIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. FOUNTAIN. Mr. Speaker, I commend to the attention of my colleagues and the members of the Civil Aeronautics Board a not so tongue-in-cheek Richmond Times-Dispatch column which makes some salient points concerning the issue of smoking on commercial flights. The column also mentions a story which my good friend, Rep. DAN DANIEL, has often told about the effects of tobacco on his grandmother.

The article follows:

[From the Richmond Times-Dispatch, Apr. 2, 1978]

SEATED, MOST HAPPILY, IN A CLOUD OF SMOKE

(By Frances Hallem Hurt)

Slowly I have become aware that I'm a full-fledged freak. Whenever I take an airplane, which is fairly often, I sit with the smokers. I've never smoked a cigarette in my life. Well, hardly ever. There was the time behind the barn.

Although I've sat with smokers for years (with a few match books deep in the debris of my handbag), it had not occurred to me how very peculiar it is until we found ourselves, as we have, swamped with the rising tide of piety and intolerance among those who have kicked the habit. The witch-burning syndrome is on the march. I know of nothing more pitiful than the increasingly common sight of a grown man, hanging his head in shame and whispering: "Do you mind if I smoke?" Shades of Hester Prynne's "A." The next trick in the Califano bag may well be to brand smokers with a scarlet "S."

When the airlines first started separating the sheep from the goats, asking, "Smoking or non-smoking?" for seat reservations, I honestly answered, "Non-smoking." I took my seat in the best part of the plane while the untouchables were herded to the tail. That's how I learned.

Please don't think I'm tainted with intolerance on my side of the question. Indeed, some of my best friends don't smoke. I simply recognize that my behavior is bizarre and feel that I owe an explanation. Among the smokers, you see, one can be at ease. The smoker is not driven to conversation. He can smoke contentedly as he gazes at his patch of sky or rests from his reading or work. One need not bury one's own head in one's book to avoid the friendly opening smile or the fishing out of the photo wallet.

This is all very serious for me, for I am as friendly as a puppy. I was trained at my mother's knee to give smile for smile and courtesy for courtesy, which can lead to a good many complications. Actually, I've met some very nice people in the non-smoking section. It is, for example, a splendid place to meet Moslems.

There are also environmentalists, backpackers, first-fighters, plain vanilla people like myself, health nuts, people with recent operations and gum-chewing knuckle-crackers. We know what their problem is.

The thing, I think, that really turned me off the non-smoking section is the high ratio of evangelists. They can tell at a glance who needs working on, even if I am a pewwarming Presbyterian who teaches Sunday School besides. As far as they are concerned, just to brighten the corner where you are is not enough. You've got to come out of the closet.

Let me give you a case in point, although this happened to a friend. My friend is a non-smoker, given to waving her hand delicately under her nose if smoking is in progress within 100 feet. We were flying to London—non-smoking, of course. Being a true non-smoker, my friend turned immediately to her neighbor to chat, as charming as if at tea. It developed that the neighbor was not exactly a Moslem, but a lapsed Moslem, on his way to win other Moslems in the name of Jesus. After a long ardent conversation, he said to my friend, "Are you saved?" She replied uncertainly, "I don't think so. I'm a Methodist."

On the next leg of our journey we sat by an un-lapsed Moslem, with eyes as blue as a Siamese cat's (Crusader genes?) and a gold medallion around his neck, quoting the Koran. His field was international law and he gave us the word on the Arab-Israeli confrontation. He said, his eyes flashing like "Star Wars" ray guns, "This time the U.S. will back the Arabs. They've got the oil. "Seeking safer ground, my friend unfortunately mentioned our other Moslem, off on his evangelical mission. "Impossible!" Moslem No. 2 shouted, and we Christian dogs cowered, waiting for the scimitar.

I confess that my fondness for smokers is rooted in nostalgia—for all of the men in my life who represented security and affectionate support. My father died when I was five, but there were my uncles, coming for Thanksgiving and Christmas with their fragrant after-dinner cigars. Then my husband—a cigarette pack always in his white shirt pocket, giving him a special mix in my olfactory memory of fresh tobacco, fresh linen and faint talcum. Add to this my husband's father and my uncles and my brothers, and you'll understand why I'm at ease with the lepers in the tail of the plane.

As our new Savonarola rises from HEW, stomping on our freedoms for our own good, it is about time for Rep. Dan Daniel of the 5th District to tell the little tale of his grandmother. Daniel was born in a cabin on a Pittsylvania County tobacco farm, he says, and grew up working in the bright leaf for which the area is famous.

He proceeds something like this: Now that he has heard his distinguished colleagues describe the horrors of this evil weed, he knows what killed his grandmother. She doted on tobacco in every form, pipe to snuff. And it finally killed her. She was 99 years old and 11 months.

So I'm a freak and a freak I intend to remain. At least among the smokers I won't find myself sitting by Secretary Califano. On second thought, I wouldn't find myself sitting by him anyway. He's a billion-budget expense account man. He flies first class.●

H.R. 11002: STREAMLINING THE GOVERNMENT CONTRACT DISPUTES PROCESS

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. HARRIS, Mr. Speaker, The Judiciary Subcommittee on Administrative Law and Governmental Relations on February 8 reported H.R. 11002, the "Contracts Disputes bill," drafted and sponsored by myself and my colleague from Ohio, Congressman TOM KINDNESS.

H.R. 11002 would establish in law for the first time a clear and precise Government policy and process for resolving disagreements between the Government and outside contractors. The bill will reform a process that has evolved erratically over the years, a system that certainly needs improvement and is described by some as being in "total disarray." It would carry out the 1972 recommendations of the Commission on Government Procurement which concluded that the present system is too expensive and time-consuming for the taxpayer and contracting companies and needs significant overhaul to provide effective justice.

DEFECTS IN THE CURRENT SYSTEM

Currently, if there is a disagreement over the terms or meaning of a contract, there are three levels through which the dispute may be processed: First, the contracting officer; Second an administrative level other than the contracting officer, usually a board of appeals; and third, the courts.

It is not uncommon for current contract disputes to take 10 years to resolve. In order to reach settlement, both government officials and private companies must spend many hours and dollars going through contracting officers, boards of contract appeals and the courts. The Commission found that 33 percent of all disputes took more than 6 months to resolve at the contracting officer level; of those appealed to boards, 70 percent took

more than 6 months and 15 percent more than 2 years.

Lengthy delay in resolving protests can seriously impair the Government and be economically devastating to the contractors. For example, the Department of the Navy and General Dynamics are currently attempting to resolve a dispute over construction of a nuclear submarine. The company claims the Navy owes it $544 million for more than 35,000 changes in the construction of attack submarines. Work stoppages are threatened. To go through a protracted settlement could ultimately affect the Nation's defense capabilities, employment in those industries, and the U.S. Treasury.

The cost of protracted legal actions to resolve a dispute discourages many businesses, particularly small ones, from even seeking business with the Federal Government. The complications and expenses of a cumbersome disputes-resolving process discourages companies from even selling goods and services to the Government—which defeats the whole purpose of a competitive contracting system. "If the concerns about inequities and inefficiencies in disputes-resolving system procedures cause potential contractors to avoid Government work, the procurement process will suffer," said the Commission. Additionally, the potential costs and chaos of pursuing a dispute causes those who do do business with the Government, to submit higher bids at the taxpayer's expense.

The current system is also unfair because the Government has the upper hand. The rights of parties are governed by the "disputes clause" in the contract which is both written and interpreted by the Government, one of the parties in the contract.

This inequity is compounded by the unique feature of a Federal Government contract—the contractor is required to continue performing work even though there is a dispute. For example, if the Government and a contractor disagree over the cost of a specification included in the contract, the company must continue performing that work even though it may take months or years to resolve the dispute.

Under the present system, a contractor must appeal the decision of a contracting officer with the agency board before taking the case to court. This layer can add unnecessary time and expense; and some cases, particularly the more complex ones, are more suited for court resolution.

The agency boards of contract appeals are problem areas as well. They do not have the procedural authority, such as discovery and subpena powers, to insure that all relevant facts and issues are brought before them. And although boards are essentially objective and independent, their members are appointed by agency heads and must depend on them for career advancement. The Commission found, "The procedural safeguards in the boards and the quality and independence of the board members are uneven. Yet * * * the findings of fact by the boards are essentially final on subsequent judicial review."

The Commission found no evidence of a comprehensive plan to improve the current system. The boards, on the one hand, have adopted judicial-like procedures and at the same time have tried to maintain a degree of flexibility and informality not usually found in court. This lack of direction from Congress and lack of planning in the executive branch has exacerbated the inefficiencies and expense.

HARRIS-KINDNESS WILL STREAMLINE AND REDUCE COSTS

H.R. 11002 establishes as a Government-wide policy that disputes should be resolved by mutual agreement when possible and requires at least one informal conference between the contractor and the agency before formal proceedings are begun. Agencies are authorized to establish full-time boards of appeals to hear and decide disputes. Both the Government and the contractor could go directly to court, bypassing the agency board. Also, boards are required to establish simplified procedures for the speedy handling of small claims. The bill includes specific deadlines for taking actions at the various levels and grants the boards clear powers to assure fairness to both the Government and the contractor.

I believe H.R. 11002 will provide a clear base in law for resolving contract disputes, which involve millions of contractor and taxpayer dollars. I am hopeful that the full Judiciary Committee will take prompt action on this bill and I will work for prompt enactment into law. We have let a system evolve sporadically and that system has become cumbersome and expensive. This bill will help bring economic and legal justice to both the taxpaying citizen and private companies.

I would like to include in the RECORD at this point three examples of contract dispute cases which point out some of the problems addressed by this legislation:

EXAMPLES OF CONTRACT DISPUTES

Carlo Bianchi and Company, Inc. In July 1946, Carlo Bianchi and Company entered into a contract with the Army Corps of Engineers for the construction of a flood contro dam. Work was completed on June 30, 1949. In May 1947, the contracting officer rejected the company's claim that additional supports were needed in the water diversionary tunnel. In 1948 Bianchi's appeal was denied by the board and in 1954 Bianchi filed in the U.S. Court of Claims. In 1959 the Court of Claims entered judgment for the contractor and in 1963 the U.S. Supreme Court vacated the Court of Claims judgment on the ground that under the Wunderlich Act the lower court should have confined itself to review of the administrative record. In 1964, on remand, the Court of Claims found the board's action to be supported by substantial evidence and dismissed the contractor's petition; a motion for reconsideration was denied. In September 1973, twenty-six years after the claim was rejected, settlement for $149,617.36 was announced following Congressional reference to the Corps of Engineers. The settlement amount matched exactly the original award of the Court of Claims in 1959.

J. L. Simmons Company, Inc. On October 5, 1949, J. L. Simmons Company, Inc. entered into a contract to construct a hospital for the Veterans' Administration and completed work on April 30, 1953. In 1951 the contracting officer denied the first of Simmon's claims for extra foundation work and a timely appeal was filed. In 1959, the board and the Assistant Administrator for Construction approved the board's action. Less than a month later, Simmons filed a petition with the Court of Claims alleging breach of contract and attacking the board's decision as arbitrary. The case became stalled because of the turmoil created by the Wunderlich, Bianchi, Utah and Grace cases. In June 1966, proceedings in the Court of Claims were suspended to permit the Board of Contract Appeals to correct defects in the record. In 1967, a second board decision was issued substantially increasing the award to Simmons. The Board decision was modified and affirmed by the Court of Claims on July 16, 1969. In August 1970, nineteen years after the first claim was denied, a $650,000 judgment for the company was entered.

Utah Construction and Mining Company. Utah Construction executed a contract in March 1953 to build a facility for the Atomic Energy Commission. After completion of the project in 1955, the contractor filed a claim under the changed conditions clause and the claim was denied by the contracting officer. The board held that there had been a changed condition but that relief was unavailable under the contract. In the subsequent breach of contract suit, the Court of Claims held that the claims were outside the disputes clause and were therefore subject to de novo review. In 1966, the Supreme Court affirmed the Court of Claims in its determination of the scope of the disputes clause but reversed the lower court because of failure to give finality to certain factual findings made by the board. In July 1966, the Court of claims withdrew its opinion and returned the matter to its commissioner for further proceedings. In 1968, thirteen years later, the parties entered a settlement stipulation for $100,000.

SUMMARY AND EXPLANATION OF H.R. 11002, THE CONTRACT DISPUTES BILL

H.R. 11002, the Harris-Kindness Contract Disputes bill, would establish in law for the first time, a clear policy and process for resolving disagreements between the federal government and private contractors when there is a dispute over the terms of the contract. The bill establishes as a policy that disputes should be resolved by mutual agreement when possible and requires at least one informal conference between the contractor and the agency before formal proceedings are begun. The bill authorizes agencies to establish full-time, formal boards of contract appeals which would hear and decide disputes. It grants both the contractor and the government "direct access" or the right of review of any adverse agency board decision in court. And it requires agency boards to establish a simplified procedure for expeditiously settling small claims.

BACKGROUND

Government contracting is as old as our form of government. The public, through Congress, has decided that government contracting for goods and services must be undertaken for the benefit of the public primarily by fulfilling government needs through competitve pricing methods that assure equal opportunities for businesses to compete at the lowest possible cost to the government. Government contracts are formed according to an etxensive and complex set of formal rules, comprised of laws, executive orders, regulations and agency internal procedures.

Contracting with the federal government is somewhat unique because the rights of the parties are governed by the so-called "disputes clause" in the contract. This clause gives the government, one of the parties in the contract, the power to decide what the contract provisions mean. Additionally, under government contracts, the contractor is required to continue to perform work

while the dispute is being resolved—a requirement that is not found in contracting between two non-government entities in the private sector.

The current method of resolving contract disputes is essentially a set of practices that have evolved out of agencies' needs without firm or clear foundation in law. Currently, when there is a disagreement over the terms meaning of a contract between the government and the contractor, there are three levels through which the dispute may be processed: (1) the contracting officer; (2) an administrative level other than the contracting officer (usually a board of contract appeals); and (3) the courts.

The 91st Congress created the Commission on Government Procurement and among its mandates was a requirement to study the current methods for settling contract disputes and to make recommendations to Congress for improvements. The Commission, in its 1972 report, concluded. "The present system for resolving contract disputes in connection with contract performance needs significant change if it is to provide effective justice. The system is often too expensive and time-consuming for efficient and fair resolution of claims."

Other findings of the Commission were as follows:

The delays and confusion of the current system make it costly for the taxpayer.

Because the current process is cumbersome and requires expensive, protracted litigation, small businesses are reluctant to sell goods and provide services to the federal government. Two-thirds of the small businesses questioned by the Commission said they would not appeal an adverse decision on a claim under $5,000. Additionally, businesses with small claims find the cost of pursuing a claim exceeds the amount of the claim; thus, many claims are not pursued and only large contractors are able to recover.

The present system does not provide due process for litigants because the agency boards of contract appeals do not possess the procedural authority or machinery to ensure that all relevant facts are brought before the boards and given adequate consideration. Even though the boards lack adequate legal powers for taking evidence and making decisions, the boards' findings of fact are essentially final on subsequent judicial review. Additionally, since the members of the boards are appointed by their agency head, their independence is often questioned.

There is increasing frustration and disillusionment with the contract disputes process among contractors. The federal contracting process is based on open competition, but faced with inequities, ambiguity and inefficiencies in the process, many potential contractors avoid government work and the procurement process suffers.

There is no evidence of an overall plan to improve the method of handling government contracts. The present system merely evolved over the years and a series of court decisions have tended to judicialize the boards' administrative procedures, while at the same time the boards have tried to maintain a degree of flexibility and informality not found in court procedures.

The Commission recommended a number of changes to accomplish four objectives:

1. Induce resolution of more contract disputes by negotiation prior to litigation;

2. Equalize the bargaining power of the parties when a dispute exists;

3. Provide alternative forums suited to handle the different types of disputes; and

4. Ensure fair and equitable treatment of contractors.

LEGISLATIVE ACTION: THE HARRIS-KINDNESS BILL, H.R. 11002

Since the Commission on Government Procurement reported to Congress in 1972, a number of bills have been introduced in both the House and Senate in each Congress. On November 10 and 11, 1977, the House Administrative Law and Governmental Relations Subcommittee of the Judiciary Committee held hearings on H.R. 664 and related bills, all of which would place in law a systematic method of handling contract disputes.

On February 8, the Subcommittee reported H.R. 11002, drafted and sponsored by Congressmen Herbert E. Harris (D-Va.) and Tom Kindness (R-Ohio), which implements the Commission's recommendations by establishing in law clear procedures for settling contract disputes.

H.R. 11002 has the following provisions:

1. Each federal agency is authorized to settle claims and disputes with contractors. Agencies are authorized to establish an agency board of contract appeals when the volume of procurement justifies a full-time agency board of at least three members. If the volume of procurement is not sufficient to justify an agency board, an agency can arrange for appeals of decisions by a board of another agency.

2. H.R. 11002 declares that it is the policy of the Congress that contract claims should be resolved by mutual agreement instead of litigation as much as possible and requires the agency to provide at least one informal conference after a contracting officer's decision in an effort to settle the claim by mutual agreement. The informal conference would be held by designees of the agency head who are employed at a level above the contracting officer.

3. Agency boards are authorized to administer oaths, authorize depositions and discovery proceedings, subpoena witnesses and records, and take testimony.

4. Agency boards are required to establish procedures to provide for the informal, expeditious, and inexpensive resolution of disputes and must issue all decisions in writing on each appeal. The board's decision is final unless the contractor appeals the decision in a U.S. district court or the U.S. Court of Claims within one year.

5. Each agency board is required to establish a simplified procedure for handling small claims appeals. The contractor can elect the small claims procedure and disputes must be resolved within 120 days.

6. All contract claims are required to be filed with the agency in writing and the contracting officer is required to issue a written decision on all claims within sixty days.

7. The bill gives the contractor the right to appeal the contracting officer's decision to the agency board of contract appeals within 90 days of the decision.

8. A contractor can elect to bring a suit on the claim directly in a U.S. district court or the U.S. Court of Claims within 12 months from the decision or final delivery of supplies or performance of the work under the contract, whichever is later, or to appeal a contracting officer's decision to the agency board. If a contractor appeals a board decision in court, the agency board's decision on questions of law shall not be final and conclusive, but the findings of fact by the board shall be final and conclusive unless fraudulent, arbitrary, capricious, so grossly erroneous as to imply bad faith, or not supported by a preponderance of the evidence.

9. At the request of an agency head, the Attorney General may appeal the board's decision in a U.S. district court or the U.S. Court of Claims in cases where the board awards the contractor over $1 million or if the Attorney General determines there is the existence of a compelling governmental interest that affects federal procurement policy.

10. In an appeal by the government, the board's decision on any question of law shall not be final and conclusive but the findings of fact by the board shall be final and conclusive unless fraudulent, arbitrary, capricious, so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence.

11. Interest on amounts found due on claims to contractors must be paid from the date of the decision by the contracting officer until payment following a decision by the agency board or court.

12. The upper dollar limit for contract claims cases handled by U.S. District Courts is increased from $10,000 to $25,000 and District Courts have concurrent jurisdiction with the U.S. Court of Claims for cases involving amounts up to $25,000.

13. The current appropriation authority for the payment of judgments found due to contractors is continued with a requirement that agencies reimburse the treasury for amounts paid out.●

THE OUTSTANDING WORK OF THE MENNONITE CHURCH

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MURTHA. Mr. Speaker, in the months since the devastating flood in central Pennsylvania, I have tried to cite many individuals and groups who contributed to the recovery effort. I would like to insert into the RECORD an editorial from the Johnstown Tribune Democrat that rightly praises the work Mennonites performed in the recovery effort. I personally saw many of these individuals at work helping our area, and that assistance was a source of great inspiration for the community during that difficult time.

The editorial follows:

THE MENNONITES

No group could be more deserving of an award for voluntary health service than the Johnstown Area Mennonite Disaster Service.

And the Mennonites are going to get that, the Benjamin Rush award of the Pennsylvania Medical Society.

The award is to be presented Wednesday in Hershey, but it is what the Mennonites did starting last summer that has brought the Rush honor their way. For it was then, following the July 20 flood, that 2,000 Mennonite volunteers came to Johnstown and provided inestimable help to our people.

The volunteers helped to shovel mud from basements; they supplied lunches and drinking water for other workers; they housed, through the Mennonite Disaster Service group, other volunteers who stayed on to continue cleanup work; and they provided counseling service for flood victims.

But they did not stop there.

After the cleaning up was well along, craftsmen got together to help flood victims who were rebuilding or repairing houses.

And the Mennonites went about their work quietly and effectively. They of course got some deserved publicity over the post-flood months; and now they will be getting more.

They are not going to stop and take a breather on their laurels, however; in conjunction with the '77 Flood Relief Center, the Allegheny Conference of the Mennonite Church will continue efforts to help flood victims.

Flood-damaged houses are to be bought, repaired and sold to flood victims at cost. And those costs will be remarkably low, primarily because the labor going into the work will be done by, once again, Mennonite volunteers.

The volunteers will be getting help, of course; the money to purchase the damaged houses will have to come from somewhere; the amount collected so far has come from three sources—the Methodist Church, the Episcopal Diocese in Pittsburgh and the '77 Flood Relief Center. Contributions are being sought from other churches.

Will Johnstown recover from the flood? Who knows whether recovery will be complete?

But in reply, if we don't fully recover it won't be because the Mennonites didn't try.●

ATF REGULATIONS WILL AID LOCAL LAW ENFORCEMENT

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● McCLORY. Mr. Speaker, the apparent misrepresentation which has been leveled by some members of the National Rifle Association against regulations proposed by the Bureau of Alcohol, Tobacco, and Firearms is most unfortunate. The principal Federal agency charged with enforcement of the Federal firearms laws—in developing regulations to provide uniform serial numbers on firearms and to establish a mechanism for recording lost and stolen weapons—is entirely consistent with the objective of meeting the challenge of crime in our Nation.

The Bureau's objective is clearly to assist local and State law enforcement agencies in tracing weapons used in cases of violent crime and to assist in apprehension of those who engage in the illegal trafficking of firearms and the use of firearms—particularly handguns.

Those who oppose any additional Federal gun control laws argue that we should have better enforcement of the existing laws. That is precisely the objective of the ATF regulations which are, indeed, consistent with the 1968 statute.

Mr. Speaker, I am enclosing an illuminating and persuasive editorial which appeared in Sunday's Washington Post—and which should, indeed, encourage NRA members to support and not oppose those in the Bureau of ATF who are endeavoring to enforce the existing federal gun laws in behalf of the law-abiding citizens of our Nation.

The Post editorial follows:

FOLLOW THOSE GUNS

The Treasury Department's Alcohol, Tobacco and Firearms Bureau has, shall we say, come under fire from the National Rifle Association and congressional opponents of gun-control laws. Their target is a set of regulations proposed by ATF that they claim would create, in NRA's words, "a massive system of centralized national firearms registration" with "no specific congressional authority."

ATF is doing nothing of the sort. The agency is simply trying, at long last, to crack down on the vast, nationwide illegal traffic in guns. Under the proposed rules, every new firearm, including future imports, would have to bear a unique serial number. Licensed manufacturers, importers and dealers would have to file quarterly reports on the disposition of each firearm they make or handle. Finally, every theft or loss of a firearm in commercial channels would have to be reported at once.

We emphasize "commercial channels" because the rules would *not* require any reporting or registration by individual owners of guns. While reporting that a given firearm had been sold, dealers would *not* have to tell Washington the buyer's identity. Dealers would have to keep that information, as they do now—and ATF agents could inspect those records during business hours, as they may now. The rules governing legitimate firearms purchases and possession would not be changed.

What would be changed—and in our view greatly improved—is the ability of officials to trace the thousands of firearms used in crimes. Last year ATF conducted a record 62,498 trace efforts, many at the request of state or local agencies, with success in 55 percent of the cases. The process now requires separate inquiries to manufacturers, wholesalers and retailers. If future commercial records are centralized and computerized, the history of illegally used guns can be reconstructed much more quickly and easily.

Beyond that, ATF could gain a much clearer picture of the whole firearms business. Officials have documented some well-traveled channels through which guns move from legitimate commerce to crime. ATF found last year, for instance, that over half of the firearms confiscated by the District of Columbia police came from Maryland or Virginia. Mississippi seemed to be the main out-of-state source for guns seized by Chicago's police. But how do the firearms get to Maryland, Virginia or Mississippi? Past administrations have not pressed the industry for information. The new system would enable ATF to find out—for the first time—precisely how many firearms are being made, where those weapons go in commerce, and where they leave commercial channels by means other than documented sales.

Finally, what about the charge that ATF is exceeding its authority? That's nonsense. In the 1968 Gun Control Act, Congress specifically required licensed firearms manufacturers, importers, dealers and collectors "to maintain such records" and "submit to the Secretary [of the Treasury] such reports and information with respect to such records and the contents thereof as he may by regulation prescribe." (That's in Section 923(g) of Title 18, U.S. Code, in case you want to look it up.) So the NRA is way off target. Congress should encourage, not hamper, ATF's new effort to enforce the laws.●

"INTERNATIONAL WEEK" AT DEER PARK HIGH SCHOOL

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. DOWNEY. Mr. Speaker, I would like to bring to the attention of the House a very special program inaugurated this year by the Deer Park High School in my congressional district.

The week of April 24–28 has been designated as "International Week" by Deer Park High School. The week will bring together foreign exchange students from 12 countries. These students will live with families in the Deer Park community and will take part in the academic life of the local high school and in many of the outside activities of Long Island.

The program will give these students a view of America which I believe will be invaluable to their understanding of our country. For Deer Park students and families, the program offers a chance to exchange ideas with young people from all over the world.

Mr. Salvatore Dionisio of the Deer Park High School foreign language staff has thoughtfully arranged the program. He, and the families of Deer Park students who are bringing these exchange students into their daily lives, deserve to be recognized.

"International Week" at Deer Park will make a great contribution to the school, the community, and to the Nation.●

INTRODUCTORY STATEMENT BY CONGRESSMAN GEORGE MILLER

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MILLER of California. Mr. Speaker, I am introducing today the Domestic Violence Assistance Act of 1978. I am very proud to have as my cosponsors Congresswomen BOGGS and MIKULSKI and Congressman STEERS.

The Domestic Violence Assistance Act of 1978, represents an effort by the Federal Government to provide critical aid to people who are planning and operating community-based shelters and related service programs for victims of one of our Nation's least acknowledged, but most prevelant crimes—domestic violence.

In 2 days of hearings last month, the Subcommittee on Select Education heard substantial amounts of testimony regarding how widespread the problem of domestic violence and spousal abuse is in the United States. A recent study by the Washington Star, and the recent monograph, Conjugal Crime, suggest that physical or severe mental abuse occurs in as many as half of the Nation's households. The Post reported that 10 percent of the abused wives nationally receive severe injuries. In California, almost one-third of all homicide victims were murdered by their husbands, a figure similar to that in other States. Nor are the spouses the only victims. One-fifth of the police killed on duty in 1974 were intervening in domestic disputes at the time of their deaths, and police have repeatedly testified that there is a greater likelihood of suffering serious injury or death as a result of intervening in a domestic argument than any other crime. Lastly, it is not limited to any one class. In fact, some studies have indicated that the incidence of abuse increase with income and education.

Despite the undisputed widespread nature of the problem, relatively few resources have been developed for the prevention of domestic violence or to aid its victims. The subcommittee, as well as the Senate subcommittee and the U.S. Commission on Civil Rights, have all heard how difficult it is for community groups to secure the level of funding necessary to establish and maintain a shelter, or other services, during the critical first few years of

operation. As a result, there are many communities where facilities and services for the victims of abuse are wanting.

The purpose of the Domestic Violence Assistance Act is to supplement these local efforts by targeting limited Federal funds to proven shelter programs for a maximum of 3 years. The bill also provides short-term funding for programs designed to provide technical assistance to groups wishing to develop community facilities for the assistance of battered spouses. Funding is limited to any particular grantee specifically so that the program will retain the strong community basis which has been critical to the success of these programs in the past, and upon which their future existence will necessarily depend. Showings of such community support and local need for a program are contained in the legislation as criteria for the awarding of a grant.

A major goal of the legislation is to avoid establishing a maze of Federal bureaucracy along with the grant program. The sponsors of the bill recognize that the Federal Government is supplementing local efforts, and should not establish bureacratic obstacles which will impede the operation of the shelters. The legislation, therefore, contains sufficient safeguards to provide necessary accountability for the expenditure of Federal funds, while at the same time permitting the latitude in operations which community-based groups will require.

The legislation also recognizes the number of experienced personnel, academicians, administrators, and others with great expertise in this field. These community people are to constitute a majority of the council which will award grants to eligible applicants. The remainder of the council will be composed of representatives of Federal agencies whose programs have a relationship to the problem of domestic violence.

The need for an expanded shelter and service program is widely recognized. Community workers, social service providers, police, and others have told the subcommittee, and written widely, that these programs address a major problem in our country, and that there are currently insufficient shelters and service programs to meet the need. Indeed, whenever a program is established, the great outpouring of clients testifies to the latent nature of the problem of domestic violence, as abused people finally recognize the availability of services which they have, in many cases, waited years to find. This is the program which the Domestic Violence Assistance Act is designed to support. The people who need these programs are very great in number, and the financial outlay for the Federal Government is very small. This legislation would direct Federal support to proven and effective programs, and would encourage the replication of these programs throughout the country.

Mr. Speaker, I want to conclude by again thanking Congresswomen BOGGS and MIKULSKI, and Congressman STEERS, for the very great help they have been in developing this legislation. Their original bills crystalized public attention in the Congress toward the issue of domestic violence, and have provided the foundation of the legislation which they join me in cosponsoring today. I would also like to personally thank their staff people who have worked so hard in developing this legislation, Mimi Griffith for Mrs. BOGGS, Joanne Howes for Ms. MIKULSKI, and Bobbi Avancena for Mr. STEERS.

The text of the bill follows:

H.R. 12299

A bill to establish a Federal Office on Domestic Violence, and a Federal Council on Domestic Violence, to provide grants for the assistance of victims of domestic violence and for training programs, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Domestic Violence Assistance Act of 1978".

ESTABLISHMENT OF NATIONAL OFFICE ON DOMESTIC VIOLENCE

SEC. 2. There is hereby established within the Office of the Secretary of Health, Education and Welfare an Office on Domestic Violence which shall be headed by an Administrator of Programs on Domestic Violence.

APPOINTMENT AND DUTIES OF ADMINISTRATOR

SEC. 3. (a) The Administrator shall be appointed by the Secretary of Health, Education and Welfare.

(b) The Administrator shall——

(1) maintain a national clearinghouse on domestic violence for purposes of (A) collecting and disseminating information on domestic violence, (B) reviewing Federal, State and local programs relating to domestic violence, (C) compiling and actively distributing information on existing programs for the prevention and treatment of domestic violence, and (D) developing a national directory of temporary shelters and other services for the victims of domestic violence;

(2) make an annual report to the Congress with respect to the status of Federal, State and local programs relating to domestic violence, including recommendations for improved coordination;

(3) develop a national media campaign to increase public awareness of the problem of domestic violence and the availability of services for its victims, including, if he deems necessary, a national toll-free hotline to provide information regarding the availability of services in particular areas of the country;

(4) make recommendations to the Congress concerning the need for the modification of Federal programs which may affect or have applicability to victims of domestic violence, including federally supported housing and community development activities, legal and medical services, and job training programs; and

(5) provide the Council with such information as may be necessary for the Council to discharge its functions under section 4(a).

FUNCTIONS AND DUTIES OF COUNCIL

SEC. 4. (a) The Council shall have sole responsibility for determining the awarding of grants pursuant to sections 5 and 6 of this Act.

(b)(1) The Council shall be composed of members appointed by the Secretary of Health, Education, and Welfare, and shall consist of—

(A) not less than five individuals who are victims of domestic violence or who are experienced in the operation of community-based shelters or service programs for victims of domestic violence and their children and in the delivery of services to such victims, but who are not employees of government; and

(B) representatives from such agencies as—

(i) the Office of Children, Youth, and Families, Department of Health, Education, and Welfare;

(ii) the National Institute of Mental Health;

(iii) the ACTION Agency;

(iv) the Law Enforcement Assistance Administration;

(v) the Legal Services Corporation;

(vi) the Community Services Administration; and

(vii) representatives of State or local government.

Provided however, That the non-Federal members appointed pursuant to subparagraph (A) of this section shall at all times constitute a majority of the members of the Council.

(2) While away from their homes or regular places of business in the performance or services for the Council, members of the Council who are appointed pursuant to paragraph (1)(A), and members appointed pursuant to paragraph (1)(B) who are not otherwise reimbursed for travel expenses, shall be allowed travel expenses, including a per diem allowance in lieu of subsistence, in the same manner as employees of the Federal Government are allowed such expenses under subchapter 1 of chapter 57 of title 5, United States Code.

(3) Members of the Council who are officers or employees of the Federal Government shall receive no additional pay on account of their service on the Council.

GRANT PROGRAMS

SEC. 5. (a) (1) The Council shall make grants under this section for programs designed to prevent domestic violence and to provide aid to victims of domestic violence.

(2) No grant made under this section shall be approved for more than $50,000 in any fiscal year, or for more than 25 percent of the annual budget of such program, whichever is less. No program for which a grant has been made under this section shall receive funds for more than 3 fiscal years.

(b) Except as provided in subsection (c), any applicant applying for a grant under this section shall demonstrate to the satisfaction of the Council that the program for which the grant will be used—

(1) has been in operation and has offered the type of services outlined in the application for a period of not less than 6 months;

(2) is receiving community support in the form of financial donations or in-kind goods and services; and

(3) is operated by personnel who have appropriate skills, including professional, clinical, or volunteer training, necessary to provide services to victims of domestic violence and their children, including multilingual skills, where appropriate.

(c) A grant may be made to a qualified applicant unable to meet the requirements of subsection (b)(1) if such applicant demonstrates to the satisfaction of the Council that—

(1) there is a local need for the establishment and maintenance of such services;

(2) there is an extreme financial hardship requiring the awarding of startup funds in order to achieve the establishment of the program. No amount in excess of 40 percent of the total amount of a grant made to any applicant under this subsection may be advanced for startup funds. The Council shall provide the remaining funds for any grant made pursuant to this subsection upon a finding that the program has been established in conformity with the grant application; and

(3) no funds provided under this Act shall be used to supplant other funds otherwise available to an applicant.

(d) (1) Except as otherwise provided in paragraph (2) with respect to grants made pursuant to this section in any fiscal year, the proportion of funds made avaiable by

the Council for programs in any State to the total funds granted by the Council for programs under this section shall not exceed the proportion of such State's population to the total population of the United States, according to the latest available reliable data.

(2) The Council shall select grantees from diverse demographic regions within each State or territory.

(3) Any funds appropriated for purposes of this Act for any fiscal year which were not allocated before January 1 of such fiscal year shall be available for awarding to other qualified applicants upon approval on an application by the Council.

(e) Funds provided through grants made under this section may be used for services and related expenses including, but not limited to, the following——

(1) rent or mortgage payments for facilities (except that no more than 33 percent of any grant may be used for rent);

(2) emergency counselling;

(3) job training;

(4) legal services;

(5) provision of food or clothing;

(6) emergency telephone assistance and councelling;

(7) housing information and referral;

(8) follow-up services;

(9) the dissemination of information and advocacy of other related social services; and

(10) administrative expenses (not to exceed 15% of any grant).

(f) No funds provided through grants made under this section shall be used as direct payment to any victim of domestic violence.

(g) Services provided under this section shall be considered emergency services and no income eligibility standard shall be imposed with respect to any individual seeking such service.

(h) Any grant recipient under this section shall furnish to the Council within 90 days after the end of the fiscal year for which a grant was made to such grant recipient—

(1) an audit of all expenditures;

(2) a report of all purchases and related financial matters;

(3) information regarding the number of individuals served, and the services offered, and a description of the disposition of cases, except that no grantee may be required to release the identity of any victim served by the program if the grant recipient of such program deems such identity to be confidential; nor shall the exact street address of any grantee be made public if public knowledge of the location of a shelter would expose residents of that shelter to physical or psychological abuse;

(4) any other information the Council may require with respect to the program for which such grant was made.

GRANTS FOR TRAINING PROGRAMS

SEC. 6. (a) The Council shall make grants under this section for programs designed to provide personnel training and technical assistance training to individuals and organizations involved in establishing or maintaining community services for victims of domestic violence.

(b) Any applicant applying for a grant under this section shall demonstrate to the satisfaction of the Council that—

(1) such applicant is able to train personnel, and has expertise in the area of emergency victim assistance;

(2) a thorough description of the program for which such grant shall be used.

(c) Funds provided through grants made under this section may be used for expenses of training programs including costs of—

(1) dissemination of information regarding treatment of victims of domestic violence;

(2) technical training of shelter personnel, including transportation and living expenses for such personnel for a period of no more than 2 weeks;

(3) production of media information programs concerning the problem of domestic violence and the availability of community services for victims of domestic violence; and

(4) shelter-based research programs concerning the needs for and use of programs for victims of domestic violence; and

(5) programs designed to develop economic self-sufficiency of community-based service providers in order to assure the continuity of programs funded under this Act.

(d) Any grant recipient under this section shall furnish to the Council within 90 days after the end of the fiscal year in which a grant was made to such grant recipient—

(1) an audit of all expenditures;

(2) a report of all purchases and related financial matters; and

(3) any other information the Council may require; with respect to the program for which such grant was made.

(e) The Council shall, as is practicable, distribute grants under this section to ensure that training programs will be established in all regions of the United States, as determined according to the regional organization of the Department of Health, Education, and Welfare.

(f) No grant pursuant to this section shall be in excess of $30,000 and shall be renewable, at the discretion of the Council, for not more than one additional year.

APPROVAL OF BUDGETS

SEC. 7. Before any funds are provided for any program for which a grant has been made under this Act, a budget for such program for the fiscal year in which such funds shall be used shall be approved by the Council.

EFFECT ON ELIGIBILITY FOR OTHER FINANCIAL AID

SEC. 8. No Federal income supplement, or nutrition, education, legal, or medical assistance, or job training shall be denied to any individual otherwise qualified for such supplement, assistance, or training, or to any child of such individual, because such individual has received aid from any shelter or program for victims of domestic violence to which a grant has been made under this Act, or has received any service provided by such shelter or associated service provider.

REGULATORY AUTHORITY

SEC. 9. The Secretary of Health, Education, and Welfare shall have the authority to promulgate such rules and regulations as he may deem necessary to carry out the provisions of this Act. Proposed regulations shall be subject to the approval of the Council.

DEFINITIONS

SEC. 10. As used in this Act——

(1) the term "Administrator" means the Administrator of the Office on Domestic Violence referred to in section 2;

(2) the term "applicant" means any community-based, nonprofit organization or Indian tribe or public agency in any State;

(3) the term "Council" means the Federal Council on Domestic Violence established in section 4;

(4) the term "domestic violence" means any act or threatened act of violence, including any forceful detention of an individual, which results or threatens to result in physical injury, and is committed by a person against another person to whom such person is married or has been married or with whom such person is residing or has resided;

(5) the term "shelter" means a facility maintained by an applicant or grant recipient under this Act which provides, on an emergency basis, temporary housing and food, or related services, to victims of domestic violence;

(6) the term "State" means the 50 States and the District of Columbia, Guam, the Virgin Islands, and Puerto Rico; and

(7) the term "victim" means any individual threatened with or suffering injury or duress as a result of domestic violence, or the child under the age of 18 of such individual.

AUTHORIZATION OF APPROPRIATIONS; LIMITATIONS

SEC. 11. (a) There are authorized to be appropriated for the purpose of this Act $15,000,000 for fiscal year 1979, $20,000,000 for fiscal year 1980, and $30,000,000 for each of the three succeeding fiscal years.

(b) No amount in excess of 10 percent of any amount appropriated under this Act in any fiscal year shall be used to administer the provisions of sections 3 and 4 of this Act.

(c) No amount in excess of 20 percent of any amount appropriated under this Act in any fiscal year shall be used for grants made under section 6 of this Act.●

NATIONAL RAISIN WEEK

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. SISK. Mr. Speaker, I am pleased to join with my colleague, Hon. JOHN KREBS, in calling to the attention of this body some of the nationwide activities which will help celebrate National Raisin Week. This year's observance will be from April 27 through May 7 and will be highlighted by a series of conferences at major universities under the sponsorship of the California raisin advisory board and the President's Council on Physical Fitness and Sports.

Dr. Sally Ride, selected as a member of the first group of women astronauts, will be a guest of honor at a joint conference of the California raisin advisory board and the President's Council. Kathrine Switzer, who was the first woman to run in the Boston Marathon, will be a speaker at this and other conferences.

Others participating in the April 27 conference in Berkeley include Jackie Sorenson, founder and president of Aerobic dancing: Glen Swengros, Director of Federal-State relations for the Council, and Dr. Beverly Bullon, also a Director.

Others in the conference series are scheduled May 1 at Rice University, Houston; May 3 at Northwestern University, Chicago; and May 5 at Boston University. A pre-raisin week program is set for tomorrow at George Washington University here in the District. The theme of all the conferences is aimed at exercise and good nutrition and is directed to women with young families.

In its own State of California, the raisin industry will present a fast-moving original health play produced by the Community Children's Health Project of Fresno. The production, to be staged at the State Capitol in Sacramento, has been a popular highlight of local and statewide educator and health official meetings and school assemblies. The play informs children of good health habits, including good nutrition, in an entertaining manner.

We feel the raisin industry is to be praised for these and other innovative

techniques in stressing to our young people the vital importance of good nutrition.

The great San Joaquin Valley of California is the very heart of this Nation's raisin industry, and, in fact, grows and processes virtually all of the energy-packed raisins produced domestically, and accounts for one-third of the world's supply.

Historically, California's vineyards and related industries engaged in producing, processing, and distributing rasins have supplied an average of more than 200,000 tons of nutritious and delicious raisins a year to United States and foreign consumers for eating out-of-hand, for cooking, for use in baked goods, and in gourmet dishes. In doing so, the raisin industry has added to the economy of California and the Nation by providing thousands of jobs.

It is hoped that consumers will continue to enjoy raisins and join in the observance of National Raisin Week, recognizing that this industry continues its substantial contribution to the nation's economy and to the welfare of its citizens.●

YOUNGSTOWN, OHIO, SALVATION ARMY TO CELEBRATE 90TH ANNIVERSARY

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. CARNEY. Mr. Speaker, the Youngstown, Ohio, Salvation Army will celebrate its 90th anniversary on May 19, 1978. A civic dinner will be held at the Saxon Club of Youngstown to commemorate the occasion.

The Salvation Army organization was founded in England in 1865 by a Methodist minister, the Rev. William Booth. Reverend Booth left the clergy to spread the good news of Christianity, not by preaching, but by doing good deeds and helping those in need.

Since its inception, the Salvation Army has established itself in 82 countries, tailoring its services to the needs of the individual regions which it serves.

The early history of the Salvation Army in Youngstown is chronicled by articles appearing in the Youngstown Vindicator 90 years ago. The Vindicator's account of the newly established Youngstown Salvation Army did not depict a favorable reception by local government:

A division of The Salvation Army, consisting of Captains Hunt, Fanny, and Lt. Bell, of Pittsburgh opened their batteries here today to fight the devil. They have leased a hall for a year, and say they expect to make a long fight here. Mayor Lawthers has notified them that in case they violate any of the ordinances they will be fired out of the city.

Indeed, the pioneer Salvationists were asked to vacate many Youngstown public meeting places before the community recognized the value of the army. However, the Youngstown Salvation Army members held tenaciously to their belief in God, and the army flourished.

Today, the Youngstown Salvation Army offers services for every age and type of individual. Men and women find meaningful activities, boys and girls learn new skills, the ill and confined are shown that someone cares, and disaster victims are given assistance in their time of need. The Youngstown Salvation Army truly offers a variety of services to a multitude of people, and the city of Youngstown has now benefited from the presence of the Salvation Army for 90 years.

Mr. Speaker, the accomplishments of the Youngstown Salvation Army are truly remarkable and deserving of the highest praise. For nearly a century, the army has provided necessary and timely assistance to our community. The Salvation Army is one of the major uplifting forces in the area, and we are grateful for its presence.

I join the citizens of Youngstown and the friends of the Salvation Army in commending the local officers and soldiers of the Youngstown Salvation Army for their outstanding community service. I wish the Youngstown Salvation Army continued success in its future endeavors.●

FEDERAL EMPLOYEE ORGANIZATION ENDORSES MERIT EMPLOYMENT ACT OF 1978

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. HARRIS. Mr. Speaker, I am pleased to learn that the National Federation of Federal Employees has endorsed H.R. 11165, the Merit Employment Act of 1978, which I introduced on February 27, 1978.

My bill would strengthen the civil service system in four major ways:

First, it requires that all personnel actions be made on the basis of merit without any special consideration.

Second, it prohibits political and other nonmerit recommendations for Federal jobs.

Third, it would put in law for the first time specific criteria for placing positions outside the career, competitive service.

Fourth, it places squarely with every agency head the responsibility for insuring merit employment within each agency and requires that all personnel director positions be in the career, competitive service.

I am pleased to share with my colleagues the statement of NFFE submitted to the House Post Office and Civil Service Committee during recent hearings on H.R. 11280, the Civil Service Reform Act, as follows:

REMARKS OF JAMES M. PIERCE ON PROTECTION OF THE MERIT SYSTEM

I would like to take this opportunity to laud the efforts of Congressman Herbert Harris, who is a member of the House Post Office and Civil Service Committee. The Congressman's endeavors on behalf of merit in government are evidenced by his sponsorship of H.R. 11165, the proposed "Merit Employment Act of 1978." The NFFE shares Congressman Harris' belief that merit principles should be clearly established in law to eliminate the potential for abuse which now exists. We feel that H.R. 11165 is the first realistic piece of legislation introduced in this Congress to achieve this worthwhile goal.

We note that H.R. 11165 identifies the Civil Service Commission as the agency which would except positions from the competitive service. Other proposals would vest this power with a proposed management arm successor agency of the Commission (OPM). Should the CSC as we now know it be dismantled, we would welcome the adoption of the bill if this authority is given to the Merit Systems Protection Board, or a larger Federal Labor Relations Authority which would encompass the functions of the Board, and have the same three member leadership as is now provided for in CSC.

The intrusion of politics and other nonmerit factors in to the Federal career service is a reality which we at NFFE have witnessed time and again throughout our 60-year history. Traditionally, we have urged that strong legislation be adopted to reaffirm and strengthen the merit system. As a result of our daily dealings with the Executive branch, we have seen agencies disregard the legislated principles and guidelines of Congress in many areas where there was no procedure available to redress such abuses.

Therefore, we would urge that Congressman Harris' excellent proposal be coupled with provisions for an enforcement mechanism to insure compliance with Congressional mandates for a merit system. This, we feel, would be the ultimate solution.

H.R. 11165 makes a major stride toward achieving this end. The establishment of merit principles in legislation is an urgent necessity and we urge this Committee to act favorably on the proposed "Merit Employment Act of 1978," with the amendments suggested.●

ADA HIGH SCHOOL BULLDOGS WIN OHIO CLASS A GIRLS BASKETBALL CHAMPIONSHIP

HON. TENNYSON GUYER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. GUYER. Mr. Speaker, the name Sharon Pitts or the Bulldogs may not be well known in this area, but in Ada, Ohio, those two names stir some of the same proud feelings as the names of many, or any, of our national heroes. For the Ada High School Bulldogs, ably coached by Sharon Pitts, have made a dream come true by winning the Ohio State class A girls basketball championship.

One of the highlights of the class A tournament, and for me personally, was the selection of Lynne Coe as Ohio "A" Player of the Year. Lynne was selected for this honor for very solid reasons—40 points and 17 rebounds in the 2 playoff games. Earlier this year it was my pleasure to nominate Lynne for an appointment to the Naval Academy in Annapolis, Md. It was even more of a pleasure to find out that she has been accepted by the Academy. Lynne has accepted the appointment to the Academy and will begin her career where such notables as Admirals Nimitz and Halsey, and astronauts Shepard and Schirra, to name only a few, also began their careers.

Ada is part of Ohio's Fourth Congressional District and it is my distinct pleasure and privilege to represent this area in the U.S. House of Representatives. Needless to say, I, too, am excited and proud of the showing by the Bulldogs in the State tournament. I offer my sincere congratulations to the coach, the players, the faculty, the entire student body, and to everyone who supported the team the entire season in its championship drive.

I would like to recognize each of the members of this team who worked hard and deserve this honor. Making up the 12-girl squad were: Lynne Coe, Kathy Decker, Teri Stahl, Donna Hall, Judy Long, Anna Wright, Lori Klingler, Linda Bischoff, Vickie Oates, Stephanie Pitts, Jodi Kindle, and Carol Pitts.

This first-time-ever event is even more significant in light of heavy competition, and the fact that the Ada team was not expected to win. Desire, direction, and determination characterized this signal achievement. Ada, Ohio, was once noted for having two U.S. Senators on the faculty of a fine school, Ohio Northern University—Senators Simeon D. Fess and Frank Willis. Now, even the stalwart memory of these statesmen is joined by this new honor for this outstanding community, the home of the Bulldogs, State champs.●

SARGENT SHRIVER ON THE NEED FOR AN INDEPENDENT PEACE CORPS

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. BONKER. Mr. Speaker, recently Sargent Shriver, the first Director of the Peace Corps, testified before an International Relations Subcommittee in favor of the Peace Corps Reform Act, H.R. 9774, which I introduced jointly with Congressman HARRINGTON and other colleagues last October. Mr. Shriver's eloquent statement in my judgment provides compelling reasons why the Peace Corps must be independent if it is to successfully accomplish its unique purpose. This was the first time Mr. Shriver has testified on the Peace Corps since he left the agency, he felt so strongly about this issue. Therefore, I ask that a copy of Mr. Shriver's testimony be submitted for the RECORD for the benefit of my colleagues.

This testimony should be studied not only because it is from someone who has had extensive experience with the Peace Corps, but also because it describes the dangers of current efforts to improve the effectiveness of U.S. foreign aid programs by combining them. How many times must we rediscover the wheel? The sad experience of the Peace Corps' being placed in ACTION a few years ago clearly demonstrates that the effectiveness of agencies is reduced, not enhanced, by "consolidating" them in larger bureaucracies.

The statement follows:

Mr. SHRIVER. Thank you very much, Mr. Chairman and members of the committee, and Director Dellenback.

I want to start off by apologizing for not coming here with a properly prepared written statement that you could have had and read before I arrived. Part of the reason for that dereliction on my part is that I have never testified before Congress about the Peace Corps since I left there. I did not do so for a number of reasons. One of them was the fact that when the Democrats were in power and Jack Vaughn had succeeded me, I did not want to be in the position of looking over his shoulder commenting upon or criticizing what he was doing. And when the Republicans came into power and ACTION was created I felt that even the manly efforts of a John Dellenback would be lost and submerged, and that he would find it difficult to keep the Peace Corps alive and vital in those days.

One of the indications of that reality is the fact that John had, to serve in ACTION for a long time and never even had the title of Director of the Peace Corps. I frankly think this was a part of a latent antipathy to, or desire—how shall I say, to subbordinate or water down the visibility of the Peace Corps, to make it one of a number of enterprises—domestic and foreign—rather than to see it grow, and to see it become ever more visible than it had been. That is my own opinion. I do not really have anything to prove that, but I think John could testify himself to some of the difficulties of a bureaucratic and budgetary nature he encountered when he was trying to achieve things with the Peace Corps.

I think that since Sam Brown, and Mary King, and Carolyn Peyton have been attempting to resuscitate the Peace Corps, substantial progress has been made. I wish to commend them personally. I think what they have been trying to do is helpful and aimed in the right direction.

Once again I will say, I would not be here today if that were the only or principal question, namely, how well the current leaders are running the Peace Corps. I think, considering the condition in which the Peace Corps was when they got it, they have been doing a commendable job. Maybe a very, very good job. But once again, I would not be here if that were the issue, or the only issue.

I am coming here today because I believe that there is a great danger to the Peace Corps now and for the future because the magnificent heritage and name of one of the greatest Americans of our time, Hubert Humphrey, is connected with the program which would put the Peace Corps back into an economic development assistance corporation or effort, and that idea is exactly like the idea that was popular when we started the Peace Corps. So that I am here to try to speak about some of the features of the Peace Corps which encouraged most of us, or all of us at the beginning, to resist exactly the same effort which is being attempted today. Consequently, what I am talking about has nothing to do with the activities of the Peace Corps under Jack Vaughn who succeeded me, or under any of the directors who ran it while the Republicans were in power in Washington. I am going all the way back to the beginning.

I think to understand at least why I feel the way I do, and why I believe that I speak for a vast majority of people that were involved in the creation of the Peace Corps, to understand that, one has to understand at least two or three things about the Peace Corps, which are so obvious that one sometimes hesitates to even talk about them, but nevertheless, they are so profound as well as obvious that they are essential, I believe, to the success of the Peace Corps.

The first one is the whole idea of volunteers and volunteering. Now, the reality is that very few people volunteer for anything. A computation we made back in 1961–65 indicated that only about one out of every 100,000, maybe 150,000 Americans, ever volunteered for the Peace Corps. Most people in any country, at any time, do not volunteer. Volunteers are exceptional people in any society, at any time, and under any circumstances.

Most of the people at the time of the American Revolution did not volunteer to fight with Washington. A huge proportion of the people in the Colonies were sitting in New York or Philadelphia, enjoying good parties and going to them with the Tories. All you have to do is to recall Valley Forge to know that there was a mere handful of people going through the winter out there with Washington, out of the total percentage of the people in the Colonies.

That is the reality just as much today, and in every country, as when the Peace Corps started.

So, the first, absolutely essential thing is to organize the Peace Corps in a way that it appeals to that special breed of people who volunteer. Now, nobody will volunteer for the Peace Corps, in my judgment, because it is in ACTION or out of ACTION, or in the new proposed Foreign Aid Administration or outside of it. In other words, volunteers do not volunteer because of the bureaucratic arrangement in Washington. In fact, most of them do not even know what the bureaucratic arrangement is in Washington and do not care about it.

Contrary to ideas that exist in Washington, the volunteers are neither motivated or unmotivated by what we do here in Washington, bureacratically speaking. The reality is that volunteers are motivated, some of them, by spirit of adventure; some by desire to help their fellow human beings; some by the challenges of the work, a sort of Mount Everest syndrome, you know, "Why do you climb it?" "I climb it because its there." Some volunteer because of emotional or even religious ferver; some because of feelings of humanism.

Volunteers do not volunteer, for example, for Amtrak. If you organized a big campaign to get volunteers for Amtrak you would not get them. You do not get many people to volunteer for the Post Office. There is nothing the matter with Amtrak, or the Post Office—but people do not volunteer for such enterprises. They do not volunteer to work in the Commerce Department, or the Defense Department, or the Justice Department. Again, there is nothing the matter with those departments, I am merely trying to explain what I think is an extremely important point. Nobody is going to volunteer for AID, or for AID's predecessor, ICA, or for the new agency, no matter what it is called, that follows the ultimate passage, if it occurs, of the Humphrey bill.

Nobody volunteered for the Peace Corps because of the existence of ACTION. Nor for VISTA or for Foster Grandparents. If anything ACTION with its additional layers of bureaucrats in Washington probably turned off volunteers. The same thing will happen if the Peace Corps is put into a new super AID. Volunteer agencies need less bureaucracy, not more.

The Peace Corps must look like and be a place and a program which challenges people, appeals to them; even calls on them for sacrifices. The Peace Corps must be like the civil rights movement. Martin Luther King did not volunteer to come up to Washington and join the Civil Rights Division of the Justice Department. He could have, some people do go to work there. There is nothing the matter with that. But Martin Luther King being a true, even a heroic volunteer, did his work out in the grassroots, which is natural for a man of that disposition and psychology. The same is true of all the other volunteers, like Ghandi in India—they do not join Governments. That is why in our country, most of the time, the volunteer spirit has been

exemplified by people joining private voluntary organizations, whether they are church-related or otherwise, like CARE or the Church World Service.

It is abnormal, therefore, I believe, for people to volunteer for anything financed by the Government. The Peace Corps in that sense is, in my judgment, an abnormality. It is an aberration, it is not a normal thing for Government, any Government, to be involved with a largely independent, free-spirited movement like the Peace Corps.

Now, having said that, what is it, in addition to volunteers, that makes me feel that the Peace Corps will be ill served by being in the proposed new legislation?

The second reason is bureaucracy. It is popular nowadays to inveigh against the bureaucrats, in Washington or elsewhere. I happen to have a very high regard for people who serve in the Federal Service, in the Civil Service. In my experience, if you appeal to them in the right way, they will work as hard and as imaginatively as any group of people in America.

But the natural tendency of the bureaucracy is to protect itself. The natural tendency of most bureaucrats is not to take too many risks without risking the whole ball game. We have seen some dramatic examples of that. Mr. Fitzgerald, for example, who blew the whistle over in the Defense Department is still trying to find a job.

On the other hand, the Peace Corps is a risk-taking enterprise. If the director of the Peace Corps is worried about his job security and is therefore afraid to take a risk, he is not going to be a good director of the Peace Corps.

Let me give you a couple of examples of what I mean. Early on, in the very early stages of the Peace Corps it was recommended to me, urged upon me to put the Peace Corps into Vietnam—I refused. I was asked to put the Peace Corps in the Congo at the time when there was a rather difficult situation there—and I refused.

Now, it takes, in the bureaucracy, a great deal of independence of position to be able to say to the Secretary of State, "No, I will not send the Peace Corps," or to say to the President, "No, I will not send the Peace Corps to Vietnam." It is the normal thing for people who have a Presidential appointment to do what the President wants them to do. It is the normal thing in the Government for people in an administration—I do not care whose administration it is—to go along with the purposes, so-called, or the specific needs of the administration.

You have to have a purpose with your organization above and beyond the immediate needs of the existing administration to justify philosophically, or politically or morally, going against what the administration proposes. Therefore, the Peace Corps has to have an independence of status, and the Director has to have an independence of spirit, which will enable them to withstand the pressures that are inevitably put upon them by the bureaucracy or by the political leadership. That has nothing to do, again, with whether people are Republicans or Democrats. It is just in the nature of things that political leadership will want parts of the Government, which may be helpful one way or another in a situation, to do what "the Government" thinks is desirable, politically.

I could give you a lot of examples of this problem which, again, indicate to me—and I hope to you—that the Peace Corps has been bureaucratically independent.

Let me give you another example. At the time of the revolution in the Dominican Republic we had Peace Corps volunteers in Santiago. President Johnson landed the Marines on the shores near Santiago. Our U.S. Marines started firing into Santiago. The reality then was that we had Peace Corps volunteers in Santiago, any one of which could have been killed by our Marines. The question was presented to me, should we take the Peace Corps volunteers out of Santiago.

Now, let me assure you that, for me, that was an extremely difficult question. If one of our Peace Corps volunteers, or more than one, got killed by the U.S. Marines, can you imagine what would have happened back home here if I tried to explain to the press or to the parents that I left these volunteers in Santiago where our Marines were firing at them? What moral justification could I adduce to justify exposing our Peace Corps volunteers to the fire of our Marines? How could I explain that to a bereaved parent?

But I decided to leave the volunteers in there; and they stayed. Thank God, none of them was hurt.

But why did we let them stay there when the U.S. Government, at least its military embodiment, was fighting against the very people our Peace Corps nurses were taking care of? These were Peace Corps nurses, and they were taking care of the wounded who were being wounded by the firing of persons representing the U.S. Government.

Well, the theory was—and I think it is still good—that the Peace Corps goals in the Dominican Republic or in any other country are to work with the people of the country. The volunteers enter the foreign country with the tolerance of the government of that country and with the support, financial, of our Government. But they do not go there to serve only the interests of our Government; or certainly only the interest of the foreign government. They go there to serve the human interests of the people.

Now, most people in the world do not believe that. When a Peace Corps volunteer arrives in a particular place anywhere it takes him a minimum of 3 to 6 months before anybody believes he is actually going to stay there for 2 years. This kind of thing does not happen; the world is not like that.

So when you are confronted with the question, do you take the volunteers out or not take them out, you run the risk that by taking them out you dissipate or wreck your credibility in that country with the people—not with the political leadership, but with the people—who will say, "Same old thing, when it gets dangerous or we are in trouble, they will quit."

There is a big risk involved in leaving them in, I already mentioned it. The same thing happened in Panama when they rioted down there in 1964 about the canal, long before the current treaty discussions. We had 50 or so volunteers out in the villages of Panama. Dean Rusk called me up on the phone and said, "Sarge, you know I have a great confidence in your judgment; but I want to advise you that I think you ought to take the Peace Corps volunteers out of Panama and put them in the Canal Zone for safety."

There were marauding bands going around the countryside in Panama looking for North Americans on whom they could wreck some vengeance. Here we had the same question again, would we take out the volunteers. We left them in once again. And in the villages the Panamanians protected the Peace Corps volunteers. When bands of marauders came by, the Panamanians would hide the volunteers in their houses. The volunteers, the Panamanians would hide them. The result was that nobody got hurt in the Peace Corps; 8 or 10 people got killed in the Panama Canal Zone where they had the protection of the U.S. Armed Forces. Again, however, the risk was very great to leave them in the Panamanian villages, a risk similar to the one I just tried to describe in the Dominican Republic.

Now, what I am trying to say is that if the director of the Peace Corps is inside of a bureaucracy, even if he were in a high place in a bureaucracy, there is a terrific danger that the other bureaucrats in that bureaucracy will see their own careers jeopardized by independent actions of that type by the Peace Corps or by its director. That is not to criticize anybody in the bureaucracy; I think it is only to say that is normal, it is human nature. People do not recall very often now, but another matter that has some significance, even today, occurred at the beginning of the Peace Corps.

We offered to send Peace Corps volunteers to the Soviet Union. We said we would be happy to send Peace Corps volunteers behind the Iron Curtain—and the Iron Curtain was a lot higher and more difficult to pierce in 1960–61 than it is today. But we said, "Certainly, if the Soviet Union, Poland, or Czechoslovakia wants to have Peace Corps volunteers, we will send them in."

The fact is they never asked for them to come in; never were willing for them to come in. But, what would happen today if the Director of the Peace Corps said. "We are going to send 50 volunteers to Russia"? That would become, I think, quite a foreign policy issue, and it might very well be that the Peace Corps would be prevented from doing that, even though, according to the Peace Corps philosophy, according to the purpose of the Peace Corps, that would be a perfectly legitimate thing for the Peace Corps to do. That action would inevitably today, I fear, be linked into a whole foreign policy debate.

Now, there are many other less dramatic examples where the Peace Corps itself did things then—and ought to be doing things now, in my judgment—which might not have the support of older and wiser heads. Eleanor Roosevelt was very scared when we said we were going to send Peace Corps volunteers 300 or 400 miles up-country in Ghana, or central African republic places that were very remote in terms of medical assistance.

She told me personally, she said, "Mr. Shriver, you do that, and you will have disasters. I have been all over the world, and Americans cannot exist there in that country. They will get all kinds of diseases, you will have a terrible fallout rate; and it will be a disaster."

Now, nobody could criticize her, I think, for being faint-hearted, nor for having lack of experience. But what she had not had much experience with at that time was the kind of person who joins the Peace Corps. The reality turned out to be just the opposite of what you would expect; namely, if you put Peace Corps volunteers in the most difficult places they performed better. The tougher the going, the better they are. In fact, if you put them in Thailand, for example, in Bangkok they do not do nearly as well as if you put them 300 miles away from Bangkok. So, it was just the reverse of what our preconceptions had been.

So I say, therefore, that if you leave the Peace Corps within the normal Government bureaucracy the decisions made by the Director are going to be influenced by considerations that are not Peace Corps considerations. He is going to be subjected to bureaucratic pressures that are not Peace Corps concerns.

I fear that the whole spirit of the enterprise will be modified to its disadvantage by that kind of arrangement.

The third point I would like to make is this, and it would almost have to do with political philosophy, or political science—maybe even with moral philosophy. The U.S. Government—thank God—is one of the few governments now in existence in the world which as a matter of philosophical commitment says that the individual citizen, individual human being is the most important entity in that country. The power actually comes to the Government from the people. A lot of governments say that, but it does not actually operate that way. Here we say that is a fact. We say there are certain things

about you Mr. Chairman, and everybody else in this room that the Government cannot invade or violate. We say those are private rights. We say that you have those private rights because you are superior to the Government—you are—I am—the stenotypist is. That is because we place a certain evaluation on you Mr. Chairman, that is higher than the evaluation we put on the Government. In fact, historically looking ahead and looking back in history we can say, governments, come and go. The Roman Empire lasted 1,000 years, 500 years, but it does not exist any more. The people do. In the religious churches we even say that people have an eternal destiny, that a person, you—you are going to live forever, Therefore you are infinitely more important than the Government. The Government is a vehicle to help you to achieve your goals, not the reverse. You are not the means for enabling the Government to achieve its goals.

Now, what does that mean, really, in terms of the Peace Corps? It means that the people who run the Peace Corps have to believe enough in the individual American who is in it, the person, the human being, to allow that person freedom to operate; freedom to say things when they are overseas which may be against the Government policy of the United States.

In the early days of the Vietnamese business I was still with the Peace Corps and the White House used to get annoyed when some people, some volunteers in some country would be saying that the United States should not be going into Vietnam, and were opposing the war in Vietnam when the White House was sending troops in. I would get calls saying, "What are the guys you've got down there"—in Chile or some place—"what are they doing? They are contesting us."

The philosophy of the U.S. Government, I believe, by God, is that they have a right to contest that, even if they are being paid as volunteers by the U.S. Government.

Now, first of all, there are very few governments in the world that believe that today. Consequently, when the Peace Corps volunteers are just walking around the street in an African, or South American, or Asian country, that volunteer—male or female—is like a walking advertisement of the philosophy of this country. It is almost like lighting up a Coca-Cola sign if you are trying to sell Coca-Cola in Indonesia.

A Peace Corps volunteer becomes a symbol of what this country is all about. I can guarantee you, that Peace Corps volunteer is a more effective advertisement of the philosophy of the United States than $100 million because dollars are only money. Everybody thinks we have a lot of money, so, what difference does it make if we give away $100 million. They just say, "You have more, give us more."

But a Peace Corps volunteer—repeat—symbolizes the entire theoretical position, philosophical and political idea of America. And to that extent they are the greatest advertisement we can send overseas.

Now, it is a little different for the Peace Corps than a private voluntary agency. A private voluntary agency is sensational, I am all for it. But since they are privately financed they do not have the mark of the Government on them. When a private volunteer is over there he is not looked upon—or she is not looked upon—as an agent of the United States in any sense. But a Peace Corps volunteer is. A Peace Corps volunteer, therefore, becomes an anomaly—difficult, maybe impossible to pigeonhole; that is why the Soviet immediately characterized the Peace Corps as agents of the CIA and still do.

I have talked to them over in Russia about that many times in the last 5 years. And even today they cannot understand the idea that the Government of the United States would finance people to go overseas who are not under the control of the Government. [Pause.] I am letting that sink in, because today having control over other people gives some people a sense of power even in our society—whether they are being controlled by medical means or other means. But political power in an authoritarian state is synonymous with control over people. Our Government goes at the world a different way.

Therefore, the very concept of our Nation is being contested at that point where an independent, freestanding human being confronts authority, especially absolute authority. That is why a person like Solzhenitsyn is so powerful and impressive in his country and in ours. He is a single human being that stood up to the juggernaut of Stalin. He is a world hero.

The reason Peace Corps volunteers are admired in foreign countries is because they are, shall we say, little heroes. They represent the capacity of human beings to stand up against politics, or political power. That is the most precious thing, or one of the most precious things that is in the Peace Corps.

Again I say, to have that encapsulated or covered over by being a part of the official foreign mission of the United States in a particular country, I think, would be a grievous mistake.

I was an Ambassador in France, and it is nice to talk about all the coordination that is going to happen, how effective all the coordination is going to be in every one of these foreign countries because everybody is in one agency here in Washington. Well, allow me to assure you, although it looks good on paper, it does not work out that way, really, when you are out there in the front lines. The Ambassador, or the AID director, or the CIA director, does not really effectively coordinate all the agencies; nor in fact, with respect to the Peace Corps, can he or she do it because, if the Peace Corps is going to be run properly, it is spread all over the country. It would take the ICA, or AID, or the new director of the total foreign agency, foreign development agency, it would take him months just to get around to find the Peace Corps volunteers. It would take him 2 weeks just to do the Philippines.

So, you have to understand that this idea for new legislation, this Washington idea—you know, these people who have Ph. D.'s in public administration, their idea where they have a chart as big as the wall behind you and everybody is in it, according to a Ph. D. thesis, that plan is terrific on that wall, but that is not what happens in the field. It is like the GHQ of General Marshall in the Pentagon in the war, it is not very closely related to what happens in the trenches in Guadalcanal. Now, the Peace Corps is like being in the trenches in Guadalcanal, as compared to be in the Pentagon in World War II. What you have to have in the trenches is independently qualified, highly trained, highly motivated human beings who are willing to lay down their lives. That is what the Peace Corps at its best ought to be in the trenches, so to speak.

That, really, can be achieved only if it has an independent status here in Washington. Thank you.●

GRANGE WEEK

HON. THOMAS S. FOLEY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. FOLEY. Mr. Speaker, the week of April 23–29 marks the celebration of Grange Week. As you know, the National Grange has a half a million members in 41 States. Five thousand local communities will be joining in this national recognition of the contributions that the National Grange has made not only to supporting vital agricultural policy initiatives but in working daily to improve the quality of rural life and maintaining the strength of American farm families.

Since its founding the National Grange and its individual members have been dedicated to the spirit of a free nation and of free agriculture. They have realized so well that a strong agriculture based on family farming is indeed the essence of a strong and dynamic America. I take this opportunity to congratulate the Grange and to express my deep appreciation to all its members for their untiring efforts on behalf of American agriculture.●

EXECUTIVE BRANCH FINANCIAL DISCLOSURE COVERAGE: A BETTER APPROACH

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. LEHMAN. Mr. Speaker, the joint substitute to title II, part A, of H.R. 1, the Ethics in Government Act, which will be offered by my colleague Mr. STRATTON, is the joint product of work performed by the Committees on Post Office and Civil Service and Armed Services.

In developing financial disclosure rules for executive branch civilian employees, my colleagues and I on the House Post Office and Civil Service Committee were of the general opinion that no traces of the present financial disclosure system for executive branch employees should be left intact and that Congress should, by statute, enact a comprehensive financial reporting system to apply to all executive branch employees, whatever their grade levels. The simple reason for this approach is that the present financial reporting system, operated pursuant to Executive Order 11222, has been a disaster.

H.R. 1 would let this disaster stay in existence. The Stratton substitute will abolish it, and I urge my colleagues to support it. The following discussion of this issue of difference between H.R. 1 and the joint substitute will be helpful in this regard:

SCOPE OF COVERAGE

The joint substitute and H.R. 1 are similar as to the civilian employees whom they cover as to public disclosure. One glaring omission in H.R. 1, however, is that ethics counselors—those who will be reviewing the public reports of others—will not have their own reports made publicly available if, indeed, they have to file them at all.

The far greater failure of H.R. 1 is to grapple with the system of confidential financial disclosure covering lower level Federal employees. Under H.R. 1, the financial reporting system established and administered under Executive Order 11222, the same system whose failure has resulted in the need for financial disclosure legislation, will remain in place. Under the joint substitute, E.O. 11222

will be overridden and all financial reporting—public and confidential—will be pursuant to statute.

The problems with E.O. 11222 have been immense. Review of the 21 General Accounting Office reports issued in the last three years upon its effectiveness find little of it worth salvaging. It has been overapplied, underapplied, misapplied, and interpreted by whims. Although the GAO has estimated that 80,000 employees are in positions which should require the filing of reports under the Order, nobody is certain that they are, nobody is certain that their reports are accurate, and nobody is certain how many Federal employees whose positions do not justify reporting are being required to report through misinterpretation.

The joint substitute replaces the Executive Order with a statute containing understandable guidelines. The types of positions which may, by the director of the Office of Government Ethics, require filing are spelled out. They include positions involving investigations, inspection, or auditing with respect to civil or criminal law enforcement or authority with respect to awarding grants subsidies, licenses, contracts, or other benefits—positions in which conflicts of interest may occur. The number of Federal employees who could file under the joint substitute would be about the same. The assurances that the right employees are designated will be much greater.●

CIA OFFERS SURPRISING OIL FIGURES

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. BROWN of Ohio. Mr. Speaker, an article appeared yesterday in the Washington Post about the validity of the CIA's estimates of international oil reserves. These estimates are the sole data base for the President's crude oil pricing policy. That these estimates are continually changing and have been challenged in numerous forums can only heighten the unease with which the Congress confronts the administration's crude oil equalization tax. I am inserting this article into the RECORD so that my colleagues might have the opportunity to review the background work that has formed the basis for the National Energy Act:

[From the Washington Post, Apr. 23, 1978]

CIA OIL FIGURES RAISE EYEBROWS AMONG EXPERTS

(By Richard Harwood and J. P. Smith)

This is a story about the Central Intelligence Agency and the domestic energy policies of the American government.

It begins, in a public sense, last April, when President Carter revealed in a television appearance that he had received "disturbing" new findings about world energy supplies.

There is less oil and gas available in the world, he said, than the government had previously believed. It was therefore imperative that an energy bill be passed "to cut down the waste of energy."

His fears were underscored eight months later, on Christmas Day, when The New York Times reported that Saudi Arabia, with its oceans of oil, may have far less productive capacity than previously believed. This information, said the Times, came from "leading energy experts."

It was, in fact, the CIA which had raised the alarm about the Saudis, and it was the CIA that had provided Carter with the ammunition for his warning.

Carter acknowledged his debt to the CIA during his television appearance. In so doing, he also acknowledged the dependence of the White House and of Congress on the CIA in the formulation of domestic energy policies.

For good or ill, the CIA is the government's most important single source of international energy information, including estimates of how much is out there and how much is available to the United States.

This may seem both unfortunate and sinister to the agency's critics. It is an inevitable and sensible role for the agency in the minds of others, including the respected international energy expert at the Library of Congress, Herman Franssen.

"The CIA," he says, "probably has the best act in town. Nobody else can do it; the only other source would be the companies."

Energy Secretary James R. Schlesinger Jr. says the CIA's role in making estimates of foreign oil capacity in connection with the domestic energy plan is to be expected, "given that the CIA has been at work for years on the question of estimating . . . the trends in foreign capacity and foreign intentions with regard to production."

"What falls outside of the traditional compass of the intelligence community is that this has gone public," Schlesinger says.

There is another question about the CIA and energy policy, however. It is directed at the agency's capabilities and the quality of its work.

Specifically, there is widespread doubt in the energy community about the validity of the CIA report cited by the President last April and about the CIA report cited by the Times in December.

The heart of the April report was a CIA prediction that the Soviet Union would be importing up to 3.5 million barrels of oil per day by the mid-1980's. Previously, the assumption had been that the Soviets would continue to be self-sufficient in meeting their oil and gas needs.

The CIA's revisionist analysis is now under serious challenge by West European intelligence agencies, by the Library of Congress, by a number of major oil companies, by the Soviets and, somewhat surprisingly, by Schlesinger.

The same is true of the revisionist analysis of the Saudi oil fields, prepared by the CIA's Bureau of Economic Research, classified secret and never released except in the form of a leak to The New York Times.

The response to the Times' version of the CIA's Saudi report has ranged from ridicule to astonishment. The critics include the State Department, the General Accounting Office, the Arabian American Oil Co. (Aramco), the Saudi government and, to a lesser extent, Schlesinger.

In summary, the CIA claimed that the Saudi oil fields were, in effect, wearing out, partly because of mismanagement, and that their ability to produce oil was far less than previously believed.

This revisionist conclusion may have been reflected in the unexplained gyrations that began appearing in December in the CIA's biweekly reports on world oil supplies.

In November, the agency estimated the productive capacity of the Saudi fields at 11.5 million barrels a day. In December, that estimate was cut to 10.5 million barrels. In January it was cut to 8.8 million barrels.

These vanishing millions of barrels of oil baffled consumers of the CIA's intelligence reports. They were further baffled in February, when the CIA again shifted gears and reported Saudi capacity at 10.5 million barrels.

This upward revisions, according to Schlesinger, was "a result of certain articles in The Washington Post," articles that had reported the gyration in the agency's estimates and had further reported that between November and February the CIA had lopped 5 million barrels a day off the "surplus production" capability of the 13 members of OPEC (Organization of Petroleum Exporting Countries).

The confusion sowed by all this in the international oil community carried a special irony, since that community is heavily populated with present and former CIA people.

They include:

Schlesinger, a CIA director in the Nixon administration.

Walter McDonald, former director of the CIA's energy analysis section, who is now a Schlesinger aide as deputy assistant secretary of energy for international affairs.

Frank Pagnotta, another Schlesinger aide, who worked for the CIA's deputy director.

Philip Woodside, the international oil specialist for the General Accounting Office, who spent more than a decade with the CIA as an oil analyst in the Middle East and Latin America.

George W. Cave, the CIA station chief in Saudi Arabia, who is a former Aramco employe.

Raymond H. Close, the former CIA station chief in Saudi Arabia, who retired from the agency last year and now works for the Saudis.

There are, in addition, scores of known or suspected CIA operatives, alumni and cooperators with an abiding interest in oil.

Two of the best known and most respected in international oil cricles are Mike Ameen of the London office of the Mobil Oil Corp., and Jack Bridges, a former congressional aide who now works for the Saudis as director of the King Faisel Foundation with offices in Northern Virginia.

They ritually deny CIA ties, but there is no doubt that they have CIA contacts and intimate relationships with the Saudis.

This web of relationships is nothing new in the oil business. For years, the CIA and the international oil companies have worked closely together out of a community of interest.

Frank Jungers, board chairman of Aramco until last year, is candid on that point: "For years out there (in Saudi Arabia) we had a good relationship with the agency, partly because I thought it would make things easier."

He said the industry-wide practice was to maintain "liaison" with the CIA. But involvements sometimes were more direct. Ashland Oil, for example, said it was surprised to find some years ago that the CIA was using the company as a cover for an agent operating abroad.

The agency also maintains a network of clandestine contacts with foreign nationals operating state-run oil companies. It may be coincidence, but the CIA compound in Saudi Arabia is located directly across the street from the Ministry of Petroleum and Minerals.

These contacts have paid off frequently.

Years before the Mexican government made public its extensive oil finds in Chiapas and Tabasco, the CIA circulated top-secret reports that Mexico was sitting on billions of barrels of oil. These reports grew out of contacts with Petroleum Mexicanos (Pemex) the state oil company.

With the rise of new technologies, the CIA has developed other information sources. Spy satellite systems track the movement of oil tankers, conduct aerial surveys, photograph drilling operations and collect geographic evidence of mineral and oil deposits. Its agents have also cooperated with the U.S. Geological Survey.

Then there is the time-honored drudge work, the collection of data from thousands of technical publications, newspapers, journals and radio broadcasts.

From all these sources—spies, friends, satellites and statistical tomes—come the special CIA studies and the biweekly energy estimates that are circulated to senior officials in the White House, the State Department, the National Security Council, the Energy and Treasury departments and congressional committees.

This is the data that is crucial to government planning and domestic policymaking in the energy field.

The dependence on the CIA in these matters is reflected in the comment of an Energy Department official who concedes, "The department simply does not have the kind of people on hand to verify the CIA analysis."

It is reflected in a recent comment by CIA Director Stansfield Turner: "I'm just so proud of what we have contributed in the past nine months to the public debate on major issues." He was talking about energy.

"I intend to keep on with this program," he said. "I will be criticized sometimes for supporting the administration's policy and sometimes for not supporting it."

His agency's contribution to the "debate" on energy is correct in the sense he intended and in the narrower sense that a lot of the "debate" swirls around the accuracy of the CIA's Soviet and Saudi studies.

James Akins, the former U.S. ambassador to Saudi Arabia, is something of an energy expert himself. He is a former director of the State Department's Office of Fuels and Energy.

He describes the CIA's woeful analysis of the Saudi oil fields as "absolutely pernicious." What is more, he said, it "gives the Saudis the perfect excuse to cut production" at a time when U.S. officials are pressuring the Saudis to increase production capacity to avert a worldwide oil supply shortage in the next four or five years.

His skepticism grows, in part, out of a personal experience. While in the State Department some years ago, Akins says, he headed off a classified CIA report forecasting a world tanker shortage. He thought the analysis was questionable. Time proved him right. There is a glut of tankers in the world today, and tanker prices and shipping costs are at their lowest level in decades.

This skepticism infects the Saudis and the Americans who run their oilfields. Abdul Aziz Turki, the deputy petroleum minister, said, "We in the Ministry of Petroleum found no reason to reply to such reports because they are ridiculous and obviously untrue." The Saudi minister of planning, Hisham Nazer, laughed at the report, while sarcastically telling an American visitor, "How am I to say this is not true if it comes from your mighty CIA?"

The most rigorous dissent from the CIA's reported Saudi conclusions came from former CIA operative Phillip Woodside, in a report for the GAO.

Woodside toured the Saudi fields in December, and upon his return reported that he found no uncommon problems, no evidence of mismanagement and no technical obstacles to much higher levels of production.

The CIA has not replied to these criticisms. It has not released its Saudi report or publicly acknowledged its existence. Schlesinger talks about the report with the caveat that what he is talking about is "hypothetical."

So the controversy over the report's validity is one-sided and, in that circumstance, produces much speculation about the agency's motives and integrity.

In the past and in other areas of study, the CIA's reputation for objection and sensible analysis has been relatively good. But in this energy arena, charges are flying about the "political motivation" of the agency.

At the time the CIA's Saudi study was reported in the Times, Sen. Frank Church (D-Idaho) was accusing the agency—in other connection—of tailoring its facts to its needs.

"We found," he said, "that the CIA was reporting the facts that they wanted to find." On oil production, he said, the agency "tended to accept a level of production that they'd hoped for without weighing other information."

A more common allegation is that the agency has produced gloomy data to give political support to the Carter energy program.

Asked about the shifting view of Saudi production in the CIA report, an administration official said, "There is certainly a political element in it."

And there even have been suggestions that the agency downgrades the oil capacity of the Saudis in order to influence the three-pronged relationship between the United States, Israel and the Arabs.

No one has produced any evidence to support these allegations, and Schlesinger rejects them vehemently. "That's ridiculous," he says. "In my experience I can recall only rare circumstances in which they deviated only slightly from what they regarded as the objective truth or could be referred to as [their having] political motivations. I just don't think that that's part of it. The agency can be wrong as everybody else in this area, but by and large they've done pretty good work."

What has changed, as Schlesinger has noted, is the public emergence of the CIA as a contributor to domestic policymaking in the field of energy. Its role in this area in the past was not talked about, and it was thus not a vulnerable target for examination.

That changed last April when President Carter waved the CIA report before the television cameras in support of his energy proposals.

He opened the question that has yet to be answered fully: how good are the CIA estimates? ●

A POSTHUMOUS TRIBUTE TO PATTIE BLEECKER

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. KILDEE. Mr. Speaker, the hearing impaired community in Flint and the rest of Michigan recently lost one of its most effective and devoted leaders with the passing away of Pattie M. Bleeker. Though she is gone, she certainly is not forgotten, and there will be a special posthumous tribute extended in her memory on April 29, 1978, by the Social Services for the Hearing Impaired in Flint. The tribute will be in recognition of the great work she did in the community as one of the foremost advocates of the hearing impaired who was a sincere and devoted educator. After teaching in the Dearborn and Lansing areas, Pattie returned to her native Flint in the 1960's. While working in the Flint public schools, Pattie developed a special interest and concern for the basic communication problems faced by hearing impaired students. Her intense desire to overcome some of the inherent inequities and difficulties of teaching the hearing impaired led to her development of a model education program for the deaf. She utilized her talents and skills as a pioneer in the education of the hearing impaired at Zimmerman Junior High School, Flint Southwestern High School, and Flint Open School. Pattie also funneled her enthusiasm and energy to the Social Services for the Hearing Impaired, which she served as vice president and as a member of its executive board.

Her expertise, enthusiasm, and dedication have left the hearing impaired of the Flint area as her beneficiaries. Indeed, I am more sensitive to the needs of the hearing impaired because of her efforts to inform those who were needed to understand and help those whom she served so well.●

ADVICE FOR MR. BLUMENTHAL

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. HAGEDORN. Mr. Speaker, while the recent surge in the stock market has been encouraging, it remains more than 20 percent lower than when the present administration took office. Treasury Secretary Michael Blumenthal was quoted recently as stating:

The Carter Administration has about reached the limits of what it can do to make business happy. . . . There's nothing more we can do. I can't explain the stock market. Of course, I am concerned if the stock market goes down, but there's nothing more we can do.

Well, I can't explain the stock market either, but as a public service to Mr. Blumenthal, I would humbly suggest to him that the administration that has done it all might consider, in addition, taking just a few of the following actions. I have a sneaking suspicion that even a market as inscrutable as our own might finally perk up a bit.

ADVICE FOR MR. BLUMENTHAL

Consider reducing, by a few dollars, budget deficits expected to exceed $60 billion in both FY 78 and 79, with estimates of the FY 79 budget reaching as high as $100 billion. The total national debt is likely to exceed $873 billion by FY 79.

Consider reducing, by a few dollars, off-budget deficits expected to exceed $12 billion in FY 79, a 50 percent increase in just two years.

Consider reducing, by a few dollars, the first half-trillion dollar budget in our nation's history, a budget up 15 percent from original estimates of FY 78 outlays, and nearly 25 percent from actual FY 77 outlays.

Stop playing games with budget figures in an effort to portray them as being lower than they actually are as, for example, by treating expenditures of crude oil equalization tax dollars as "refunds" rather than outlays, and by making the largest budget cuts in popular program areas certain to be restored by Congress such as veterans' programs, biomedical research, and SBA assistance.

Revamp a "zero-based budgeting" campaign that has resulted only in the zero-elimination of Federal agencies, and which has resulted in budget reductions for nearly the same number.

Quit trying to sell as "stern" and "austere" a Federal budget that provides for 70,000 more Federal employees than the previous year's budget; that contains hefty increases for such agencies as the National Foundation for the Arts and Humanities and the Equal Employment Opportunity Commission;

that contains $2.1 billion in new HEW discretionary programs; and that contains sizable spending increases for public service jobs, welfare, food stamps, urban renewal, mass transportation operating subsidies, anti-smoking programs, and Federal prison programs.

Adopt an energy program aimed at encouraging new energy exploration and development, rather than one imposing hosts of new taxes upon the citizenry. These taxes are expected to cost the American taxpayer a minimum $100 billion per year by 1985.

Stop lending the Administration's support to legislation making it more difficult to mine coal, develop nuclear power, transport energy supplies, and produce Outer Continental Shelf oil and gas.

Re-think tax simplification efforts which are reported to have resulted in a 100 percent increase in business for H&R Block.

Index the internal revenue code so that individuals are not pushed into higher tax brackets by paper gains in income. Failure to "index" the code will cost taxpayers an estimated $270 billion over the next five years.

Reduce taxes permanently and across-the-board for individuals and businesses.

Instead of imposing increased taxes on investment income, through treating it the same as ordinary income or through raising the alternative tax, consider instead policies designed to promote capital investment such as the elimination of double taxation of corporate income, reduction in capital gains taxes, reduction in corporate tax rates, increasing the investment tax credit, or liberalizing depreciation. The ratio of investment to GNP in the United States is already less than half of that in countries such as Japan.

Leash Jerome Kurtz who seems absolutely to salivate at the prospect of taking increased shares of the national product for the Federal government. Disavow his proposals to tax fully fringe benefits, and to require taxpayers to "flag" or bring to the attention of the IRS "questionable" deductions.

Stifle the demogoguery about "three martini lunches" and "tax lopholes", the major purpose of which is to pave the way for the transfer of more income from the private to the public sectors.

Cut the charade of giving the American people "tax reduction" legislation in 1977 which raised taxes for millions of citizens earning above $13,000 and provided tax "rebates" to welfare recipients while providing none to those individuals who paid the most in taxes; as well as "tax reform" legislation in 1978 which would result in higher taxes for virtually everyone earning more than $20,000.

In addition to new income taxes and energy taxes, stop burdening the productive sector of the economy with huge new Social Security taxes and unemployment compensation taxes. The $227 billion Social Security tax increase makes it the single largest tax increase in our country's history, a tax on work.

Quit trying to redistribute income with every new program. The wealthier half of the country already pays 94% of its taxes, while the wealthiest 1.4% pays nearly a quarter of its taxes.

Stop proposing welfare reforms which add millions to the welfare rolls and add billions to the cost, and food stamp reforms which do the same thing. Reconsider your opposition to "workfare" proposals, and your support of HEW disability regulations which will sharply increase eligibility for welfare.

Support elimination of out-dated Federal statutes such as the Davis-Bacon and the Jones Acts which cost American citizens billions of dollars in inflationary labor costs.

Rein in a bureaucracy in which HEW goes after smokers, EPA goes after commuters, the Office of Civil Rights goes after cheerleaders, FDA goes after saccharin, Department of Agriculture goes after bacon and the Consumer Product Safety Commission goes after match makers.

Take a break from (a) proposing new Federal agencies such as the Consumer Protection Agency, the Department of Energy, and the Department of Education; (b) involving Washington in such new areas of regulation as debtor-creditor relations and hospital facilities; and (c) expanding the regulatory jurisdiction of such agencies as FTC, FDA, EEOC, and EPA. The Federal Register set a new record in 1977 of 65,603 pages with more than 7500 new rules and regulations. CPSC goes on regulating matchbooks, DOT mandatory airbags, and the BATF handguns.

Stop proposing $2.4 billion urban programs which give the American people the same sort of warmed-over Great Society that you campaigned against. Re-assess the contributions of a HUD Secretary who warns against too much reliance upon the private sector for new housing.

Forget about comprehensive National Health Insurance.

De-emphasize the cosmetic gimmickries of 'zero-based budgeting', sunset laws, re-organization, paperwork commissions, and guidelines for Federal Register prose as substitutes for genuine regulatory reform, and start mustering up the will to make some tough decisions. Quit subordinating substance before form.

Stop transferring employment from the private to the public sectors through increased public employment programs, increased "counter-cyclical, anti-recessionary" assistance, CETA, and Humphrey-Hawkins.

Quit supporting such blatantly special interest, union-backed legislation as common situs picketing, cargo preference, and labor law reform. While you're at it, ask yourself why the Administration supported the largest increase in the minimum wage in our country's history, an increase from $2.30 to $3.35 over a three year period.

Question the wisdom of a Secretary of Commerce who considers a priority of hers the creation of a Social Performance Index for businesses.

Once and for all, make clear that wage and price controls will not be a tool in the Administration's anti-inflation program. Recognize also that controls applied selectively, e.g. hospital cost controls, will have the same distortive economic effect as controls applied on a more widespread basis.

Re-assess the Administration's identification with, and support of racial quotas, affirmative action strengthened "anti-discrimination" efforts in the nation's schools and businesses, and regulations which associate handicapped citizens and drug addicts as equal victims of discrimination.

Reconsider the Administration's position that it is only a "myth" that the government can do very much to combat inflation.

Downplay the "jawboning" of steel price increases and the like immediately after acceding to a trend-setting 39% pay increase for coal miners, a pay increase accompanied by no provisions for increases in productivity.

Slow down the Federal government's rush to take control of hundreds of thousands of acres of land throughout the country, closing such lands entirely to mining, logging, and virtually all developmental uses. Washington already owns or controls 80% of nation's coal supplies.

Restrict the more "innovative" anti-trust efforts of the Justice Department and the FTC, including "price-signalling", "shared monopolies", etc. Discontinue support of parens patriae anti-trust suits, legal subsidies for interest group litigation, etc.

Recognize realistically the root causes for the plight of the U.S. dollar and attend to these instead of blaming the speculators, the Japanese, and wasteful U.S. energy consumption.

Resolve to remain firm in opposition to "protectionist" economic impulses. At the same time, reconsider policies which cripple U.S. business abroad, e.g. increased employee tax liability, DISC phase-out; and policies which subsidize our competitors, e.g. palm oil loans to Indonesia, crude oil entitlements.

Instead of increasing both White House staff and salaries by considerable amounts, reduce them as you promised during your campaign.

Stop endorsing 45% pay hikes for Members of Congress, judges, and high level executive personnel, and cut back proposed Federal employee pay raises beyond the 5.5% figure. Federal employees already earn far more than private sector employees both with respect to straight salary and fringe benefits.

Reconsider your support of Hatch Act reforms and Civil Service reforms, both of which are certain to enhance the power of militant public employee unions.

Encourage "your" man at the Federal Reserve to consider reversing the Board's nearly 50% increase in the rate of growth of the money supply during the past year.

Quit recognizing as legitimate demands the re-distributionist economic goals of the Third World. These would include those expressed in the International Law of the Sea Conference and the on-going North-South economic talks, as well as demands that the United States "renegotiate" $500 million in loan repayments by Third World countries.

Put the country's national defense policies in order. In return for caving in repeatedly at SALT, foregoing production of the B-1, deferring production of the neutron bomb, cutting back on Naval ship-building, and delaying MX and Cruise missile development, what have we gotten in return?

Reconsider Administration policies which are steadily eroding the abilities of the FBI and the CIA to carry out their law enforcement and national security functions.

Put the country's foreign policy in order. This might include a re-assessment of (a) a 'human rights' policy that combines toughness toward our allies with obsequiousness toward the likes of Tito, Gomulka, Brezhnev, Obasanjo, and Nyerere; (b) a world view that sees the U.S. as growing in respect with Latin America through a surrender of the Panama Canal; (c) a chaotic Middle East policy; (d) continued indifference toward the genocide today occurring in Southeast Asia; (e) a policy that allows international financial institutions to dictate foreign policy to the U.S. rather than the other way around; (f) a Southern Africa policy designed to promote the interests of Marxist, terrorists in that part of the world; and (g) the contributions of Andrew Young in the development of our foreign policy.

Repudiate the suggestions of Agriculture Secretary Bergland that international commodity cartels are the best way to organize the world economy.

Re-assess the contributions made to good public policy by the hordes of 'public interest' group alumni that are populating your Administration.

Do something to ease the burdens placed upon small businessmen by uninterpretable Federal pension regulations, and by heavy product liability insurance premiums.

Refuse to extend Federal assistance to New York City for a second time in order to prevent their bankruptcy.

Stop trying to nationalize flood insurance and federalize automobile insurance.

Hire yourself a new Assistant Secretary of Education, one that doesn't look to the People's Republic of China as a model for the United States.

Push for changes in the new 'carry-over' basis provisions of the estate tax laws.

Recommend amendments to the Clean Air Act that will permit increased industrial development and remove from EPA life-and-death authority over the developmental goals of communities throughout the country.

Repudiate the centralized planning objectives of the Humphrey-Hawkins Act, and further recognize that voluntary price restraints are not only incompatible with a free enterprise economy but impossible within it. Prices are set through competition, not through the individual preferences of business enterprises.●

MR. ED SALT, OF YOUNGSTOWN, OHIO, PRESENTS "MY AMERICA" SERIES

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. CARNEY. Mr. Speaker, Mr. Ed Salt, a long-time resident and journalist of Youngstown, Ohio, has recently provided me with his series of newspaper articles entitled "My America."

This series recently won the Freedoms Foundation of Valley Forge's George Washington honor medal for its contribution to the appreciation and understanding of our American heritage. I commend Mr. Salt for his winning series.

Mr. Salt has been one of Youngstown's best-known newsmen for over 50 years. Born in the tiny Columbiana County village of Salineville, Mr. Salt spent a Ohio Northern University. Prior to entering the journalism profession, Mr. Salt year studying electrical engineering at worked as a mould runner in a pottery factory, a laborer in a brickyard, a railroad "gandy dancer," and a motor tester.

In 1922, his newspaper career began as a cub reporter for the Alliance Review, where he worked for 8 years. He left the Review to become editor of Trip Topics, a magazine for the Utilities Service Co. which operated telephone and powerlines, ice plants, and an electric railroad. The depression ended Mr. Salt's editorship at that publication, and he subsequently became a police reporter and photographer for the old Youngstown Telegram. When the Telegram merged with the Youngstown Vindicator, Mr. Salt worked briefly for the Columbus Citizen, but he returned to Youngstown to open a Vindicator news bureau in Sharon, Pa. While at the Vindicator, he worked as a reporter, photographer, assistant city editor, and, during World War II, as acting city editor.

In 1945, Mr. Salt became editor of the Youngstown Sheet & Tube Co.'s Bulletin, a publication with both Youngstown and Chicago district editions. As an industrial editor, he was committed to explaining the end uses of steel products. Consequently, he traveled extensively, from the mining fields of Minnesota to the oil wells of the Southwest. As the editor of an employee's publication, he felt just as strongly that he should be knowledgeable about al phases of the manufacturing operation. Therefore, he was a familiar face to many employees at the Campbell and Brier Hill plants. He also regularly attended weekly supervisors' meetings at Youngstown Sheet & Tube to keep up with business trends. After 21 years with the Bulletin, Salt retired, and became a freelance writer.

Salt's award-winning "My America" series recently appeared in the Boardman News. He explains that his purpose in writing the series is threefold:

My objective is to make people more aware of the country in which they live and more appreciative of that country, as well as focus on the American economic system that makes this country the greatest in the world and also to reflect the cost of independence that was won over 200 years ago.

Mr. Speaker, it is with great pleasure and pride that I present the first installment of Ed Salt's "My America" series. From time to time, I will be inserting these articles in the CONGRESSIONAL RECORD because they deserve the attention and consideration of all of us.

The article follows:

FABULOUS LAND

A little more than 200 years ago, a new nation was born. It was given the name "The United States of America" and was composed of 13 colonies stretched along the Atlantic Coast.

In two centuries this nation's population has grown from less than 3,000,000 to more than 215,000,000. In land area it has grown from less than 1,000,000 to more than 3,500,000 square miles.

The United States contains only six per cent of the world's land area and population. In area, it is smaller than Canada and smaller than China. It is a little larger than Australia and a little larger than Brazil. It is less than half the size of Soviet Russia.

Yet we have 50 per cent of the world's wealth. We manufacture 63 per cent of the world's goods; drive 58 percent of the world's automobiles and talk on 56 per cent of the world's telephones.

If the world's total population of more than four billion people were reduced to one thousand, fewer than 300 would be white and only 53 would be Americans. The 53 Americans would have half the world's total income while the other half would be divided among 947 persons.

Our gross national product (the value of goods and services) in 1975 amounted to $1,516,338,000,000—three times what it was in 1960. Our national income—received by more than 90,000,000 workers in wages, salaries, and fringe benefits, plus income from farm, business and professional activities and corporation profits—amounted to $1,207,584,000,000. This was nearly three times what it was in 1960. Our closest rival is Japan where the gross national product is less than one-third of ours.

In comparison, Canada's gross national product was $118,900,000,000; West German $348,170,000,000; France, $255,060,000,000 and Australia $52,160,000,000. Our gross national product is greater than the USSR (Soviet Russia), West Germany and France combined.

Of the 68 largest cities in the world, 13 are in the United States. New York, with a 1970 population of more than 16 million, is the world's largest. It is followed by Tokyo, Japan, the second largest, with an estimated 11,612,311 in 1973; Shanghai, China with an estimated 10,820,000 in 1970 and Mexico City with an estimated 10,766,791 in 1974.

Based on our nation's 1970 census, other American cities with two million or more people, were Los Angeles-Long Beach (7,032,075); Chicago (6,978,947); Philadelphia (4,817,914); Detroit (4,199,931); Washington area (2,861,123); Boston (2,753,700); Pittsburgh (2,401,245); Dallas-Fort Worth (2.377,979); St. Louis (2,363,017); Baltimore (2,070,670); Cleveland (2,064,194); and Newark, N.J. (2,054,928).

Americans are always hunting for new methods of doing things or inventing new products. Of more than 300 great inventions and scientific discoveries, approximately 60 percent are credited to the United States and the other 40 percent to the rest of the world.

The United States is credited for the adding machines, Addressograph, aerosol spray, air brakes used on railroads, the motorized airplane and airplane automatic pilot; the hydro airplane, electric auto, auto self-starter, bifocal lenses for spectacles, bottling machine, cameras producing almost instant pictures in black and white and color, cash register, cotton gin, electric fan, grain harvester, mower and reaper; movies, Kodak, electric light, turret lathe, linotype and monotype for setting type for the printing industry, Mason canning jar.

Microphone, talking movies, nylon and rayon, paper machine, ball point and fountain pens, phonograph, color photography, photo film which made the glass photo plate obsolete, safety pin, revolving chamber pistol, cast iron plow and disc plow, rotary and web printing presses, punch card accounting.

Radar, radio beacon, safety and electric razors, repeating rifle, rubber vulcanizing, sewing machine, alloy steel, submarine and submarine torpedo, telegraph and teletype machines, radio and automatic telephones, electronic television. automatic toaster, electric trolley cars, typewriter, electric vacuum cleaner, electric washer, electric welding, barbed wire and the zipper.

I like My America. It's a fabulous land and we have a lot going for us.●

HUMANITARIAN EFFORTS LAUDED

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MARKEY. Mr. Speaker, we are all aware of the disastrous storms that ravaged our country this past winter. Massachusetts was particularly hard-hit, and parts of my district, the Seventh District, took the brunt of those storms. Thousands of people were forced to evacuate their homes, and the property damage was enormous. Many people and organizations came to the aid of those who were hurt by the storm. For all of their help I give my heartfelt thanks. In particular, I would like to express my sincere gratitude to, among others, Allegheny Airlines, the Heinz U.S.A. Co., and the Campbell Soup Co. These three groups provided great relief to our area by supplying food to our citizens and transporting that food free of charge. Such humanitarian efforts should not go unnoticed. I would like to enter my letters of appreciation to these three groups into the RECORD so that we may all be aware of their fine and commendable efforts:

FEBRUARY 15, 1978.

Mr. RAYMOND S. PAGE, Jr.,
U.P. Government Relations, Campbell Soup Co., Campbell Place, Camden, N.J.

DEAR MR. PAGE: On behalf of all the storm victims who have had their lives made a little easier thanks to the generosity of the Campbell Soup Company, may I offer my sincere thanks.

Campbell's donation of thousands of cases of canned goods came at a critical time when individuals and families were desperately in need of some good, hot food.

Campbell's exemplary humanitarian efforts during our time of need will remain prominent in the memories of Massachusetts citizens for years to come. We are deeply grateful.

Sincerely,

EDWARD J. MARKEY,
Member of Congress.

FEBRUARY 15, 1978.

Mr. FRANK ZUSEL,
Customer Service Manager, Allegheny Airlines, Logan International Airport, E. Boston, Mass.

DEAR MR. ZUSEL: On behalf of all the storm victims who have had their lives made a little easier thanks to the generosity of Allegheny Airlines, may I offer you and your company my sincere thanks.

Truly, if it were not for the humanitarian efforts of Allegheny, the expeditious shipment of thousands of pounds of canned goods donated by the Heinz and Campbell companies, would have not been possible.

Your company has performed an exemplary service to the people of Massachusetts. We are deeply grateful.

Sincerely,

EDWARD J. MARKEY,
Member of Congress.

FEBRUARY 15, 1978.

RICHARD B. PATTON,
President, Heinz U.S.A., Pittsburgh, Pa.

DEAR MR. PATTON: On behalf of all the storm victims of eastern Massachusetts who have had their lives made a little easier thanks to the generosity of the H.J. Heinz Company, may I offer my sincere thanks.

The Heinz donation of thousands of cases of canned goods came at a critical time when many families were desperately in need of some good, hot food.

Your company's exemplary humanitarian efforts during our time of need will remain prominent in the memories of Massachusetts citizens for years to come. We are deeply grateful.

Sincerely,

EDWARD J. MARKEY,
Member of Congress.●

COMMENT ON FOOD LABELS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. CRANE. Mr. Speaker, for those who have recently been exposed to some Government commercials stating "Have you read a good label recently?" the following will make interesting reading. If the Congress cannot pinpoint all of the reasons why food costs have been going up, here is an easy one:

LABELING OF FOOD PRODUCTS 1978

HOW MUCH IS ENOUGH?

Recipe—Macaroni and Cheese Casserole:
1 cup Grated American Cheese.
4 oz. Macaroni.
¼ cup Bread Crumbs.
3 tbsp. Margarine.

1977—4 Ingredients: Macaroni, Cheese, Bread Crumbs, Margarine.

INGREDIENT DECLARATION 1978

Macaroni and Cheese Casserole

1978—53 Ingredients: Macaroni (Durum and Patent Flour, Niacin, Sodium Iron Phosphate, Thiamine Mononitrate, Riboflavin); American Cheese (Water, Cream, Milk, Sodium Citrate, Disodium Phosphate, Salt, Artificial Color and Sorbic Acid (a preservative)); Bread Crumbs Enriched Flour (Wheat Flour), Niacin, Reduced Iron, Thiamine Hydrochloride, Riboflavin), Corn Syrup, Sugar, Vegetable and/or Animal Shortening (Contains one or more of following: Hydrogenated Soybean Oil, Hydrogenated Cottonseed Oil, Hydrogenated Palm Oil, Lard), Salt, Yeast, Whey, Soy Flour, Dough Conditioner (Sodium Stearoyl-2-Lactylate), Yeast Nutrients (Contains one or more of the following: Mono Calcium Phosphate, Calcium Sulfate, Ammonium Chloride, Potassium Bromate), Calcium Propionate to retard spoilage; Margarine (Liquid Corn Oil, Partially Hydrogenated Soybean Oil, Water and/or Pasteurized Skim Milk and/or Nonfat Milk, Salt, Lecithin, Artificial Flavor, Colored With Carotene and Vitamin A Palmitate).

Is this really more informative?
Is this the intent of Congress? ●

APPROPRIATIONS TESTIMONY—HIGH ENERGY PHYSICS

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. PURSELL. Mr. Speaker, on April 12, 1978, I had the honor of introducing three distinguished professors from the University of Michigan—which I represent—to the House Public Works Appropriations Subcommittee. The testimony concerned a topic which is crucial to all of us—alternative sources of energy. Prof. Lawrence W. Jones spoke about elementary particle high energy physics. Prof. Terry Kammash addressed the question of magnetic fusion energy research. Solar energy was discussed by Dr. John A. Clark. Realizing the tremendous importance of new energy sources, the subcommittee received this testimony with interest. Therefore. over the next 3 days, I would like to share this testimony with you, as I believe each man addressed an area which we should be more aware of.

Today, I would like to present the testimony of Prof. Lawrence W. Jones on high energy physics:

My name is Lawrence W. Jones, I am a Professor of Physics at the University of Michigan, and I would like to address the question of support for the Department of Energy program of basic research in the area of elementary particle high energy physics.

I have been continuously active in the area of elementary particle experimental research for over 25 years as a member of the University of Michigan faculty. My research has included work on the development of new particle accelerators and detection devices as well as experiments on the nature of elementary particules and their reactions. I have done experiments at facilities built under the auspices of the Atomic Energy Commission at the Berkeley Lawrence Radiation Laboratory, the Brookhaven National Laboratory, the Argonne National Laboratory, and (currently) the Fermi National Accelerator Laboratory, as well as at the European Nuclear Research Center (CERN).

I am not a member of any board, panel, or committee of the Department of Energy nor of any of its laboratories or facilities, and my own research program is supported by grants from the National Science Foundation.

THE CURRENT CHALLENGES IN ELEMENTARY PARTICLE PHYSICS

Elementary particle physics has evolved rapidly over the past decade, so that our view on the structure of matter at its most fundamental level is dramatically different from what we learned and taught only two decades ago. It is now understood that portions, neutrons, and mesons as well as the myriad of erstwhile "elementary" particles are not themselves fundamental entities but that they in turn are composed of more elementary constituents. The concept of these constituents, generally referred to as "quarks", has permitted a general and unifying explanation of what threatened to become a mushrooming plethora of many kinds of particles, just as the Periodic Table of Elements and the subsequent understanding of the structure of the atom over 50 years ago led to an understanding and systematization of the hundred or so chemical elements.

With the quarks concept of particle structure we have reached a new level in the hierarchical structure of matter, continuing downward to the increasingly microscopic, a sequence that may now be arranged as: crystal, molecule, atom, nucleus, particle, and quark.

We know with some certainty that there are at least four kinds of quarks, and there is new evidence from experiments last year at the Fermi National Accelerator Laboratory, that there may be a fifth quark. The questions now begged include the following:

(1) Are there additional new quarks? If so, how many and what are their masses and other properties?

(2) What is the nature of the forces that bind quarks together? How do they interact, and how can we understand the observable properties of our "elementary" particles in terms of their quark constituents?

(3) May there be an internal structure to the quark?

(4) Where are the quarks? In spite of the success of the quark model, free, independent quarks remain very elusive, and a theoretical structure has evolved to explain the apparent permanent confinement of quarks into the observed particles. And yet, to many physicists, the explanation is unsatisfying and the search for free quarks remains a challenge.

I have noted here but one of the areas in particle physics which is currently experiencing a rapid conceptual advance. On another front, we seem to be on the verge of a comprehensive understanding of the "weak" interaction, that force which governs most radioactive decay. A crucial prediction in the theory concerns the existence of very massive fundamental bodies, the "intermediate vector bosons". These cannot be produced at any existing accelerators and must await facilities now under construction, due to the great energies required for their formation. The observation of these bosons with their predicted properties would be a landmark in our understanding of the weak interaction without parallel.

The single, most important parameter of our laboratory facilities for studying the structure of matter at its most fundamental level is energy, and it is this toward which current developments in our program of facilities development and construction is directed. Raising the energy is equivalent to examining a system with a more powerful microscope. The laws of physics teach us that higher energy is necessary to probe smaller dimensions. The rapid strides in our progress in this area over the past few years is a direct consequence of the energies made available by the CERN storage rings, the Stanford Electron-Positron Storage Ring, SPEAR, and the Fermilab 400 GeV proton synchrotron. And yet cosmic ray experiments at energies well beyond those available in any current facility hint at phenomena totally unantici-

pated by current theories and by experiments at existing accelerators. Whereas the cosmic ray intensity at these energies is quite inadequate to study most of the predicted challenging phenomena such as the intermediate vector bosons, these observations offer an outstanding challenge to our comprehension of elementary particle physics.

THE RELATIONSHIP BETWEEN NATIONAL LABORATORIES AND UNIVERSITY USERS

The Department of Energy program in support of research in elementary particle physics, together and in cooperation with that of the National Science Foundation, is based on two elements: the facilities at the national laboratories and research centers, and the community of physicists in the major universities of the nation. Whereas the spokesmen for the national laboratories have articulately stated their program needs, I believe that those of us in the universities who make use of the national facilities may have been less vocal in our support of this program. I should like to emphasize the essential dependence of our research program in elementary particle physics at the University of Michigan for example, on the continued vitality and federal support of the national facilities at Stanford, Argonne, Brookhaven, and Fermilab.

The United States has a remarkable record since 1945 in this area of science as indeed in most of science and technology. Our share of the world's major discoveries and inventions has been quite out of proportion to our financial investment in research. I believe that our success is due in no small part to our integration of the most advanced research into the graduate—and undergraduate—educational programs of the great universities. This is in marked contrast to the system in some other nations where most research is isolated in large research institutes, and a quite separate group of scholars are involved at the universities in the education of students. And yet huge particle accelerators are beyond the scope of single universities to build and staff; the existence of the national laboratories is logical and necessary. But I urge continued cognizance of these two facts; that the universities and their faculties are an essential part of this national program, and that the central facilities at the national laboratories are essential to the programs in physics education and research at the universities.

THE CURRENT FUNDING CRISIS AND THE FERMILAB ENERGY DOUBLER-SAVER

Our national preeminence in this area of science is currently threatened by the increasingly lavish support extended to the corresponding research programs in Western Europe, the Soviet Union, and the Far East. We now see evidence of a reverse brain drain, where some of our best scientists have joined the staff of the CERN European Laboratory, and other physicists have moved their research activities to Europe while retaining an operational base at an American university.

Meanwhile, younger, promising students are discouraged from entering the field in view of the long term employment prospects, and more senior scholars are drifting away into other research areas.

There are currently three major new facility efforts active in the Department of Energy program in this area: The Stanford Linear Accelerator Center Positron-Electron Project (PEP), the Brookhaven Intersecting Storage Accelerator (ISABELLE), and the Fermi National Accelerator Laboratory Energy Saver-Doubler. All three are important and valuable steps in our national program, and I urge the strongest, most vigorous financial support of each.

I would like to emphasize in particular my interest in and support of the Fermilab Energy Doubler. This is the smallest (financially) of the three, and its funding is at the lowest, slowest level. However, its potential for very significant advances in our understanding are so very great that I personally believe that it may yield a research payoff quite out of proportion to the investment.

The Energy Doubler was originally conceived as a means of doubling the Fermilab accelerator energy through addition of a second ring of magnets in the same tunnel, the new magnets are to be superconducting and thus achieving over twice the field strength and hence twice the particle energy of the present facility. This objective entirely justifies the cost and effort required. The Fermilab accelerator, thus upgraded, will provide beams of neutrinos, mu mesons, pi mesons, and other secondary particles more energetic by more than a factor of two than any other facility on earth. In addition, the superconducting magnets will achieve this energy increase with a great reduction in electric power, leading to sufficient economies to pay for the cost of the program over a period of several years.

And yet the most exciting potential research use of the Energy Doubler appears to me to be as a colliding beam storage ring. This role, less apparent in the early discussions of the Doubler and in its justification before D.O.E. and Congress, had evolved over the past two years to a point where it has generated a very high level of excitement among many physicists. The Energy Doubler will make possible collisions of 150 GeV protons stored in the existing accelerator ring with 1000 GeV protons in the Energy Doubler ring, achieving an energy in the center-of-mass of 800 GeV, equivalent to a high energy proton of about 300,000 GeV incident on a stationary target. The Energy Doubler ring could also be used to contain counter-rotating protons and antiprotons on the same orbit, and collisions of these two beams, each of 1000 GeV, would provide an energy of 2000 GeV in their center-of-mass, equivalent to an antiproton of about 2,000,000 GeV incident on a stationary proton target! This most remarkable feat is possible with intensities and interaction rates of interest using a combination of very ingenious tricks and sophisticated new technology. The energies which will thus become available are 1000 times the highest energy currently achieved with particle accelerators (60 GeV center-of-mass, equivalent to 2000 GeV on a stationary target at the European Nuclear Research Center).

The energies encompassed by this facility will comfortably exceed those at which remarkable and mysterious cosmic ray phenomena are reported, and will permit a quantitative search for the intermediate vector bosons noted earlier. Great as the excitement surrounding this search will be, I find even more challenging the opening of an energy frontier at one stride a thousand times beyond our experience. Previous steps in particle accelerator construction have permitted advances in the energy frontier by factors of 3 to 10 every 5 to 10 years. Never before has a leap of this magnitude been technically possible.

The experimental exploitation of this new energy regime will require great ingenuity, expertise, and time. It is intrinsic in the nature of colliding beam facilities that few experiments and groups can be accommodated simultaneously. Thus it is important and desirable that two other facilities will enter this energy domain. The CERN 400 GeV proton synchrotron is being modified to store counter-rotating proton and antiproton beams, each up to 400 GeV, thus providing an energy of up to 300,000 GeV equivalent, and the Brookhaven ISABELLE project will achieve the same energies with proton-proton collisions at higher intensities and with more fully-developed facilities for experimental exploitation. I am absolutely convinced that the physics revealed in the new energy regime thus made accessible will productively occupy an intensive experimental effort at each of these three facilities for many years, and that the progress of physics will thus be most productively served.

United States physicists are understandably eager to be the first to explore this scientific no-man's-land, however the CERN program is well funded and staffed, and is scheduled for operation in the early 1980's. With proper financial support, the Fermilab antiproton-proton facility could mount experiments in 1981, due to the Energy Doubler progress to date.

The Fermilab Energy Saver-Doubler appears in the President's FY 79 budget as a $10 million construction and a $5 million operation items in a total Fermilab budget of $84.4 million. Regrettably the budget history of the project has been one of cutbacks and slowdowns, leading most recently to the resignation of the laboratory director. I urge most strongly that this budget be supported and increased if at all possible.

SUMMARY

Elementary particle high energy physics has significantly altered our comprehension of the fundamental nature of matter in recent years. Developments in accelerator technology now make possible dramatic increases in the energy available with the accelerator facilities at our national laboratories through colliding beams. Cosmic ray experiments, theoretical predictions, and past experience all strongly suggest remarkable new discoveries and advancements in knowledge will flow from experiments with these facilities.

As a university scientist, I am concerned over the level of support of these laboratories and the rate of construction of these new facilities, particularly of the Energy Doubler-Saver at the Fermi National Accelerator Laboratory. I respectfully urge you to support the entire elementary particle physics program of the Department of Energy and to assist it in achieving the rich potential which is now apparent.●

IOWA SUPPORT FOR THE BOUNDARY WATERS WILDERNESS ACT

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. FRASER. Mr. Speaker, Minnesota's Boundary Waters Canoe Area (BWCA), the American half of the Quetico-Superior wilderness lakes country, has become the focal point of considerable controversy both in Congress and in my home State. It is important to bear in mind that the decisions Congress will make about this area's future management are of concern to citizens throughout the country, not only to the residents of Minnesota. Widespread interest has developed about our deliberations, an interest exemplified by the active concern of Minnesota's southern neighbor, Iowa.

There has been consistently strong support among Iowans throughout the debate for bringing full wilderness protection to the BWCA. Lacking wilderness areas in their own State, residents of Iowa explore the BWCA's lakes and forests by the thousands—according to recent Forest Service data, they account for approximately 45,000 visitor-days annually in the BWCA. More than 60

percent of these visitors do not use motorboats, preferring instead to paddle a canoe, hike, or cross-country ski.

Interest from their constituents encouraged five of my colleagues from Iowa to cosponsor H.R. 2820, the Boundary Waters Wilderness Act: BERKLEY BEDELL, MICHAEL BLOUIN, CHARLES GRASSLEY, TOM HARKIN, and JIM LEACH. More recently these same Members sent a letter to the House Interior Committee urging support for a compromise BWCA bill developed by PHIL BURTON and BRUCE VENTO and subsequently passed by the committee on April 10. I include the text of their excellent letter below:

CONGRESS OF THE UNITED STATES,
April 10, 1978.

Hon. PHILLIP BURTON,
Chairman, Subcommittee on National Parks and Insular Affairs, Interior and Insular Affairs Committee.

DEAR MR. BURTON: As bipartisan co-sponsors of the original Fraser bill concerning the Boundary Waters Canoe Area (BWCA), we compliment you and Mr. Vento on your efforts to arrive at a fair compromise regarding its future.

Last year, over 6,500 Iowans registered as visitors to the Boundary Waters Wilderness. The Subcommittee has on file petitions signed by over 10,000 Iowans urging support for the original Fraser bill. In addition, there are some Iowans who have vacation homes in the BWCA. For this reason, we had concerns as to how their property and lifestyle would be impacted—concerns which we believe have been addressed by the Subcommittee.

While you and the Committee members have certainly spent many hours studying the BWCA issue, we would like to share with you our reasons for supporting the Subcommittee bill. We urge you to oppose weakening amendments that will be offered during Committee mark-up. Possible amendments include:

1. Logging: The anticipated amendment would call for a 20-year phase-out of logging in the BWCA. The Subcommittee bill calls for an immediate halt to logging, but provides authority for the Secretary of Agriculture (1) to intensify forest management on federal lands outside the BWCA; (2) to furnish substitute timber outside the BWCA for companies now holding contracts in the BWCA; and, (3) to compensate the companies now holding contracts for losses. Equally as important, the State of Minnesota has pledged that it will make up for the softwood volumes that the industry claims will be lost if the BWCA is closed to logging. The State has submitted a report to the Subcommittee that details its plan.

2. National Recreation Area (NRA): The anticipated amendment would strike the 227,000 acre NRA which the Subcommittee bill establishes. We oppose this amendment. However, based upon our belief that zoning decisions are better made locally, we do support the amendment which will be offered reducing the Secretary of Agriculture's zoning authority and strengthening the zoning authority of the State and counties within tho NRA.

3. Motorboats: The anticipated amendment would open up lakes in the interior of the BWCA to motorboat travel. The Subcommittee bill allows continued motorboat use of 13 of the lakes on the perimeter of the BWCA and responds to the concerns of home owners, resort operators, and local fishermen by: (1) allowing motors on every lake (with 2 minor exceptions) where there are concentrations of homes and resorts; (2) authorizing the Secretary to develop a recreational plan outside the BWCA in the surrounding Superior National Forest that would include improving access to remote lakes; and, (3) making available financial and technical assistance to resort owners and canoe outfitters to help them adjust to more wilderness-oriented management of the BWCA.

4. Snowmobiles: The anticipated amendment would establish snowmobile trails in the BWCA. The Subcommittee bill continues the current ban on snowmobiles, but allows for 2 routes to enable people to reach homes and resorts in Canada. The Subcommittee bill takes into account that snowmobiles have been banned by an order from the Secretary of Agriculture for the last two winters. The ban was proposed after extensive public hearings. The bill also authorizes the Secretary to complete trunk snowmobile trails in the rest of the Forest outside the BWCA.

We appreciate your consideration of our bipartisan effort and hope you will share this communication with the other members of the Committee prior to mark-up.

Kindest personal regards,

Sincerely,

MICHAEL T. BLOUIN,
Member of Congress.
CHARLES E. GRASSLEY,
Member of Congress.
TOM HARKIN,
Member of Congress.
JIM LEACH,
Member of Congress.
BERKLEY BEDELL,
Member of Congress.

There has also been firm editorial support from the Iowa press for the Boundary Waters Wilderness generally and the Burton-Vento compromise bill specifically. One writer refers to the "proprietary attitudes" held by certain people who live and work in the vicinity of the BWCA. That proprietary attitude can be expressed just as legitimately by Iowans. One Iowan who testified at field hearings last summer in St. Paul put the matter quite clearly: "We will grow your corn if you will preserve our wilderness." I commend the two pieces from the Des Moines Register to my colleagues' attention:

PLUS FOR PRESERVATION

If the compromise bill on the Boundary Waters Canoe Area, approved by a House subcommittee this week, makes it through Congress pretty much as is, the cause of wilderness preservation will have been served. In this conflict—local commercial interests and motorboaters vs. pure-wilderness advocates and canoeists—those who favor minimum human impact on the wilderness have an edge.

The compromise legislation, offered by Representatives Phillip Burton (Dem., Calif.) and Bruce Vento (Dem., Minn.), would permit limited us of motorboats and snowmobiles but would ban mining and logging. It would provide compensation for loggers' losses and help for resort owners affected by tighter restrictions on use of the BWCA. A 227,000-acre National Recreation Area would be designated outside the BWCA, and the million-acre wilderness would be enlarged slightly.

Commercial interests are unhappy with the compromise; their champion, Representative James Oberstar, calls "compromise" a misnomer. Oberstar, whose district includes the Boundary Waters, had introduced a bill to continue multiple-use management of the area.

Some of Oberstar's constituents would have to adjust to a new situation if the compromise bill passes, but the need to maintain the nation's storehouse of wilderness should be given overriding consideration. Whether it will be is uncertain. Burton is chairman of the subcommittee that approved the compromise, so clearing the initial hurdle was not unexpected. Oberstar and likeminded legislators may have more clout later.

It would be unwise for lawmakers to make more concessions to commercial interests and communities on the edge of the BWCA. Preserving the wilderness is of national interest. A new law should not be any less protectionist than the subcommittee bill.

BOUNDARY WATERS WILDERNESS: LOCAL VS. NATIONAL INTEREST

(By Richard Liefer)

Indians and trappers who once paddled and portaged in what today is the Boundary Waters Canoe Area (BWCA), a million-acre wilderness in extreme northern Minnesota, would have marveled at the agitation in nearby Ely on July 8.

Many businesses were closed; "Gone to the BWCA hearing," store-window signs explained. Three Democratic congressmen were holding House subcommittee hearings at the high school, exploring ways to regulate use of the BWCA.

Parked in front of the school were loggers trucks bearing signs like "We need BWCA pine NOW!" One truck was a gallows from which the Sierra Club and two environmentalists were hanging in effigy. Bumper stickers invited the Sierra Club to "kiss my axe." Some people wore patches that said, "Snow belongs to everyone."

Recognizing one side of the BWCA-use dispute was no trick; subtlety was not rampant. The preponderant local sentiment seemed to be: Don't restrict "our" wilderness area any further.

The other side was represented, too, if less ostentatiously. In fact, the Sierra Club concluded that supporters of the environmentalists' pro-wilderness position were dominant in number at Ely and at a similar hearing the day before in St. Paul. Many came from far away.

The hearings addressed two proposals for regulating activities in the BWCA. One bill, by Representative Donald M. Fraser of Minneapolis, would preserve the wilderness character of all the BWCA by banning timbercutting, mining and the use of snowmobiles and motorboats. Iowa's Dick Clark has introduced an identical bill in the Senate.

The other House bill, sponsored by Representative James Oberstar of northeastern Minnesota, would divide the BWCA into two blocks, a 600,000-acre wilderness and a 500,000-acre national recreation area. Timber harvesting, snowmobiling, motorboating and some commercial activities could take place in the recreation area. Both bills would enlarge the BWCA.

New legislation affecting this vast expanse of lakes, streams and forests would be unnecessary but for a significant imperfection of the 1964 Wilderness Act, which included the BWCA in the new wilderness preservation system. (The BWCA is the second-largest wilderness area in the system, the largest east of the Rockies.)

Although the 1964 law defined wilderness as a place "where the earth and its community of life are untrammeled by man," it said the BWCA should be managed "without unnecessary restrictions on other uses, including that of timber." It also allowed for "the continuance within the area of any already established use of motorboats."

Those contradictions have kept the BWCA in a spotlight of controversy. Congress ought to end the ambiguity by declaring the BWCA a full-fledged wilderness. But that proposed solution boils the blood of many who testified in Ely.

Snowmobile and motorboat advocates, outfitters, officials of small communities adjacent to the BWCA, state legislators from the area, and elderly and handicapped outdoorsmen spoke in favor of the Oberstar bill or of no bill. Some prefer the status quo, or want the management authority of the secretary of agriculture reduced.

For the most part, the present management plan for the BWCA dates from 1965, when Orville Freeman was secretary of agriculture. Freeman designated 19 canoe routes (60 per cent of the water surface) for motorboat and snowmobile use. He divided the BWCA into an interior zone closed to logging and a slightly smaller area, a portal zone, open to timber harvesting.

Snowmobiling was prohibited last September, generating antipathy in Ely that beggars description.

It is not difficult to understand some of the concerns of northeast Minnesotans, for they involve matters of economics and convenience. El Lustman, executive director of the Ely Chamber of Commerce, figures that 65 per cent of the Ely economy is derived from tourism and logging, and that further restricting BWCA use would hurt the town. Officials of other small towns expressed a fear that federal encroachment on more municipal land would adversely affect their tax bases.

Fraser's bill, however, would increase federal payments to local governments in lieu of taxes. And there is no reason why local economies could not be adjusted to emphasize the unique, purely wilderness aspect of the BWCA.

Outfitters with money invested in motors and towboats naturally do not want them banned in the BWCA. And the elderly and handicapped who can fish but not paddle a canoe consider motorboats vital.

Considerable logging has taken place, but by 1975 a federal District Court had barred further harvesting of large blocks of virgin timber.

The Eighth Circuit Court of Appeals overturned the lower court's prohibition on logging about a year ago, but four timber companies with contracts on six timber stands have refrained from cutting until mid-September to give Congress time to act. Hence the need for prompt action.

While it is possible to sympathize with those likely to be inconvenienced by BWCA restrictions or affected by a reordering of the local economy, it is not possible to embrace the "liberty" argument. "People of Ely are also citizens of the United States," said one motorboat enthusiast. The right to motor to a favorite fishing spot is assumed to be God-given and constitutionally protected.

Lawmakers with the national interest in mind will discount that contention, and they will discount proprietary attitudes toward the BWCA—attitudes like those of Bob Lessard, a member of the Minnesota Legislature, who said: "We can take care of our lands up here."

Presumably Lessard would exclude from his list of exemplary local stewards whoever left a 1950s-vintage car rusting with its bumper almost in the water. True, the heap of metal I paddled past was just outside the BWCA, but is the mind-set behind such a practice left at the edge of the wilderness?

The BWCA is a national asset. It should be preserved for future generations in a state as close to natural as possible. This consideration should prevail over the narrow, short-range view of those who would exploit the wilderness. Under the Fraser bill, only non-motorized canoeists, hikers, snowshoers, etc., would use the BWCA.

Logging would destroy the BWCA's balanced ecosystem; it would deprive researchers of an invaluable gene pool. The BWCA still contains about half a million acres of virgin forests. Timber-harvesting practices cannot duplicate nature; forests grow back but species are lost.

The logging industry's need for timber from the BWCA is doubtful. Gerald L. Seck, a lawyer from Walker, Minn., who helped obtain an injunction against logging in the BWCA's portal zone, testified that timber-cutting in the BWCA is an "insignificant part of the logging industry in Minnesota." The state has 16 million acres of commercial forests, with only 160,000 acres of virgin timber in the portal zone.

Sigurd Olson, the leading environmentalist in Ely and a person of national reputation, contended that plenty of timber is available outside the BWCA. Two-thirds of the Superior National Forest lies outside the BWCA. Olson went along with the ambiguous language of the 1964 act—for which Minnesota Senator Hubert Humphrey is to thank or blame, depending on your viewpoint—because he wanted the bill as a whole. What has changed in 13 years? Use of the BWCA has increased enormously, Olson said. So has interest in canoeing and in the wilderness experience concept.

The "wilderness experience" is hard to define and highly subjective. It is easily ridiculed and can smack of the worst kind of elitism. At the very least, it means the enjoyment of peace, quiet and isolation. Motors destroy the peace.

There are thousands of lakes and millions of acres of timberland outside the BWCA, surely enough for loggers and motorboat enthusiasts. Compromise, the thrust of the Oberstar bill, is not necessary.

Congress must decide between local interests and the national interest. Lawmakers are expected to act soon. Jay Scholtus of Virginia, Minn., told the congressmen in Ely: "We have a wilderness treasure on our doorstep." The nation has a wilderness treasure in northern Minnesota. The treasure needs the protection only formal wilderness status will provide it.●

MUSKIE ON SUNSET

HON. JAMES J. BLANCHARD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. BLANCHARD. Mr. Speaker, recently the distinguished Senator from Maine, EDMUND S. MUSKIE, gave a very thoughtful speech on the current public attitude toward Government and the overwhelming need for us to enact meaningful "sunset" legislation. While his address would be relevant to our work at any point, it is particularly timely in view of the upcoming debate on the first budget resolution of 1979.

I would like to share Senator MUSKIE's thoughts with our colleagues, particularly with those who are cosponsors of my "sunset" legislation in the House—the identical version of the Muskie bill in the Senate:

REMARKS BY SENATOR EDMUND S. MUSKIE, ST. JOSEPH COLLEGE, PHILADELPHIA, PA., APRIL 11, 1978

I want to talk to you today about the State of your Government in Washington—A Government of which I am now a part—and which your generation will inherit before the next decade is out.

The news I bring from Washington is mixed.

The good news is that for most of us, 1978 is a pretty good year. We are coming out of the worst recession since the 1930's. Unemployment is slowly but surely coming down. The economy is slowly but surely picking up steam. We are at peace abroad and at home. We have little immediate reason for complaint.

The bad news is that many of us are uneasy about the state of national affairs. Unemployment may be coming down, but inflation is heating up. Our most thorny problems—energy and inflation—defy easy solution. We are less certain in our optimism for the future—and more nostalgic for times now passed.

Much of our uncertainty is directed at Government as the cause of all our ills.

The polls tell us that even with Vietnam and Watergate well in the past, Americans continue to have little confidence in their Government in Washington. Three quarters of the people believe Government is wasting their hard-earned money.

We in Congress get particularly low marks. Only a third of the public approves of the way we do our job.

But the public is not the only one who's frustrated with Government these days.

For years, Presidents have complained that when they push a button to get something done, nothing happens. President Carter is learning this painful lesson now. He may be the President, but up against an entrenched Bureaucracy, an Independent Congress, and well-established special interests, he is not always in charge.

And, believe it or not, some of us members of Congress are frustrated as well.

Over the last fifteen years, Congress has been at the forefront of tremendous economic and social change. Government has labored to produce a Governmental remedy to every injustice and need under the sun.

Clearly, the Nation has made much progress as a result.

We have made tremendous strides toward racial equality.

We have raised the standard of living for many poor Americans.

And we have provided health care to many who previously could not afford it.

Surely, we all have reason to be proud.

Yet today, our Nation has many unmet needs. And they bear a striking resemblance to those we first addressed through Government programs a decade ago.

Economic opportunities for blacks have increased dramatically. And yet unemployment among black inner city youth is a National disaster.

We have not yet eliminated poverty. Indeed, we have not even lessened the imbalance in income distribution between rich and poor to any great degree.

And we still have not cracked the fundamental health problem—providing high quality care at a cost all can afford.

We have pursued these and other problems at no small cost to the Federal budget.

And we have reaped an even greater cost, in the form of massive frustration with Government at every turn.

This frustration stems, I believe, not from Government having tried to solve problems—but from not having solved them well enough.

It stems not from a disenchantment with the goals we've set—but with a Government grown so large and ineffective that it is suffocating the very goals it seeks to achieve.

Finding a remedy for this frustration is the most important—and difficult—challenge to Government today. For we have little hope of solving the truly serious problems we face—from inflation to energy to jobs—as long as Government bears this burden of no trust.

And I am convinced that we cannot meet that challenge unless Government is prepared to change its ways.

In my view, the task of meeting this challenge must fall first of all to the Congress.

It is the Congress which is the arbiter of national priorities, through the legislation we enact.

It is the Congress which is vested with control over Government spending, through the constitutional power of the purse.

And it is the Congress which has generated most of the activities of Government which now give us both hope and despair.

If Government has become unresponsive to the people, it is the Congress which must bear much of the blame. For it is our job not just to take the credit for new programs, but to see to it that all tax dollars are well spent.

Today, I believe that Congress is failing to meet its responsibilities on both important counts. Instead, we find ourselves increasingly unable to respond to problems which arise. For to a surprising degree the hands of Congress are tied by legislative commitments we've made in the past.

A brief look at some numbers from the budget illustrates the reason for my concern.

President Carter's budget for next year will be at least $40 billion larger than last year's spending total.

Of that $40 billion increase, fully three quarters is automatically committed before the first budget decision is made. That $30 billion will be spent on programs we call "uncontrollable"—programs which mandate certain benefits regardless of cost, and over which neither Congress nor the President has any control save through amending or repealing existing law. Uncontrollable spending includes such programs as social security, veterans' benefits, medicaid, medicare and welfare.

Only $2.5 billion of the increase in next year's budget is available for all other domestic needs—education, housing, mass transit, pollution control and many more.

More shocking than these numbers is the budget trend they confirm. Over roughly the last ten years, uncontrollable spending has grown from about 55% of the budget to more than 75% of all Federal spending for fiscal 1979. From 1968 to 1977, the budget grew from $180 billion to $400 billion. Of that increase, a staggering 37% went for three uncontrollable programs alone—social security, medicare and medicaid.

Meanwhile, other spending on which the public places a high priority has been squeezed out. For example, Federal spending for education has actually grown less than the budget as a whole over this same period.

Why doesn't Congress do something to rein in uncontrollable spending? Because most of these programs, in addition to being popular, are almost permanent. They never come up on a regular basis, for thorough, top-to-bottom review.

To be sure, they are amended from time to time, to correct the worst examples of waste. By and large, they are protected from the normal political and budget pressures of our democratic process. So each year we watch them devour ever larger amounts of scarce resources. And each year we are left with less room in the budget to meet changing national needs.

To make a bad situation worse, the meteoric rise in uncontrollable spending is not the only factor tying our hands. Uncontrollable programs are the big ticket items, and so they command the greatest concern.

But the vast majority of Federal programs are relatively modest, short-term efforts aimed at a highly specific need. And today, these programs constitute a maze of government activity that no mere mortal can comprehend.

We have both health and community development programs in the hundreds—veterans and education programs in the dozens.

We have over a hundred different agencies with regulatory responsibilities. And twenty-two separate offices have health programs that they run.

In a single office in the Department of Housing and Urban development, there is one program to promote development in inner cities, and another to encourage development in the suburbs.

Of the many health programs we have, there are 29 related to cancer prevention alone. That ought to be enough to meet any conceivable need. Yet a comprehensive cancer prevention plan proposed by the State of New Jersey early last year has yet to be funded, because individual Federal agencies couldn't get together in a joint effort to help the state.

Legislation to remedy this kind of problem has seldom been used, because each agency insists on going its own separate way. Only one state in the country, for example, has succeeded in untangling dozens of overlapping planning programs into a single, unified plan.

In 1973, the Federal Register contained 35,000 pages of rules and regulations governing the way Federal laws are carried out. Only four years later, the size of the Register had almost doubled, to 65,000 pages.

Twenty-four States and 44 cities now have their own office in Washington to keep up with everything the Federal Government churns out.

And it's not hard to understand why.

Many programs overlap. Others work at cross purposes to each other.

No agency knows what any other is doing. And until recently, many congressional committees did not even know how many programs fell within their jurisdiction.

In sum, over the last fifteen years, Congress has created an array of programs so complex that government cannot deliver the very services we've enacted into law.

What good does it do us to have 29 different cancer programs when they can't work together to do the job?

What good does it do us to spend billions to revive our older cities and at the same time encourage people to leave the cities behind?

The answer is, of course, that it makes no sense at all.

Why, then, doesn't Congress do something to make the system more sane?

The answer to that question lies in the way Congress works.

Over the years, Congress has responded to a host of individual problems and needs. We have done so with the best of intentions. But we have also done so one program at a time.

Today, our good intentions notwithstanding, we've accumulated so many programs that we have no idea how they all mesh. And we have even less idea how much the public's tax dollars have bought.

Pressure to continue all these programs is strong.

Support for reexamining them simply does not exist. Every agency, committee and lobby wants its own program to not only continue but grow. No one is willing to take the risk that fewer programs might be for the good.

As a result, we are all paying the price, in the form of government immobilized by the past.

As one who believes strongly in an active federal role, I am very much troubled by this situation we are in.

Our dilemma limits both present and future budgets—and the national priorities they define.

It denies Congress the money and the public support it needs to effectively carry out its legislative work.

It raises a particularly serious issue for your generation. For your future could be even more heavily mortgaged to the past, unless Congress is willing to mend its ways.

And there is another, more tangible threat which concerns me very much. It is that if Congress cannot bring spending under control, Government may well drive inflation through the roof.

In a recession, it is important for government to spend money to keep the economy from going dry. When unemployment is high, government spending replaces private consumption, which declines during hard times.

But as we head into an inflationary period—which by all accounts we are doing today—excessive government spending only makes inflation worse.

That means that over the next few years—or as long as inflation poses a threat—if we want to spend more money on a good program, we're going to have to throw a bad one out.

This is not lofty rhetoric about making government more effective. It is a hard fact of life—one that Congress can ignore only at substantial political peril to itself, and at devastating economic peril to the nation as a whole.

With all this talk of gloom and doom, where should Congress go from here?

For starters, Congress took an important step toward controlling government spending four years ago, when it adopted the Congressional Budget Act. In agreeing to budget reform, Congress for the first time committed itself to considering the budget as a whole—of setting spending limits each year and trying to abide by them.

As chairman of the Senate Budget Committee since that new process began, I can report that our experience so far has been mixed.

On the positive side, budget reform has dramatically increased the awareness in Congress of the costs of actions we take.

On the negative side, budget reform has failed to give us the discipline over spending that we need.

The temptation to always spend more on existing programs is irresistibly great. And in our yearly battle between the budget total and its individual parts, the parts always seem to win.

So the lesson of budget reform for me is that the process does not go far enough. For unless and until Congress gains control over the individual parts of the budget, we will never have truly effective control over the budget as a whole.

Two years ago, I introduced a bill in the Senate which I believe can help provide the kind of extra discipline that we need. Known as the "sunset" bill, this proposal embodies a very simple approach. First, it would require that all Federal programs come up for review on a regular basis. Only those programs which Congress specifically decided to reenact would remain on the books.

Second, the bill would require that all programs of similar purpose come up for review at the same time. This provision would give Congress much needed perspective on the entire Federal effort in an area at once, instead of the usual one program at a time.

When the sunset bill was first introduced, it had enormous political appeal. More than half the Senate and over a hundred members of the House added their names to the bill's support.

In the campaign of 1976, sunset was a ready-made issue for voters concerned about government out of control.

Today, that political climate has changed—and the outlook for sunset is bleak. Efforts are afoot in the Senate and House to do the bill in—and replace it with legislation which resembles sunset only in name.

And the closer we get to a vote, the harder it is to find the support we thought we had.

Opponents of sunset argue that it will create a workload too great for Congress to manage well. They argue that termination is too heavy-handed an approach to encourage program review.

I believe these arguments are a smokescreen for other, more political concerns.

The real opposition to sunset, I believe, is rooted in the very system which makes sunset such a good idea—a system that rewards

politicians if we pass new programs, but not if we take some away.

And sunset, for all its ultimate promise, offers none of us the immediate acclaim we've come to expect.

Over the long haul, sunset can help free up scarce resources—and that will be a boon to us all. Indeed, that is the essence of my support and hard work for this idea for the last two years.

But others view the sunset idea as a threat to benefits they've fought hard to win.

I do not share their worry. And it concerns me very much.

Our national interests are not set in concrete. And we are not well served by a government which is.

We have a great unfinished agenda—one begun two hundred years ago. To fulfill it we will need to call on every resource we have. Today, we may all have to forgo something we want, so that tomorrow we will have the resources we need.

We cannot afford a government which does not spend our money well.

We cannot afford the inflation which will come if government does not tighten its belt.

And we cannot afford a continuing vote of no confidence from the people we are bound to serve.

Sunset offers us one of the few opportunities I've seen to respond to these various needs. It may not be a perfect answer—but I haven't heard anything better. And I think we ought to give it a try.

As widely as sunset is feared, it will not change the spending patterns of government overnight.

All it can do is open up the political process through which our democratic system works best—so that we can again have a government which reassures and unites the hopes of this great land.●

THE CONGRESSIONAL RAILROAD COSTING PLAN—A $2 BILLION IMPROVEMENT

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MOSS. Mr. Speaker, 2 years ago Congress enacted the Railroad Revitalization and Reform Act of 1976, popularly referred to by the railroad industry as the 4R Act. The purpose of the act was to improve the quality of rail service in the United States through various regulatory reforms, including a revision of the agency's cost and pricing practices which theretofore had been totally independent and unrelated.

Title II of the act directs the Commission to establish expeditious procedures for the publication of railroad rates based on seasonal, regional, or peak-period demand for rail services, or in accordance with the carrier's cash outlays for such service and the demand therefor. The first three are forms of "peak responsibility pricing," while the latter is a value of service methodology. Definitions for peak, seasonal, and regional are not provided in the act because neither the ratemaking nor accounting professions could provide such delineations.

Title III of the act deals with the Uniform System of Accounts, which Congress directed the Commission to revise to be cost effective, nonduplicative, and compatible with present and desired managerial and responsibility accounting requirements of the carriers. In order to assure the availability of accurate and pertinent economic and accounting data, the act specifically directs the Commission to revise the system of accounts to give due consideration to appropriate economic principles. As the House Committee on Interstate and Foreign Commerce carefully observed in its report of December 12, 1975, on H.R. 10979, it intended these principles to include at least peaks in traffic demand and differences in value of service.

Peaks in traffic demand and value of service are two economic factors which play a role in determining costs and the use of capacity. However, unless such economic factors are taken into consideration in the computation of costs, all other traffic will be burdened with the cost of unused or excess capacity. Accordingly, the committee directed the Commission to devise the system of accounts to give due consideration to appropriate economic principles in order to assure the availability of accurate and pertinent economic and accounting data for essential regulatory purposes including rate change request, abandonment of facilities, determination of responsibility for peaks in demand and cost of service, and issuance of securities." Report 94–725, 94th Congress, 1st Session, p. 65.

Thus, Mr. Speaker, it is clear that one of the principal goals of Congress in enacting the 4R act was to harmonize the agency's cost and pricing practices. To be specific, it is the intent of Congress that the Uniform System of Accounts be revised in such a manner that the cost section of the Commission's Bureau of Accounts will allocate the railroad's fixed, common, joint, and constant costs on the basis of appropriate economic principles—including peaks in traffic demand and value of service—and that the tariff sections of the railroads and Commission will relate the railroads' rates to those costs.

I should interject, for purposes of clarification, that the Commission found in docket No. 34013 that peaks in traffic demand require added capacity which is idle at other times. The higher the peak traffic demand relative to average demand, the greater both the added cost of providing such service, and the total costs. As a result, unless such added costs are assigned directly to the traffic responsible for the peak demand, as mandated by Congress, all other traffic will be burdened with the cost of the excess capacity during the idle times engendered.

With respect to the allocation of expenses on the basis of demand or value of service, the Committee on Interstate and Foreign Commerce noted in its report on the Surface Transportation Act of 1974 that "This is the most commonly used business method for allocating costs. It is a weighting technique. The end result of this methodology is to allocate costs to traffic on the basis of the value of that traffic." Report 93–1381, 93d Congress, 2d session, page 40.

The reason that I, as a member of the Committee on Interstate and Foreign Commerce, am reiterating the intent of Congress in passing this legislation is because I understand there is some misunderstanding within the industry and the Commission as to our intent. The difficulty arises in part from the fact that Congress could not define the various appropriate economic principles and terms precisely since, as I observed earlier, the accounting professions could not provide us with such definitions.

In addition, the Commission initially opposed such a costing methodology. Its specific objections were set forth in a letter to our distinguished chairman, Hon. HARLEY O. STAGGERS, dated October 3, 1974:

> In Title VI, new objectionable language has been added in section 601. . . . It requires us to consider 'peaks in demand' and 'value of service' in determining the apportionment of common, joint, fixed or common costs to more than one service or activity. Peaks in demand and value of service are not use factors to be considered in determination of cost. They are economic considerations which may play a role in product pricing. These are for use in management decisions and deserve consideration in the regulatory process insofar as setting rates is concerned, but not as cost considerations. Therefore we strongly recommend that 'peaks in demand' and 'value of service' be deleted as mandatory considerations in computation of costs.

Suffice it to say, the House of Representatives rejected the Commission's argument and adopted H.R. 5385, as amended. A year and a half later, the Senate joined the House in again mandating the same costing methodology in section 307 of the 4R act. I might add, since many railroads are now conglomerates, it is becoming increasingly difficult to understand why anyone would contend that appropriate economic principles, such as peaks in demand and value of service, should not be considered in determining the rail service costs when those same factors are being used by the firm to allocate the expenses associated with its lumber, oil, real estate, and other nonrail operations.

Finally, it should be noted that in a report to Congress on "The Impact of the 4-R Act Railroad Ratemaking Provisions," dated October 5, 1977, the Commission stated, "it is estimated that peak period premium rates designed to equalize demand could yield over $100 million in additional revenues annually from grain, metallic ores, and construction aggregates industries, and that "under best case assumptions, it is estimated that during the next 10 years, a capital expenditure of nearly $1 billion for new covered grain hoppers alone could be avoided by an effective peak load pricing strategy." Page 15.

A billion dollars in additional revenues and a billion dollar reduction in capital expenditures, over the next 10 years, clearly establishes the real value of the congressional plan to relate rail rates to properly allocated costs, and the need to have the cost sections of the railroads and the ICC's Bureau of Accounts allocate the railroads' fixed, common, joint, and constant costs on the basis of appropriate economic principles—includ-

ing peaks in traffic demand and value of service.●

DEPARTMENT OF AGRICULTURE AND THE MEAT INDUSTRY RESOLVE DRUGS CONTROVERSY

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. NOLAN. Mr. Speaker, when Carol Tucker Foreman, Assistant Secretary of Agriculture for Food and Consumer Services, addressed the National Pork Congress on March 10, 1978, she announced a policy of cooperation between the Department of Agriculture and the meat industry to resolve the controversy regarding the use of nitrites and sulfa drugs.

Neither the interests of producers nor consumers will be furthered by an atmosphere of constant confrontation. I welcome Secretary Foreman's decision to seek a mutual resolution of the outstanding problems. As Foreman emphasized in her speech:

Our goal must be to carry out the law in a way that will protect the public and build confidence in the food supply while not causing major dislocation to producers and processors.

The speech follows:

I appreciate the opportunity to meet here with you today. The USDA is concerned with the well-being of America's farmers, including pork producers. I am concerned about America's farmers and pork producers—that's why I accepted the position as Assistant Secretary at USDA, and that's why I am happy to be here with you today.

Let me talk a moment about my responsibilities at the Department and how they might affect you as farmers and pork producers. Under my policy jurisdiction is the Meat and Poultry Inspection Program—the program that is vested with the enormous responsibility and duty to assure the safety and wholesomeness of our nation's meat and poultry supply. I want you to know that I feel that duty and responsibility personally. I have great respect for American meat producers. You do a good job for the public. But my job involves evaluating—using the best methods and research available—any system, substance or product involved in meat or poultry production which may be harmful to the public health. Congress, speaking for the people, gave this important safety mandate to USDA and to the Meat and Poultry Inspection Program.

There are several areas where our actions seem to have aroused understandable concern on your part.

The first involves the use of sodium nitrite to cure meat products. The second is sulfa residues in swine meat. We at USDA know that we will be able to resolve both of these problems in a manner that protects public safety, builds public confidence that pork and cured meat products are safe and wholesome, and causes no major economic dislocation to pork producers. It is a tall order but we can do it.

Let me explain. First, I would like to go over for you why USDA is involved in regulating nitrites and sulfa. Second, I would like to explain what we have done and propose to do with regard to nitrites. Third, I would like to announce publicly to you today our plans for a Government-wide effort to reduce the percentage of sulfa residue violations and to help producers who have had violations avoid them in the future.

First, the Department of Agriculture is involved in regulating nitrites and sulfa because Congress has directed us to make certain that no adulterated or contaminated meat moves in commerce.

Federal meat inspection functions were first created and given to USDA by Act of Congress over 70 years ago. Some people wonder why a Department set up to represent the interests of farmers was given this function of public health protection. Certainly, one good reason is that the law is designed to protect the good reputation of meat products and meat producers. It makes certain that you don't lose business because someone tries to get an economic advantage by selling an inferior or adultered product. Imagine how many people would decide not to eat meat if they were afraid they would get sick from it. Obviously, meat producers want people to eat meat. Obviously, consumers want to eat meat. Meat is an excellent source of protein and iron and it tastes good. It is a highly desirable product. So public health protection in this case is also farmer and producer protection.

Now you may be wondering if industry protection was so vital, why has it been that only in the past year or so the problem of public health protection has gotten so much attention and caused you so much trouble. Well, the first answer is that it hasn't happened just over the past year or so. Surely, we all remember our history lesson about the first meat inspection act which was passed because of Upton Sinclair's revelations in his book *The Jungle*, about filthy meat packing plants. One of the reasons for the early meat inspection laws was to stop meat packers from using dangerous chemicals such as formaldehyde to give bad meat a fresh appearance. Public health issues, such as chemicals in meat, are not new. They simply involve different chemicals today. We must work together to resolve the problems we face. Ignoring problems, denying them, hoping they will go away are really not answers.

Even if I left USDA today and John Soorholtz took my place, there would still be public concern about the safety and quality of food. Reporters would still ask questions, congressional committees would still demand to know why we allow meat with nitrite or sulfa residues on the market. There would still be a law to enforce and a market to be preserved. Our goal must be to carry out the law in a way that will protect the public and build confidence in the food supply while not causing major dislocation to producers and processors.

The meat inspection law states that we shall not approve as wholesome any product that contains a substance that may be injurious to health.

Nitrites alone are not injurious to health. In some products, however, they can combine with other substances to form a powerful cancer-causing substance known as nitrosamines. Since nitrites have the virtue of providing a desirable taste and color and some protection from botulism, we want a system where we can have those benefits with the assurance of no nitrosamines.

We have asked the meat packing industry to show that we can continue to use nitrites with no nitrosamine formation. We expect that they will be able to do so—either by using ascorbate and perhaps Alpha tocopherol to block the formation of nitrosamines or by reducing the use of nitrites, or by a combination of these factors. At the very worst, we might have to find ways to manufacture cured meat products using substitutes for nitrites. Some small packing companies do this now and do it very successfully.

Stories have appeared in the media saying that USDA might "ban bacon." Those are not our words, nor our sentiments. We feel confident that the public will continue to have cured meats, including bacon.

Our goal is to have cured meats in a way that preserves consumer confidence. If the public fears that there is a threat in eating cured meat, they won't eat it. We must assure safety to preserve the market for your products.

Now let's turn to sulfa. We at the USDA know how important sulfa is to you in preventing such diseases as atrophic rhinitis. We want you to continue to have access to sulfa drugs. No one wants to see them removed from the market.

Once again, however, the Meat Inspection Act requires that meat not contain any substance that may be harmful to health. Sulfa residues can cause allergic reactions in some people. If someone gets sick from eating pork, or thinks they might get sick, they won't eat pork. They'll choose a substitute. I think the solution to the sulfa residue problem must be a way for pork producers to use sulfa with no residues above the accepted tolerance.

USDA is committed to a strong course of action to achieve this. Today, I want to announce to you a Government-wide action plan to eliminate the troublesome and persistent problem involving sulfa residues.

Let's look at the problems you have told us that you are having with the sulfa residue testing program and see how USDA, with your valuable assistance, can solve them.

First, the period of time it takes to get test results back to the producer has been too long. So we will commit more resources to our testing program in order to cut down the turn-around time. We will also make greater efforts to notify a producer promptly by telephone (backed up by a registered letter) whenever a violation is discovered. We want to work closely with you in dealing with these problems.

But you also have to work with us. We know that when violations are discovered, some producers have been changing routes or using other producers as middlemen to get their animals into commercial channels.

This practice involves only a smaller minority of producers, but it has become a significant problem. The deliberate diversion of pork with residues into the market is the main reason we have to ask for legislative authority to quarantine herds and premises when a residue problem has been identified, and the authority to require owner identification of all livestock. We would like to avoid that legislation by seeing the residue problem disappear.

Second, I have met with the leaders of all the pertinent U.S. Government agencies and we have developed a program that will help us help you avoid residue violations. We have developed a coordinated program to use all of the USDA's extensive resources to do this. On Wednesday, Secretary Bergland gave us his approval to move ahead with our action plan. Most of you know Dr. Frank Mulhern of the Department's APHIS. He is a man of great talent and experience in dealing with animal health problems. He and his agency have led the fight to eliminate hog cholera. He will now coordinate a new program using many of the same techniques to help eliminate sulfa residue violations.

As you know 10 to 15 percent of swine slaughtered since 1973 have had violative levels of sulfa residues.

We have not done a very good job of finding out why this is the case. In part that is because FDA only investigates violations to determine if there is a need for prosecution. FSQS really only carries out its functions at the slaughterhouse and APHIS only has authority to deal with disease control. As a result, there has been no comprehensive eval-

uation of the total problem on the farm. In addition, we have not found adequate ways to work with producers. And producers fear that if they are open about their problems, they won't be able to market their hogs.

The new USDA program will work with FDA and producer groups and feed and sulfa manufacturers to:

1. Conduct a study of the factors causing residue violations and train personnel to identify these sources to producers who have violations.

2. Carry out an information campaign to let producers know about steps needed to avoid violations. This will include fact sheets, background materials, slide presentations and other methods.

3. Conduct research studies on such problems as recycling of sulfa thru feces and urine; feed manufacturing practices; dose levels and time of withdrawal.

FDA, APHIS, FSQS, Extension and ARS will all play a role. We want and Dr. Mulhern has sought your advice and counsel too. We want a practical, realistic and workable program to aid swine farmers when violative levels are found at slaughter and to help producers prevent a recurrence.

We believe the program I've outlined will succeed. We want to work with you in this and the Department has assigned the lead role to a man who we know has your confidence.

Finally, the USDA will seek to create a joint task force of producers, feed and drug manufacturers and consumers to review the sulfa program. The NPC has sought this action and we are glad to comply, working together I believe this is a problem that can be overcome. We believe this approach will make it possible to carry out the dual responsibilities of USDA—to protect and promote the interests of producers and to assure the safety and quality of food for the American public.

The fact is that I believe that, by working together, we can resolve virtually any problem that arises. I have never accepted the position that farmers and the people who consume their products must be in conflict. I would like to prove I am right. If I am, we will all benefit.●

FLORIDA THANKS ISABELLA OF SPAIN

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. PEPPER. Mr. Speaker, my distinguished colleagues, I would like to bring to your attention a recently issued proclamation of the State of Florida, honoring Queen Isabella of Spain, whose effort and vision aided Christopher Columbus in his momentous discovery of the American Continuent, and whose birthday of April 22, 1451, we will remember this year.

It is unusual for our democratic Government to pay such homage to the royal rulers of the Old World in that bygone epoch, when the rights to vote and decide for others lay wholly in their hands and was not shared as we believe to be desirable and just. Yet we are grateful for the opportunity Columbus opened up for our fathers, and, indeed, for the world, to live their lives in freedom under equal law. And we also thank Queen Isabella for having shown a sensitivity to the progress of nations and of men, which finally enabled Columbus to undertake that "fanciful" journey of his, which others had denied him, but which would change forever the face of the known Earth and the assumptions of the medieval human mind.

The resolution follows:

Whereas, throughout the ages, man's course has often been guided and altered by great rulers who have left indelible marks upon their eras; and

Whereas, the enthusiasm and support of a single ruler led to the discovery of America and the resounding effect this discovery had upon the history of the world; and

Whereas, this great ruler, Queen Isabella, wife of Ferdinand of Aragon, enabled Christopher Columbus to make his daring voyage that resulted in his reaching the shores of the New World, thus laying open a new chapter in the history of mankind's progress; and

Whereas, the discovery and history of Florida are closely tied to said Spanish daring and exploration; and

Whereas, the history of America has direct linkage to the birth of Queen Isabella on April 22, 1451;

Now, therefore, I Reubin O'D. Askew, by virtue of the authority vested in me as Governor of the State of Florida, do hereby proclaim April 22, 1978 as "Queen Isabella Day" in Florida and do urge all citizens to pay homage to the memory of said Queen whose daring vision and fervent support for explorers' dreams made possible the epoch-making discovery of the New World.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed at Tallahassee, the Capital, this 9th day of March in the year of our Lord nineteen hundred and seventy-eight.

REUBIN O'D. ASKEW,
Governor.

Attest:

BRUCE A. SMATHERS,
Secretary of State.●

STATE OF TEXAS MOVES OUT ON SELF-SUFFICIENT ENERGY FARMING

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. PICKLE. Mr. Speaker, the Southwest Farm Press recently carried an article outlining the innovative approach being taken in the State of Texas to farm energy. State-supported efforts there center on small scale, on-site energy systems composed of low-technology, "off-the-shelf" components using farm wastes, solar and wind energy, and other renewable resources to make each farm self-sufficient in energy.

I commend this effort in my State and I urge my colleagues to read the article, reproduced, in shortened form, as follows:

SELF-SUFFICIENT ENERGY FARMING BEING PUSHED

(By Calvin Pigg)

COLLEGE STATION, TEX.—Considering the money you send off to pay fuel and power bills, it's a little hard to believe your farming operation has the potential for becoming nearly totally energy self-sufficient.

"The farmer is in an enviable position," contends one energy authority. "He produces not only food and fiber but also a carbonaceous, energy-rich byproduct called agricultural residue, or biomass."

"Using these and other available resources, such as solar and wind power, he conceivably could become a producer of excess energy on his farm."

Energy farming is definitely a thing of the future.

These rather startling revelations on the tightening energy crisis question came to light during a recent special report given to a Texas House legislative subcommittee here. The subcommittee is holding hearings around the state to explore and make recommendations to the state legislature on alternate sources of energy for agriculture, and how specifically such developments can be speeded up.

Agriculture consumes just under 10 percent of the total amount of energy used within the state.

Farmers currently are shelling out a gigantic $700 million a year for all fuels.

"If all goes well," a Stephenville poultry specialist told the subcommittee headed by Representative Bill Keese of Somerville, "we'll be lighting light bulbs in May with electricity generated from methane gas derived from poultry wastes."

"This is a start, at least," said E. L. Fulton, poultry husbandman from Tarleton State University. "Our goal is to run the whole poultry house on gas generated from poultry manure."

EFFORT BY STATE

The day and a half session held on the Texas A&M University campus under auspices of the Center for Energy and Mineral Resources (CEMR), and other Texas A&M departments, agencies and divisions, brought into perspective an apparent well-directed and little-known state effort to devise alternative sources of competing energy, not only for agriculture, but for other segments of the Southwestern economy as well.

Conference participants took the wheel of a small automobile whose engine was fueled with methanol, an alcohol derived from cereal grains.

The group heard about potential "energy-making crops" and farm cropping systems coming on stream that reduce total energy inputs.

"ENERGY DEMONSTRATORS"

Subcommittee members heard a prediction that in the not-too-distant future certain local farmers will be selected as "energy farm demonstrators." They would show their fellow growers the latest "unconventional energy-generation systems," much the same way they demonstrate a new cotton variety or farm machines today.

The subcommittee heard reports on agricultural biomass, the conversion of grains into alcohol, methane generation from poultry, swine and beef feedlot wastes, wind and solar power and a host of other research developments—either now in progress or on the drawing board.

One major departure from federally-sponsored energy developmental efforts, the subcommittee was told, is Texas' effort to devise small-scale, on-site systems of energy-making for the private citizen that will require low-level technology to install and operate.

Initial efforts in this direction, said CEMR acting director Dr. Spencer Baen, are being made to build such units with what he referred to as off-the-shelf components.

The six-member subcommittee was appointed by Representative Joe A. Hubenak of Rosenberg, chairman of the Committee

on Agriculture and Livestock within the Texas House of Representatives. Subcommittee members, besides Rep. Keese, are Rep. Dan Kubiak of Rockdale, Rep. Susan McBee of Del Rio, Rep. Luther Jones of El Paso, Rep. W. G. "Bill" Coody of Weatherford and Rep. Elmer Martin of Colorado City.

As part of an overview of energy usage by Texas farmers, a university official said producers today are spending some $700 million annually for all types of fuel. This, he said, compares with a total net income of $900 million not very many years ago. He was indicating the sharp increase in costs to producers for fuels that has taken place in the last four years.

Nearly 40 percent of the state's total agricultural energy-fuel requirement goes for fuels to pump irrigation water.

The spokesman, Dr. Harry O. Kunkel, dean of agriculture at Texas A&M, said he expects to see a giant conversion taking place within agriculture in the years ahead as energy costs further rise and as it seeks to become a producer of energy to meet its owr. needs.

The region's large supplies of lignite coal, forestry and crop residue biomass by-products and large quantities of animal wastes are among the tools and raw resources scientists have at hand to work with in the quest for new and economically feasible sources of energy.

On the overall subject of energy research for agriculture, one speaker, Dr. Kurt J. Irgolic, an Austrian-born chemist, said that while Texas agriculture's consumption of energy is only 0.6 percent of the total U.S. energy consumption, it is of vital importance to the state's overall economic health.

"It is extremely disturbing that the energy necessary to produce vital food and fiber products might not be available in the future in sufficient amounts to Texas farmers."

"The rising prices for energy commodities could make many agricultural operations unprofitable. There is also the possibility that these commodities might not be available in sufficient quantities at any price in the near future, because of unpredictable political developments involving oil-producing countries, and in the long term, because of the decline in the production of petroleum and natural gas."

"SAVING GRACE"

Dr. Irgolic said that the various carbon and hydrogen-based residues produced on the farm "might be the saving grace for agriculture in an energy-scarce future."

AS SUBSTITUTE FUEL

The conversion into pyrolysis liquids (from gas), he continued to tell the legislative subcommittee, could serve as a substitute for gasoline or diesel, or into methanol or ethanol suitable as fuels for internal combustion engines. He said such on-farm wastes can be most simply burned directly producing steam and then electricity.

Dr. Irgolic said that today, however, very few, if any, of the systems needed for on-farm energy production are presently available to farm producers at an affordable price.

Recognizing this, he said that the CEMR and other university branches has sought to initiate and fund research, development and demonstration activities "whose goals are to make available efficient, reliable and affordable systems for energy-generation on the farm."

He added that all projects underway are looking at low-technology, small-scale systems suitable for on-farm operation.

EIGHT APPROACHES

The Texas A&M chemist who is CEMR associate director said the major thrust areas of such development are divided into eight basic areas:

Combustion and gasification of biomass.

Pyrolysis of carbonaceous materials to general liquid fuels.

Anaerobic digestion of animal wastes to methane.

Methane production on a poultry farm.

Bioconversion of agricultural residues to hydrogen.

Methanol as a motor fuel.

Agricultural use of solar energy.

Optimizing wind as an energy resource.

PROGRAM FUNDING

Existing activities, it was reported, are being funded in part by the Texas Legislature for what is known as an Energy Public Service Program.

Compared to the Nation's tightening energy squeeze, the CEMR official said that, fortunately for agricultural producers, the task of developing small-scale, on-farm energy conversion systems based on agricultural by-products stands to be accomplished in a few years.

"We really do not have much choice," concluded Dr. Irgolic. "An energy crisis will immediately be followed by a food crisis. Nobody will even notice then whether he freezes or is uncomfortably hot, because hunger pains will overwhelm him."

During the meeting the House representatives were given briefings on the Econocot cotton growing methods being devised in the energy-pinched Pecos River Valley of Texas, and newest crop production methods, featuring fast-maturing varieties and integrated pest management methods that cut cost outlays and energy inputs into major agronomic crops of the state.

AGRICULTURAL BIOMASS

A major part of the subcommittee report dealt with agricultural biomass and its potential within the state.

(The term biomass refers generally to all living or once living matter.)

(It is estimated that over 12 million tons of agricultural wastes are produced annually in Texas, and the average heat content of this residue is between 5,000 and 6,000 Btu per pound. This compares, according to a subcommittee finding, with Texas lignite coal which is valued at about 7,000 Btu per pound, but with a high undesirable sulphur content.)

On the subject of energy from biomass, Dr. Edward A. Hiler, soil and water engineer, said a recently completed study reveals that five major Texas crops—sorghum, corn, cotton, wheat and rice—are known to produce about 20 million tons of in-field plant residues. These residues, he said, have a theoretical heat value of 270 trillion Btu's.

He said this alone represents energy in amounts equal to all on-farm fuel purchases within the state in the year 1974.

Dr. Hiler said that in other terms the amount of potential energy to be found in these crop leftovers in equal to 1.7 times the energy used for irrigation, or 64 percent of the total energy requirements of Texas agriculture.

He said that generally the collection and transportation of biomass materials is not seen as a bottleneck to new energy source production, when scaled down to the individual farm unit basis.

The engineer told the House subcommittee members that technology for a small, on-site energy production plant using agricultural biomass currently is being put together at Texas A&M. He and team members are working on a prototype engine system for converting biomass into power.

"We've considered a number of various energy transfer methods," said Dr. Hiler adding that the direct combustion (burning) of cotton gin trash has been chosen for the trial.

"We also are concentrating on using presently available components to combust and convert the energy into usable shift power to generate electricity."

OLD TECHNOLOGY

He said the technology to be used is far from new. "This first demonstration is aimed at establishing the operational requirements and economics of small-scale, on-site systems."

It was obvious that research workers are keying-in on cotton gin trash as an initial fuel source. It is readily available at the gin site, and for the most part is considered a waste product with little economic value.

Engineer Dr. Hiler cited two examples of the potential energy in common crop residues—gin trash and grain crop residues.

"A gin operating at a capacity of 15 bales per hour is accumulating trash which contain thermal potential equivalent to 21,-545 kilowatts of power."

COULD POWER GIN

"Only about 750 KW is needed to power the gin; so with a thermal conversion as low as 3.5 percent, gin trash could provide the power for the gin."

A 2,000-acre Texas High Plains farm growing sorghum, corn or wheat was his second example. Such an operation, he explained, normally yields 1.5 to 3 tons of crop residues per acre. (The residues are either grazed in the field by livestock or turned back to the soil.)

All crop residues from the 2,000 acre place, he continued, would have a thermal potential equivalent to 14 million kilowatt hours per year. "If the farm has 200 irrigation wells requiring 50 horsepower each and operating 2,000 hours annually, 1.5 million Kwh each year are needed to pump the water."

"Assuming only a 10.6 percent conversion efficiency," said Dr. Hiler, "crop residues could be used to supply energy enough to pump this water."

ENERGY FARM

He said looking beyond his present work, he foresees the need in the future for such a thing as an energy research and demonstration farm to be located somewhere across the state.

"We believe a central place is needed to bring all the energy research together and demonstrate its use."

"This farm would demonstrate new crop production systems like Econocot, and low pressure mobile trickle irrigation methods. It would also use solar energy, biomass and wind energy sources."

FOREST RESOURCE

The state's massive forestry resources offer another major possible source of biomass for energy purposes. Speaking to this point with projections was Dr. Ed J. Soltes, associate professor of forest science.

Dr. Soltes said that approximately five million tons of "logging residues" annually are known to result from an annual harvest and processing of 475 million cubic feet of timber.

"Some or all of the logging residues, and wood associated with our woody brush in Texas," he said, "could be made available for energy generation." There are, however, he continued, several technical and economic problems that must first be addressed and solved.

He said that in general the problem areas are not specific to wood but are associated with the use of many types of agricultural biomass. These include basic availability of the resource, havesting and collecting, transportation costs, processing method and finally the economics of the whole procedure.

In concluding its report to the legislators, speakers concurred that agricultural residues cannot solve the United States' overall energy problem, but, they stressed, can provide significant contributions in specific situations, keyed on local small scale, on-site energy generation in the future.●

DICKINSON: SCHOOLS SHOULD TEACH FREE ENTERPRISE

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. DICKINSON. Mr. Speaker, the Dothan Eagle on April 17, 1978, ran an editorial entitled "Shouldn't Schools Teach Basics of Our Free Market System?" The Eagle answered its own question with a resounding "Yes."

I am afraid that most adults and youth have lost sight of what made this Nation the economic giant it used to be—the free market system. But now less and less of this philosophy is being passed on to our children. Our children are being exposed to more and more about the "evils of business."

I would not doubt that the steady slide our Nation is taking toward "socialism" and "welfare stateism" in part, is proportional to the education our kids are not getting about the strengths of the free market system.

I commend to my colleagues the following editorial from the Dothan Eagle:

SHOULDN'T SCHOOLS TEACH BASICS OF OUR FREE MARKET SYSTEM?

Railroad president Prime F. Osborn III touched on one of our pet peeves in a speech to the Dothan Rotary Club last week: ignorance of how our economic system works.

This ignorance has been confirmed time after time over many years by the results of questionnaires submitted to college and high school students. Some of the misconceptions are little short of astounding.

We have often thought that courses explaining the free market economic system should be required, starting with the lower grades and progressing through the upper levels. In high school our system could be compared to socialism, mixed economic systems and totalitarianism. And we're not advocating propaganda, but rather imparting factual information.

Somehow we need to teach our young people (and a lot of their elders) that the keystone of free enterprise is the profit motive and that this system has produced the highest living standard, has benefited more people, than any economic system in the history of man. It is often said that profit is not a dirty word, but unfortunately it is to too many people.

Would fifth graders understand economics? Yes, if we start with simple explanations. We could start with the simple truth that governments create no wealth, earn no money. Individuals and companies create wealth. Governments take part of this wealth by taxing profits and redistribute it, supposedly for the benefit of all the people.

At the appropriate grade level we could explain how businesses, large and small, actually operate and who benefits. We could teach difference between the markup and profit. We could explain that a certain kind of store's average markup is, say, 40 per cent; that is, the store buys an item for $1 and sells it for $1.40. But that out of the 40 cent markup all expenses must be paid, including salaries, rent, electric power, insurance, social security taxes, license fees, office supplies and so on. What's left is profit, which then must be divided with government. How many young (or old) people know that the federal government takes about half of a corporation's profits in taxes?

In the higher grades we could teach the different ways of measuring profits. That is, operating profits (revenue less expenses), after-tax profits, and return on investment. The importance of the latter should be taught because companies don't just start; they must be created and pump-primed with money invested by individuals, groups such as labor unions, pension funds, or other companies. The money is invested with the hope of making a profit eventually, a hope that is not always realized. And that would lead to an understanding of what we call venture or risk capital, and its importance in our free market system.

Some of the things that should be taught would surprise not only young people but many adults. For instance, how volume is directly related to prices and profits. How many people know that the large retail food chains make a profit of less than five cents on each dollar taken in, and some years it's 2 cents or even less?

High-volume businesses such as food stores should be compared to comparatively low-volume concerns such as jewelry stores where much higher markups are necessary for the proprietors and employees to make even a modest living.

Well, enough of this skipping about at random among economic facts. But perhaps the point has been made. We need a better understanding of how our economic system works. And perhaps the best way is to teach the subject in schools, early on.●

SUBCOMMITTEE ON CRIME TO HOLD HEARINGS ON TREASURY'S NEW FIREARMS REGULATIONS

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. CONYERS. Mr. Speaker, I wish to announce that the Subcommittee on Crime of the House Committee on the Judiciary will on May 3 and 4, 1978, hold hearings on proposed new firearms regulations by the Treasury Department.

On March 21, Treasury published in the Federal Register a notice of proposed rulemaking, proposing that first, a unique serial number be required on all firearms imported into or manufactured in the United States; second, all Federal firearms licensees be required to report to the Bureau of Alcohol, Tobacco and Firearms any theft, loss, or recovery of a firearm; third, each licensed manufacturer be required to submit to ATF a quarterly report of firearms manufactured; fourth, licensed manufacturers and dealers be required to submit a quarterly report of firearms dispositions. Comments on the proposed regulations may be submitted to BATF for a period of 60 days following publication in the Federal Register.

We do not ordinarily hold hearings on administrative regulations issued pursuant to legislative authority, as is the case here. However, considerable controversy has surrounded the proposed regulations from the day they were announced, and public misunderstanding of them is widespread. Our public hearings, which will include examination of the need for the new regulations, the legislative authority under which they were issued, and their operational scope and effectiveness, should serve to help put the regulations in proper perspective.

Hearings will begin each day at 9:30 a.m., in room 2141, Rayburn House Office Building. Witnesses representing Treasury Department and BATF, police officials, the firearms industry, retailers of firearms, elected officials, and private organizations concerned with firearms issues will be among those appearing.

Persons wishing to submit prepared statements or to testify should contact the Subcommittee on Crime, 207E Cannon House Office Building, telephone 225-1695.●

SAVAGING THE PRESIDENT

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. EDWARDS of California. Mr. Speaker, has any President in recent times had a more successful first year? I think not, and the following article by Anthony Lewis from the April 24, 1978, issue of the New York Times examines the record.

SAVAGING THE PRESIDENT

LONDON, April 23.—In Europe as in America, Jimmy Carter is the subject of much head shaking. The Economist of London leads this week's issue with a worried article about what it calls his "insouciant Presidency." America's friends, it says, must hope that "the giddy slide" in his fortunes is coming to an end.

Some of Mr. Carter's troubles are no doubt of his own making. He was naive in his expectations of quick reform. He evidently lacks a taste—a Rooseveltian savor—for political maneuver. And so on. The list is familiar.

But his shortcomings by no means explain the scorn, the savagery of the attacks on him. That is evident if the criticism is viewed in the light of a little history.

The current wisdom among political analysts, for example, is that Mr. Carter has "overloaded the circuits" in Congress with his legislative requests. Compared to what? Harry Truman poured Fair Deal proposals onto resistant Congresses, and he is now everyone's political hero.

One of President Kennedy's assistants goes around the country these days making sour remarks about Jimmy Carter. I greatly admired Kennedy, but his first year in the White House was hardly a model of wisdom. Its distinction included the Bay of Pigs and a national bomb shelter program. Compared to that, Mr. Carter's first year was a blessing.

Then there were Lyndon Johnson and Richard Nixon. Can people really have forgotten their terrible flaws of character? The Economist, fairer to Jimmy Carter than his domestic critics, did praise his personal qualities while faulting his politics. He has "many of the right instincts," it said, "whether on disarmament, racism or human rights." It praised his openness and decency and said, "He may be impulsive, but he is not furtive."

Memories seem short on both sides of the Atlantic. The Europeans complain about lack of consultation, and there are such faults in the Carter record. But they do not amount to much compared, say, with the sudden, unilateral change imposed by Mr.

Nixon on the dollar basis of the world monetary system—nor to the crudity with which Mr. Nixon's Secretary of the Treasury, John Connally, dismissed European and Japanese views.

Foreign policy experts, European and American, express a good deal of longing for the experience and sureness, as they put it, of Henry Kissinger. But their memories are partial, too—or their values distorted.

Mr. Carter's foreign policy advisors may not have so magisterial a presence. But they have not bombed a peasant society back to the Stone Age. They have not bombed any countries, or invaded any. In fact, this is the first recent Presidency that in its first year has not used military force.

It would be too much to expect a sense of history from the press when it performs its function of criticizing politicians. But in its treatment of Jimmy Carter's White House, it has seemed especially shallow and shrill—more concerned with gossip and style than with substance.

When Mr. Carter talks about inflation, the critics examine the inconsistencies in his past views, the dubious prospects for success. But hardly anyone states the simple truth that inflation is an extraordinary intractable problem, and not only for this country. That is so of all economic issues in the developed world today. Does France have the answer to unemployment, or Britain?

In many areas the problems are harder than they used to be, and the resistance of interest groups to any conceivable solution more intense. Fighting the rapid rise in hospital costs sounds like good politics, but it turns out that hospital workers and doctors and trustees have their reasons to disagree with the policy—and powerful means to fight it.

The problems are more difficult, consensus more elusive than Jimmy Carter said in his campaign—or probably understood. That is a reason for disappointment with him. And I think he and his Georgia colleagues are still resented by some as outsiders. There are Europeans bothered by the idea of a "peanut farmer" as President. And in Washington, last year, there was the nauseating absurdity of a newspaper reporting resentment at the Georgians' failure to come to dinner parties.

But Jimmy Carter rates no personal sympathy; he asked for the job. And indeed, the tendency to focus political disappointment and animosity on the American President goes beyond him.

Writing in The New York Review of Books, Professor Sheldon Wolin of Princeton suggests that "an unnatural rite has become incoporated into the anthropology of American political life: the ritual destruction of the President." If that is so, America's friends should worry—and for reasons much more serious than the faults of Jimmy Carter.●

PERSONAL EXPLANATION

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MAZZOLI. Mr. Speaker, on April 13, 1978, I was unavoidably detained in carrying out my responsibilities as a House conferee on the omnibus judgeship bill.

Had I been present, I would have voted "yes" on roll No. 222, H.R. 11003, authority for employment of personnel in the White House Office and the Executive Residence.●

JUDGES AND "FORGOTTEN INTELLIGENCE"

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

[From the Washington Star, Apr. 22, 1978]

JUDGES AND "FOREIGN INTELLIGENCE"

The notion that so-called "foreign intelligence" electronic surveillance—the kind that has to do with espionage and the like—should henceforth be controlled by judicial warrant has become an idee fixe in Congress. Mighty labors have been expended to design bills effecting this control. One passed the Senate overwhelmingly on Thursday.

Their passage marks a sharp departure. Every president for almost four decades has assumed that the discretion to gather such intelligence on his own motion lay among the "inherent" presidential powers.

Now a curious thing has happened. The longer the legislative tinkering goes on, the more the doubts of both libertarian and conservative critics seem to converge. Those doubts did not impress the Senate, but there is still time to consider them in the House.

These two sets of critics start, of course, from very different outlooks. Libertarians worry that judicial restrictions, which they otherwise favor, may be too lax—especially if warrants for electronic eavesdropping are not governed by the "probable cause" standards that govern the issuance of ordinary domestic search warrants. Conservatives worry that the president's intelligence-gathering capacity might be stunted at the risk of injury or mischief to the national security.

What is remarkable is that, starting poles apart, both have conceived substantial doubts that judges, deliberating in closeted hearings, are or can be proper and effective monitors of what is permissible in "foreign intelligence" surveillance practices.

Statistics from the U.S. Judicial Conference, of primary interest to liberatarian critics, show that wiretap warrants for domestic criminal purposes in the year 1976 were easily obtained. Only two were denied; 686 were authorized. Such figures raise the spector of the "rubber stamp."

Conservative critics are skeptical of the effectiveness and usefulness of judges for other reasons. The most compelling comments we have seen are by former Solicitor General Robert Bork and by Rep. Robert McClory of Illinois, ranking Republican on the House Judiciary Committee.

Both offer similar criticisms for the *idee fixe* of judicial supervision. Mr. Bork, for instance, observes that since the purposes of foreign intelligence surveillance are quite different in nature from the purposes of domestic intelligence (it is necessarily more speculative and often does not look to prosecution) the process of clearance is more administrative than judicial.

"There are and can be," writes Mr. Bork in a recent *Wall Street Journal* article, "no judicial criteria for making decisions about the needs of foreign intelligence, and judges cannot become adequately informed about intelligence to make the sophisticated judgments required. To do an adequate job they would have to be drawn fully into intelligence work, which is not the point of this enterprise. To suppose that they would defer to the superior expertise of the agencies is either to confess the safeguards will not work or to underestimate the strength of the tendency displayed by the judiciary in recent years to take over both legislative and executive functions."

Mr. Bork and Representative McClory both make the additional point that any law vesting control over foreign intelligence in the bench "seems certain," as Mr. Bork puts it, "to diminish substantially the responsibility and accountability of the executive branch." Writes Mr. McClory: "It should be seen that by shifting from the president to the judiciary the responsibility to authorize foreign intelligence electronic surveillance, the courts become a buffer to executive accountability."

Even conceding that the executive branch has sometimes abused the "foreign intelligence" discretion and may do so again, we nonetheless find these criticisms compelling. If special judges designated to issue warrants for foreign intelligence surveillance are held to a "probable cause" standard (i.e., if they must be shown how the job at hand is directly related to the commission, or possible commission, of a crime) they will undoubtedly have to veto some intelligence operations that are arguably prudent and necessary. If the standards governing their warrant-issuing function are broad, making allowance for the difference between foreign and domestic intelligence, what is "judicial" about the judge's role?

We wonder, in short, whether the debate over this legislation isn't misconceived. By and large, the debate has turned on the mechanics and details of judicial control—not on the more basic issue of whether judges are necessarily more satisfactory guardians of foreign-intelligence gathering than duly-instructed, responsible executive officials who are overseen by, and accountable to Congress.

The House and Senate bills differ in detail but share the fixed notion that judges *must* be brought into the picture. Must they? Is the case so open-and-shut? It may be a good time to reexamine this fundamental premise of intelligence "reform." Are judges really the answer to perceived abuses and excesses that originated more in administrative laxity and misbehavior than in institutional necessity?●

FINANCIAL DISCLOSURE BY REPRESENTATIVE CLARENCE D. LONG

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. LONG of Maryland. Mr. Speaker, each year at this time I make a voluntary disclosure of income, taxes, assets, and liabilities.

For 1977, I paid taxes totaling $21,970.32 on an income of $58,021.49.

My Federal income tax was $15,239.90; State and local income taxes totaled $3,892.82; real estate and sales tax totaled $2,837.60.

Chief source of income was $54,275 salary as Congressman. Other taxable income included: An annuity of $1,233.68 and dividends of $788.33 from the Teachers Insurance Annuity Association; net rents of $1,623.48 from a farm in Harford County, Md.; $100 for an article in the spring 1977 Harvard Journal of International Security. No outside income was received for speeches. Mrs. Long's total income was $1 won in the Maryland lottery.

Following my long-standing policy, no gifts however small or in whatever form were accepted by me or my staff—not even flowers or fruit.

Real property consists of a home in Ruxton, Md., purchased in 1946 for $32,000 and currently mortgaged for $5,443.65 with the Provident Savings Bank of Baltimore, and a 112-acre farm in Harford County purchased in 1965 for $118,000. I owe $1,000 on an unsecured short-term note to the Equitable Trust Co. of Baltimore.

Contributions to the Federal retirement system for 1977 totaled $4,342. In nearly 16 years as Congressman, I have contributed a total of $43,477.76 to this fund, which cannot be withdrawn in cash. Estimated capital value of my Teachers Insurance Annuity Association policies as of December 31, 1977, was $23,605.06. This also cannot be withdrawn as cash.

Other assets include a 1976 Buick, a 1977 Plymouth station wagon, home furnishings, my wife's jewelry (nearly all inherited), clothing, and a small checking balance sufficient to pay current bills.●

MS DINNER OF CHAMPIONS

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. HYDE. Mr. Speaker, last year, my wife, Jeanne, our youngest son, Tony, and I were privileged to attend the Multiple Sclerosis Dinner of Champions sponsored by the National Capital Chapter. It was one of the most inspirational, relaxing, and entertaining events I have ever been associated with.

It was unusual because the special guests were national and local sports personalities who were giving their time as "Athletes Versus MS," to join in the battle against MS to raise funds for much-needed research. Personalities like George Allen, Sonny Jurgensen, members of the Washington Redskins, Baltimore Colts, Pittsburgh Steelers, Washington Diplomats, Washington Capitals, Washington Bullets—seated at each table.

It was a family affair, with spouses and children not only welcomed but encouraged to attend, with opportunities for photographs and autographs. It was truly an evening of sports entertainment.

As a former athlete and the father of three healthy sons, I know how vital it is for young people to have good health. MS strikes between the ages of 20 to 40—right when athletes and all young people are at the most productive point in their lives. I was proud and honored to join the team of "Athletes Versus MS."

There is another dinner this year, on June 6 at the International Inn. Sonny Jurgensen and his wife, Margo, are the honorary chairmen. Pat Summerall and Tom Brookshire of CBS Sports will be among the many honored guests. My family is going to be there, showing our continued support for the fight against MS. I urge my colleagues to join me in the important battle to find a cure for multiple sclerosis, a tragic, crippling neurological disease.●

CARL ROWAN'S COMMENTARIES ON TUITION TAX CREDITS

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MITCHELL of Maryland. Mr. Speaker, much of the current debate over providing tuition tax credits to elementary and secondary schoolchildren has focused on the issue of the appropriate role of the Federal Government in directly aiding private schools. I agree with many of the persons engaged in this debate that the provision of a $250 or $500 per student tax credit to any individual having children in private schools would be the beginning of the total destruction of our public school system in this country.

I am afraid, however, that many of my colleagues have not formed their opinions on this subject by any review of the actual merits or demerits of the tax credit approach. Rather, many Members' opinions on this subject are based on the political benefits to be gained by going home and saying to their constituents that they voted for a tax credit for all parents with children in private elementary and secondary schools.

I was pleased to see that my good friend, Carl Rowan, in another hard-hitting series of commentaries, has also chosen to announce publicly what many of us have known but not spoken. Mr. Speaker, I direct my colleagues attention to Mr. Rowan's commentaries, the full text of which follows:

[Feb. 24, 1978]

TUITION CREDITS

In election years you can count on Congress to create the illusion that it is giving voters something for nothing. This year the gimmick is to offer middle-class Americans college tuition money.

The Senate Finance Committee has just voted for a 4..5 billion dollar raid on the Treasury in the form of 250 dollar tax credits for each college undergraduate or vocational school student. Drunk with the spirit of largesse, the committee wants to hike the credit to 500 dollars in two years and to extend it to elementary and secondary school pupils in 1980.

This bill appears to give Americans something, but it will cost them plenty.

Our public schools today are far from the best; they will become atrocious if this measure becomes law, because we'll have the Federal Government propping up private and parochial schools at the expense of public schools. If I want to send my children to a private or a church-oriented school, that should be my business, and at my expense.

Does the average American want a 250 dollar tax credit badly enough to tolerate another erosion of the principle of separation of church and state? Do Americans really want to see education for the masses so weakened that we'll wind up paying thousands of dollars to support those whom we leave incapable of fending for themselves in this complex society?

If the Congress is so vote-hungry that it passes this tuition credits monstrosity, I pray that President Carter will veto it.

This is Carl Rowan.

[Mar. 24, 1978]

WHAT THE TUITION CREDIT FIGHT IS ABOUT

(By Carl T. Rowan)

WASHINGTON.—Caught up in its biennial gush of election-year irresponsibility, a majority of congressmen and senators seems determined to put the federal government into the business of financing private and church school educations for millions of youngsters.

Starting with the legitimate notion that many middle-class families want help in financing their children's college educations, the Congress wants to leap to the point of forking over up to $500 to taxpayers' money per elementary or secondary school child—no matter how many children a family may have, or how much income that family has.

Thus a family with eight children in church school could get $4,000 a year from Uncle Sam, even if the parents had income of a million dollars a year.

The bill ignores the factor of "need" to the point that it is absurdly unfair. It is a vote-hunting gimmick in which congressmen open the U.S. Treasury for a raid by those Americans who live handsomely but are moaning, "Everybody gets handouts but us."

The Carter administration opposes this plan for tuition tax credits as do many educational groups across America. Many opponents are emphasizing their view that the Constitution forbids the federal government to give aid to church-related schools. A few days ago Attorney General Griffin Bell issued an opinion that tuition tax credits would violate the constitutional provisions relating to separation of church and state.

While I am convinced that this bill would offend seriously the First Amendment and other provisions of the Constitution, I believe it would be a mistake to base the fight on those grounds.

There is no clear body of Supreme Court decisions relating to the separation of church and state. The high court ruled in 1947 that a state could provide bus transportation to and from school for parochial school students, but it said in 1977 that the state could not provide such transportation to and from field trips. The high tribunal approved state provision of textbooks for sectarian schools in 1975 but forbade state provision of instructional materials and equipment in 1977.

Because the Supreme Court has been all over the lot on this issue, members of Congress are going to interpret the Constitution in the way that seems to offer them the most votes.

Maybe—just maybe—some of our lawmakers can be persuaded of one overriding reality: tuition tax credits as proposed in the Packwood-Moynihan-Roth bill would have a destructive effect on public education in America in particular, and on this society as a whole.

When Uncle Sam ponies up $500 per child for private schooling, half the fly-by-night evangelists in America are going to open schools. We'll see a lot of "private schools" pop up which are not church-related—just schools set up to rip off the treasury, or keep out blacks, or Presbyterians, or Indians.

The spirit of snobbery and elitism is now so strong in America that it will become a stigma to have your child in anything but a private school. The public school system will become a cripples outpost for children of families so poor that, even with tuition tax credits, they can't send their children to private schools.

So we shall have a country polarized on many levels: one class of people who, because of governmental largesse, send their children to Catholic schools, Lutheran schools, Holy Roller schools, Zen schools, white supremacy schools, black power schools; then another

class of down-and-out Americans with no political clout whose children go to ramshackle schools with bad equipment and worse teachers.

I know that the Congress is now caught up in mob psychology. I understand that some people turn to the constitutional argument because the Constitution alone has built-in safeguards against mob fever.

But in our Congress so cravenly political that a majority of its members cannot be convinced to vote against tuition tax credits on the simple basis that such credits would be profoundly harmful to this society?

[Mar. 1, 1978]

THE PERILS OF THOSE TUTION CREDITS

(By Carl T. Rowan)

WASHINGTON.—For years we've heard Americans earning $15,000 to $50,000 a year wailing that they are the unfavored people of this land.

They tell tear-jerking stories about how they're not poor enough to get welfare, food stamps, Medicaid or college scholarships for their children: and they aren't rich enough to enjoy the tax loopholes that cladden the hearts of the rich.

So now, in an election year, comes the Senate Finance Committee with a $4.5 billion morale builder for these Americans who are pleading with government to "give" them something. What these Senate vote hustlers are offering is going to cost middle-class Americans plenty in the longrun.

The Finance Committee has voted to raid the treasury of $4.5 billion in order to give tax credits of up to $250 for each college undergraduate and vocational school student. Drunk with the spirit of election-year largesse, the committee also voted to hike the credit to $500 in two years and to extend it to elementary and secondary school pupils in 1980.

I can hear 'em shouting in Middle America: "Hooray! Farmers and poor people, the aged and the sick, veterans and New York City, and all the others have been raking in the handouts. Now I'm gonna get mine!"

If this atrocious Senate bill passes, they're sure going to "get it"—right in the old bank account. They're going to get a piddling tuition tax credit and then pay through the nose for the damage that this scheme will do to the country.

Americans in the $15,000 to $50,000 category already pay heavy taxes to help sustain the tens of millions of Americans who are so ill-educated that they can't cope in this society. Pass this bill and let Uncle Sam give tuition money for elementary and secondary pupils and we'll have a vaster army of Americans who can't read, write or find a job. Because we will cripple even more a public school system that already is a disgrace in many communities.

Does the average American really want a $250 tax credit badly enough to accept another erosion of the principle of separation of church and state? Do we want Congress to put $250 in one pocket and take $1,000 out of another to support those whom we will leave incapable of fending for themselves because we have relegated them to even worse public schools? Is our greed for a tax credit so great that we will now permit Uncle Sam to help finance the "private academies" that have been created in Virginia and elsewhere to avoid desegregation?

It serves the common welfare for government to make available to all the best public schools we can create. But it is not the business of government to subsidize those who, for elitist, religious, racial or whatever other reasons, prefer private or parochial schools. That is their choice and it should be at their expense.

The cries for financial help from middle-class America are so strident that many congressmen will overlook the fact that what the Senate Finance Committee has approved is bad educational policy, bad social policy and probably unconstitutional. So they'll give the old re-election-year wave to enactment.

But you ought to join me in asking President Carter to veto it. Rowan.●

A DESERVED TRIBUTE TO JOHN RHODES

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. RUDD. Mr. Speaker, a deserved tribute to our distinguished and much admired minority leader, JOHN RHODES, has been written by Arizona's highly regarded political writer John Kolbe.

Mr. Kolbe's column appeared this afternoon in the Phoenix Gazette.

I believe this column succintly explains why JOHN RHODES is the Republican Party's most valuable asset. I would like to include it at this point in the RECORD:

[From the Phoenix Gazette, Apr. 24, 1978]

RHODES IS TIRED OF HEARING HE'S IN TROUBLE

(By John Kolbe)

John Rhodes is tired of hearing he's in trouble.

It's understandable. The veteran congressman is in his 26th year in the House, longer than anyone in Arizona history, one of the two most potent Republicans in Washington, in his third term as minority leader, and he keeps hearing he's about to lose his political shirt.

To some extent, such rumors are the price of power, and Rhodes can be philosophical about it. "Heck, I used to get ticked off at the leadership myself," he notes, adding he once considered challenging Gerald Ford for the job.

But in his case, it's also the price of being a square, nose-to-the-grindstone straight arrow, thus appearing more vulnerable.

So during slow days on Capitol Hill, the pundits often take up the familiar theme—Rhodes' leadership is in jeopardy from the GOP's right wing.

And he becomes less philosophical. "It really galls me," he concedes about the stories, "because it hurts morale in the House, and certainly doesn't help our unanimity, which is little short of fantastic."

He has a point. So far in the 95th Congress, the Republican Policy Committee has taken formal positions on 48 key issues; on those, an average of 83 percent of the 147 GOP House members toed the line. Not a bad demonstration of party leadership.

Speaker, Tip O'Neill, the man whose job Rhodes wants and who never seems to be subject to the same rumors of impending job loss, would welcome a record of party solidarity even close to that. With it, he might now be hailed as the legislative genius who rammed through such controversial items as situs picketing, cargo preference and consumer protection bills—rather than the man who presides over the most hopeless congressional disarray of modern times.

It's a tribute to the myopia of the GOP's ideological right that there is even the kernel of truth needed to sustain such stories.

Political gnats dog his footsteps both at home and on the Hill.

In his First District domain, it started with the right-to-life crowd who regarded him as mushy on the abortion issue, and was taken over by the Reaganites who could not forgive his support for old friend Ford. Rhodes' consistently high conservative voting scores don't satisfy the malcontents; an 80 percent rating only means he's a 20 percent nogoodnik.

Among House colleagues, the discontent is fanned by a few hard-righters who see his efforts for building party strength and solidarity as a threat to their more important priority—party purity.

He has the gall to campaign for such Republican moderates as John Anderson and Paul McCloskey. That he does the same for the right-wingers seems not to assuage the hard-liners. Purity before harmony, please.

Probably most annoying, he has the temerity to say things that drive them up the wall. Like suggesting the Republicans' loss of black voters, who regarded the GOP as their natural home for 70 years, is a product of Republican neglect. Or that Jimmy Carter's "instant voter registration" concept (although not his exact proposal) is "not going to do us in."

Nevertheless, he must be doing something right. He became GOP leader in 1973, when Ford became vice president, without opposition—for the first time in several decades. And he's repeated the performance twice since.

One former colleague, a member of the House right-wing gang, notes: "No one can talk to all sides like John. They don't always like him, but they always respect him. No one can touch him."

That straight-arrow image is deceiving. He may not be Mr. Excitement, but it's precisely because he is so approachable, so void of any personal ambition beyond building a GOP majority which will make him speaker (and give all of them new power), that he is so secure, rumors notwithstanding.

He insists he could achieve his goal in this election, although it would require a massive shift of six dozen seats. Privately, he's hoping for 30 or so.

Then, if the GOP fields a strong presidential candidate in 1980, and Carter continues his current blundering, and O'Neill maintains the most fiercely partisan House regime in recent history to forestall effective congressional action, Rhodes could be in striking distance of the brass ring in 1981.

That's a tall order, of course, and not even GOP diehards—including Rhodes—are ready confidently to predict it will happen.

But if it, or something close to it, doesn't happen sometime soon, John Rhodes, just may be ready to hang up his spikes after a quarter-century spanning six Presidents and a sevenfold increase in the federal budget.

"Sure, I'm tired of being in the minority," says Rhodes, one of only three Republicans who have been around long enough to remember what it's like in a majority, "and if things don't get better, I'm going to get the hell out."

Which is why Rhodes criss-crosses the country, 90 or 100 hours a week, making endless speeches and beating endless drums, "trying to convince people that this Congress they don't like is a Democratic Congress."

John Rhodes may not get to the top, but it won't be for lack of trying.●

DR. WILLIAM WADE HONORED FOR 33 YEARS OF SERVICE

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. LONG of Maryland. Mr. Speaker, on April 20, 1978, hundreds gathered in southeastern Baltimore County, Md., to pay tribute to Dr. William C. Wade.

Dr. Wade has been part of the Turners Station community for 33 years, both as a general practitioner of medicine for

area families and as a concerned and active citizen.

After earning his bachelor's degree at Howard University in 1938 and his medical doctorate at the distinguished Meharry Medical School in Nashville, Tenn., in 1943, Dr. Wade interned and served his residency at Homer Phillips Hospital in St. Louis. He then came to Turners Station and has spent over three decades providing medical care to area families.

Dr. Wade served his country during World War II and was honorably discharged as a captain in the Army Medical Corps in 1954.

Joining me and 500 other citizens in honoring Dr. Wade, Baltimore County Executive Ted Venetoulis issued a formal proclamation renaming a street in the Turners Station area William Wade Avenue. It was my pleasure to present this proclamation to Dr. Wade, together with my congressional commendation for his 33 years of service.

In these days of specialists, rising health care costs, and malpractice suits, it is heartwarming that hundreds of people gather to honor their doctor. In the words of one woman present at the ceremony, "It didn't matter whether you were rich or poor, whether you could pay now or never, Dr. Wade would always care for you and your children. That's one reason we love him."●

THE CASE FOR BREEDERS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. TEAGUE. Mr. Speaker, in the ongoing debate over breeder reactors and reprocessing of nuclear fuel and their relationship to the increase of plutonium in the world, I would like to submit this extremely thoughtful article by Walter Marshall, Deputy Chairman of the United Kingdom Atomic Energy Authority, which appeared in the April 19 issue of the New York Times.

Mr. Marshall states his case for breeder reactors very concisely:

If the energy demand does increase, we had best have fast reactors, used as breeders, to meet it, whereas if it does not increase we had best have fast reactors, used as incinerators, to eliminate the plutonium that will not be needed.

The full text of Mr. Marshall's article explains why he believes breeders are necessary even without a major increase in energy demand, why he considers breeders important in attaining our nonproliferation goals, and how he suggests the vulnerability of plutonium in the reprocessing step should be solved.

I believe this information is important for all my colleagues as we prepare to determine the direction of America's breeder program for the next decade.

The article follows:

ON PLUTONIUM FEARS

(By Walter Marshall)

UPTON, N.Y.—The argument in the United States about nuclear power and weapons proliferation usually asserts, or acknowledges, that the reprocessing of nuclear fuel and the subsequent use of plutonium do have "proliferation" risks, and then debates whether their economic value justifies those risks.

This debate is seriously misoriented because most public statements on these topics are technical, correct and obscure or simple, understandable and misleading.

All reactors now in use produce plutonium. The plutonium is initially "inaccessible" because it is contained in highly radioactive fuel elements, but this ceases to be true as the radioactivity decays over a period of some years. Therefore, storing fuel elements indefinitely establishes plutonium "mines" and the availability of plutonium increases as its quantity grows, as the fuel elements lose radioactivity and as their distribution in the world becomes widespread with the growing use of nuclear power.

Therefore the fuel elements are best retrieved from these widespread locations and the best motivation for retrieval is to reprocess the fuel at a few very large reprocessing plants, re-use the unburned uranium in thermal reactors and use the plutonium in fast breeder reactors.

It is factually correct, but consistently misunderstood, that the use of fast breeder reactors instead of thermal reactors decreases the amount of plutonium in the world. This is because fast breeder reactors do not breed fast, they use fast neutrons and breed slowly.

To explain this we should remember that a typical thermal reactor (of 1,000 megawatts) produces about 300 kilograms of plutonium each complete year it operates. Therefore, if thermal reactors alone are used, the plutonium in the world grows and grows indefinitely. That was never the intention. That is why, throughout the world, fast breeder reactors were planned to incinerate that plutonium.

The fast reactor has a core and a region surrounding that called a "blanket." The core is a straightforward incinerator of plutonium, producing electricity in the process. Typically, 200 kilograms are incinerated each year by a 1,000 megawatt reactor.

The material put into the blanket is optional. It can be, and usually will be, the type of uranium that cannot be used in thermal reactors. This gets converted to plutonium. The maximum production of plutonium in the blanket is about 450 kilograms a year so, taking account of the 200 kilograms incinerated in the core, the overall production is about 250 kilograms. This is rather less than the production rate from thermal reactors. If the material in the blanket is changed, we get a "fast incinerator reactor."

The choice of blanket material, therefore, gives us a technical option to control the total amount of plutonium to that required. Whether that option is used or ignored depends upon governments, not upon technologists. Without fast reactors the option does not exist.

These facts are usually lost in arguments because the nuclear technologist stresses his ability to produce plutonium to match the energy demands he is sure will exist, while the nuclear opponent fears that plutonium will be produced whether the demand is there or not. But they both ought to be insisting on fast reactors because if the energy demand does increase, we had best have fast reactors, used as breeders, to meet it, whereas if it does not increase we had best have fast reactors, used as incinerators, to eliminate the plutonium that will not be needed.

However, the main proliferation attraction of the fast reactor is neither the control of the total quanity of plutonium nor the opportunity to incinerate plutonium. It is the fact that so long as plutonium is used in reactors it becomes associated with so much radioactivity that it is rendered "inaccessible" and therefore safe from diversion.

But in order to realize the advantages of fast reactors, it is necessary to reprocess the spent plutonium fuel elements. In reprocessing, plutonium is separated from the radioactivity of the fuel element, fabricated into fast reactor fuel and transported to the reactor. There are fears that the plutonium might be diverted to weapons use during these last two steps.

These fears prompted President Carter to call for an international study of the problem. My American and British colleagues and I have tried to respond to his initiative by making constructive proposals to how, given time, those fears can be eliminated—if society wishes—by never separating plutonium from a high level of radioactivity.

This would remove, in my opinion, the fundamental obstacles to claiming the benefits facts reactors promise for energy supply, environmental and nonproliferation objectives.●

AKRON EDITOR PRAISES CARTER'S DECISION ON NEUTRON BOMB

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. SEIBERLING. Mr. Speaker, the Akron Beacon Journal for April 13 contained an outstanding article by the Beacon Journal editor, David B. Cooper, on curbing the nuclear arms race. Mr. Cooper recently joined the staff of the Beacon Journal after a distinguished record with other Knight-Ritter newspapers, including the Charlotte Observer and the Detroit Free Press.

Mr. Cooper points out that criticism of President Carter for taking a long time to make up his mind about the neutron warhead is specious. As he says—

If Americans learned anything from our involvement in Vietnam, it was that we don't want our leaders making hasty decisions about American military involvement or nuclear weapons that can fuel the arms race.

He further points out that President Carter "has displayed to the world and the Soviets a new and wholesome American commitment to slow the growth of nuclear weaponry. He has offered them the opportunity to respond during the SALT negotiations in ways that can benefit both countries and a world that has reason to fear the dangers of a nuclear holocaust."

The full text of Mr. Cooper's article follows these remarks:

CURBING THE NUCLEAR ARMS RACE

(By David B. Cooper)

The current controversy over the neutron "bomb" reminds me of something President Eisenhower said as he went out of office in 1961.

Mr. Eisenhower's record as a military man was exemplary and revered. His two terms as President came during the Cold War, and his strong military background was comforting to many Americans while he was the nation's commander-in-chief.

In his farewell address to the country as he left the presidency, Ike issued this warning:

"This conjunction of an immense military establishment and a large arms industry is new in the American experience . . . We recognize the imperative need for this devel-

opment. Yet we must not fail to comprehend its grave implications . . .

"In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist."

There's no way of knowing whether Mr. Eisenhower would have applied his comments to the neutron bomb controversy, but I think they do in part fit.

For example, congressional funding for production of the weapon was proceeding with no public attention until less than a year ago.

A classified amount of money—but obviously hundreds of millions or even billions—was tucked away in the Energy Research and Development Administration budget for production of this new nuclear weapon. The first public notice about this proposed funding came from a Washington Post story last June 6 headlined, "Killer Bombs Buried in ERDA Budget." President Carter, who has now deferred production of the weapon, said later he did not know about the neutron budget proposal.

The bomb, which is really a shell designed to be fired from a cannon at tank concentrations, had therefore slowly developed a life of its own within the military planning at the Pentagon.

There have been numerous other examples. The B1 bomber became an Air Force sacred cow even after the development of the cruise missile made it unnecessary to build. In the final days of the arguments over the B1, before Mr. Carter said he would veto an attempt to finance its production, justification for the B1 was even based on the jobs it would create.

Mr. Carter's decision on the neutron weapon, which is designed to kill people but to spare property, has aroused widespread controversy, both in this country and abroad.

Even so, I think his decision was eminently correct.

Criticism of the President for waffling about this weapon before reaching his decision seems especially specious. He may have taken a long time to make up his mind. However, if Americans learned anything from our involvement in Vietnam, it was that we don't want our leaders making hasty decisions about American military involvement or nuclear weapons that can fuel the arms race.

The neutron weapon has some tactical appeal, especially for our NATO forces in Europe, and that is precisely why I think Mr. Carter is wise to be cautious about deploying or producing it. The danger with an attractive new nuclear weapon is that it may make nuclear war more likely.

Reducing that danger, as well as reducing the awesome costs of the strategic arms race, is what the U.S.-Soviet SALT talks are designed to accomplish.

Those talks take place in a world already dangerously armed for nuclear annihilation. So armed, in fact, that some of the current strategic thinking begins to sound like the dialogue from a play by Kafka. For example, some strategists believe that a defense system against Soviet nuclear weapons is no longer advisable, since that may encourage the Russians to believe we would not initially retaliate with the full weight of our own strategic nuclear forces.

As Paul Warnke, our chief negotiator in the SALT talks, says:

"The thing that deters the use of nuclear weapons is the prospect for retaliation . . . We have to be sure we have the retaliatory capability to respond with such devastating force that we would destroy all Soviet society."

What this amounts to, he has pointed out, is "mutually assured destruction—the acronym for which is MAD."

It is in that sense that I think Mr. Carter made the right choice at this time on the neutron bomb.

He has made no decision that would prevent production or deployment of the weapon at some future time, if that became necessary.

He has displayed to the world and the Soviets a new and wholesome American commitment to slow the growth of nuclear weaponry.

He has offered them the opportunity to respond during the SALT negotiations in ways that can benefit both countries and a world that has reason to fear the dangers of a nuclear holocaust.●

RESOLUTIONS OF THE 87TH CONTINENTAL CONGRESS, DAUGHTERS OF THE AMERICAN REVOLUTION

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. RUDD. Mr. Speaker, for the past several weeks, ladies from throughout our country whose direct ancestors participated in the American Revolution have been meeting at the 87th Continental Congress of the Daughters of the American Revolution.

Among these devoted patriots was Mrs. John Trudeau Salmon of Tucson, Ariz., a regent of the Daughters of the American Revolution and longtime citizen leader in our State.

The DAR Continental Congress passed 14 important resolutions, covering the full range of national and international concerns facing our country today. I believe that that these resolutions merit the careful consideration of every Member of Congress and the leaders of our Nation at every level of government.

I would like to include those resolutions, adopted as official DAR policy on April 19, at this point in the RECORD:

RESOLUTIONS OF THE 87TH CONTINENTAL CONGRESS, DAUGHTERS OF THE AMERICAN REVOLUTION

REDEDICATION

This country became the greatest nation on Earth by following the way of the Lord.

In George Washington's day we knew that we wanted to be free politically, economically, and in every other way—realizing that each of us had the sole responsibility for the welfare of self and family.

We need faith in America and in the principles upon which it was founded. Let us rededicate ourselves to faith in our future and Divine Providence, remembering that "Faith is the substance of things hoped for, the evidence of things not seen."

GOVERNMENT REGULATIONS

Whereas the success of the American free enterprise system has traditionally depended upon a maximum of individual initiative and a minimum of governmental interference; and

Whereas the ever increasing list of multiple regulatory agencies is instituting and enforcing policies that prevent many private businesses from receiving a fair return on investment; and

Whereas increased costs to businesses in fighting these injustices add inflationary cost to the consumer; and

Whereas increasing regulation of free enterprise is slowly but surely eroding our democratic process and leading to socialism;

Resolved, That the National Society, Daughters of the American Revolution, oppose dictatorial intrusion into this country's free enterprise system by bureaucratic regulatory agencies.

DESPERATION TACTICS ON ERA

Whereas the present deadline for ratification of the Equal Rights Amendment is March 22, 1979, with chances of its ratification by that date being remote; and

Whereas in tactics of desperation the proponents of the Equal Rights Amendment are seeking an extension for ratification beyond the customary limit of seven years, traditionally regarded as a "reasonable time"; and

Whereas the proponents are employing a campaign of retaliation using blackmail against the states which have not ratified the Equal Rights Amendment by attempting to impose boycotts of hotels and convention facilities in these states, thus threatening a financial loss of millions of dollars on uninvolved businesses and individuals in order to force ratification by these state legislatures;

Resolved, That members of the National Society, Daughters of the American Revolution, as individuals, continue to oppose the conspiratorial boycott in states which have not ratified the Equal Right Amendment and to oppose an extension of the time limit for ratification of the Equal Rights Amendment.

CIVIL SERVICE REFORM

Whereas in order to correct inefficiencies in the Civil Service System, the administration has proposed changes which expand political appointment at the expense of merit examination; and

Whereas a movement is under way to repeal the Hatch Act, a political code of conduct for federal employees allowing them a broad range of political activity but protecting them from intimidation by supervisors; and

Whereas further proposals would curtail veterans' benefits in federal hiring, thus invalidating the pledges made under the 1944 Veterans Preference Act;

Resolved, That the National Society, Daughters of the American Revolution, oppose political favoritism in federal service and support continuation of the Hatch Act and of veterans' benefits.

UNITED NATIONS COVENANTS COMMUNIST CONTROL UNDER ONE WORLD GOVERNMENT

Whereas the 1948 United Nations Declaration of Human Rights, a statement of principle without the force of law, has been transformed into "treaty provision" by two convenants, the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights; and

Whereas these treaties—with the concept of government-granted rights as opposed to United States inalienable rights which limit government—have been signed by the President and the United States Ambassador to the United Nations and are pending before the Senate Foreign Relations Committee, although previous administrations have taken no official action on these treaties; and

Whereas these treaties which exclude the right to own property as individuals or in association with others free from arbitrary seizure by government, also exclude many of the other United States constitutionally guaranteed rights; and

Whereas these covenants are a blueprint for total communist control under One World Government and would supercede the Constitution if ratified by the Senate;

Resolved, That members of the National Society, Daughters of the American Revolution, alert the citizens of this country to the immediate danger of the complete loss of our freedoms with ratification of the In-

ternational Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights, and, as individuals, work to oppose ratification of these treaties.

NATIONAL DEFENSE—FOR OUR NATIONAL SURVIVAL

Whereas since the Cuban missile crisis the Soviet Union has increased its military might at an alarming rate; and

Whereas the Soviet Union has also provided an unsurpassed Civil Defense capability for the protection of its citizens; and

Whereas through the SALT agreement, the myth of detente, and the failure of United States policies to support the necessary development and production of advanced weapons systems to keep the United States in a position of military superiority, our country is now in a critically inferior position; and

Whereas the abandonment or curtailment of such vital projects as the B-1 bomber, nuclear missile programs, the destruction of defensive systems, the closing of important military installations, the reduction of military personnel at home and abroad, the failure to provide any civilian defense, the alarming reduction of naval strength, including the cutback in building of nuclear submarines have greatly impaired the capability of the United States to effectively oppose an aggressor; and

Whereas this frightening military imbalance could subject our nation to nuclear blackmail or Soviet first-strike annihilation; and

Whereas the number of Soviet spies known to be operating within the United States has greatly increased in recent years endangering every phase of our economy and our national defense; and

Whereas according to military authorities the national defense capability of the United States has, since 1962, changed from a position of dominance in every category to a complete reversal, as the Soviets now have the superior capability;

Resolved, That as American citizens we reorder our priorities to place stronger emphasis on National Defense, to recreate the patriotism evidenced in previous national crises and to educate our youth to the dangers that threaten our very existence as a nation; and

Resolved, That the members of the National Society, Daughters of the American Revolution, insist that our national legislators assert their authority to restore this nation to its former position of outstanding strength and superiority in order to ensure the survival of the United States of America as a free nation.

LABOR REFORM—POWER GRAB

Whereas organized labor, becausee of declining union membership, is urging passage of the Labor Law Reform Bill of 1978, using the power of the federal government to take punitive action against business; and

Whereas this bill would force compulsory union membership on all businesses, nullifying the individual states' Right to Work Laws and the Taft-Hartley Law; and

Whereas the effect of this power grab benefits only unions, ignoring legitimate concerns of employers and employees; and

Whereas direct intrusion of government into the collective bargaining process and unionization of business will result in higher prices, inflation and bankruptcies;

Resolved, That the National Society, Daughters of the American Revolution, continue to support Right to Work Laws and to oppose the Labor Reform Bill of 1978.

THE ASSAULT ON INTELLIGENCE AGENCIES

Whereas the survival of the United States of America and its defense against both external and internal threats are dependent upon accurate intelligence; and

Whereas the common goal of those attacking the activities of the FBI, the CIA and the entire intelligence community is to diminish and curtail their functions, to destroy their effectiveness and to discredit them in the eyes of the American people; and

Whereas the intelligence units of the Defense Department have been eroded, the authority of the FBI and the CIA weakened, and governmental boards and committees concerned with subversion have been abolished—all grim evidence of the success of the assault on the intelligence community;

Resolved, That the National Society, Daughters of the American Revolution, affirms the right and duty of the United States government to engage in whatever intelligence operations are necessary to protect and defend the nation; and

Resolved, That the National Society, Daughters of the American Revolution, supports the efforts of the FBI and the CIA in their intelligence gathering activities, and urges the strengthening of the intelligence units of the Defense Department and the restoration of the congressional committees and governmental boards dealing with subversion.

WORLD MONETARY CONTROL

Whereas foreign aid appropriations channeled through the United Nations specialized agencies, the International Monetary Fund and the World Bank and its affiliates, are a continuing financial drain upon the United States which is burdened with massive debt and is faced with dwindling gold reserves at Fort Knox; and

Whereas through United States payments for imports, multinational investments and tourist trade, up to 300 billions of dollars are floating around the world; and

Whereas the United States government has no control over reinvestment by foreign interests in the products, securities and real property of the United States; and

Whereas vast wealth controlled by would-be world managers has created an international group which by design partially controls the economic policies of the industrialized nations and is conspiring to control the developing naticns of the world; and

Whereas would economic control is tantamount to world government;

Resolved, That the National Society, Daughters of the American Revolution, recommends that the nation adopt as its goal a return to gold backed dollars;

Resolved, That the National Society, Daughters of the American Revolution, urges disentanglement of the United States from the International Monetary Fund and World Bank and affiliates which have been ineffective, have wasted billions of dollars of American money, have demonstrated no ability to restore a sound world economy and pose an imminent threat to the solvency of the United States cf America.

CONSTITUTIONAL CRISIS

Whereas the Constitution, the law of the land, protects the American people from tyranny as long as they are alert enough to protect the Constitution; and

Whereas the Constitution must not be compromised by treaty manipulations which endanger the guaranteed rights and privileges of citizens; and

Whereas the United States of America has been governed by an activist Supreme Court which has usurped law-making powers far beyond its judicial responsibilities as set forth in the Constitution and has interpreted failure of legislatures as grounds for court interference; and

Whereas provisions of the Constitution have been abrogated by Executive Orders; and

Whereas proposals have been made to rewrite the Constitution on the pretext that the Constitution is not germane to present day social and economic conditions;

Resolved, That the National Society, Daughters of the American Revolution, impress upon its members that they study and know the Constitution and the responsibilities of the Executive, the Legislative, and the Judicial branches of government for the protection and betterment of all.

FOREIGN POLICY HYPOCRISY

Whereas the Trilateralists have assumed leadership of the Foreign Policy of the United States and policies once considered treason are now openly and boastfully made daily, promoting the convergence of the American people with the aims of the Soviet government; and

Whereas current foreign policy is based on the "liberal" assumption that equality is far more important than freedom, that a powerful government aiming to promote the "common good" is preferable to an effective limited government; and

Whereas United States foreign policy has become a process of "moral selectivity" motivated by an attempt to impose upon other nations a false interpretation of the basic American principles resulting in favoritism to enemies and repudiation of our proven friends and allies;

Resolved, That the National Society, Daughters of the American Revolution, firmly supports a foreign policy that would protect our proven friends and would cease to deal with our mutual enemies—economically, politically and militarily.

FEDERAL LAND EMPIRE

Whereas the United States of America has encouraged and promoted the historic concept of the right of individuals to own and manage land; and

Whereas there has been a reversal of this policy in a concentrated onslaught against private land ownership by unfavorable tax rulings, wilderness land acquisition, organized environmental groups and dictatorial management practices of lands and water; and

Whereas under the provisions of the Reclamation Act of 1902, a court ruling (as cited in the Federal Register of August 25, 1977) has permitted the federal government to acquire and redivide into 160 acre plots privately owned farmland watered by Federal Reclamation Dams, and has stipulated regulations for residency, leasing and selling; and

Whereas without prior disclosure to the owner or lessee, land has been confiscated by Executive Order; and

Whereas the federal government owns more than one third of all the land in the United States with approximately 96 percent of the land of Alaska, 45 percent of California, 66 percent of Idaho, 85 percent of Nevada, 53 percent of Oregon, and 65 percent of Utah;

Resolved, That the National Society, Daughters of the American Revolution, views with alarm the extent of socialistic land control and interference into private ownership of land.

Resolved, That the National Society, Daughters of the American Revolution, urges that the vast empire of federally owned land be reduced in size by sale to the private sector.

REAFFIRMATIONS

Whereas all past resolutions previously adopted by the National Society, Daughters of the American Revolution, are in effect unless rescinded;

Resolved, That the following resolutions be reaffirmed:

1. (Executive Orders—1964–1972) Congress should restore its authority of Constitutional powers vested in it by the Constitution of the United States of America.

2. (Education—1956, 1964, 1966, 1970, 1977) Work to insure that our children understand the classic meaning of freedom and to instill a renewed sense of self-discipline and moral obligation.

3. (Gun Control—1957, 1966, 1975) Those who take away our guns and ammunition take away our freedom.

4. (Illegal Aliens—1975 back to 1952) Oppose the rewarding of aliens' illegal conduct by giving them amnesty—thus undermining the efficacy of our laws.

5. (Voter Registration—1977) Continue to oppose universal voter registration which expands the power of the federal government, preempts states rights, and enlarges federal control of voter qualifications.

6. (Food and Agriculture—1975) Continue to oppose the proliferating governmental control of the American farmers.

7. (Health—1977) Continue to oppose any national health plan that could have a disastrous effect on the overall health care of Americans.

8. (The Flag of the United State of America—1966, 1977) Reiterate that respect for and honor to the Flag of the United States of America be strictly enforced and upheld by the courts.

EMERGENCY RESOLUTION—PANAMA CANAL

Whereas approval of the Panama Canal Treaties has been voted by the required two thirds of the United States Senate in spite of the overwhelming opposition of the American people; and

Whereas the ominous threat of complete Communist domination of the entire Caribbean area resulting in the encirclement of the United Sttates of America by Communist forces has now become inevitable according to plans already formulated by the Soviet military command as published in their official journal, *Red Star;*

Resolved, That the members of the National Society, Daughters of the American Revolution, as individuals express deep sorrow and apprehension concerning this tragic decision which will insure the continuance of Soviet Communist expansion and domination to the detriment of the United States of America and the other free countries of the world;

Resolved, That the members of the National Society, Daughters of the American Revolution, as individuals, highly commend those Senators who placed loyalty to country and dedication to its ideals above political expediency and considerations by voting against the Panama Canal Treaties and for their efforts to preserve and protect this strategically important geographic area so vital to the security and defense of the United States of America and the free world;

Resolved, That the members of the National Society, Daughters of the American Revolution, as individuals, redouble their efforts to insist that this disposal of United States property be brought before the House of Representatives and to the courts of the United States of America for final adjudication.●

EXECUTIVE BRANCH FINANCIAL REPORTING REQUIREMENTS

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mrs. SCHROEDER. Mr. Speaker, I am inserting in the RECORD, for the information of my colleagues, a discussion of the differences in reporting requirements for executive branch employees which are contained in H.R. 1 and the substitute to H.R. 1 developed by the Committees on Post Office and Civil Service and Armed Services. The discussion follows:

REPORTING REQUIREMENTS

The reporting requirements for the Executive Branch, unlike those for the Legislative or Judicial branches, will apply to thousands of individuals. Accordingly, it is extremely important that these financial reporting requirements be as simple, clear, and unambiguous as possible. Many of these reports will be available for public scrutiny, so it is extremely important to minimize the possibility that a Civil Service employee could in good faith file an inaccurate report because the requirements are vague, ambiguous, misleading, or subject to more than one legal interpretation. Moreover, although the approximately 2,500 political appointees in the Executive Branch may be somewhat insulated from such an immediate possibility, the other 10,000 Executive Branch employees whose reports are open to public examination, and who are not political appointees, can be fired (and have been fired for even good faith misinterpretations of financial disclosure and conflict of interest rules. And while judgment of the initial adequacy and inadequacy of financial reporting in the Legislative and Judicial branches will be carried on by the peers of these who are filing, the only effective mechanism for reviewing the over 14,000 employees who would file public reports (and 80,000 who now file and will continue to file confidential reports) is to have control coming from a centralized office.

A number of questions have arisen concerning the substance Part A, of the Judiciary Committee bill, H.R. 1, to which the Post Office and Civil Service and Armed Services Committees have prepared a joint substitute (printed in the Record, April 10, 1978, pages H-2704 and following) derived from their reported versions of H.R. 6954 (House Report 95-642, Parts I and II). The issues are discussed as follows:

A. Section 202(a)(1) (page 21, lines 15–17) of H.R. 1 requires "the source and amount of income, including honoraria, received during the preceding calendar year aggregating $100 or more in value" to be reported. Literally this means that if income received from all sources totals $100 or more the amount received from each source must be reported. For example, an individual receives during the year a $12,000 civil service salary and $5 for cutting his neighbors' lawn. Both must be reported as to source and amount since income received during the year aggregates $100 or more. It could be argued that the amounts from each source should be aggregated separately except that where aggregation by source is intended in the bill, the bill's provisions specifically so provide See, page 21, lines 20–21 ("from any one source"); page 22, line 6 ("from any one source"); page 22, lines 12–14 ("from a single source"); page 22, line 18 ("gifts aggregating $1,000 or more made *to any one* recipient"). Given such specificity, section 202(a)(1) can only be read to require aggregation of income from all sources, and since everyone required to report receives a salary of more than $100, the $100 threshold is meaningless. Compare the language used in the joint substitute: "receives from any source during such period does not exceed $100 per year."

B. Categorizing Assets. H.R. 1 creates separate categories for reporting (a) personal property held in trade of business, (b) transactions in "securities or commodities futures," (c) real property holdings or transactions, and (d) interests in patents, copyrights, or mineral leases (regardless of value).

The joint committee substitute requires reporting on *property* held for trade or investment and transactions in such *property.*

The intentions of financial disclosure are not served by jumping through hoops. Property is property, and a rose given to a lover need not be identified by its Latin subspecies. If a rose smells the wrong color it will smell the same if it's a security, a real property interest, personal property, or a mineral lease, especially since a mineral lease is recognized in many states as a real property interest.

There are some real issues of definition contained in the categorization of H.R. 1 which the joint substitute solves by using the term property:

(a) It is possible under the laws of most states to hold a copyright in any unpublished effort. Registering at the Copyright Office is not required. The interest is a common law right to protect the unauthorized publications of person's letters. Would H.R. 1 require the listing of every item a person wrote or where do we draw the line? In addition, what purpose is served by the disclosure, as H.R. 1 would definitely require, of a long lost boyhood love song dutifully entered at the Copyright Office 25 years ago?

(b) A person who invests in a Broadway play be a partner in a venture which involves copyright, property held in investment (costumes and scenery), and securities. How, under H.R. 1, does he divide the whole when each part is probably valueless alone? He has a property interest, for investment, under the joint substitute, and it is the fact of the interest upon which a conflict of interest may lie if, for example, he is an employee of the Securities and Exchange Commission investigating offerings to theatre angels.

(c) A person who owns shares in a Real Estate Investment Trust (REIT) may actually own interest in real property of which he has no actual knowledge. How would be declares under H.R. 1?

(d) A person who, under one of the new plans by which one purchases a right to a vacation condominium for set weeks each year (other people purchasing the other weeks, and the condominium being rented for the benefit of its co-owners at other times) may own real property and securities. How does he report under H.R. 1?

(e) Since patents and copyrights are sui generis to trademarks, and H.R. 1's categories do not include trademarks, is one violating the law by reporting a trademark interest one owns?

C. H.R. 1 consistently requires the reporting of financial interests held or liabilities owed "directly or indirectly". What constitutes indirect holding? Would the following examples constitute indirect holding?

An individual transfers title to all real property to a revocable trust. Must the real property be reported?

An individual sets up a partnership with a third party and transfers all financial interests to that partnership. Must the transferred financial interests be reported?

An individual sets up a close corporation, retains 51 percent interest in the corporation then transfers $100,000 worth of GM stock to the corporation. Must the GM stock be reported?

An individual buys a 51 percent interest in a corporation. The corporation owns $100,000 worth of GM stock. Must the GM stock be reported?

An individual buys $100,000 worth of GM stock. GM has as a wholly owned subsidiary a company, XYZ. XYZ is seeking a multimillion dollar contract with the reporting individual's agency. Must the wholly owned subsidiary (XYZ) be reported as an indirect interest? Would the answer be any different if the individual owned only one share of GM stock?

A large misconception about the joint substitute is that it will unduly burden individuals with reports about income and interests of business associations and trusts. This misconception has come about because the joint substitute rejects the "directly or indirectly" language and spells out general

guidelines of what "directly or indirectly" probably is meant to mean. The following language is used in the joint substitute:

"(2)(A) Subject to subparagraph (B) of this paragraph, income, property, and liabilities attributable to any partnership, corporation, or trust (other than a blind trust) in which the individual or member of the individual's immediate family holds a substantial interest, as determined under regulations prescribed by the Director, shall be reported as if directly attributable to such individual or family member.

"(B) Except with respect to the reporting of the identity of parties to any transaction, additional information otherwise required be reported under subparagraph (A) is not required to be reported unless a party to such transaction—

"(i) has, or is seeking to obtain, contractual or other business or financial relations with the reporting individual's employing agency;

(ii) conducts operations or activities which are regulated by such agency; or

(iii) has interests which may be substantially affected by the performance or nonperformance of such individuals official duties.

The provision hones in on situations which may cause conflicts of interest. It will not, for example, require one to file with his financial disclosure form a copy of all the bookkeeping entries and a list of renters (from each of whom he received indirectly a share of income) of an apartment house of which he owned a five percent share, although he might have an indirect interest in all of the dealings on this apartment house under H.R. 1. He would just have to report on the income he received from the apartment house plus the fact that he held a share in it under the provisions for reporting income and property held for investment in the joint substitute. Only where a substantial interest is involved, for example, tantamount to control of the apartment house, or a close or public corporation, would more detailed reporting be required. The blunderbuss concept of reporting indirect interests in H.R. 1 is bound to be error prone and not a reasonable approach to the detection of conflicts of interest.

D. Section 202(a)(4) of H.R. 1 requires liabilities . . . which exceed $2,500 to be reported. Thus if an individual signs ten $2,400 notes with the same bank, none of the liabilities would be reported since none exceeds $2,500 (even though the total of all liabilities owed the bank is $24,000). Compare the joint substitute, which requires the reporting of "any liability owed *any person*, if the aggregate amount *owed such person* . . . exceeds $2,500."

Morover, one has to know, under H.R. 1, the person whom the money is owed to actually is. A person who, for example, borrows on a stock brokerage account cannot easily trace to whom he is actually in debt. All he knows is that he pays back the broker. The same goes with many automobile loans, personal loans, mortgage loans, or small business loans, which may be discounted to other firms although collected by the original holder. Consequently, under H.R. 1, a person could have 100 outstanding $2,499 "loans" from a person he regulates and never report any while a person who reported a General Motors Acceptance Corporation auto loan which actually had been discounted to the Bank of America would be misfiling. The joint substitute would not permit such an absurdity to occur.

In addition, the joint committee substitute permits the yearly averaging of a revolving credit card debt. H.R. 1 does not. Under H.R. 1, needless reporting, such as that of a State Department employee who charges an official trip to Japan on his American Express (which costs $3,000 and for which he is reimbursed the next month) will not occur, since the employee can average the debt out over the year.

E. Section 201(e) of H.R. 1 provides that an individual must file a report "before leaving" his position. Must an individual who has been fired be kept on the rolls (and paid) until he files a report? Requiring an individual to remain in a job against his will may be a violation of the 13th Amendment. The joint substitute requires such reports to be filed 30 days after leaving the job.

F. Section 201(b) of H.R. 1—Individuals nominated to positions which require "the advice and consent of the Senate" must file reports. What about an individual nominated for Vice President under the 25th Amendment which also requires House confirmation? The joint committee substitute specifically accommodates this situation.

G. H.R. 1 contains no separate provision for the reporting of unearned income (or income other than for personal services). Exact amounts of unearned income would be reported.

The joint substitute contains a special category for reporting income for other than personal services which aggregate $100 or more from a source in the calendar year. Such income would also be reported by categories of amount.

On a disclosure form filed under H.R. 1, a person who derived $1,000 from interest on a savings account at a bank would consequently look the same to the world as one who worked for the same banks and earned a $1,000. Public review of such reporting could lead to the unfounded conclusion that numerous thrifty employees were holding jobs on the side. Since many Executive Branch employees are prohibited from holding second jobs, the problem is not a joking matter. Since earned and unearned income are easily separable, no purpose is served by the potential amount of confusion which non-separation of earned and unearned could cause.

H. H.R. 1 permits any gifts valued under $35 to escape detection no matter their number. The joint substitute requires reporting of gifts aggregating $100 a source, with no exemption, and requires additional reporting on gifts from those who might have official dealings with the employee.

The reception of a gift, lunch, or anything else, by an employee in the Executive Branch which comes from one he officially deals with is generally grounds for dismissal from the Civil Service. The public's faith in the Executive Branch will not be served by opening up the loophole H.R. 1 creates: that Federal employees may be wined and dined up to $35 by those they regulate.

I. H.R. 1 excludes reporting of alimony and child support payments received. The joint substitute contains no such provision. Alimony would be treated as income to the reporting individual. Child support would be income to immediate family members.

The need for any special exclusion for such payments is debatable. We are, mind you, primarily dealing in financial disclosure legislation with persons with incomes over $36,500 per year. Nevertheless, it is rather absurd to require the spouse of an individual to the source of income received when the same source of income, and probably the same desire to assure its continued receipt, may be present in the case of an ex-spouse who is required by law to pay alimony or child support.

J. Section 202(a) of H.R. 1 requires only certain disclosure in the case of family members. Generally reporting is required only of a spouse residing with the reporting individual and a reporting individual's dependent child and only to the extent to which either a spouse or child's interest are or have been entangled with those of the reporting individual. This subsection is a noble attempt at protecting privacy within the family which in the process of excepting out for privacy's sake creates untold loopholes.

Under section 202(d)(3) a naval officer on a year long cruise or a civilian employee detailed to Alaska for six months would not have to file on spouse interests because they were living "separate and apart."

Under section 202(d)(2) no reporting would be required on a dependent child's controlling interest in Exxon Corporation if the child had received it from his grandparents. Moreover, a non-dependent child living in the household of an SEC Commission employee could be trading hundreds of thousands of dollars daily in the stock market and escape disclosure even if he were giving all his profits to the same Commission employee.

Examples such as these (there are many more of a less outrageous variety) are why the joint substitute contains (a) a tough definition regarding immediate family and (b) vests authority in the overseers of the program to make exceptions to unneeded disclosure.

This definition of immediate family in the joint substitute requires reporting of the interests of (a) one's spouse, unless legally separated for six months, (b) minor children, wherever they reside, and (c) any relative residing in one's household. The joint substitute assures the detection of conflicts of interest where a reporting individual has been in a close relationship with a relative.

Moreover, this definition in the joint substitute is based upon the language of Executive Order 11222, which now requires confidential financial disclosure for Executive Branch employees, and which would continue to apply to employees below grade GS–16 if H.R. 1 were enacted. Consequently, enactment of H.R. 1 without adoption of the joint substitute will require two types of disclosure for family members of Federal employees, the more extensive being for those under grade GS–16.

K. The blind trust provisions of H.R. 1 and the joint substitute are similar. The joint substitute, however, requires such a trust to be administered by a person unassociated with the settlor of the trust.

There is a great debate about whether or not such an animal as a blind trust can really exist. However, there can be no doubt that one of the requirements of a blind trust should be the absence of association (past or present) of the trustee or the settlor. Under H.R. 1, an individual could use the family lawyer, former business partner, nondependent child, father, mother, girlfriend, or boyfriend as trustee. The "insulation" of a blind trust must be two-way. Even if a Federal employee does not know what is in such a trust, if he is associated with the trustee he could, unintentionally or intentionally, "spill the beans" about an anti-trust case about to be announced, or a large contract about to be let, which his trustee could use to his eventual advantage. It makes little sense to make even the inadvertent disclosure of information which might affect a trustee's dealing with the assets of a blind trust possible.

L. *Income from the U.S. Government.* The joint substitute requires disclosure of all income, including that received from the United States Government. There is a great need for such disclosure, and it will not, for most employees in the Executive Branch who are only receiving salaries, involve any new intrusion upon privacy: salaries of Federal employees are already publicly available.

The most impressive case regarding this matter is that of the Federal employee at the Department of Transportation who recently was convicted of receiving about $800,000 in U.S. mass transit funds. Although, of course, such a case might be covered up by a willful failure to disclose, eliminating the disclosure of Federal payments received as one of the

criteria which must be checked out during review or audit of financial disclosure form directs efforts away from a potential area of abuse. An even more recent example of, at least, appearance of impropriatey in this area is the investigation of certain Federal employees who review workman's compensation cases and have collected workman's compensation.

Other problem areas which could be ignored by not requiring disclosure of Federal payments include a Federal employee who works on the side as a consultant to his agency, a Federal employee who is selling property to his agency, a Federal employee who is wrongfully claiming partial cancellation of a student loan on the basis of being a teacher, and a Federal employee receiving research grant.

M. *Job Description.* H.R. 1 does not require the filing of an employee's job description (if available) with his financial disclosure form. The joint substitute does.

10,000 or so of the 14,000 Executive Branch employees of whom public financial disclosure will be required are not high ranking political appointees who may be in positions in which any investment might be affected by a decision they make. Conflicts of interest for the bulk of Executive Branch employees will thus result from financial dealings in narrow areas of concern. It thus makes sense to require that the public have available when reviewing their reports, the general guidelines of their duties. This will cause the public less confusion and since job descriptions are already publicly available (with a little trying) will create no burden to employees themselves.●

DISCLOSURE OF FINANCIAL REPORTS: A BETTER APPROACH FOR THE EXECUTIVE BRANCH

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mrs. SPELLMAN. Mr. Speaker, when the House considers H.R. 1 on Wednesday, Mr. STRATTON will offer a substitute to part A of title II of this bill. This substitute contains the joint efforts of the Committees on Post Office and Civil Service and Armed Services. I urge my colleagues to closely examine it.

With thousands, rather than hundreds, of employees in the executive branch being required to file financial reports, consideration must be given to the varied situations in which these employees obtained their jobs and the varied amounts of disclosure which may be required to detect conflicts of interest. H.R. 1 just broad brushes all employees into full financial disclosure to the public. It makes no distinction between a Federal employee who is a librarian or assistant bureau chief and the President.

In my opinion, there is a need to make such distinctions. The President may be able to call a press conference to explain away an error in his financial form. The librarian of the assistant bureau chief could call a thousand press conferences and probably never have anyone attend to listen to his explanation.

I urge my colleagues to examine the joint substitute and the following discussion of the differences regarding disclosure of reports between the substitute and H.R. 1:

DISCLOSURE OF REPORTS

H.R. 1 requires full disclosure of all reports filed pursuant to it. There is no review of the reports prior to disclosure.

The joint substitute varies the amount of public disclosure. Political empoyees would disclose all information they report. Career employees would disclose only the identities or sources of items in all categories which they report except that they would disclose the amount of outside income earned. Military personnel and career employees below grade GS–16 would not be required to publicly disclose their reports.

Under the joint substitute review is required of all reports before they are made publicly available. Review of reports, especially of those to be made public, is crucial to preventing public confusion, preventing the public from misinterpreting information in the reports, and perhaps correcting apparent conflicts of interest.

With 14,000 executive branch employees publicly disclosing, the odds are that many reports will (not through willfulness) be inaccurate. We have only to view the number of income tax forms found to have mathematical errors to recognize one source of such errors. Yet, if an employee transposes an error on his tax form onto his financial disclosure form (and the expectation and argument is that the forms may be completed together), H.R. 1 permits no opportunity for correction of the error through reviews. Factor in the possibilities of miscategorizing an asset or missinterpreting a definition and the problems multiply. Review prior to public availability is a necessity which is recognized by the joint substitute.●

U.S. AGENCIES BOLSTER DEFENSES AGAINST FRAUD

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. LEVITAS. Mr. Speaker, last week I submitted for the RECORD the first article in a series which appeared in the New York Times concerning fraud and abuse in Federal programs. Today, I would like to bring to the attention of my colleagues the second article in the series, entitled "U.S. Agencies Starting To Bolster Meager Defenses Against Fraud."

This article points to some of the problems the Government faces in beefing up efforts to weed out fraud and abuse in Government programs. One of these problems is the built-in bias of administrators who do not want their programs to be identified with cheaters, but who oftentimes are the ones investigators must clear with before initiating an investigation.

As you know, the House approved last week legislation establishing Offices of Inspectors General in 11 executive agencies and departments. This legislation should solve this particular problem, inasmuch as the Inspectors General will be responsible for audits and investigations only and have no program responsibility to divide their allegiances.

The article follows:

U.S. AGENCIES STARTING TO BOLSTER MEAGER DEFENSES AGAINST FRAUD

(By David Burnham)

WASHINGTON, April 16.—The Department of Transportation last year assigned only four inspectors to detect fraud and abuse in the $6 billion Federal highway program.

The Veterans Administration had only one auditor for every $238 million provided it by Congress.

The Labor Department devoted only three one-hundredths of one percent of its $23.5 billion budget to investigations and audit.

As these examples suggest, the Government's defense against fraud has been meager. But there are some preliminary signs that Congress and various agencies are beginning to move to stanch the annual flow of billions of tax dollars to dishonest executives, hospitals, schools, doctors, banks, welfare recipients and others who try to bilk the Government. Among these signs are the following:

The House of Representatives is expected to approve on Tuesday legislation mandating the establishment of a central, semi-autonomous office of inspector general in 12 Federal agencies that each year spend $100 billion.

Attorney General Griffin B. Bell, in his first year in office, has sought to increase the efforts of the Justice Department, the Federal Bureau of Investigation and the 94 United States attorneys to combat white-collar crime, particularly fraud against the Government. Although some experts believe that his personnel allocations have not kept pace with his statements, the Attorney General has emphasized this effort in a series of speeches in which he promised new attacks on white-collar crime. "One serious aspect of white-collar crime is fraud against the Government, including Medicare and Medicaid programs," he said in a speech to the bar association in Little Rock, Ark. "But fraud is too nice a term. It is theft of Government funds, and that really means stealing from the public.

In response to a law approved by Congress in 1976, largely at the urging of Representative L. H. Fountain, Democrat of North Carolina, the Department of Health, Education, and Welfare has created a unified and still growing Office of Inspector General, which has begun trying to improve the detection and prevention of fraud and mismanagement in the department's 320 programs.

The Law Enforcement Assistance Administration, a branch of the Justice Department, has made a series of grants to help local prosecutors improve their ability to deal with economic crimes and to assist states in adopting model laws on purchasing and contracts designed to reduce the opportunities to steal from the Government.

NEW EFFORTS TO REDUCE FRAUD

Interviews with a cross section of officials and former officials further indicate that a number of agencies, responding to the pressure developed by Mr. Fountain in hearings of his House Intergovernmental Relations Subcommittee, have begun to increase their efforts to reduce fraud.

Allan L. Reynolds, the recently appointed inspector general of the Veterans Administration, for example, is in the process of tripling his audit and investigation team, expanding it to 325 persons as against about 100 at the end of last year.

Secretary of Labor Ray Marshall announced last week the formation of a permanent office of special investigations to deal with fraud and mismanagement in his department's programs.

Despite these and other steps, however, many officials cited a variety of continuing psychological, sociological and programmatic pressures that mean the Federal Government is still an easy mark.

LACK OF BUILT-IN INCENTIVES

Simply put, the Government lacks some of the built-in incentives to protect itself from fraud that an individual or a business concern has.

An individual has limited resources to spend and normally is quick to notice when he is being cheated. Corporate managers

must answer to stockholders if they are being cheated and must disclose the situation on their balance sheets.

But Government administrators handle money that belongs to no one because it comes from everyone, and they often deal with people they have never seen and to whom they are not immediately accountable.

Charles F. C. Ruff, the fourth Watergate prosecutor, now the deputy inspector general of the Department of Health, Education and Welfare, touched on the matter in a recent interview.

Some of the "inducements to heightened criminality," he said, include "very few controls on how the money is spent, no immediate victims" and low odds that an offender will be caught. He added: "No one is really being hurt."

Mark M. Richard, head of the fraud section in the Justice Department's criminal division, said, "The problem with fraud, and with most white-collar crime, is in showing the significance of what was done. It's not a sexy area."

Moreover, Government officials may be disinclined to root out corruption because to do so might reflect badly on their programs and ultimately damage their careers. Most of those interviewed said that program managers frequently had an allegiance to the clients or administrative system their programs were serving, a factor that often undermined efforts to improve accountability.

Mr. Reynolds, the new inspector general at the Veterans Administration and for almost 25 years an auditor at H.E.W. and the Interior Department, said: "There is a motivation among many program people toward the client or industry—by this I mean a school or hospital system—that they are serving. They don't have a high level of concern, characteristically, about preventing fraud and abuse."

He emphasized that he had not been at the V.A. long enough to make generalizations about that agency.

Robert R. Elliott, the former general counsel of the Department of Housing and Urban Development, said that administrators of Federal programs had "a tremendous tendency" to decide that people stealing from the Government were doing so by accident rather than design. "It doesn't help a program if its constituents are viewed as frauds," Mr. Elliott said. "Who wants to find his own program full of frauds?"

MEALS FOR 2.4 MILLION

Administrators of programs, and the sponsors of them in Congress, tend to concentrate on the social problems their programs are designed to alleviate and sometimes look upon controls to prevent fraud as a hindrance.

The summer food service program for children, for example, in recent years has provided meals to 2.4 million children at more than 16,000 places throughout the United States.

But the General Accounting Office has investigated the program and uncovered indications of kickbacks, bribes, improper bidding procedures and questionable claims for payments.

Another explanation for the Government's failure to combat fraud more effectively is the sheer size and complexity of many programs. The Veterans Administration, for example, provides monetary benefits to more than six million people. In the fiscal year 1977, the Defense Department had 10,320,141 "procurement actions" in which it paid $10,000 or more for some item or service, according to Brent Rushford, who was recently named an assistant general counsel of the department with a specific mandate to reduce fraud.

Adding to this complexity is the fact that many Federal programs are run by state, county or city governments. The Labor Department's $15 billion unemployment insurance program, for example, is administered by the 50 states. Its supervision at the Federal level consists of the part-time effort of six trained criminal investigators and 13 program analysts.

LETHARGIC ENFORCEMENT POSSIBLE

Such situations tend to breed lethargic enforcement. The experienced head of the fraud section in one Federal prosecutor's office said that if he was a local district attorney he would not be greatly concerned about fraud against his city or county when as much as 90 percent of the funds lost came from Washington.

"I'd figure that if the Federal Government wants to throw away its money, let the Federal Government prosecute the cases," he said.

Moreover, states and local governments are sometimes not eager to find corruption in Federal programs because they might be held liable for the repayment of losses from their own budgets.

The General Accounting Office has suggested that Federal prosecutors, like their colleagues at the local level, frequently fail to prosecute those found to be stealing from the Government because of a lack of manpower.

According to one of its reports, almost two-thirds of the 1.2 million criminal complaints referred to Federal prosecutors in a recent six-year period were not prosecuted, at least in part for that reason. Furthermore, the G.A.O. found that in four sample offices 22 percent of the complaints on which the Government did not act "were considered prosecutable."

CONCENTRATION ON DETECTION

While the hearings by Representative Fountain's subcommittee and the statements of President Carter about the need for efficiency in Government appear to have heightened sensitivity to fraud against the Government, officials so far have concentrated on detection and prosecution rather than prevention. Yet it is in the area of prevention that many experts believe real improvements are possible.

For example, Mr. Richard of the Justice Department said that since neither the Federal nor State criminal justice systems could adequately cope with the fraud that existed, the Government should devise programs that were less subject to abuse.

Thomas D. Morris, H.E.W.'s inspector gen- involved in shaping . . . Mr.Morris's deputy, Mr. Ruff, added that his hope was "to reduce fraud by simplifying government."

"If all we do is add new reporting forms, if all we do is make Government more complicated," Mr. Ruff said, "we might as well fold up our tent and go away."

But interviews with officials throughout the Government indicated that there was no concerted effort to prevent fraud.

NO PROJECT ON PREVENTION

Peter J. Petkas, director of the management staff of President Carter's Government reorganization project, said that his group had no across-the-board project concerning fraud prevention. Richard Berg, executive director of the United States Administrative Conference, an agency designed to improve Government procedures, said he could not recall any project by his agency aimed at reducing fraud.

And the Office of Management and Budget has repeatedly reduced the size of investigating and auditing branches in various agencies in the last few years.

According to a number of officials, one underlying explanation for the Government's broad failure to detect, prosecute and prevent fraud is that program managers frequently come from the constituencies they are serving, expect to join them when they leave Government service or have financial interests in those areas.

"The revolving door is a contributing factor to this problem," Mr. Reynolds said. "Conflicts of interest in the sense of the ingrained biases of an administrator who comes from an industry he is responsible for, that is a tough problem."

Brent Rushford, who recently joined the Defense Department as an assistant general counsel to work on the fraud problem agreed. "My own opinion is that while there are a lot of good reasons for cross fertilization, it creates serious problems," he said. "It is very hard to switch your loyalties, very hard to drop old loyalties."●

PARREN J. MITCHELL—AN ALTERNATIVE MILITARY STRATEGY

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MITCHELL of Maryland. Mr. Speaker, one of the most unfortunate aspects of the national discussion on defense policies and military spending is that it resembles a monolog more than a dialog. The voices appealing for constructive and less costly alternatives to present policies have not been afforded a fair hearing. The only question we seem to debate each year in Congress is which, not whether our foreign policy or international position requires us to maintain a huge defense establishment reminiscent of the Cold War.

During the consideration of the first budget resolution, I shall raise the issue of alternative policies and expenditures. To prepare for that national priorities debate, I would like to share with my colleagues a report prepared recently by two eminent military authorities which recommends substantial reductions below current force levels without jeopardizing any commitments to our friends and allies.

The report, entitled, "Military Policy and Budget Priorities: Fiscal Years 1979–82," was prepared by Townsend Hoopes and Dr. Herbert Scoville. Mr. Hoopes was Under Secretary of the Air Force (1967–69), Principal Deputy Assistant Secretary of Defense for International Security Affairs (1965–67), and Assistant to the Secretary of Defense (1949–52). Dr. Scoville was Assistant Director of the Arms Control and Disarmament Agency (1963–69), Assistant Director and Deputy Director of the Central Intelligence Agency (1955–63) and Technical Director, Armed Forces Special Weapons Project, Department of Defense (1948–55).

Their report concludes that significant savings can be achieved and our security enhanced by a courageous reexamination and realinement of the force structure.

As I intend to use their recommendations to provide assistance in developing military reductions in my transfer amendment to the budget resolution, I urge my colleagues to give it close scrutiny.

It should also be noted, Mr. Speaker, that their report contains an introduction signed by the presidents of our major domestic institutions, including the U.S. Conference of Mayors, the United Auto Workers, the Urban League, the American Federation of State, County

and Municipal Workers, the International Association of Machinists, and the National Education Association. The introduction urges that wasteful defense spending be eliminated and that provisions be made for the conversion of unnecessary military production facilities to civilian uses. These national leaders suggest that unwarranted defense spending should be trimmed and transferred to domestic programs to revitalize our cities and rural areas. I heartily endorse their transfer perspective.

I feel that this report, "Military Policy and Budget Priorities: Fiscal Years 1979–82" deserves close attention, for it is one of the most serious efforts to swim against the tide on military policy issues. During this week, I will be inserting each of the Report's sections, and I will also enter into the CONGRESSIONAL RECORD some of the press responses to the report.

The first installment, which includes the introduction by major domestic leaders and the foreign policy framework set out by Mr. Hoopes and Dr. Scoville, now follows:

THE FOREIGN POLICY FRAMEWORK

If the United States has suffered foreign policy frustrations recently, none has been the result of U.S. military weakness. Larger military forces would not have enabled us to roll back the price of oil, manage the transition from minority white rule in Southern Africa, or effect a political settlement in the Middle East. Our decision not to intervene militarily in these situations did not follow from a judgment that our military forces were inadequate, but rather from a considered conclusion that none of these situations lent itself to a military solution—indeed that a U.S. military intervention could only have exacerbated the difficulties. In part, our sensible restraint was derived from the painful and sobering lessons learned in Vietnam—that there are inherent limits to the effectiveness of military power as an instrument of policy, even for a great power. An equally influential factor was the commonsense realization of our government and people that the critical problems that cut across the world today—ranging from food shortages, energy imbalances, rising national tariff walls, large-scale violation of human rights, and the precarious stability of democratic governments—cannot be ameliorated by military force.

Nor is there any significant element in present or prospective U.S.-Soviet relations that requires us, rationally, to expand our military forces. Unfortunately, reason and proportion have frequently conflicted with the picture painted by proponents of larger U.S. military spending. They have argued that the story of the past decade in world diplomacy is the story of Soviet gains and American losses—caused by rising Soviet military power. This seems to us a quite false picture of reality. Western frustrations and setbacks have been fundamentally unrelated to Soviet military strength. Moreover, there is abundant evidence that the Soviets have been seeking normalized relations with the West during this period, in part to gain the benefits of Western technology and even of Western foodstuffs, but even more basically to enhance the security of the USSR. And Soviet diplomatic forays in the Third World have been tentative and have not fared well. The Soviets face continuing dissension in Eastern Europe, are quarreling bitterly with the Euro-communist parties of Western Europe, have been expelled from Egypt and Somalia, have lost influence in Syria, and have been rebuffed by the new countries in Africa and Indochina in their efforts to establish military bases in those places. In our judgment, both superpowers have been forced in recent years to accept a greater accommodation to the indigenous dynamic of local events in an increasingly unmanageable world.

The overall U.S.—Soviet balance remains stable. Both the USSR and the United States possess enormous military power, and both countries have been expanding or modernizing their military forces beyond reasonable limits. Both have far more military capability in the aggregate than they can effectively utilize in conjunction with any foreseeable international crisis—including total nuclear war. The contention that whichever superpower spends more of its GNP on military procurement will automatically gain prestige or leverage in the Third World, or in foreseeable crisis situations anywhere, is a highly dubious proposition, as reference to the nonmilitary nature of the overriding global problems has suggested. It is well known, for example, that the Soviet Union spends a greater proportion of its GNP on agriculture than we do, but this does not make Russia the world's leading breadbasket; on the contrary, the Soviets must import huge quantities of wheat from us. The CIA recently doubled its estimate of the percentage of Soviet GNP devoted to military spending, but it did not change its estimate of Soviet military capability. The analysis showed, not that we are twice as threatened, but that the Soviet economy is twice as inefficient as we had originally thought. Finally, we see little indication in present and prospective Soviet policy of an aggressive drive carrying with it a willingness to run a serious risk of war.

We need to maintain significant military power. But in an era of slow economic growth and scarce resources worldwide, the particular size and character of the U.S. defense budget does not send sensitive or even relevant "signals" of our intentions to either allies or potential adversaries. A "real growth" military budget is not therefore a prerequisite to effective U.S. efforts to confront, define and resolve major global problems facing the world today; nor is it a test of our internationalism, in the sense that a reduction in the military budget would be read as a return to isolationism. We are hardly an isolationist nation. The Carter Administration has launched a whole range of significant foreign policy initiatives—in the Middle East and Africa, in Latin America, on nuclear proliferation, on Western economic policy, on arms sales, and human rights. Success in these initiatives demands the concentrated attention of our best diplomats and government managers, and they need to be backed by significant resources, but it does not depend upon an expansion of U.S. military forces.

President Carter said recently, "It is a new world that calls for a new American foreign policy." We agree, and suggest that the military posture appropriate to underpin such a foreign policy is one sufficient to defend the United States and its principal strategic interests, but that we neither want nor need a capacity for extensive military interventions in the Third World.

THE MILITARY BUDGET

The important military budget issues facing the American people today relate to force structure—how many active Army divisions should be deployed, how many Air Force wings should be procured and maintained, and how much military force should be "forward positioned" far from our shores. These are the basic questions. The new Administration has inherited and is carrying forward a planned expansion of U.S. military forces. In our view, such an expansion is not warranted at this time either by the general climate of international conditions or by the present and prospective state of US—Soviet or US—China relations. On the contrary, we believe that a number of our military deployments can be safely reduced, and that such actions would be in the national interest. They would produce desirable savings in the military budget and thus permit the transfer of funds to socially useful programs. Of equal importance, they would give us a military posture more appropriate to our national requirements in a period when the primary foreign policy problems are nonmilitary in nature.

If the military force structure is expanded, then it is certain that the longer term costs of manpower, procurement and operations will dwarf any short-term savings that may be realized through greater efficiencies. Decisions made now on force structure questions will determine the character and level of military spending for decades to come.

One principal aim of this paper is to broaden the debate over military alternatives, which has been confined within very narrow limits during the past several years. While the factor of the US-Soviet military balance is fundamental in such a debate, there are many other considerations. President Carter has instituted a "zero-based budgeting" technique aimed in part at achieving a balanced budget by 1981. This technique forces government agencies to justify and "prioritize" their entrenched spending programs. Such a process requires the vigorous development and debate of alternative programs; nothing is regarded as sacred, everything is open to question. It is imperative that this "zero-based" technique be applied to our military spending and military commitments, for two reasons: First, there exists a powerful inertia in favor of the steady expansion of military programs, sustained by a powerful military-industrial constituency. Second, there exists in our society a strong tendency to accept new military technology, without examining whether it will produce greater or lesser security.●

QUEEN ISABELLA DAY

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. RAHALL. Mr. Speaker, I would like to bring to the attention of my colleagues a proclamation offered by Gov. John D. Rockefeller IV, Governor of the State of West Virginia, on behalf of the residents of West Virginia declaring April 22, 1978, as Queen Isabella Day. This day is set to honor the 527th birthday of the woman responsible for the discovery of America.

Whereas, America's Discovery in 1492 was made possible through support from Queen Isabella (1451–1504), Queen of Castile, wife of Ferdinance of Aragon; and

Whereas, the navigator was able to present his innovative navigational theories to the Spanish Court because Queen Isabella had been moved by his honesty and determination; and

Whereas, that voyage opened North and South America to settlement and development by European nations, laying the foundations for contemporary American societies; and

Whereas, the colonizing of this country and the winning of its independence could have been delayed for many years without Queen Isabella's initiative and the successful voyage of Columbus; and

Whereas, Sail explorations gave Spain a vast empire, Isabella did not treat the NEW WORLD with greed or neglect. Many times she expressed concern with the plight of the American natives. When Indians were

brought back to Spain as slaves, Isabella ordered them freed; and

Whereas, The history of America has direct linkage to the birth of Queen Isabella on April 22, 1451; and

Whereas, the 527th birthday anniversary of Queen Isabella occurs on April 22, 1978.

Now, therefore, I, John D. Rockefeller IV, by virtue of the authority vested in me as Governor of the State of West Virginia, do hereby proclaim April 22, 1978, as "Queen Isabella Day" in West Virginia, and do urge all citizens to observe the day and that teachers direct the attention of your students to the history of Queen Isabella, whose generosity resulted in generations of immigrants from all over the world seeking their freedom and fortune in the Western Hemisphere.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State to be affixed.

Done at the Capitol in the City of Charleston, State of West Virginia, this the Sixth day of April, in the year of our Lord, One Thousand Nine Hundred Seventy-eight and in the One Hundred Fifteenth year of the State.

By the Governor:

JOHN D. ROCKEFELLER,
Governor.
A. JAMES YANCHINE.
Secretary of State.●

MISSOURI'S VOICE OF DEMOCRACY WINNER

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. TAYLOR. Mr. Speaker, recently a young constituent of mine, Mr. Shelby Michael Durham became the representative for the State of Missouri in the annual Voice of Democracy scholarship program. Shelby was one of over a quarter of a million young people who took part in the scholarship program. For the past 16 years, the Veterans of Foreign Wars and its Ladies Auxiliary has offered our Nation's youth an opportunity to win a scholarship and participate in our country's post-secondary education process. In the beginning, one $1,500 scholarship was awarded for the first place winner. Today, the program has grown until the VFW is able to offer five awards for a total of $22,500. It is my hope that they will be able to continue this fine service to our youth as well as to our Nation.

I am proud of Missouri's winner, as I am sure Shelby's parents and friends are in his hometown of Springfield, Mo. I would like to share Shelby's outstanding speech with my colleagues.

The speech follows:

SHELBY MICHAEL DURHAM, MISSOURI WINNER OF 1977–78 V.F.W. VOICE OF DEMOCRACY SCHOLARSHIP PROGRAM

In this land of the free we must each ask ourselves how long will it continue to be free? Will it last another two hundred years? This land will only continue to be a land of freedom as long as its people fulfill their responsibilities as American citizens. Thus, we must ask ourselves another question, what are the responsibilities of Americans? After contemplating this question myself, I concluded that there are three responsibilities that are the most important for a young American citizen as myself; the responsibility of being knowledgeable of the major issues, voicing my opinion in a constructive manner, and being faithful to the call of duty in the armed services.

People are destroyed for their lack of knowledge. Consequently, a society dies because its members are ignorant of the issues that affects them. Ignorance works within a nation like cancer does within a human body. Therefore to perform my obligations I must be aware of the controversies that influence me directly or indirectly. Knowledge is also the instrument of production in a democratic state in which all citizens are to participate. But in order for everyone to be productive they must be well informed of their responsibilities. The way I can be productive is to do the best I can to learn in the classroom and to be open to the news media. Knowledge is a life giving source to the principle of human liberty.

As a result of being knowledgeable of the major issues I then can perform my second responsibility; to voice my opinion in a constructive manner. Knowledge is the door to democracy and practice is the key that unlocks knowledge. In order for knowledge to work it must be used. If I disagree with an idea I have the right and the duty to say so. The concept of a "government of the people, by the people, and for the people" will not work unless the people do participate and make their voices heard. To fulfill this responsibility now and in the future I can express myself through voting, petitions, and formal speeches. If this nation is to increase its greatness, young people like myself and others must voice our approval or dissent. We must be willing to accept change for the better through the voice of disagreement of acceptance and to see our plans carried out.

The third obligation is to serve my country honorably in one of the military branches if called upon to do so. The price may seem great but freedom was never free. If the draft were to be reenacted and I burned my draft card or fled the country after being drafted then I would not deserve the pride of saying that I was an American. To march on foreign soil in order not only to secure America's liberty, but also to promote democracy and freedom is possibly the greatest thing an individual can do for his country. To be able to say that I served my country is a self-recognition that is truly deserved. An individual must be willing to protect America unless he can prove it contradicts his religious values.

The value of being an American is hard to put into words if one seeks its true worth, for it is very valuable. The privileges of being an American to me is the honor of existing in a status that is respected all over the world. It gives me an identification with our forefathers who considered the same three responsibilities that I gave as the building blocks of a great nation. Therefore, I view my role as a citizen very important. I hope to be knowledgeable in America's laws and issues. I plan to voice my opinion if needed and to defend my country spiritually, morally, and physically. I must strive to fulfill these responsibilities and if I succeed I will find myself fulfilling my greatest responsibility and that is giving my entire self to this beloved country.●

TRANSFER AMENDMENT

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. WALGREN. Mr. Speaker, the council of the city of Pittsburgh, on April 3, 1978. approved a resolution which I would like to insert in the RECORD at this time:

RESOLUTION

Whereas, President Carter and the Democratic members of the Congress have publicly committed themselves to re-order Federal spending priorities away from wasteful military programs and toward domestic programs meeting human needs; and

Whereas, the security of our nation, our city, and our neighborhoods is directly threatened, daily, by neglected human needs; and

Whereas, Pittsburgh does not have the financial resources, by itself, to resolve a number of urgent social, economic, educational, medical, legal and environmental problems; and

Whereas, Congress will introduce a Transfer Amendment for Fiscal Year 1979 Federal Budget; Now therefore be it

Resolved, That the Council of the City of Pittsburgh calls upon Congress to redress the imbalance between domestic expenditures and the Pentagon by supporting the transfer of funds from unwarranted military spending to human needs programs through the Congressional budget process.●

LOCKING CONSTITUTIONAL HORNS OVER THE PANAMA CANAL

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. HANSEN. Mr. Speaker, although I am extremely disappointed in the vote last week by the Senate to dispose of the Panama Canal without the consent of the House of Representatives as required in article IV. section 3. clause 2, of the U.S. Constitution, I would like to assure my colleagues in the House that the battle has only just begun.

Our position is sound and our efforts did receive aid because of an amendment to the treaties by Senator BROOKE which keeps the President from exchanging instruments of ratification until March 31, 1979. This helps assure the House time to consider several options. We could, for instance, reject the administration's implementing legislation, or propose various amendments to appropriations authorizations for fiscal year 1979 to deny funds to be used in connection with the treaties until such time as the House votes on disposition of U.S. property in the Panama Canal Zone.

The fight in the House of Representatives has just started, and I would like to remind each of my colleagues that it is not too late to sign discharge petition No. 6 as many are doing each day.

There is no need to point out the mischief which might take place if the concept of "self-executing treaties" is allowed to prevail where property disposal and appropriations are involved. Once the precedent exists, where will the lines be drawn? Will treaty approval power further expand to preclude any need for action by the House of Representatives in matters of foreign policy? If the possibilities are expanded, will self-executing treaties even allow tax adjustments and other appropriations-type authority exclusive of House action? And ultimately, can a President eventually sign Executive agreements which finally preclude even the Senate in treaty matters?

The Senate via the Brooke amend-

ment has granted us the time to resolve the question of a House vote and they have also created a situation whereby the House will offer the ultimate resolution to the Panama issue by accepting or rejecting the administration's implementing legislation.

There are two fights involved—one over the Panama Canal and one over the Constitution. I ask that, whatever your feelings regarding the Panama Treaty issue, you continue to fight for the rights of the House and preservation of our proper constitutional role as representatives of the people. The House must assert itself and preserve the separation of powers. This constitutional principle must remain intact.

However, when the will of the House is thwarted by certain influences, then we must turn to the only legislative tool capable of alleviating the situation. Therefore, I initiated discharge petition No. 6 which would allow for immediate consideration by the entire House of House Concurrent Resolution 347 which now has 239 cosponsors. Some 170 Members have already signed this discharge petition and the number is increasing rapidly.

DISCHARGE PETITION NO. 6 SUPPORTED BY COMMITTEE CHAIRMAN JOHN M. MURPHY

. . . It remains of paramount importance that House Members sign discharge petition No. 6 . . . the most expeditious means of bringing the Resolution (No. 347) to the floor and allowing all Members to express a position on a matter that vitally affects the power of which we are trustees.—Congressional Record, April 6, 1978, E1711.

DISCHARGE PETITION NO. 6 SUPPORTED BY MINORITY LEADER JOHN J. RHODES

. . . if ever there was a time for this unusual procedure to preserve our legislative system and the constitutional provisions for checks and balances, this is it. I have accordingly extended my support both as a cosponsor of H. Con. Res. 347 and as a co-signer of the discharge petition No. 6 and strongly encourage all Members to do the same.—Letter to Congressman George Hansen, April 4, 1978.

I also call the attention of my colleagues to a statement by Congressman METCALFE, the chairman of the Panama Canal Subcommittee and a supporter of the treaties in the CONGRESSIONAL RECORD of April 18, 1978, page 10453.

Mr. Speaker, it is my personal conviction that the Constitution vests in Congress exclusive jurisdiction with regard to the disposal of U.S. property. This is based upon a careful evaluation of the testimony of numerous witnesses (pro and con) who have appeared before various committees of Congress during recent years and my own personal study of the issue.

Acting pursuant to my own convictions on the meaning of Article IV, Section 3, Clause 2 of the Constitution, and acting pursuant to the expressed opinions of members of the Subcommittee on Panama Canal, I have consistently urged that the role of the House be respected.

The time is ripe and the people of the United States are looking to the House of Representatives for leadership and action on this crucial question. I repeat, it is not too late to sign the discharge petition. Please reflect the views of your constituents and sign discharge petition No. 6 today.

Mr. Speaker, the present situation regarding the Panama issue as set by the Senate is as follows:

First. The DeConcini, of Arizona, reservation, had the situation in chaos just 4 days prior to the final vote on the Panama Canal Treaty. The "Tale of Two Countries" finally shed some light on the obvious fraud of selling an agreement where each party is giving conflicting assurances of the terms. However, I believe that the DeConcini reservation is now worthless in light of statements made to ABC's Barbara Walters by Panama's Gen. Omar Torrijos on April 19. Torrijos stated that if the Senate had not ratified the treaties he was prepared to intervene militarily in the Canal Zone the next morning. He also stated that he would blow the canal up before he would ever allow the United States to intervene militarily to reopen the canal in case of shutdown. These inflammatory statements are given even stronger support in light of his further remarks on April 21 when he stated that Muammer el-Qaddafi, the terrorist-supporting dictator of Libya, helped to formulate the plans to destroy the canal. Obviously, there is no guarantee by Panama of the United States right to unilaterally keep the canal open. This, I believe, is a rejection by Panama of the terms of the treaties as passed by the U.S. Senate.

(2) The Hatch (Republican, of Utah) amendment which insisted that treaty action disposing of titled U.S. property must be contingent upon an act of Congress under article IV, section 3, clause 2 of the U.S. Constitution failed to pass the Senate by a vote of 58 to 37. Such an amendment or reservation had significant support.

a. In the House where 239 Members have cosponsored legislation demanding that article IV be complied with and a discharge petition is rapidly being completed (having 167 of the required 218 signatures at this date) to force a vote on the matter; and

b. In the courts where this same separation-of-powers question concerning article IV has risen through the U.S. District Court, the Court of Appeals, and now rests before the entire Supreme Court on a priority basis.

(3) The Brooke amendment which placed the effective date of exchange of instruments of ratification on March 31, 1979, or earlier if required congressional action occurs, has several significant aspects.

a. Senate sources indicate that Senate leaders agreed to the Brooke reservation as a means of hopefully minimizing the impact of the passage of the Panama treaties on this year's elections. However, the reverse is true especially in the House where voters are looking to Members expecting action to counteract Senate ratification. A majority of the House is already on record in belief that Senate ratification is incomplete and unconstitutional without House approval of the disposition of U.S. property. National polls indicate that almost three-fourths of the American public feel that the House must vote on disposition of U.S. property in the Panama Canal Zone.

b. The Brooke reservation may also be viewed as a concession by the Senate to the House. I believe that the 239 cosponsors of House Concurrent Resolution 347 influenced passage of the Brooke reservation. Senator BROOKE was a strong advocate of the Hatch amendment and I am sure that he proposed his reservation in deference to due process and in sympathy to House Members. The Brooke reservation was designed to allow needed time for House action.

The present situation concerning the Panama situation in the House is as follows:

(1) The Hansen-Murphy resolution, House Concurrent Resolution 347 now has 239 cosponsors and many more sympathizers in addition, an unprecedented show of support for legislation involving a major controversial issue. This has been in progress since the treaty signing and has become the foundation for a constitutional defense against the administration's railroad job on the Panama Canal giveaway in the Senate. The fight is to save the Constitution. I am sure that is why over half of the Members of the House, including the chairman of the committees immediately concerned, have cosponsored the Hansen-Murphy resolution. This strong manifestation of support for House action in traditional constitutional fashion has buttressed arguments in the court where constitutional confrontations cannot be ignored.

a. Immediate action on House Concurrent Resolution 347 has become necessary and therefore I filed Discharge Petition No. 6 with the unusual and unprecedented outspoken support of the chairman of the affected committee, Congressman JOHN MURPHY (D–NY), of Merchant Marine and Fisheries, and Minority Leader JOHN RHODES (R-Ariz.) Already 167 of the necessary 218 have signed. Continued action in this regard will accomplish three things.

First. Completing the discharge petition will demonstrate forcefully that we will not tolerate the Senate's unreasonable application of the use of self-executing treaties in order to deprive the House of its constitutional responsibilities as the voice of the people. Additionally completion of the discharge petition will notify the Senate and the President that the House considers ratification of the Panama Canal treaties without an appropriate act of Congress as incomplete and unconstitutional.

Second. Completion of the discharge petition will also provide a much-needed legislative history in case of a similar situation occurring in the future.

Third. Finally, completion of the discharge petition will significantly enhance any court action which is presently being undertaken by some Members of House or others and any court action which may be undertaken in the future. We are intent that the court understand that the House is not complacent about invasions of its responsibilities and expects any judgment to be predicated accordingly.

Although the discharge petition is a highly irregular method, congressional leaders agree that it is necessary to push House Concurrent Resolution 347 out of intracommittee controversy, past the Rules Committee and Speaker to unimpeded early and privileged consideration on the floor of the House.

(2) H.R. 11201 (sponsored by myself) is similar to House Concurrent Resolu-

tion 347 and is in the Committee on Armed Services. Where House Concurrent Resolution 347 generally provides for no transfer of U.S. property to Panama without an act of Congress (assigned to Merchant Marine and Fisheries Committee), H.R. 11201 provides that no military base or U.S. property under the jurisdiction of a secretary of any branch of the military services can be transferred without an act of Congress. Over 80 percent of the members of the Armed Services Committee are cosponsors and letters and petitions have been circulated calling for early consideration.

(3) H.R. 11415 (sponsored by myself) is also similar to House Concurrent Resolution 347 and is in the Committee on Veterans Affairs. This legislation would provide that there be no transfer without an act of Congress of property in Panama wherein Americans are interred who are in any way the responsibility of the Veterans' Administration. This was introduced in reaction to administration requests before the House Veterans Affairs Committee for $300,000 to move interred Americans including veterans from Mount Hope Cemetery to Corozal in the Canal Zone in obvious compensation for oversight in the proposed treaty agreement, and after loud administration assurances that there would be no cost to U.S. taxpayers in the Canal Zone transfer.

(4) H.R. 11634 (sponsored by myself) is the administration's proposed treaty implementation legislation. The text is unchanged but the title was expanded to include the necessary functions for the Canal Zone transfer as provided by the Constitution.

This means authorization for transfer or disposal as stipulated by Article IV, authorization for necessary appropriations as stipulated by article I, and authorization for implementation to supplement article II. Requests have been made of the four committees to which the bill was assigned and to three others with apparent jurisdiction that early consideration be given inasmuch as the Senate has approved the proposed treaties. Answers have been received to the effect that the committees would act expeditiously when the official executive branch request is submitted. My action in introducing the administration's implementation legislation gave opportunity to teach a civics lesson as enumerated in the conditions of the title and flushed out the need for House Concurrent Resolution 347 which is intended to prevent the administration from any attempt to implement the treaties prior to House action. To be confined to a post-implementing role is to put the House in a hostage condition where they must act in conformance to pre-set conditions or risk creating international incidents if it chooses to work its will otherwise.

(5) Another means of impressing the Senate and Administration with the power of the House to assert its right to legislative partnership as provided by the Constitution in treaty consideration involving disposal of U.S. property or appropriations of funds is the ability to boycott or amend ongoing legislation such as State and Defense Department appropriations authorizations for fiscal year 1979 to make a point. There is no question but what serious attempts will be made in this regard. I have already formulated amendments using language similar to that of House Concurrent Resolution 347 to properly encumber upcoming appropriations bills.

IN THE COURTS

The U.S. Supreme Court is now considering accepting the Separation of Powers case sponsored by 66 Members of Congress. The case originally was dismissed by the U.S. district court in the District of Columbia and then appealed to a circuit court three-judge panel. Split decisions (2–1) on substance and on a requested injunction prompted the case to be accepted by the Chief Justice for decision by the entire Supreme Court. Some decision is expected immediately. Many court cases have been prompted by the proposed Panama Treaties.

The first was a suit by Members of Congress (HANSEN and MCCLURE) to force treaty negotiator Linowitz to take obvious conflicts of interest to the U.S. Senate for the normal ambassadorial advice and consent process since his special appointment had allowed a bypass of this usual prerequisite. The second was an early suit by Members of the House and Senate similar to the current case which was dismissed on technical grounds. The third was an action dismissed by the Supreme Court brought by attorneys general of several States supported by Members of Congress to block the treaties on economic grounds and other factors of concern to those respective States as political entities in their own right. The current action has excellent potential for forcing high Court action in that the Senate has voted (Hatch Amendment No. 92 defeated 58–37) to reject need for compliance to article IV, section 3, clause 2 in the Panama Treaty considered and the House has strongly demonstrated its will that article IV applies by the fact that a large majority of the Members are cosponsors of House Concurrent Resolution 347 which makes that point precisely.

Thus, a classic head-on confrontation over constitutional power and authority is evident and must be resolved. If perchance a point of technicality should allow the Court to again sidestep making the needed constitutional determination, then we will proceed to use a completed discharge petition and House vote on House Concurrent Resolution 347 as the grounds for a new filing and other action as necessary to support our efforts. We will not rest in anything short of victory in preserving the balance of powers endowed on us by our Founding Fathers to assure that the people's interests are protected and their voice is heard.●

TAX REFORM: WHY IS THE TIME NEVER RIGHT?

HON. ANDREW MAGUIRE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. MAGUIRE. Mr. Speaker, last September, the Treasury Department, at President Carter's request, presented him a lengthy package of ambitious tax reform proposals. The Treasury was guided by Mr. Carter's own compelling sense that the Federal tax system is a "disgrace to mankind."

And who can doubt that? Our income tax system necessarily relies, for the most part, upon voluntary compliance to finance all but 12 percent of Federal expenditures. Voluntary compliance must be founded, in turn, on a prevailing belief that the laws are just and fairly administered. The Internal Revenue Code, however, is comprised of 8 pages of tax rules and tables, and 2,104 pages of exceptions.

Mr. Speaker, I wish to share with my colleagues a summary of major contrasts between the September package and the 1978 tax program ultimately sent to Congress by the President. Not much in the real world has changed in the few months since the President was on the verge of accepting a strong package of reforms on the advice of his Treasury Department. Most of the changes promoted then are still good ideas, and for the same reasons. I insert this synopsis at this point in the RECORD:

I. MARRIAGE TAX PENALTY REDUCTION

Problem: Present law provides a substantial disincentive for marriage, encouraging people to "live together." This is due to higher tax rates for joint income where both partners work, a lower combined zero bracket amount (standard deduction) for couples, and the general tax credit which is half as large for a couple as for two single people. The IRS believes the vast majority of two wage earner couples pay a marriage tax.

September Proposal: In addition to rate cuts and a unified $250 credit which would reduce the penalty somewhat, the Treasury supported a special working spouse deduction equal to 10 per cent of the first $6,000 of earnings by the partner with the lower earnings. Thus, the maximum deduction would be $600.

President's 1978 Tax Program: It contains no relief beyond a $240 credit and rate reductions that will eliminate less than half of the penalty. The September proposal would have eliminated all but 12 percent of the penalty for couples earning $20,000 annually, where the higher earning spouse earns $14,000 of that amount.

II. TREATMENT OF CAPITAL GAINS

Problem: Assets accrued through capital gains, usually by the well off, are accorded exceedingly preferential treatment over assets accrued through earned income. Only half of long-term capital gains (those held more than a year) are fully taxed, and the first $50,000 of such gains may be taxed at a maximum rate of only 12.5 percent. This provision alone is anticipated to cost the Treasury nearly $9 billion from individuals, nearly all in upper income brackets, and $700 million from corporations. Capital gains could be equitably taxed as ordinary income if the purchase price of the asset were adjusted for the effects of inflation.

September Proposal: The September proposal would have fully taxed long-term capital gains, with certain exceptions for rolled-over sales of houses. Capital loss treatment would be changed accordingly. In exchange, the basis value would be indexed to inflation to the extent the asset was held longer than 10 years. A special venture capital rule sustaining present preferential treatment for the initial stock offerings of new corporations would encourage risk capital formation and new enterprise. The changes would have raised $3.5 billion from individuals and closed off the full $700 million loss to corporations.

1978 Tax Program: It only proposes to end the 12.5 percent rate limitation on the first $50,000 of gains, thus raising only $100 million from individuals.

III. DOUBLE TAXATION OF DIVIDEND INCOME

Problem: Profits distributed as dividends are taxed twice, once at the corporate tax rate, and once as individual income to the recipient. Only $100 of dividend income may be excluded by individual taxpayers. Many elderly taxpayers rely upon dividends to supplement fixed incomes. Additionally, the double taxation distorts capital financing in favor of internal earnings, and away from new equity issues.

September Proposal: Pursuant to Mr. Carter's campaign pledges, the Treasury urged partial integration of corporate and individual taxes. Corporate taxes pro-rated to dividends could be claimed as a credit by individual dividend receipients. The $100 exclusion would be ended.

1978 Tax Program: This problem is not addressed.

IV. WITHHOLDING TAX ON INTEREST INCOME

Problem: No tax is withheld on interest income to domestic taxpayers. The Treasury estimates that up to $8 billion of interest income escapes taxation by not being voluntarily reported to the IRS, an act of illegal tax avoidance.

September Proposal: The Treasury recommended withholding 20 per cent on interest income, except where an exemption certificate was filed stating the expectation that the taxpayer will owe no taxes that year. The Treasury projected this would raise $1.4 billion already legally owed it.

1978 Tax Program: It does not address this problem.

V. GROUP TERM LIFE INSURANCE

Problem: Under current law, taxable employee income excludes premiums paid by employers for the first $50,000 of group term life insurance. There is, however, no reason why such premiums should not be considered constructively received income.

September Proposal: The Treasury recommended the exclusion be reduced to $25,000, chipping away at this loophole which is not available to most lower income workers. Such a change would net the Treasury $165 million.

1978 Tax Program: The Program before Congress does not address this inequity.

VI. PERCENTAGE DEPLETION ON HARD MINERALS

Problem: There is no conceptual reason to permit continued percentage depletion for hard minerals, a tax accounting policy that encourages waste of limited raw resources instead of using recycled resources. Congress has already seen fit to end percentage depletion for major oil companies and the same logic which resulted in that action should apply to the 125 remaining categories of percentage depletion allowed for hard mineral exploitation.

September Proposal: The Treasury urged phasing out percentage depletion over 10 years, a modest proposal designed not to shock the affected industries. Percentage depletion would be replaced with cost depletion that would permit write-off of investments in mineral properties over their useful life as with most other investments. This change would close off $82 million of the loophole in 1979 rapidly increasing to $403 million by 1982, and higher thereafter.

1978 Tax Program: It drops this reform entirely.

The President's final 1978 tax program is only a shell of the September Treasury proposal. We have all heard what supposedly happened in those intervening months. The President was persuaded by advisers and key Members of Congress that now was not the time for reform. It would only interfere with the critically needed revenue reduction and bog down the debate. In the words of one Congressman "there's just no constituency for reform." So, we are told it is fatuous to suggest Congress might alter the Internal Revenue Code just because reform is in the public interest. The congressional tax agenda seems always set by the crisis of the moment, whether real or contrived. In short, now would never be the time for reform if we listened to certain people.

In spite of its limitations, however, the President's proposal, if accepted in full, would bring meaningful progress this year, and a good basis for future action next year.

But, unfortunately, the prospect is for less than the President advocates. The special interests and their sycophants in Washington are even now celebrating over a sumptuous, tax deductible meal, the anticipated bowdlerization of the President's program.

The President, I hope, will learn two things from his experience in trying to sell to Congress and the people a toned down reform package:

First, he will always achieve less than whatever he proposes, especially concerning tax legislation because so many congressional committees and interests are determined to influence the product. Therefore, he might as well seek everything that is needed, and be willing to accept essential compromises for the sake of accomplishing some good. His initial proposals would then, at least, have the strength of internal logic derived from a set of consistent and explicit principles of tax equity. I fear, however, that his current tax program attempts to write the conference report on the bill before handing it for the first time to the tax committees.

Second, there will never be a public constituency for tax reform with as intensely held views as those collectively expressed by special interests. And we know where those special interests lie on the income scale thanks to the Treasury analysis released a few weeks ago by Senator MUSKIE. Those individuals in the top 1.4 percent of income have the greatest stake in preserving and expanding tax breaks since they receive a third of all such benefits. And, of course, corporations—generally our largest—receive $20 billion or more each year in tax expenditures.

That these laws are nearly incomprehensible to many people—not raising simple issues of commonsense and justice as with civil rights for instance—does not mean there are fewer matters of equity and fairness for us in Congress to confront. With a small measure of courage and an understanding of our responsibility, we need not let the country down.

Finally, there are two special tax issues I wish to discuss: The employment tax credit and the investment tax credit. These credits are intended to encourage the full use of this Nation's productive resources.

I was pleased to see the President proposed substantial revisions of the employment tax credit (ETC) in his recently released urban policy. The credit we hastily adopted last year does not provide a very efficient hiring incentive for many companies which fall outside of the narrow employment growth range where taking on additional workers is rewarded. The President's proposal would better target the disadvantaged and low-skilled unemployed. It would include a partial second year credit to encourage retention of the newly hired worker, and continued investment in his or her ability to keep an unsubsidized job.

The employment credit must be considered in conjunction with the investment tax credit since both affect relative production factor costs. The investment tax credit was originally enacted as a temporary measure during an economic contraction, and then for only 7 percent instead of 10 percent of qualified fixed investments. Now the President proposes making the credit permanent and extending it to structures, thus inducing further abandonment of our few remaining inner city factories. Such a revision would seriously undermine the President's own program for assistance to cities. Surveys show that business leadership would prefer a general rate reduction but will take any reduction if they can get it. So, let us fashion more precise tools that do not undermine other key objectives. Business is just like the rest of us—its appetite for higher income is insatiable—and if Congress feeds it at the slightest cry of impending doom then we can expect such unfounded cries to resound regularly and repeatedly in the halls of the Capitol.

Finally, every credible study of the impact of the investment tax credit has demonstrated it to be a largely ineffective stimulus, subsidizing many expenditures which would be made anyway. It is true that capital formation is not proceeding as it should this far into a long recovery. But we know that this is mostly explained by uncertainty about future economic health and a low rate of utilizing present capacity. Cheapening the use of structures and equipment relative to labor will not eliminate those causes of the problem.

Mr. Speaker, there can be no doubt the President's tax program was watered down in response to congressional inflexibility. I hope this does not signal a more timid approach toward an admittedly recalcitrant Congress during 1978. Last year, despite undeserved darts, Mr. Carter presented Congress the foundations of a Democratic program delivering on some of the promises to remedy ills accumulated during prior years of misguided policies and neglect. I applaud his boldness in 1977 and encourage him to build on that record, starting with tax reform. At the same time, I urge the tax writing committees of Congress to place the public interest in tax justice above all else in their deliberations.●

"DEKE" SLAYTON SPEAKS AT KEYSER HIGH SCHOOL, WEST VIRGINIA

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. STAGGERS. Mr. Speaker, earlier this month I had the very distinct

privilege of introducing former astronaut Donald "Deke" Slayton to the student body and guests at my alma mater, Keyser, West Virginia High School.

Mr. Slayton was the principal speaker at the 33d annual Ed Kelley Memorial Award ceremonies. This prestigious award honors an outstanding student-athlete at the school as well as the memory of Ed Kelley, who was posthumously awarded the Congressional Medal of Honor for his valor and courage during World War II.

I am certain that every Member is aware of Mr. Slayton's unmatched contribution to our space program. Not only did he command the historic Apollo-Soyuz space flight, he has also played a key role in every U.S. manned space flight since he was chosen as one of the original seven astronauts in 1959. He is currently the Director of our Space Shuttle program.

Mr. Slayton's address was extremely informative and inspirational, and I wish to share his words with my colleagues:

SPEECH OF NASA ASTRONAUT DONALD K. SLAYTON

It is an honor for me to be asked to Keyser to say a few words to this assembly and share in the 33d Annual Jonah Edward Kelley Memorial Awards Program.

Staff Sergeant Kelley, who lost his life in winning the nation's highest award for courage above and beyond the call of duty, needs no introduction to most of you. Certainly not to General Parker, former commander of the 78th "Lightning" Infantry Division, or to General Jones, who heads the Division's Association. Or to the Moose Lodge members sponsoring this program. Indeed, many of them or their relatives survived the terrible days of the second world war.

For my part, I proudly salute the memory of Sergeant Kelley as a comrade-in-arms; and the more so because this young man was the sole Medal of Honor winner in one of the U.S. Army's proudest—and fighting-est—outfits.

Ed Kelley, as he is identified in the 78th's official history, was a team man in that he led an infantry squad—twelve men, each of whom was dependent for survival on the performance under fire of his eleven squadmates. Though twice wounded in the grittiest kind of ground warfare—house-to-house fighting—he refused to be evacuated. He pushed on to the final objective. His third and fatal wound came as he emptied his weapon and completed his mission.

That gallant deed of over 33 years ago in a town in Germany called Kesternich, must strike many of you KHS students of 1978 as something that happened a long time ago and has no particular relevance on today apart from a routine tribute to an extraordinarily brave West Virginian.

You couldn't be further wrong.

"What's past is prologue," said William Shakespeare almost 400 years ago. He knew whereof he spoke and he even convinced the people in Washington he was on the mark: When they built the National Archives in our nation's capital, to house the Declaration of Independence, the Constitution and other invaluable records, they engraved his words in stone over the entrance.

When Jonah Edward Kelley got his diploma here in 1941, he pretty well KNEW what the future had in store. We were not in the war then—Pearl Harbor was a few months away. Nevertheless, every able young American in 1941 faced the near-certainty of participating in armed conflict. It was just a matter of how soon and where. President Roosevelt had already said that "this generation has a rendezvous with destiny." I doubt that, in 1941—even with fine teachers like your principal, Mr. Shelton, who had him as a student—that Ed Kelley had ever heard of the Roer River. And if he had, he probably wouldn't have been too interested. Yet his final rendezvous came along its banks less than four years later.

So . . .

What may not seem relevant to the KHS Class of 1978 could be a keystone in the life that lies ahead of each of you. Keeping in mind that coming events cast their shadows before, I think that, if Sergeant Kelley were here, he would be concerned about your future because you and he have much in common.

When you analyze, President Roosevelt's "rendezvous with destiny" statement, it really wasn't that profound. What generation DOESN'T face coming to grips with the future? In one way or another?

Let's talk for a few minutes about the future of you young people. Though you may never hear a shot fired in anger or—like Sergeant Kelley—be called upon to make the ultimate sacrifice in a strange land, the future is out there and it belongs to you.

What are you going to do with your lives?

It has been my good fortune to survive two wars, be a member of the team of the first seven astronauts, share vicariously in all of our country's manned—or should I say personed—space flights, participate in one of my own, and to have a hand in developing the Space Shuttle, the space transportation system of the future. Like yours, the future of the Shuttle is almost upon us.

I don't pretend this has given me the wisdom of the ages or am I about to give a lengthy "graduation address." However, I do have some ideas I'd like to pass on and I earnestly hope they will help in your own thinking.

First, let's ask ourselves what some of the essentials might be in any life we plan for ourselves.

An indispensable one is another person to share it with. I'm afraid I can't be much help there. It's every man (or woman) for him or herself.

Right here in Keyser, your education thus far has been sufficient to give you insight and information on which to base intelligent decisions, both personal and otherwise.

In my view, the single most important factor to be weighed is the selection of the right profession or occupation. By "right," I mean one that satisfies certain requirements.

It should be interesting and challenging to keep you on your toes.

It should provide the opportunity to advance in responsibility and compensation as rapidly as your abilities permit.

It should be something that is necessary and important and something which contributes to the overall welfare of our country so that you can have the satisfaction of knowing that you are accomplishing more than just bringing home a pay check.

But it should pay well enough to provide an adequate standard of comfort and convenience for you and your family.

It should be fun. Yes, I said fun. By that, I mean it should provide the zest and excitement without which life can become just a dreary chain of gray, monotonous days and weeks and years.

You're probably expecting me to say next that all of these things can be yours if you go on to college and maybe even try for an advanced degree or two. After all, I do come from a background of high technology, precise tolerances, and a national program that, in its 20 years of existence, accomplished such wonders as placing the first humans on the surface of the Moon and returning them safely to Earth. No way.

It is not my intention to tell you that you shouldn't go to college. Nor would I have you go against the wishes of your families, your teachers or your counselors. I only want to stress that, in my opinion—using the requirements I have already listed—the final decision should be yours.

And I don't, and you shouldn't think arriving at the decision is going to be easy. You young people are arriving at maturity at a time very different from any other in man's history. The world is changing so fast we really have no accurate idea of what it will be like when your children are your age. That isn't a very profound statement either. Your parents were in the same predicament. The one difference is, given today's technology, the changes can come much faster and be fraught with greater consequence. The population of the planet is doubling every few years.

New nations have struggled and will continue to struggle up out of centuries of primitive obscurity.

Minorities of all kinds are striving rightfully for equal opportunity and their fair share of what life has to offer.

We are fighting to prevent fatal pollution of our environment.

There is a real danger to the survival of the way of life we have come to take pretty much for granted.

To zero in on your future and whether it must include a college education, I can only say some of the happiest, best-adjusted, respectable-in-every-way and valuable men and women I have known in the military service and in my years with NASA have never seen the inside of a college classroom.

As you must reach a decision, each of them did. I'm talking about machinists, mechanics, secretaries, carpenters, clerks and technicians of all kinds who are happily living the good life because they knew what they wanted.

If you want to study law, medicine, architecture, engineering, agronomy or become a teacher or professor, then college is the place for you—there's no other way. But please don't go to college just for the sake of appearances. If you haven't decided what line of work you would like to pursue, college could be four years of wasted time and an awful lot of money.

There's an old law about a college diploma guaranteeing a foot in the door. This may have been true at one time, but I don't think it's necessarily so in today's world. They are looking for skills and craftsmanship at all levels out there. At NASA, for example, the men and women who executed the designs and helped implement the ideas of some of the most sophisticated devices ever assembled are just as important as the geniuses and near-geniuses who conceived them.

If you have decided what you want to do and it includes going to college, don't be discouraged if your academic record is not the best. It took Winston Churchill three tries to get past college examinations. And he turned out rather well.

But to those of you who don't know what you want to do and to those of you who do, there is that commonality with Sergeant Kelley. Whatever it may bring, the future is now. And you and I—every one of us—owe him something.

Can we pay the debt? Can each of you reach down inside and find the kind of courage to decide for yourself if you can have his team spirit? More importantly, can you muster the resolve to be yourself and, in your own way, make a truly noble thing of the sacrifice of Sergeant Kelley and so many others before and after him?

I urge you above all to have faith in the United States of America, its people and the special form of government we enjoy. It is a fabric woven with thoughtfulness and care by such ordinary, yet extraordinary, men over two centuries ago and so carefully natured since then. Remember that, unlike the great pyramids, such monuments of the spirit will not survive untended.

They must be nourished in each generation by the dedicated believing of loyal men and women.

Thank you.●

FETAL MONITORS AND MEDICAL TECHNOLOGY

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. WAXMAN. Mr. Speaker, this week the House Subcommittee on Health and the Environment will hold hearings on medical technology, a subject which is receiving increasing attention among health planners and the medical academic community. We are seeing the proliferation of purchases of new medical equipment whose proper utilization is not yet fully understood. Medical technology may be an important cause of spiraling health costs or it may be saving us money by diagnosing and treating illness more rapidly than was ever possible before—no one really knows. We must find ways to reduce the time it takes to transfer medical discoveries into daily practice once we know they will improve patient care. At the same time we must prevent premature use of technology of unproven value which may trigger discomfort and long-term side effects in the patient. A solution must be found to the maldistribution of medical technology, which, like our physicians, is highly concentrated in large metropolitan areas.

An outstanding case study of one instance of medical technology—fetal monitors—was done by Judith Randal in the Outlook Section of the Washington Post on April 16. I include her fine investigative report in the CONGRESSIONAL RECORD. I can think of no recent article which provides a better backdrop for the Health Subcommittee's hearings this week on medical technology:

IS FETAL MONITORING SAFE?—WIDELY USED TECHNIQUE NEEDS MORE TESTING

(By Judith Randal)

Angela Miller was a healthy young woman facing the prospects of an uncomplicated first pregnancy. The 27-year-old wife of a telephone company employe had been born in a hospital and expected that her baby would be too. But when she learned that her obstetrician was likely to wire her and her unborn infant to a machine during labor, she turned for prenatal care to Maternity Center Associates, a Maryland group of certified midwives, and made arrangements to be delivered at her Sterling Park, Va., home. Allison Kay was born April 5. She and her mother are fine.

Fetal monitoring, the major factor in Miller's decision to seek out the midwife group, has become an important part of medical practice in the last 5 years or so. Already, however, it has become controversial not only because about 90 percent of the nation's hospitals where babies are delivered already have installed the equipment, but also because no one really know whether it should be routine for all pregnancies or, for that matter, whether it does more harm than good.

The idea behind monitoring is that the use of electronic listening devices in the maternity suite will be more effective than the stethoscope or the traditional laying on of hands in alerting doctors and nurses to "fetal distress," medical parlance for any one of several things that can go wrong during labor and irreparably damage or even kill the child. The earlier such problems are detected, according to the technologys' enthusiasts, the better modern medicine can successfully intervene.

Actually, fetal monitoring is a pair of techniques rather than a single technology. Both provide continuous electronic measurements of the fetal heart rate and the mother's contractions during labor. But in one, which relies on ultrasound (the use of echoes to detect internal events), the electrodes are placed on the mother's abdomen and fastened on by belts, while in the other the sensors and their wires are threaded through the vagina and into the uterus, where one is screwed or clipped into the fetal scalp and the other, a tiny tubelike device, is positioned on the uterus behind the baby's head.

Often a third element is added to internal monitoring, a second needle in the baby's head so that its blood can be sampled for its oxygen content. Whatever the method, the electrodes continually feed their data to an oscilloscope which displays the patterns on a screen and prints out the tracings.

In some maternity units, only external monitoring is used.

The days of external monitoring, however, may be numbered. Although it has the advantage of allowing the expectant mother some freedom of movement and posing no risk of infection, it has gotten a reputation for being unreliable because the sensors tend to slip when the fetus or the woman change position and become capable of either missing or falsely identifying fetal distress. Besides, some scientists are worried that, because ultrasound is a form of radiation, it may ultimately prove to have delayed detrimental effects on the child, even though the wattages are very low.

No one has been injured yet by external monitoring, insofar as is known, but there have been a number of accidents with its internal counterpart. A Georgia woman died when part of the uterine monitor behind her baby's head was somehow pushed into a large blood vessel and the fluid surrounding the infant got into the bloodstream, causing a fatal clot.

Scalp abscesses are fairly common among monitored infants and deaths have been recorded among them, too. What happened to two newborns whose mother had herpes virus infections in their vagina at the time of labor is illustrative. The babies picked up the infection, which does not respond to drugs, through the place where the electrode had broken the skin on their heads and, despite all efforts to save them, died when the spread of the virus could not be controlled.

Mishaps like this are to be expected from any medical technology. Even a mainstay as benign as penicillin causes an occasional death from a severe allergy reaction known as anaphylactic shock. The question with fetal monitoring is whether the risks are acceptable relative to the benefits.

DEATH RATE DECLINES

Monitoring enthusiasts claim that newborn death rates plummet where the technology is used. It is true that the nation's track record on infant mortality has improved somewhat. But whether monitoring can claim the credit or whether at least a share of it must go to such other factors as more readily available prenatal care, legal abortion and family planning services which prevent high-risk women from becoming pregnant isn't all that clear.

In one study made in Vermont by Dr. John Wennberg of the Harvard School of Public Health, the newborn death rate dropped 30 percent between 1969 and 1974 in the hospital affiliated with a medical school where fetal monitoring had been introduced. But the same gains in infant survival occurred in the rest of the state's hospitals, suggesting that influences other than this technology had been at work.

There also has been two controlled trials, in Australia and Colorado, in which high-risk women—those who for reasons of health, age, weight or previous reproductive history are likely to have complicated pregnancies—have been randomly assigned to be internally monitored or not so that the results could be compared.

In Dr. Peter Renou's Australian study, he and his colleagues found less death and disability reported among the infants whose mothers had been assigned to the monitored group, but experts have quibbled with the design of the experiment and found inconsistencies in its results.

Dr. Ronald Havercamp's study at the Denver General Hospital, in which some 1,000 women participated, also has been challenged on several grounds, most notably that the unmonitored group had more attention from the nurses in the maternity suite than those who were monitored. Havercamp has been following the outcome of these pregnancies for several years now and has found nothing to indicate that monitoring made any difference to the infants.

"What about normal (as opposed to high-risk) obstetrical patients?" he asked at a health care meeting held in New York last year. "What if the nurse . . . could only intermittently check [fetal] heart rate tones . . . as so often happens on a busy labor floor? If she can't be with the patient all the time, she can't watch the monitor continuously either."

Similar points have been made by other critics, even those willing to give monitoring the benefit of the doubt. In Atlanta, Judy Rooks, a certified nurse-midwife, agreed to submit to monitoring because she had lost a previous baby and was clearly having a problem pregnancy.

Because of her own professional experience she could tell that her uterus wasn't relaxing between contractions as it should. But when she pointed this out to a nurse and asked her to feel for herself by putting a hand on her uterus, the woman suggested instead—until Rooks insisted otherwise—that she just turn the knob on the machine so that the tracings would go back to where they were supposed to be.

"Monitors are somewhat like TV sets," explains Rooks, who is nonetheless grateful to her obstetrician for having provided her with a healthy son. "It's hard to know when the picture goes awry whether the trouble is in the set or at the broadcasting station. There is tendency to nurse the monitor and not nurse the patient and if she [the nurse] had been nursing me and not the monitor, she wouldn't have needed my expertise to tell her that something was wrong."

PROBLEMS IN TECHNOLOGY

Nor, seemingly, is misinterpretation the only potential pitfall. That internal monitoring has disclosed information important to patient care is not in dispute. It is a visual tool and so has sensitized nurses and obstetricians to the immediate harmful effect of some drugs on the fetus and such benefits as placing the laboring mother on her left side. Still, skeptics like Rooks and Havercamp have a number of other concerns.

For one thing, the technology requires the mother to be fitted with an intravenous drip and to lie on her back, although she can turn from side to side—this at a time when it is natural for a woman to walk around a great deal to relieve both her physical discomfort and her emotional anxiety. The position also puts the weight of the uterus and the fetus on the blood vessels of the placenta, diminishing its ability to provide nourishment to the baby in the crucial hours before it is born.

Another of the technology's requirements, that the bag of waters, or amniotic sac encasing the fetus, be broken early to permit the insertion of the instrumentation, is regarded with suspicion, too. While such advocates of monitoring as Dr. L. Stanley James

of the Columbia-Presbyterian Medical Center in New York claim that any resulting infection can easily be handled by antibiotics, this is not necessarily the case.

Moreover, while those who, like James, claim that infection is a small price to pay for a baby who might otherwise be handicapped by lifelong mental retardation, no one has come up with hard and fast evidence that monitoring actually achieves this result. And though no studies of the problem have been done in the United States, there is a growing suspicion in some other countries that the pressure brought to bear on the baby's brain by early rupture of the mother's membranes may itself diminish the infant's potential IQ.

By far the most serious charge leveled at fetal monitoring, however, is that it tends to confuse fetal stress which is normal with fetal distress which is not and so is primarily responsible for the nation's escalating caesarian section rate.

According to data collected by the National Center for Health Statistics, the rate has more than doubled since 1971 to the point where 11.4 percent of American babies are being surgically removed from their mothers' wombs. In some hospitals relying heavily on monitoring, in fact, as many as one in five infants comes into the world without passing through the mother's birth canal. James and other monitoring enthusiasts say that, properly used, it should reduce rather than increase the C-section rate, but no study has supported their contention to date.

Again, advocates say that more C-sections make for better, healthier babies. And again, skeptics ask where the evidence is. Is it worth it, they wonder, to subject so many mothers and babies to the added anesthetic and infection risks that are fellow travelers of this operation, not to mention its psychological drawbacks.

"Everything we know," says Havercamp, "points to the importance of the emotional bond formed between the mother and her infant just after birth. In that connection, you can't do anything worse than an unnecessary C-section which puts the infant in the newborn nursery and the mother sick in bed with an I.V. (intravenous drip) going and dependent on a Foley catheter to drain her urine. What's more, once a woman has had a C-section, it's near certainty that she'll have to have one the next time she delivers, too."

INCREASE IN COST

There is also the matter of cost. Women having caesarians stay an average of twice as long in the hospital, 7 to 8 days, as those delivering vaginally, longer if some complication like infection intervenes. Whereas the average vaginal delivery costs $700, the typical C-section runs to at least $3,000.

The infant may have to stay longer, too particularly if it is delivered earlier than it would have been otherwise. It is thought that even a few days can spell the difference between a baby whose lungs function normally and one who, assuming that it lives at all, develops respiratory distress syndrome (hyaline membrane disease) and th s must spend days, weeks or even months in a neonatal intensive care facility at a cost of $10,000 or more.

To be sure, there is a feeling among experts that if a baby is destined to be born weighing 3 pounds or less, fetal monitoring, caesarian or both will increase its chances of survival. But one study suggests that the mothers of these tiniest prematures have been those least likely to be monitored and, like so much about this entire subject, the theory has yet to be put to a rigorous test.

With national health insurance now a distinct possibility, it might be best to declare a moratorium on the wholesale use of fetal monitoring, particularly for low risk women, until more of the answers about it are in. Unfortunately, the technology is changing so fast that it is increasingly difficult to evaluate. Besides, the practice has become so ubiquitous that obstetricians, understandably, are reluctant to participate in controlled clinical trials lest they be sued by someone in the study from whom monitoring is withheld.

The day obviously will come when an obstetrician is sued because fetal monitoring is alleged to have injured a woman or her baby. Meanwhile, at least one physician already has been brought to court on malpractice charges that he is culpable for his failure to use a procedure that other obstetricians in his community said was necessary. Such is the dilemma created by a largely untested medical technology, yet one which is widely applied.

FETAL MONITORING IS BIG BUSINESS

Fetal monitoring was pioneered in Uruguay during the 1950s by Dr. Roberto Calderyo-Barcia, who developed both a transducer to record the baby's heartbeat during labor and a catheter that was passed through the mother's abdomen during labor to record the pressure in the uterus. But it was not until the 1960s, when Dr. Edward Hon—then at Yale and now in Los Angeles at the University of Southern California—further refined the instrumentation so that it could all be inserted through the vagina, that first internal monitoring and then external ultrasound monitoring began to attract the attention of the U.S. obstetrical community.

A system capable of both kinds of monitoring typically costs a hospital $6,500 to $7,500, depending on its sophistication, and adds $75–$100 to the cost of a delivery. Six U.S. companies are in the business, with sales said to be running $25–30 million a year. The firm with by far the largest share of the market is Corometrics in Wallingford, Conn., now a subsidiary of the American Home Products Corp. Dr. Hon is a consultant to Corometrics and owns stock in both it and American Home Products.●

LEGISLATION TO CHANGE FORMULA FOR VOCATIONAL REHABILITATION FUNDS

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1978

● Mr. BIAGGI. Mr. Speaker, last week I was joined by my colleagues Mr. ZEFERETTI and Mr. MILLER of California in sponsoring H.R. 12195 legislation to amend the Rehabilitation Act of 1973. The bill specifically addresses itself to reforming the antiquated method by which vocational rehabilitation funds are directed into the States.

The present formula was adopted in 1954 and modeled after the Hill-Burton Hospital Survey and Construction Act. The formula was based on population weighted by an inverse per capita income factor which is squared thereby giving additional weight to the low per capita income States. Initially, the formula was devised to reduce the difference between States with low- and high-income per capita incomes and their ability to afford to provide vocational rehabilitation services. This initial difference has been virtually eliminated. Instead, those higher per capita income States with a high vocational rehabilitation target population are getting shortchanged. Fiscal year 1973 figures showed the 25 States with the lowest per capita allotments for vocational rehabilitation services, had 75 percent of the population. More recent figures show the tremendous disparity in present per capita payments for vocational rehabilitation services. Whereas Mississippi was receiving $10.46 per person, New York received $4.41. Wyoming $8.62, California $4.35, Arkansas $8.87, Illinois $4.16. I wish to insert at this point in the RECORD a table prepared for Senator JAVITS, whose bill S. 2142 mine is modeled after, by the Congressional Research Service.

	Population ages ages 18–64 (as of July 1, 1976)	Vocational rehabilitation appropriation (fiscal year 1978)	Fiscal year appropriation per person, 18–64
Alabama	2,113,000	$18,103,094	$8.57
Alaska	231,000	2,000,000	8.66
Arizona	1,295,000	8,526,789	6.58
Arkansas	1,181,000	10,472,837	8.87
California	13,106,000	57,035,827	4.35
Colorado	1,568,000	8,295,388	5.29
Connecticut	1,885,000	7,017,813	3.72
Delaware	351,000	2,000,000	5.70
District of Columbia	437,000	5,427,250	12.42
Florida	4,748,000	29,138,423	6.14
Georgia	2,920,000	21,133,655	7.24
Guam			
Hawaii	544,000	2,310,785	4.25
Idaho	472,000	3,344,923	7.09
Illinois	6,616,000	27,499,339	4.16
Indiana	3,092,000	19,066,756	6.17
Iowa	1,630,000	9,036,986	5.54
Kansas	1,349,000	7,200,397	5.34
Kentucky	1,987,000	15,919,071	8.01
Louisiana	2,177,000	18,074,413	8.30
Maine	611,000	4,967,235	8.13
Maryland	2,534,000	11,455,890	4.52
Massachusetts	3,453,000	18,212,747	5.27
Michigan	5,359,000	26,886,001	5.02
Minnesota	2,278,000	13,303,546	5.84
Mississippi	1,281,000	13,402,867	10.46
Missouri	2,760,000	18,198,853	6.60
Montana	435,000	2,886,498	6.64
Nebraska	884,000	5,032,964	5.69
Nevada	372,000	2,000,000	5.38
New Hampshire	478,000	3,282,747	6.87
New Jersey	4,388,000	18,376,436	4.19
New Mexico	666,000	5,647,884	8.48
New York	10,814,000	47,714,258	4.41
North Carolina	3,277,000	24,464,797	7.47
North Dakota	364,000	2,472,049	6.79
Ohio	6,309,000	36,617,086	5.80
Oklahoma	1,609,000	11,529,952	7.17
Oregon	1,382,000	8,109,804	5.87
Pennsylvania	7,072,000	39,945,506	5.65
Puerto Rico (1973 total population)	2,951,000	22,368,458	7.58
Rhode Island	545,000	3,264,733	5.99
South Carolina	1,677,000	13,905,312	8.29
South Dakota	383,000	2,799,957	7.31
Tennessee	2,489,000	19,262,813	7.74
Texas	7,279,000	46,756,113	6.42
Utah	680,000	5,559,165	8.18
Vermont	274,000	2,123,949	7.75
Virgin Islands			
Virginia	3,075,000	17,499,157	5.69
Washington	2,159,000	11,079,348	5.13
West Virginia	1,063,000	8,538,262	8.03
Wisconsin	2,653,000	16,785,908	6.33
Wyoming	232,000	2,000,000	8.62
Total, United States	129,488,000	758,054,041	5.854

The present formula has been subjected to much criticism but little has been done in the way of substantive change. One amendment adopted in 1970 increased the Federal match to a uniform 80 percent. In 1973, the minimum State allotment was raised to $2 million. The results of a study mandated by Congress in 1973 may have provided the main impetus for change. The survey done by the DHEW was critical of the present formula and recommended that greater emphasis be placed on the total population. They charged that the current Hill-Burton formula does not allocate funds in close proportion to the incidence of the best estimated of VR target population. The study further recommended that any change in formula be spaced out over a time period to avoid major disruptions.

My bill proposes a gradual 5-year change in the present VR formula through a process of "phasing in" the total population factor in each State. This would result in vocational rehabilitation funds in future years being distributed in the following way—

Fiscal year 1979—20 percent by population—80 percent current formula.

Fiscal year 1980—40 percent by population—60 percent current formula.

Fiscal year 1981—60 percent by population—40 percent current formula.

Fiscal year 1982—80 percent by population—40 percent current formula.

Fiscal year 1983—100 percent by population.

This is perhaps the fairest approach which offers the best hope for real reform. It guarantees that no State will lose any funds over the next 4 years, but also provides a more realistic share of the Federal dollar. The extent to which each State would benefit is dependent on the total amount authorized for the bill. With a modest $215 million increase between now and fiscal year 1983, hard pressed States would receive as much as 90 percent more in additional VR Federal funds.

We have reached an important stage in the history of the Rehabilitation Act. It is imperative that the act reflect the realities of today by directing its funds in a way where it helps the most people who are in need of services. The present formula inhibits the bill from achieving its true mandate which is to make services available to eligible individuals and to equalize access to such services across the States. This change in formula is an essential first step which must be adopted if we are to make these improvements. I am a member of the House Select Education Subcommittee which will be marking up legislation to extend the Rehabilitation Act. I hope to offer my formula change as an amendment and welcome any and all support.●

SENATE COMMITTEE MEETINGS

Title IV of the Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meeting as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committees scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, April 25, 1978, may be found in Daily Digest of today's RECORD.

MEETINGS SCHEDULED

APRIL 26

8:45 a.m.

Judiciary

To resume consideration of S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.

2228 Dirksen Building

9:00 a.m.

Commerce, Science and Transportation

Science, Technology, and Space Subcommittee

To hold oversight hearings to examine the science and technology aspects of the Federal Research and Development budget.

5110 Dirksen Building

Energy and Natural Resources

Public Lands and Resources Subcommittee

To hold hearings on S. 2913 and S. 2914, to amend the Federal Land Policy and Management Act so as to conform the interest rate therein to yield on certain tax exempt bonds and U.S. obligations.

3110 Dirksen Building

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee

To continue markup on S. 2570, to extend the Comprehensive Employment Training Act (CETA).

4232 Dirksen Building

9:30 a.m.

Armed Services

General Legislation Subcommittee

To consider S. 1708, to prohibit the sale of certain defense articles from the stocks of the Department of Defense.

224 Russell Building

Environmental and Public Works

Regional and Community Development Subcommittee

To mark up S. 1816, authorizing funds for a program of research, development, and demonstration of guayule rubber production.

4200 Dirksen Building

Judiciary

Antitrust and Monopoly Subcommittee

To resume oversight hearings on ICC's price regulation in the motor common carrier industry.

2228 Dirksen Building

Judiciary

Criminal Laws and Procedures Subcommittee

To hold hearings on the subject "Terrorism in Today's Society".

457 Russell Building

10:00 a.m.

Appropriations

HUD-Independent Agencies Subcommittee

To hold hearings on budget estimates for FY 79 for the Federal Home Loan Bank Board and the National Institute for Building Sciences.

S-128, Capitol

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for FY 79 for the Department of the Interior, and related activities.

1114 Dirksen Building

Appropriations

State, Justice, Commerce, the Judiciary Subcommittee

To hold hearings on budget estimates for FY 79 for the Arms Control and Disarmament Agency, Foreign Claims Settlement Commission, Japan-U.S. Friendship Commission, and the Legal Services Corporation.

S-146, Capitol

Appropriations

Transportation Subcommittee

To hold hearings on budget estimates for FY 79 for ConRail and the U.S. Railroad Association.

1318 Dirksen Building

Armed Services

To mark up S. 2571, FY 79 authorizations for military procurement.

212 Russell Building

Banking, Housing, and Urban Affairs

Housing and Urban Affairs Subcommittee

To hold hearings on S. 2726, 2798, 2800, and 2931, bills to amend the housing act.

5302 Dirksen Building

Commerce, Science, and Transportation

To hold oversight hearings on the Fishery Conservation and Management Act (P.L. 94-265).

235 Russell Building

Energy and Natural Resources

To consider pending calendar business.

3110 Dirksen Building

Environment and Public Works

Nuclear Regulation Subcommittee

To mark up FY 79 authorizations for the Nuclear Regulatory Commission.

S-126, Capitol

Finance

Public Assistance Subcommittee

To continue hearings on S. 2084, to replace the existing Federal welfare program with a single coordinated program.

2221 Dirksen Building

Foreign Relations

Foreign Assistance Subcommittee

To hold hearings on S. 2846, the proposed International Security Assistance Act.

4221 Dirksen Building

Governmental Affairs

Intergovernmental Relations Subcommittee

To hold hearings on public attitudes toward Congressional review of Federal programs.

6202 Dirksen Building

Rules and Administration

To resume hearings on S. Res. 160, to reorganize administrative services of the Senate, and to consider other legislative matters.

301 Russell Building

Select Indian Affairs

To hold hearings on S. 2358 and 2588, to declare that the U.S. hold in trust for the Pueblo tribes of Zia and Santa Ana respectively, certain public domain lands.

6226 Dirksen Building

10:30 a.m.

Governmental Affairs

Governmental Efficiency and the District of Columbia Subcommittee

To mark up H.R. 7747, to amend the D.C. Code with regard to pretrial release or detention.

SB-6, Capitol

1:30 p.m.
Conferees
On S. 1678, to amend and extend through FY 79 the Federal Insecticide, Fungicide, and Rodenticide Act.
H–140, Capitol

2:00 p.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the National Transportation Safety Board and the ICC.
1224 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates For FY 79 for the FCC, Federal Maritime Commission, FTC, International Trade Commission, and on supplemental appropriations for FY 78.
S–146, Capitol

2:30 p.m.
Armed Services
To continue mark up of S. 2571, FY 79 authorizations for military procurement.
212 Russell Building

Foreign Relations
To hold hearings on the nominations of William B. Edmondson, of Nebraska, to be Ambassador to the Republic of South Africa, and David Bronheim, of the District of Columbia, to be an Assistant Administrator of the Agency for International Development, to be followed by a business meeting.
S–116, Capitol

APRIL 27

9:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To hold hearings on S. 2385, S. 2405, and S. 2504, bills to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities.
324 Russell Building

Energy and Natural Resources
Energy Research and Development Subcommittee
To resume mark up of S. 2692 and S. 2693, FY 79 and authorizations for the Department of Energy.
3110 Dirksen Building

Judiciary
Constitution Subcommittee
To resume hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

9:30 a.m.
Banking, Housing, and Urban Affairs
To resume markup of S. 2065, 2470, and 2546, to prescribe policies and procedures to protect consumer rights in relation to the electronic fund transfer system.
5302 Dirksen Building

Environment and Public Works
Resource Protection Subcommittee
To resume consideration of proposed resources protection legislation.
4200 Dirksen Building

Judiciary
To hold hearings on S. 1382, to establish criteria for the imposition of the sentence of death.
2228 Dirksen Building

Criminal Laws and Procedures Subcommittee
To resume hearings to examine the erosion of law enforcement intelligence gathering capabilities.
424 Russell Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Civil Rights Commission, EEOC, and on supplemental appropriations for FY 78.
S–146, Capitol

Appropriations
HUD-Independent Agencies Subcommittee
To continue hearings on proposed budget estimates for FY 79 for HUD, and related agencies.
1318 Dirksen Building

Finance
To hold a business meeting.
2221 Dirksen Building

Foreign Relations
East Asian and Pacific Affairs Subcommittee
To hold hearings on the current situation of U.S.-Japanese bilateral relations.
4221 Dirksen Building

Governmental Affairs
To resume hearings on S. 991, to create a separate Cabinet-level Department of Education.
3302 Dirksen Building

10:30 a.m.
Commerce, Science, and Transportation
To continue oversight hearings on the Fishery Conservation and Management Act (P.L. 94–265).
235 Russell Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Renegotiation Board, SEC, and on supplemental appropriations for FY 78.
S–146, Capitol

Conferees
On S. 1678, to amend and extend through FY 79 the Federal Insecticide, Fungicide, and Rodenticide Act.
H–140, Capitol

APRIL 28

9:00 a.m.
Energy and Natural Resources
To hold hearings on the nomination of John K. Mansfield, of Connecticut, to be Inspector General of the Department of Energy.
3110 Dirksen Building

Judiciary
Constitution Subcommittee
To continue hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

9:30 a.m.
Environment and Public Works
Resources Protection Subcommittee
To continue consideration of proposed resource protection legislation.
4200 Dirksen Building

Human Resources
To consider S. 2450, FY 79 authorizations for Community Mental Health Centers and for biomedical research; S. 2466, to establish a National Institute of Health Care Research; S. 2474, to extend through FY 1983 the Public Health Service Act; and S. 2579, to establish a President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research.
4232 Dirksen Building

Judiciary
To resume consideration of S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.
2228 Dirksen Building

Select Small Business
To hold hearings on S. 836, to amend the Small Business Investment Act so as to provide an adequate guarantee for participating surety companies.
424 Russell Building

10:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To continue hearings on S. 2385, S. 2405, and S. 2504, bills to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities.
322 Russell Building

Appropriations
HUD-Independent Agencies Subcommittee
To continue hearings on proposed budget estimates for FY 79 for HUD and related agencies.
1318 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony on budget estimates for fiscal year 1979 for the Departments of State, Justice, Commerce, the Judiciary, and related agencies.
S–146, Capitol

Energy and Natural Resources
Parks and Recreation Subcommittee
To hold hearings on S. 88, to add additional lands to the Sequoia National Park, California, and S. 1906, to establish the Channel Islands and Santa Monica Mountains National Park and Seashore in California.
3110 Dirksen Building

Foreign Relations
Foreign Assistance Subcommittee
To hold hearings on S. 2646, FY 79 authorizations for development assistance programs.
4221 Dirksen Building

MAY 1

9:30 a.m.
Environment and Public Works
To resume consideration of proposed highway legislation.
4200 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To mark up proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
5302 Dirksen Building

Energy and Natural Resources
Parks and Recreation Subcommittee
To hold hearings on H.R. 6900, S. 929, 2659, 2663, 2664, and 2705, bills to amend the National Trails Systems Act.
3110 Dirksen Building

Foreign Relations
To resume hearings on FY 79 authorizations for foreign assistance to Korea related to the withdrawal of U.S. forces, and on S. 2420, proposed International Development Cooperation Act.
4221 Dirksen Building

MAY 2

9:00 a.m.
Judiciary
To hold hearings on the nominations of Cristobal C. Duenas, to be Judge for the district court of Guam; Alfred Laureta, of Hawaii to be Judge for the district court for the Northern Mariana Islands; Len J. Paletta, to be U.S. District Judge for the western district of Pennsylvania; and Leonard B. Sand, to be U.S. District Judge for southern district of New York.
2228 Dirksen Building

9:30 a.m.
Environment and Public Works
To mark up proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
4200 Dirksen Building

10:00 a.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the Office of the Secretary, DOT.
1224 Dirksen Building
Banking, Housing, and Urban Affairs
To continue markup of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
5302 Dirksen Building
Energy and Natural Resources
Business meeting on pending calendar business.
3110 Dirksen Building
Finance
Public Assistance Subcommittee
To continue hearings on S. 2084, to replace the existing Federal welfare programs with a single coordinated program.
2221 Dirksen Building
Foreign Relations
To continue hearings on FY 79 authorizations for foreign assistance to Turkey and Greece, and on S. 2420, proposed International Development Cooperation Act.
4224 Dirksen Building
Judiciary
Constitution Subcommittee
To resume hearings on S. 35, the proposed Civil Rights Improvements Act.
6226 Dirksen Building
Select Indian Affairs
To hold hearings on S. 857, to provide Federal financial education assistance to Hawaiian natives.
1202 Dirksen Building

MAY 3

9:00 a.m.
Governmental Affairs
Governmental Efficiency and the District of Columbia Subcommittee
To hold hearings on proposed new criminal code for the District of Columbia.
3302 Dirksen Building
Judiciary
Constitution Subcommittee
To continue hearings on S. 35, the proposed Civil Rights Improvements Act.
1202 Dirksen Building

9:30 a.m.
Environment and Public Works
To continue mark up of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
4200 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue markup of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
5302 Dirksen Building
*Commerce, Science, and Transportation
Communications Subcommittee
To hold hearings on S. 2883 and S. 2901, authorizations for the Corporation for Public Broadcasting for fiscal years 1979–1983.
1224 Dirksen Building
Energy and Natural Resources
Business meeting on pending calendar business.
3110 Dirksen Building

MAY 4

8:00 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Legislation Subcommittee
To hold hearings on the status of nonfarm, nonfood, and fiber rural development research with USDA and the State land grant system.
322 Russell Building

9:00 a.m.
Governmental Affairs
Governmental Efficiency and the District of Columbia Subcommittee
To continue hearings on proposed new criminal code for the District of Columbia.
3302 Dirksen Building

9:30 a.m.
Environment and Public Works
To continue markup of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
4200 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue markup of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
4200 Dirksen Building
*Commerce, Sciences, and Transportation
Communications Subcommittee
To continue hearings on S. 2883 and S. 2901, authorizations for the Corporation for Public Broadcasting for fiscal years 1979–1983.
1224 Dirksen Building
Energy and Natural Resources
Business meeting on pending calendar business.
3110 Dirksen Building

MAY 5

8:00 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Legislation Subcommittee
To continue hearings on the status of nonfarm, nonfood, and fiber rural development research with USDA and the State land grant system.
322 Russell Building

9:30 a.m.
Environment and Public Works
To continue markup of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
4200 Dirksen Building
Veterans' Affairs
To markup S. 2393, to extend the period of eligibility for Vietnam-era veterans' readjustment appointment within the Federal Government; H.R. 5029, authorizing funds for hospital care and medical services to certain Filipino combat veterans of WW II; and S. 2836, to amend the Veterans' Administration Physician and Dentist Pay Comparability Act.
412 Russell Building

10:00 a.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the St. Lawrence Seaway Development Corporation, the Research and Special Programs Directorate, Department of Transportation, and the Minority Business Resources Center.
1224 Dirksen Building
Banking, Housing, and Urban Affairs
To continue markup of proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
5302 Dirksen Building

MAY 8

9:30 a.m.
Human Resources
To mark up S. 2600, to extend certain vocational rehabilitation programs and to establish a comprehensive services program for the severely handicapped.
4232 Dirksen Building

10:00 a.m.
Commerce, Science, and Transportation
Communications Subcommittee
To hold hearings on S. 2211, the International Maritime Mobile Satellite Telecommunications Act.
235 Russell Building

MAY 9

9:00 a.m.
*Judiciary
Improvements in Judicial Machinery Subcommittee
To resume hearings on S. 1314, to provide that State and Federal prisoners may petition Federal courts in a writ of habeas corpus.
2228 Dirksen Building

10:00 a.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the Office of the Secretary of Transportation.
1224 Dirksen Building

MAY 10

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings on S. 2782, to protect consumers from misrepresentative advertising of gold and silver jewelry.
235 Russell Building

9:30 a.m.
Judiciary
Citizens and Shareholders Rights and Remedies Subcommittee
To resume oversight hearings on the rights and remedies of insurance policy holders.
5110 Dirksen Building

MAY 15

10:00 a.m.
Judiciary
Antitrust and Monopoly Subcommittee
To resume oversight hearings on ICC's price regulation in the motor common carrier industry.
2228 Dirksen Building

MAY 16

10:00 a.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the Department of Transportation.
1224 Dirksen Building
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold hearings jointly with the Senate Banking Subcommittee on International Finance on technology exports and research and development investments.
6226 Dirksen Building
Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To resume hearings on S. 2096, Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographic placement of electronic fund transfer systems.
5302 Dirksen Building

MAY 17

10:00 a.m.
Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To continue hearings on S. 2096, Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographic placement of electronic fund transfer systems.
5302 Dirksen Building
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To hold hearings in connection with restrictions employed by foreign coun-

tries to hold down imports of U.S. goods.
Room to be announced

MAY 18

9:30 a.m.
Veterans' Affairs
Housing, Insurance, and Cemeteries Subcommittee
To hold hearings on S. 1643 and H.R. 4341, to eliminate the requirement for inspections of the mobile home manufacturing process by the VA, and S. 1556, authorizing funds through FY 81 to assist States in establishing and maintaining VA cemeteries.
457 Russell Building

MAY 22

9:00 a.m.
Select Small Business
To resume hearings on the Federal government patent policy.
318 Russell Building

10:00 a.m.
Select Small Business
To resume hearings on the Federal government patent policy.
318 Russell Building

10:00 a.m.
Judiciary
Antitrust and Monopoly Subcommittee
To resume oversight hearings on ICC's price regulation in the motor common carrier industry.
2228 Dirksen Building

MAY 23

9:00 a.m.
Select Small Business
To continue hearings on the Federal government patent policy.
6226 Dirksen Building

JUNE 7

9:30 a.m.
Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold oversight hearings on use of the drug PCP (Angel Dust).
4232 Dirksen Building

HOUSE OF REPRESENTATIVES—*Tuesday, April 25, 1978*

The House met at 12 o'clock noon.

Dr. Robert H. Mayo, Beulah United Presbyterian Church, Pittsburgh, Pa., offered the following prayer:

Bless Your servants, our Congressmen, O Lord, as they wrestle with our number one problem of inflation at home and the devaluation of the dollar abroad, and the even greater problem in the devaluation of our moral currency.

In all the tensions and pressure of this time-space continuum, be gracious as they effectively govern in Washington, and yet conscientiously serve their district at home. Bless them in this election year by helping them to stretch their ministry across the miles with love and understanding for their electorates there, and with perception and patriotism in the unsolved problems of the state here.

In their continuing dependence upon You even after this prayer is said, may they conclude the day to their satisfaction and with your approval through Christ. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 1617. An act to establish a program of ocean pollution research and monitoring, and for other purposes.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 6669. An act to establish a national climate program, and for other purposes.

The message also announced that the Vice President, pursuant to Public Law 95-45, appointed Mr. SPARKMAN, Chairman; and Mr. STAFFORD, Vice Chairman; to the 65th Interparliamentary Conference, to be held in Bonn, Germany, September 5–13, 1978.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 1829. An act to provide for the establishment of the Jean Lafitte National Historical Park and Preserve in the State of Louisiana, and for other purposes; and

S. 2553. An act to authorize appropriations for the fiscal year 1979 for certain maritime programs of the Department of Commerce, and for other purposes.

TRIBUTE TO DR. ROBERT MAYO

(Mr. BOB WILSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BOB WILSON. Mr. Speaker, I would like to acknowledge and thank Dr. Robert Mayo for our opening prayer today. Dr. Mayo serves as pastor of the Beulah United Presbyterian Church of Pittsburgh, Pa., but I have known him from the years he served as my pastor at the First Presbyterian Church of San Diego, until last year when we lost him to Pennsylvania. San Diego's loss is certainly Pittsburgh's gain.

Dr. Mayo was a most valued member of San Diego's community, having served as president of the San Diego Council of the Navy League, on the boards of the American Red Cross, the American Cancer Society and the Rotary Club. He was also an advisory committee member of the Freedom's Foundation and the San Diego Community College, and an executive committee member of the Postal Customers Council.

In 1972. Dr. Mayo was presented the coveted Silver Beaver Award by the Boy Scouts of America, and he has been the recipient of eight George Washington Honor Medals presented by the Freedoms Foundation at Valley Forge.

Dr. Mayo and his wife, Janet. have four daughters and three grandchildren.

Dr. Mayo has a keen interest in Government affairs. I am always happy to have the benefit of his thinking and thank him for sharing his time with us here today.

PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE REPORT ON HOUSE JOINT RESOLUTION 859, SUPPLEMENTAL APPROPRIATIONS FOR U.S. RAILWAY ASSOCIATION

Mr. MAHON. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a report on House Joint Resolution 859, making supplemental appropriations for the U.S. Railway Association for the fiscal year ending September 30, 1978, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERMISSION TO CONSIDER IN HOUSE ON THURSDAY OR ANY DAY THEREAFTER HOUSE JOINT RESOLUTION 859, SUPPLEMENTAL APPROPRIATIONS FOR U.S. RAILWAY ASSOCIATION

Mr. MAHON. Mr. Speaker, I ask unanimous consent that it may be in order on Thursday or any day thereafter to consider in the House as in Committee of the Whole, House Joint Resolution 859, making supplemental appropriations for the U.S. Railway Association for the fiscal year ending September 30, 1978.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

WE SHOULD SUPPLY FOOD TO LAOS

(Mr. SIMON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIMON. Mr. Speaker and my colleagues, for the first time since the end of World War II there is a nation that is desperately in need of food and that has asked the United States for food and

we have turned that nation down. That nation is Laos.

I do not happen to approve of the government that is in power in Laos and I know that my colleagues do not but we can convert no one to our way of life by refusing food to desperate people.

I am pleased to join my colleague the gentleman from California, Mr. McCLOSKEY, and the Senator from Massachusetts, Mr. KENNEDY, in protesting this lack of response by the administration.

Mr. Speaker, we rained some 2 million tons of bombs on that country and now when they ask us for help, it seems to me it is clearly a moral responsibility on our part to respond. And it is sound economics and sound politics.

I hope we will change our decision and do what is both prudent and right.

THE SALT RIVER PIMA-MARICOPA INDIAN COMMUNITY BOUNDARY SETTLEMENT ACT OF 1978

(Mr. RHODES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RHODES. Mr. Speaker, today I am introducing for myself and the other members of Arizona's congressional delegation, a bill to modify a portion of the south boundary of the Salt River Pima-Maricopa Indian Reservation in Arizona, to settle a longstanding dispute between the Indian community and its neighbors regarding the boundary of the tribe's reservation. This bill represents the fruition of 2 years of hard work on the part of the tribe, the city of Mesa, Ariz., and a lot of other concerned people to see that the tribe's reservation boundary is established so the Indian community and its neighbors can live in harmony together and prosper.

The Salt River Indian Reservation was created back in 1879, to accommodate the Pima Indians who had migrated to the area in search of greater water supplies. Subsequent Executive orders in 1910 and 1911 enlarged the reservation so that as of 1974, the reservation consisted of over 49,000 acres, equally divided between allotted land and tribally owned land.

At the time of the creation of the reservation, a portion of the southern boundary was established to follow the course of the then flowing Salt River. In the ensuing years, the United States granted patents, leaseholds, and other interests in lands adjacent to this ambulatory southern boundary to other settlers in the Salt River Valley who were not members of the Indian community. However, as the course of the Salt River shifted, much uncertainty was created with respect to the precise location of the tribe's southern reservation boundary. In order to insure that neither the Indian community, or its neighbors, has to involve themselves with costly and lengthy litigation to settle this dispute that has arisen because of conflicting decisions made by the U.S. Government over the years, I have introduced this bill today with the other members of the Arizona delegation.

GENERAL LEAVE

Mr. TEAGUE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days during which to revise and extend their remarks and include extraneous material on the bill (H.R. 11401), authorizing appropriations to the National Aeronautics and Space Administration.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING APPROPRIATIONS TO THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. TEAGUE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11401) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Texas (Mr. TEAGUE).

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 387, nays 3, not voting 44, as follows:

So the motion was agreed to.

The result of the vote was announced as above recorded.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11401, with Mr. McKAY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas (Mr. TEAGUE) will be recognized for 30 minutes, and the gentleman from Kansas (Mr. WINN) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Texas (Mr. TEAGUE).

Mr. TEAGUE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, it has been my privilege to be a part of our national space program since its inception. On the basis of that participation I wish to offer a few comments on the significance of the space program to our Nation and the importance of H.R. 11401 authorizing funds for NASA for fiscal year 1979 which is before us today.

Twenty years in space has demonstrated for us a number of fundamental principles. First, the most significant contributions of our space program to our quality of life and economic well-being were not clearly recognized when the challenge of Sputnik occurred. Second, the importance of the space program in maintaining and enlarging our technical competence and our international competitive capabilities is not as clearly perceived today as it was when we found our leadership challenged in the late 1950's.

Today we recognize that satellite communications, navigation, and Earth resource monitoring have become tools that we accept as necessities. They have returned far more directly to our economy than the total cost of our space program. The wealth of new knowledge, instruments, and equipment created by our scientific exploration of the solar system and beyond has provided a "seedbed" for new practical applications while enlarging our viewpoint and challenging our innovative abilities.

Yet, we may fail to heed the lessons of our first two decades in space. We stand today challenged on all sides by the growing technological excellence of the nations of the world. Our access to essential resources diminishes with time.

None of this needs to be a prophecy of doom. We need only to recognize that technology is that foundation which allows us to adapt to changes while maintaining a high standard of living. Our national space program has been and continues to be a vital link in maintaining technological expertise.

The bill before us today, H.R. 11401, maintains current NASA programs with modest increases in key areas to encourage advanced program planning and supplemental applications programs. A number of increases and decreases to the bill resulted in a net overall increase of $43.7 million to the budget submission for NASA.

These changes are:

Space Shuttle: $4 million increase for maintaining the option to purchase a fifth Space Shuttle Orbiter;

Space flight operations: $10 million general reduction in development, test, and mission operations; $7 million increase in advanced planning including a 25-kilowatt power module definition and development;

Expendable launch vehicles: $5 million decrease to be applied across the program as conventional launch vehicles are phased out;

Space applications: $10 million increase for applications research and technology development; $4 million increase to initiate a Stereosat development program;

Technology utilization: $1.5 million increase for industrial applications; $4 million increase for technology applications (bioengineering);

Aeronautical research and technology: $26.7 million increase for composite primary aircraft structures program; $8 million increase for variable cycle engine components program; $4 million increase for supersonic cruise research program; $1.5 million increase for aerial applications systems technology; $12 million decrease for engine components improvement and energy-efficient transport programs;

Space research and technology: $3 million increase for space structures, power conversion, microwave technology;

Energy technology applications: $3 million increase in energy technology applications for solar satellite power;

Tracking and data acquisition: $5 million decrease in system operations; $4 million increase for Spacelab systems implementation;

Construction of facilities: $5 million reduction in rehabilitation and modification of facilities at various locations.

Two additional changes to the bill are recommended by the committee: First, a new section 6 making the technical corrections to paragraphing in the basic act; and second, a new section 7 making changes to sections 102 and 203(b) of the National Aeronautics and Space Act of 1958.

Section 7 is recommended to assure that the technical and managerial skills and the technology of space are fully applied to the field of bioengineering. As you know, NASA has carried on a significant technology utilization program for a number of years. This program has provided the basic technology for major new products to reach the marketplace and created the basis for advances in metallurgy, computer and other industries. The requirements for the technology utilization program are small but its contributions far exceed the modest cost. An opportunity exists for NASA with its skills in materials, human factors engineering, electronics, and automated systems to provide valuable service in bioengineering. Section 7 of the bill provides for that opportunity.

In addition to the funding changes which I have outlined, a number of significant views were adopted by the committee and have been included in the report which accompanies H.R. 11401. All were considered of sufficient importance to warrant committee support. I will discuss only one at this time—future space programs. As we approach the availability of a true space transportation system in the early 1980's, new and substantial space applications programs are possible. Routine access to space at lower costs means even greater returns from practical Earth oriented space effort. The committee has insisted that the executive branch and NASA strengthen its future programs both in terms of engineering studies and technology development. The bill which we consider today will start to do this. Before hearing from the distinguished gentleman from New York (Mr. WYDLER) and the distinguished gentlemen from Florida (Mr. FUQUA) and Texas (Mr. MILFORD), I want to say to my colleagues that the members of the Committee on Science and Technology have fashioned an excellent bill and it deserves your support. I want to commend these gentlemen and all members of the committee for their efforts. I urge passage of H.R. 11401.

Perhaps the best way to describe the diversity and value of the space program is to outline the launch plans of NASA for 1978.

Twenty-five launches, including 11 Delta launch vehicles and 8 Atlas Centaurs, have been scheduled by NASA in 1978.

NASA personnel will provide support in connection with three Atlas-F space launches from Vandenberg Air Force Base, Calif.

Most of the launches in 1977 emphasized the use of space for the direct benefit of people on Earth—such as communications, geodetic, environmental, navigation, meteorological, and Earth resources.

In 1978, plans call for missions virtually equally divided between emphasis on these applications and launches of spacecraft for primarily scientific and exploratory research.

Fifteen launches will be for paying customers other than NASA. They include the European Space Agency (ESA), Comsat Corp., the U.S. Navy, Japan, the National Oceanic and Atmospheric Administration (NOAA), the United Kingdom, and Canada.

During 1977 the agency logged 16 launches—12 of them "reimbursables," for paying customers.

With 25 launches scheduled in 1978, the expendable vehicles workload will be heavy throughout the year. The tentative schedule provides for two to three or more launches in some months.

Ten of the Deltas will be launched by Kennedy Space Center, Fla., from Cape Canaveral Air Force Station, and one

from a western test range (WTR) launch pad at Vandenburg AFB. All of the Atlas Centaurs will be launched from complex 36 at the Cape.

First launch of the year (January 6) was Intelsat IV–A (F–3), one of a series of International Telecommunications Satellite Organization spacecraft launched on the Atlas Centaur. A second, Intelsat IV–A (F–4), could be launched in April.

Another Atlas Centaur with FLTSAT COM–A, the first of a series of geosynchronous orbiting spacecraft in a new Navy worldwide communications system, was launched in February.

An International Ultraviolet Explorer (IUE) flew from Cape Canaveral, January 26. In geostationary orbit above the equator, IUE will obtain data on ultraviolet emissions from stars and other stellar sources.

The IUE spacecraft was built at NASA's Goddard Space Flight Center, Greenbelt, Md. The European Space Agency and Great Britain's Science Research Council will participate in IUE experiments.

Landsat–C was launched on a Delta from Vandenberg on March 5. The picture-taking satellite joined Landsat–1 and Landsat–2 in polar orbit to expand NASA's program for cataloging the Earth's resources and monitoring changing environmental conditions.

Launch of an experimental broadcasting satellite, Japan-BSE, for research leading to the orbiting of future large-scale broadcasting satellites by the island nation, is scheduled on a Delta from Cape Canaveral March 23.

A backup ESA Orbital Test Satellite (OTS) on a Delta from Cape Canaveral is scheduled in April. An earlier attempt to orbit an OTS failed when Delta–134 exploded shortly after liftoff September 13, 1977.

Pioneer Venus–A, the first of two missions to examine the Venusian atmosphere and the planet's weather, is scheduled for launch on an Atlas Centaur in May. Pioneer Venus-A's mission is to place its spacecraft in orbit to examine the upper atmosphere.

Pioneer Venus–B will be launched on an Atlas Centaur in August. A multiprobe, it is scheduled to enter the Venusian atmosphere 6 days after arrival of the orbiter. The spin-stabilized multiprobe spacecraft consists of a bus, a large probe and three identical small probes, each with scientific instruments.

The probes will be released from the bus 20 days prior to arrival at Venus. The large probe will conduct sounding of Venus' lower atmosphere, measuring clouds as well as atmospheric structure and composition. The smaller probes, entering at widely separated points, will provide information on the general circulation patterns of the lower atmosphere.

A Japanese spacecraft that would be launched on a Delta from Cape Canaveral if an earlier Japanese mission is not successful, is on the schedule for June. If the Japanese spacecraft is not required, ESA–GEOS–B, a scientific satellite, will be launched on a Delta in June. GEOS–1, launched from the Cape April 20, 1977, did not reach its intended orbit, although the spacecraft is transmitting data back to Earth and the mission is listed as partially successful.

COMSTAR–C, a domestic communications satellite, will be launched for COMSAT General Corp. on an Atlas Centaur in June.

Scheduled for July launch is International Sun Earth Explorer-C (ISEE–C) on a Delta from the Cape. ISEE–C will be orbited at the liberation point between the Earth and the Sun, a point in space where the force of gravity and dynamic force exert an equal pull.

From there it will obtain data on solar wind similar to, but from a different location than, that obtained by ISEE–1 and ISEE–2. ISEE–1, developed by NASA, and ISEE–2, developed by ESA, were launched in tandem on a Delta, October 22, 1977.

NATO–III–C, a North Atlantic Treaty Organization communications satellite, is on the launch schedule for October. Launch will be on a Delta from Cape Canaveral.

Telesat–D, a domestic communications satellite that will be renamed Anik–4 in orbit, will be launched for Telesat Canada in November. Launch will be on a Delta from Cape Canaveral.

High Energy Astronomy Observatory-B (HEAO–B) is scheduled for launch on an Atlas Centaur during November. HEAO–B will maneuver and point for long periods of time at selected celestial X-ray sources mapped earlier by HEAO–1 and other X-ray spacecraft. HEAO–1 was launched August 12, 1977.

A second FLTSATCOM spacecraft is scheduled for launch during November, also on an Atlas Centaur.

Schedule for launch on Atlas-F launch vehicles from Vandenberg are Seasat-A, NASA polar-orbiting spacecraft for global monitoring of the oceans and ocean phenomena, in May; TIROS–N, a NASA polar-orbiting experimental weather satellite, also in May; and NOAA–A, a polar-orbiting weather satellite for NOAA, tentatively in September.

A possible Delta call-up launch is on the 1978 schedule. If required to replace a presently operational spacecraft, Geostationary Operational Environmental Satellite-C, GOES–C) would be launched from Cape Canaveral in May. In addition, Nimubs–C, a NASA research satellite for testing sensors for oceanographic and meteorological monitoring, is planned for launch from Vandenberg in August.

The launch schedule for 1978 could not have been conceived of in 1958 when our space program began. In 1998 people will look back to 1978 and likely say the same thing. That will only occur if we support a strong continuing space program. H.R. 11401 deserves the support of this body and your vote.

Mr. WINN. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, it gives me pleasure to rise in support of the fiscal year 1979 NASA (National Aeronautics and Space Administration) authorizing legislation, H.R. 11401. My colleagues and I, on both sides of the aisle, have worked quite diligently to bring this legislation to the House floor. We have conducted several hearings, beginning in the fall of 1977, both in the field and on the Hill, which have contributed immensely in formulating it.

One set of hearings entitled the "Future Space Programs" has proven quite interesting because it has given us a glimpse of the administration's long term or future perspective of the space program. I must admit that the glimpse we received is not the most desirable. In fact, the future looks rather drab and bleak. Not because of what NASA is planning to do, they are commended for what they are doing—but because of what they plan not to do.

We live in an innovative and creative nation. In fact, no other nation in the world can hold a candle to the innovative and creative abilities of the American people. As a consequence, I have anticipated that NASA, as one of the few Government agencies chartered with harnessing this innovativeness and creativity, would present some bold new initiatives for resolution of the pressing problems we are now facing. Problems such as energy, communications, and in an indirect way, even foreign trade deficits.

Unfortunately, our glimpse did not include any bold new initiatives. It did include a strong commitment to a space applications program and I compliment NASA and the administration on this commitment. However, I must admit that I am disappointed not to see more bold new initiatives oriented toward the pressing issues and problems at hand.

The budget that was presented by the administration to the Science and Technology Committee was $4,371,600,000. This is a lot of money by any standards. However, when compared with other portions of the Federal budget it is really quite small. In fact, it represents less than 1 percent of the $500 billion Federal budget. This is a relatively small amount to pay for technology that could conceivably hold the key to our continued prosperous existence.

The equivalent of the fiscal year 1979 NASA budget is spent every 9 days by the Department of Health, Education, and Welfare. With statistics like this, I sometimes wonder if we have placed our priorities in the proper area.

I feel quite adamant that technology is one of the most valuable commodities that our Nation has to offer to the world.

In fact, I am quite certain that our technology combined with the agricultural exports, represents a majority of our exports. Unfortunately, I continue to see national policies being established that tend to ignore that fact. The committee has acted in a very conservative manner to maintain some of the long-term options such as in the advanced programs, energy technology applications, and large space structures.

Additionally, I feel the committee took the only logical action by reinstating the funding to procure the fifth Space Shuttle Orbiter. The probability seems quite high that we will need the fifth orbiter, therefore spending the additional $4 million in 1979 with a reasonable chance of

saving $220 million in penalty cost is more than adequate justification. The net change to the budget is a total increase of $43.7 million, a change, which I mentioned earlier, is quite conservative. I am certain that if the committee would have been provided with more long-term programs we would have justified further increases. The final budget, as reported to the House, is $4,415,300,000. This is approximately 9 percent greater than last year's budget and represents a slight growth above a constant level of effort.

In closing, I would like to reemphasize my support for this budget and commend the administration for highlighting the significance of space applications. I have been crying for years how important it is to get the space age technology down to earth. However, we must continue looking ahead and exploiting the creativity and innovativeness of the American technology.

Mr. WYDLER. Mr. Chairman, will the gentleman yield?

Mr. WINN. I yield to the gentleman from New York.

Mr. WYDLER. Mr. Chairman, I congratulate both the chairman of the committee and the chairman of the subcommittee, and the ranking minority members, for bringing forth what I consider a good solid piece of legislation.

Mr. Chairman, I rise in support of the legislation, H.R. 11401, the National Aeronautics and Space Administration (NASA) authorization bill. This bill will allow NASA to continue to make a very valuable contribution to the development of this Nation's technological base.

The Administration presented a budget to the Committee on Science and Technology that was of concern to my minority colleagues and me.

This concern was centered around the apparent dichotomy that existed between what the Administration's stated position was and the fiscal actions that were taken. For example, NASA's Administrator stated in hearings before the committee that a primary goal was the successful implementation of the Space Transportation System. However, the budget excluded the fiscal year 1979 funding required for the fifth space shuttle orbiter. The justification given for this action was that it had not been proven that the fifth orbiter was required. Therefore, it would be worthwhile to delay this procurement until 1981. This delay, due to penalty cost, will increase the total cost of the fifth orbiter from $585 million to $820 million—an increase of $235 million.

The committee did not agree with this position. First of all, both DOD and NASA witnesses stated that they felt the fifth orbiter would be required. Secondly, the only additional funding required for fiscal year 1979 was $4 million. As a consequence, this addition has been made. This will allow us another year to look at the necessity of a fifth orbiter without incurring the huge penalty cost.

Another area of concern is the energy technology area. This Nation is faced with, in the words of our President, "the moral equivalent of war," when we look at our energy problems. This is not only a short-term but also a long-term problem. Unfortunately, this budget does not reflect that same concern. We as a nation should be exploiting every conceivable opportunity for solving both the short- and long-term energy problems. A large percentage of the NASA expertise could be utilized in this solution. The committee has taken actions to more fully capitalize on this capability by adding $3 million in the solar power satellite and $3 million in the space research and technology area for low density structures, and microwave energy technology.

In conclusion, let me restate my support for this legislation. This is a small investment to make in our future, but it is an investment that we must make.

● Mr. FREY. Mr. Chairman, it gives me great pleasure to pledge my wholehearted support to this legislation. The National Aeronautics and Space Administration epitomizes one of the most valuable assets the United States possesses—technological innovation.

NASA's programs make major contributions to the health and growth of the U.S. business and industrial communities. New technologies are stimulated across a broad spectrum of disciplines which create new processes, products, and business opportunities. Direct applications of space technology has made possible worldwide communications systems providing rapid, reliable telephone links with distant segments of U.S. business at reduced cost. Earth sensing systems such as Landsat and Seasat assist U.S. industry in the search for new resources, and in the effective use of their present holdings. Improved weather forecasting permits the businessman to plan his operations more efficiently than ever before. NASA research in aeronautics furnishes the technology base for the U.S. aircraft industry which exports products worldwide at a level second only to our agricultural resources. New products result from the innovative use of technology developed for NASA's aerospace programs. For instance, Kaman Helicopter Corp. set up a new subsidiary to develop better musical instruments than existed before by applying the structural dynamic theory used in the design of helicopters to the design of these instruments.

In short, it is difficult to find any segment of American business or industry that has not benefited from the use of shown that there is from a sevenfold to fourteenfold return to the country's economy for every dollar invested in NASA programs.

I feel quite strongly that we have an obligation to the future generations to provide a credible legacy of technology. I urge my colleagues to also support this legislation.●

Mr. TEAGUE. Mr. Chairman, I yield such time as he may consume to the gentleman from Florida (Mr. (FUQUA), the chairman of the subcommittee that held the hearings on this bill.

Mr. FUQUA. Mr. Chairman, during 1977 NASA undertook 16 launches. Thirteen of these were successful and 12 of the total were paid for by other agencies of Government, private enterprise or foreign agencies. This is indicative of gradual but significant change in our space program. In 1978, NASA is scheduled to launch 25 payloads. Of these, 15 will be paid for by customers other than NASA. The first four of these launches have already taken place; Intelsat IV–A for international communications, a Navy communications satellite, an international ultraviolet explorer (IUE), Landsat-C and a Japanese experimental broadcasting satellite (Japan-BSE). In 1979, a diverse scientific and space applications program will continue using conventional launch vehicles and the first flights of space shuttle transportation system will begin. Our space program will have begun a new way of operating where lower cost transportation, repair and recovery of payloads from space can become routine. The budget before you today supports a continuing program of space science and practical applications without a large increase in fundings.

There are substantial opportunities for our Nation in space beyond the content of this budget. It is my belief that this body will want to support a number of new initiatives in space in the years ahead. In looking ahead, the vision and leadership of the gentleman from Texas (Mr. TEAGUE), chairman of the Committee on Science and Technology, continues to give strength and direction to our national space program. It is important to note that the gentleman's contribution to bringing the benefits of the space program to the American public is second to none.

I want to add, Mr. Chairman, the gentleman from Texas for the past 20 years, after serving on the select committee that established not only the National Aeronautics and Space Administration, but also recommended to Congress the establishment of the Committee on Science astronautics. and has served on this committee throughout that time and the last number of years as its chairman.

As he has announced earlier this year this will probably be the last time that he will participate in the presentation to this body of a NASA budget. I think this House and this country owes the gentleman from Texas (Mr. TEAGUE), a great deal of gratitude for the leadership that he has exerted, particularly during the time of the Apollo program, as well as programs prior to, and since, that time in making this Nation second to none in our leadership in space. On behalf of the committee, wish to thank the gentleman for his outstanding contributions to our space program.

As chairman of the Subcommittee on Space Science and Applications, I want to recognize also the dedicated efforts of all the members of the subcommittee in developing the bill before us today. Each Member on both sides of the aisle has made a significant contribution. As

always, we can depend on the gentleman from Kansas (Mr. WINN), the ranking minority member of the subcommittee, for his knowledge and personal insight into the complex programs. His diligent effort continues to be of immeasurable help in establishing a sound bill and strong NASA program.

Again, I would like to commend all members of the committee who have so diligently worked on bringing this bill to the floor.

I also wish to commend our very outstanding staff without whose help we could not have made this possible.

My remarks will be directed primarily to the actions taken by your Committee on Science and Technology as a result of the recommendations of the Subcommittee on Space Science and Applications, which it is my privilege to chair. The gentleman from Texas (Mr. MILFORD) distinguished chairman of the Subcommittee on Transportation, Aviation, and Weather will cover those areas of aviation contained within H.R. 11401.

The committee as a whole recommended 10 changes to funding line items and added two sections to the bill. A net increase in research and development is recommended by your committee over that requested by NASA with a small reduction in construction of facilities. The net overall recommendation is $43.7 million more than the President's budget submission for NASA. The actions taken by the committee on the program contained in the budget as submitted have the effect of:

First, increasing by $80.7 million certain programs while decreasing by $37.0 million other areas of effort;

Second, maintaining the option to purchase a fifth space shuttle orbiter without incurring penalty costs;

Third, placing increased emphasis on advanced planning for future programs including the industrialization of space;

Fourth, additional emphasis on space applications program particularly at the State and local level for Earth resources data;

Fifth, adding special emphasis to utilization of NASA technology as it applies to bioengineering;

Sixth, recognizing the major contribution that NASA can make to the solution of our energy problems by augmenting solar satellite power technology studies; and

Seventh, providing 18 areas of comment—committee views—for emphasis or improvement through which the committee would seek to insure a strong national space program.

For the benefit of my colleagues, I am including in the RECORD a table which summarizes the budget actions of the committee for fiscal year 1979:

FISCAL YEAR 1979 NASA AUTHORIZATION BILL—COMMITTEE RECOMMENDATIONS

[In thousands of dollars]

Subline	Line item	Fiscal year 1978 House authorization	Fiscal year 1979 NASA request	Committee action	Remarks	
1(a)(1)	Space Shuttle	$1,349,200	$1,439,300	1,433,300	+$4.0 million	5th Space Shuttle Orbiter.
1(a)(2)	Space flight operations	270,800	311,900	308,900	−10.0 million	Development, test, and mission operations reduction.
					+7.0 million	Advanced programs.
1(a)(3)	Expendable launch vehicles	129,500	76,500	71,500	−5.0 million	General reduction.
1(a)(4)	Physics and astronomy	229,200	285,500	285,500		
1(a)(5)	Lunar and planetary exploration	161,200	187,100	187,100		
1(a)(6)	Life sciences	33,300	40,600	40,600		
1(a)(7)	Space applications	238,800	274,300	288,300	+10.0 million	Applications research and technology development.
					+4.0 million	Stereosat.
1(a)(8)	Technology utilization	9,100	9,100	14,600	+1.1 million	Industrial applications
					+4.0 million	Technology applications (bioengineering).
1(a)(9)	Aero. research and technology	236,500	264,100	292,300	+26.7 million	Composite primary aircraft structures program.
					+8.0 million	Variable cycle engines components program.
					+4.0 million	Supersonic cruise research program.
					+1.5 million	Aerial applications systems technology.
					−12.0 million	Engine components improvement program and energy efficiency transport program.
1(a)(10)	Space research and technology	101,700	108,300	111,300	+3.0 million	Low-density space structures, solid state. Power conversion, microwave energy technology.
1(a)(11)	Energy technology applications	9,500	3,000	6,000	+3.0 million	Energy technology applications for solar satellite power.
1(a)(12)	Tracking and data acquisition	278,700	305,400	304,500	−5.0 million	Operations reduction.
					+4.0 million	System implementation (Spacelab).
	Subtotal, research and development	3,047,500	3,305,100	3,353,800	+48.7 million	R. & D.
1(b)(1)	Ames Research Center, modification of unitary plan wind tunnel		5,390	*5,390		*Transportation, Aviation, and Weather Subcommittee items.
1(b)(2)	Ames Research Center, modification of 3.5-ft wind tunnel		1,870	*1,870		
1(b)(3)	Ames Research Center, modification of 12-ft pressure wind tunnel		2,510	*2,510		
1(b)(4)	Goddard Space Flight Center, modification and additions for logistic and supply functions.		5,640	5,640		
1(b)(5)	Jet Propulsion Laboratory, modification and additions to space flight operations facility.		3,060	3,060		
1(b)(6)	Jet Propulsion Laboratory, modifications to various buildings for seismic protection.		1,570	1,570		
1(b)(7)	Langley Research Center, modifications for utility control systems		1,980	1,980		
1(b)(8)	Langley Research Center, rehabilitation of unitary plan wind tunnel		4,520	*4,520		
1(b)(9)	Lewis Research Center, construction of research analysis center		6,140	*6,140		
1(b)(10)	Large aeronautical facilities at various locations as follows:					
	(a) Construction of national transonic facility, Langley Research Center.		24,500	*24,500		
	(b) Modification of 40x80-ft. subsonic wind tunnel, Ames Research Center.		31,600	*31,600		
1(b)(11)	Space Shuttle facilities at various locations as follows:					
	(a). Modifications to launch complex 39, John F. Kennedy Space Center.		13,570	13,570		
	(b) Modification of manufacturing and final assembly facilities for external tanks, Michoud Assembly Facility.		13,980	13,980		
	(c) Modification to solid rocket motor manufacturing and assembly facilities, Thiokol Plant, Wasatch, Utah.		1,920	1,920		
	(d) Minor Shuttle—unique projects, various locations		1,600	1,600		
1(b)(12)	Rehabilitation and modification of facilities at various locations, not in excess of $500,000 per project.		17,800	12,800	−5.0 million	Program reduction.
1(b)(13)	Minor construction of new facilities and additions to existing facilities at various locations not in excess of $250,000 per project.		4,200	4,200		
1(b)(13)	Facility planning and design		10,650	10,650		
	Subtotal, construction of facilities	158,340	152,500	147,500		
1 (c)	Research and program management	847,989	914,000	914,000		
	Subtotal, research and development	3,047,500	3,305,100	3,353,800		
	Subtotal, construction of facilities	158,340	152,500	147,500		
	Subtotal, research and program management	847,989	914,000	914,000		
	Total	4,048,329	4,371,600	4,415,300	+43.7 million	Above request.

Language amendments: new sec. 6—To make technical changes to sec. 203 of the basic act. New sec. 7—To provide for use of NASA management and technical skills in the field of bioengineering.

Mr. Chairman, the Subcommittee on Space Science and Applications held a total of 10 hearings in September 1977 and January and February 1978 to review the NASA fiscal year 1977–78 budget performance and the fiscal year 1979 budget request. Testimony was also taken from representatives of NASA, the U.S. Air Force, the European Space Agency, and members of the industrial and scientific community on NASA related programs. In addition, the full committee heard testimony in 3 days of hearings on future space programs. The aeronautical programs of NASA have been covered separately by the Subcommittee on Transportation, Aviation, and Weather and will be reported on separately by the gentlemen from Texas (Mr. MILFORD).

For use of the Members a budget analysis for the NASA programs is included:

NASA BUDGET ANALYSIS

BUDGET OVERVIEW

Fiscal Year 1978 Operation Plan (See Chart I):

1. No significant difference exists between the final appropriation for the current year (Fiscal Year 1978) and the Operating Plan.

2. A small decrease from the authorized amounts in Space Transportation Systems, Space Sciences and Aeronautical Research and Technology with a small increase from the amount authorized for Space Applications was made to adjust to $31.5 million decrease from the amount authorized to the amount appropriated.

CHART I—FISCAL YEAR 1978 OPERATING PLAN

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

FISCAL YEAR 1978 OPERATING PLAN—SUMMARY OF NEW OBLIGATIONAL AUTHORITY

[In millions of dollars]

Research and development	Fiscal year 1978 budget request	Authorization	Appropriation	Current operating plan
Space transportation systems	1,753.5	1,756.5	.....	1,751.5
Space Shuttle	1,349.2	1,354.2	.....	1,349.2
Space flight operations	267.8	267.8	.....	267.8
Expendable launch vehicles	136.5	134.5	.....	134.5
Space science	415.7	414.7	.....	401.7
Physics and astronomy	224.2	228.2	.....	224.2
Lunar and planetary	158.2	153.2	.....	147.2
Life sciences	33.3	33.3	.....	33.3
Space and terrestrial applications	241.9	248.9	.....	243.9
Space applications	233.8	239.8	.....	234.8
Technology utilization	8.1	9.1	.....	9.1
Aeronautics and space technology	333.2	341.2	.....	333.2
Aeronautical research and technology	231.0	234.0	.....	228.0
Space research and technology	97.7	99.7	.....	97.7
Energy technology applications	4.5	7.5	.....	7.5
Tracking and data acquisition	281.7	280.2	.....	278.3
Research and development total	3,026.0	3,041.5	3,013.0	3,011.6
Construction of facilities	161.8	160.9	160.9	162.3
Research and program management	847.0	847.0	844.0	844.0
Subtotal	4,034.8	4,049.4	4,017.9	4,017.9
Proposed supplemental to cover increased salary rates				46.2
Total, NASA	4,034.8	4,049.4	4,017.9	4,064.1

Reductions in NASA budget by Office of Management and Budget (OMB):

The following tabulation (Chart II) shows the fiscal year 1979 NASA request to OMB, the Budget requests to Congress and comparison with the fiscal year 1978 Operating Plan (Chart I). The remarks column defines reductions made by OMB. Among the reductions of particular note are:

1. Reduction of Advance Planning (Space Flight Operations).

2. Deletion of definition funding for 25 KW power module (Space Flight Operations).

3. Deletion expansion of upper atmospheric research program (Physics and Astronomy).

4. Deletion of funding for definition of potential future missions (Physics and Astronomy).

5. Deletion of funding for improved efficiency data processing equipment SEASAT A radar (Space Applications).

6. Deletion of funding for augmentation of applications team activities in biomedical and other technology transfer areas (Technology Transfer).

7. Reduction in system technology and flight experiments (Space Research and Technology).

8. No funds requested or included for Solar Satellite Power technology activities (Energy Technology Applications).

9. Reduction in fund for NASA personnel (Research and Program Management).

CHART II—NATIONAL AERONAUTICS AND SPACE ADMINISTRATION—REDUCTIONS TO NASA REQUEST, FISCAL YEAR 1979 BUDGET

[In millions of dollars]

	Fiscal year 1978 operating plan	Fiscal year 1979 budget request of OMB	Reductions	Fiscal year 1979 budget request to Congress	Remarks
RESEARCH AND DEVELOPMENT					
Space Shuttle	1,349.2	1,443.3	−4.0	1,439.3	
Design, development, test, and evaluation	1,307.5	985.3	.....	985.3	
Production	41.7	458.0	−4.0	454.0	Delete fiscal year 1979 funding for 5th orbiter.
Space flight operations	267.8	319.4	−7.5	311.9	
Advanced programs	10.0	12.0	−7.0	5.0	Reduction in advanced planning for potential future space transportation capabilities, deletion of funding for definition of 25 kW power module.
Other space flight operations activities	257.8	307.4	−.5	306.9	Deletion of upper stage for Lunar Polar Orbiter.
Expendable launch vehicles	134.5	76.5	.....	76.5	
Physics and astronomy	224.2	303.9	−18.4	285.5	
Gamma ray observatory	.....	10.0	−10.0	.....	Deletion of funds to initiate proposed mission to conduct a whole-sky survey in the highest energy region of the electromagnetic spectrum.
Mission operations and data analysis	27.0	33.3	−.8	32.5	Deletes funds planned to extend orbiting solar observatory mission into fiscal year 1979; reduction in data analysis level of funding.
Research and analysis	33.4	42.3	−6.4	35.9	
Upper atmospheric research	(11.6)	(14.0)	(−2.1)	(11.9)	Deletion of proposed extension of current upper atmospheric research activities to include the upper stratosphere and mesosphere and the coupling of these regions.
Other research and analysis	(21.8)	(28.3)	(−4.3)	(24.0)	Deletion of proposed funding for definition of potential future missions.
Shuttle/spacelab payload	28.9	39.5	−1.2	38.3	Reduction in fiscal year 1979 funding for initial activities on multi-user instruments development for future spacelab missions.
Other physics and astronomy activities	134.9	178.8	.....	178.8	
Lunar and planetary	147.2	197.8	−10.7	187.1	

CHART II—NATIONAL AERONAUTICS AND SPACE ADMINISTRATION—REDUCTIONS TO NASA REQUEST, FISCAL YEAR 1979 BUDGET—Continued

[In millions of dollars]

	Fiscal year 1978 operating plan	Fiscal year 1979 budget request of OMB	Reductions	Fiscal year 1979 budget request to Congress	Remarks
Lunar Polar Orbiter		7.3	−7.3		Deletion of funds to initiate proposed mission to provide comprehensive set of global chemical and physical data on the Moon.
Mission operations and data analysis	84.5	86.9	−2.5	84.4	Reduces funding planned for extension of Viking operations and data analysis in fiscal year 1979.
Research and analysis	23.9	24.9	−.9	24.0	Reduction in planned funding for ground based planetary astronomy instrumentation.
Other lunar and planetary projects	38.8	78.7		78.7	
Life sciences	33.3	44.6	−4.0	40.6	Reduction in planned development of life science experiments to be conducted on Spacelab missions.
Applications	234.8	304.6	−30.3	274.3	
Earth resources detection and monitoring	107.0	170.2	−18.7	151.5	
Landsat-D	(48.2)	(87.5)	(+10.0)	(97.5)	Addition of provision for 1 multi-spectral scanner instrument to be flown on Landsat-D.
Spaceborne imaging radar		(8.0)	(−8.0)	(....)	Deletion of funding for proposed development of experimental microwave instrument to provide all-weather Earth resources data—especially soil moisture measurements.
Applications research and technology	(49.8)	(57.1)	(−20.7)	(36.4)	Reductions in Earth resources research and analysis, including advanced crop prediction, microwave applications for agriculture and operational systems planning.
Other Earth resources projects	(9.0)	(17.6)		(17.6)	
Weather observatories and forecasting	25.1	22.8		22.8	
Climate	2.5	12.2		12.2	
Earth dynamics monitoring and forecasting	7.2	14.6	−6.0	8.6	
Spacelab geodynamic ranging system	(....)	(5.0)	(−5.0)	(....)	Deletion of funding for proposed development of experimental laser ranging instrument for accurate measurement of crustal plate motion for use in earthquake research.
Other Earth dymanics project	(7.2)	(9.6)	(−1.0)	(8.6)	Reduction in applications research and technology related to Earth polar motion studies.
Ocean condition monitoring and forecasting	16.9	14.9	−2.5	12.4	Deletion of funding for planned procurement of equipment to improve efficiency of SEASAT A radar data processing, and in planned definition of future missions.
Environmental quality monitoring	26.2	20.2		20.2	
Materials processing in space	15.2	21.4	−1.0	20.4	Reduction in applications research and technology and sounding rocket experiments.
Space communications	21.2	24.1	−2.1	22.0	Deletion of planned definition study on a public service broadcast satellite, and reduction in applications research and technology activities.
Applications explorers	13.5	4.2		4.2	
Technology utilization	9.1	10.6	−1.5	9.1	Deletion of proposed funding for augmentation of applications team activities in biomedical and other technology transfer areas.
Aeronautical research and technology	228.0	303.5	−39.4	264.1	
Composite primary aircraft structures	25.1	46.7	−26.7	20.0	Reorientation of previously planned activities in application of composites to aircraft primary structures.
Aerial applications technology		2.0	−2.0		Deletion of planned systems technology for improved effectiveness of aircraft and related systems in agricultural applications.
Variable cycle engine technology and supersonic cruise aircraft research.	15.2	22.0	−6.1	15.9	Deletion of proposed augmentation of experimental activities on components and technologies required for an advanced propulsion system and research on structural material, configuration and environmental factors with potential application of any future supersonic aircraf .
High performance flight experiments-variable camber and digital engine control.		3.1	−3.1		Deletion of planned flight experiments using the F-111 to test a smooth camber variable cycle wing and the F-15 to test an advanced digital engine control concept.
VTOL flight experiments—using modified Harrier		1.5	−1.5		Deletion of proposed flight experiments using a modified Harrier aircraft to validate ground simulation of vertical takeoff and landing handling qualities, flight control, display concepts * * *.
Space research and technology	97.7	119.1	−10.8	108.3	
Systems technology	5.8	12.7	−4.8	7.9	Reduction in systems technology relating to multipurpose user oriented software, large area structures, and composite materials in advanced transportation system.
Space technology payloads planned for shuttle/Spacelab missions.	10.3	15.4	−5.0	10.4	Reduction of planned activity on space technology flight experiments in such areas as advanced guidance and control, combustions, zero-G fluid flow and cryogenic handling and storage.
Low-cost systems	9.0	10.0	−1.0	9.0	Reduction in planned effort on cost reduction through standardization of space hardware and software.
Other space R. & T. activities	72.6	81.0		81.0	
Energy technology applications	7.5	3.6	−.6	3.0	Deletion of planned concept definition on a system of orbiting reflectors for collection and transmission of sunlight to a ground receiving station.
Tracking and data acquisition	278.3	312.4	−7.0	305.4	
Spacelab payload data processing		6.6	−6.6		Deferral of funding to provide data processing capability required for future Spacelab missions.
Support for Lunar Polar Orbiter		.4	−.4		Deletion of tracking and data equipment to support Lunar Polar Orbiter.
Other T. & D. activities	278.3	305.4		305.4	
Research and development, total	3,011.6	3,439.3	−134.2	3,305.1	
Construction of facilities	162.3	171.7	−19.2	152.5	
Space Shuttle facilities	64.9	37.7	−6.6	31.1	Deferral to fiscal year 1980 of increment of funding required for modification of Pad B at Launch Complex 39, KSC, rather than full funding in fiscal year 1979.
Flight experiment facility addition Ames-life science experiments.		2.2	−2.2		Deletion of funding for flight experiment facility addition required in support of life sciences experiments planned to be flown on Spacelab missions.
Spacelab data facility—Addition—GSFC		5.9	−5.9		Deferral of construction of facility to house data processing equipment required in support of future Spacelab missions.
Rehabilitation and modifications	18.9	19.7	−1.9	17.8	Reduction in planned funding for facility rehabilitation and modification.
Minor construction	6.0	4.5	−.3	4.2	Reduction in planned funding for minor construction.
Facilities planning and design	11.8	12.9	−2.3	10.6	Reduction in planned funding for facilities planning and design.
Other construction projects	60.7	88.8		88.8	
Research and program management	844.0	870.0		870.0	
Subtotal	4,017.9	4,481.0	−153.4	4,327.6	
Additional requirement for unbudgeted Civil Service pay increases	46.2	44.0		44.0	
Total NASA	4,064.1	4,525.0	−153.4	4,371.6

UNOBLIGATED BALANCES

[In millions of dollars]

	Fiscal year 1977 and prior unobligated balance Sept. 30, 1977	Fiscal year 1978 and prior unobligated balance Dec. 31, 1977 (end of 1st quarter of fiscal year 1978)	Estimated unobligated balance Sept. 30, 1978
Research and development:			
Space Shuttle	4.9	885.7	
Space flight operations	13.3	214.1	
Expendable launch vehicles	34.4	146.1	
Other space flight	1.1	3.2	
Physics and astronomy	27.6	192.0	
Lunar and planetary	30.3	131.8	
Life sciences	5.1	31.7	
Space applications	19.4	197.8	
Technology utilization	1.6	9.8	
Aeronautics research and technology	21.2	204.7	
Space research and technology	8.0	76.8	
Energy technology applications	1.0	7.4	
Tracking and data acquisition	22.6	186.6	
Total, research and development	190.5	2,287.7	
Construction of facilities	80.3	211.1	71.9
Research and program management		655.9	
Total, NASA	270.8	3,154.7	71.9

Note: All research and development and research and program management funds are planned for obligation by the end of fiscal year 1978. Historically, however, there remains a relatively small amount of R. & D. funds in the procurement pipeline which is technically unobligated at the end of the fiscal year. This amount, statistically equivalent to a few weeks of procurement activity, is normally legally obligated in the next fiscal year. These amounts in the procurement pipeline have no impact on the following fiscal year requirements. For construction of facilities, it is estimated that $122,000,000 of the fiscal year 1978 appropriation of $162,300,000 will be obligated in fiscal year 1978, leaving a planned unobligated balance of $40,300,000. In addition $31,600,000 of prior appropriations are estimated to be unobligated at the end of the year.

Inflation effect—NASA budget

Chart V shows the effect of inflation on the buying power of the NASA dollar. Note that $4.572 billion in fiscal year 1979 represents $3.368 billion in terms of 1976 dollars. For example, the effect of inflation is as follows on the Space Shuttle Design, Development, Test, and Evaluation Program.

	Millions of Dollars
Original development estimate in 1971 dollars	$5,150
Increases in development estimate resulting from program and schedule changes	280
Revised estimate in 1971 dollars	5,430
Inflation adjustment to FY 1979 budget dollars	1,881
Estimate in FY 1979 budget dollars	7,311
Additional inflation adjustment through completion assuming a future annual rate of 7%	43
Total estimate in real year dollars	7,354

CHART V.—EFFECT OF INFLATION OF TOTAL NASA BUDGET PURCHASING POWER

[In millions of dollars]

	1976	1977	1978	1979
Actual budget authority	3,552	3,846	4,064	4,372
Budget authority in terms of constant fiscal year 1976 dollars, based on compensation index	3,552	3,459	3,375	3,368

You will note that in the area of space science and applications nine changes to budget line items are recommended. The total net dollar change to the NASA request (exclusive of aeronautical research and development) is $15.5 million which is comprised of $40.5 million of increases and $25.0 million of decreases. These recommended changes are as follows:

A. Space Shuttle: $4.0 million increase for maintaining the option to purchase a 5th Space Shuttle Orbiter.

B. Space Flight Operations:

$10.0 million general reduction in development, test and mission operations.

$7.0 million increase in advanced planning including a 25 kW power module definition and development.

C. Expendable Launch Vehicles: $5.0 million decrease to be applied across the program as conventional launch vehicles are phased out.

D. Space Applications:

$10.0 million increase for applications research and technology development.

$4.0 million increase to initiate a Stereosat development program.

E. Technology Utilization:

$1.5 million increase for Industrial Applications.

$4.0 million increase for Technology Applications (Bioengineering).

F. Space Research and Technology: $3.0 million increase for space structures, power conversion, microwave technology.

G. Energy Technology Applications: $3.0 million increase in Energy Technology Applications for solar satellite power.

H. Tracking and Data Acquisition:

$5.0 million decrease in system operations.

$4.0 million increase for Spacelab systems implementation.

I. Construction of Facilities: $5.0 million reduction in rehabilitation and modification of facilities at various locations.

Your committee reviewed the bill section by section. A section change is proposed of a technical nature to clarify the paragraphing of the basic act as follows:

SEC. 6. Section 203 of the National Aeronautics and Space Act of 1958 is amended—

(1) by inserting "(1)" after "(b)" in the subsection which was added by section 15 (c) of Public Law 94–413; and

(2) by redesignating the subsection which was added by section 4 of Public Law 93–409 (and redesignated by section 15(c) of Public Law 94–413) as paragraph (2) of subsection (b).

LANGUAGE AMENDMENTS

SECTION 7

The committee amended section 102 and section 203 of the National Aeronautics and Space Act of 1958 directing NASA to apply its expertise in science, engineering, and administration of complex interdisciplinary research and development programs to initiate, support, and carry out research, development, demonstration, and other related activities in bioengineering to assist handicapped individuals and lessen or alleviate the problems caused by disability. To carry out this directive, there is authorized to be appropriated to the National Aeronautics and Space Administration, $4 million (in addition to any other amount authorized by this act) for research and development to become available October 1, 1978.

An additional sectional change is recommended to modify sections 102 and 203b of the basic act as follows:

SEC. 7. (a) Section 102 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2451) is amended (1) by redesignating subsection (f) as subsection (g) thereof; and (2) by inserting immediately after subsection (e) thereof the following new subsection.

"(f) The Congress declares that the general welfare of the United States requires that the unique competence of the National Aeronautics and Space Administration in science and engineering systems and in the administration of complex interdisciplinary research and development programs be directed toward bioengineering research, development, and demonstration programs. Such programs shall be conducted to alleviate and minimize the effects of disability."

(b) The subsection of section 102 of such Act redesignated as subsection (g) by subsection (a) of this section is amended by striking out "and (e)" and inserting in lieu thereof "(e), and (f)".

(c) Section 203(b) of such Act is amended by inserting after paragraph (2), as redesignated by section 6 of this Act, the following new paragraph:

"(3) The Administration shall initiate, support, and carry out research, development, demonstrations, and other related activities, to the extent funds are appropriated therefor, in bioengineering includ-

ing but not limited to materials, human factors engineering, electronics and automated systems) to assist handicapped individuals and lessen or alleviate the problems caused by disability. To the extent appropriate, these bioengineering research, development and de... istration programs shall be conducted in coordination and cooperation wi'h other related Federal agency programs."

In addition to the budget changes noted, your committee is recommending a number of committee views. The remainder of this report provides in somewhat more detail an analysis of actions recommended and a statement of views recommended and incorporated within the report of the bill.

SPACE SHUTTLE

NASA requested $1,439,300,000 for the Space Shuttle in fiscal year 1979. These funds will support the Shuttle design, development, test, and evaluation program and the Shuttle production program for a four orbiter fleet. The committee believes that there is a requirement for a five-orbiter fleet to provide flexibility for exploitation of the orbiter capabilities and to provide a backup for any unforeseen loss of a vehicle. Considerable economy can be realized if production of the fifth orbiter is initiated in fiscal year 1979. Therefore, the committee recommends the addition of $4 million, for the fifth orbiter resulting in a total Space Shuttle program authorization of $1,443,300,000. This action will maintain the option of the fifth orbiter for another year without incurring any penalty costs.

SPACE FLIGHT OPERATIONS

NASA requested $311,900,000 for space flight operators programs in fiscal year 1979. Within this line item the committee decreased development, test, and mission operations $10 million and increased advanced programs $7 million resulting in a total recommended authorization of $308,900,000 for space flight operations in fiscal year 1979.

Development, test, and mission operations—NASA requestd $163 million for development, test, and mission operations in fiscal year 1979. It has been the committee's understanding that the development, test, and emission operations activities would decrease as the space transportation system operations capability activity increased. The committee reviewed the funding history of the development, test, and mission operations item and found that the fiscal year 1979 estimate is more than the amount funded in fiscal year 1976 whereas the space transportation systems operations capability activity has increased from a level of $11,300,000 in fiscal year 1976 to a request of $110,500,000 in fiscal year 1979. Therefore, the committee recommends a total authorization of $153 million for development, test, and mission operations for fiscal year 1977, a reduction of $10 million from the NASA request.

Advanced programs—NASA requested $5 million for advanced programs in fiscal year 1979. The committee recommends an addition of $7 million for advanced programs resulting in a total authorization of $12 million in fiscal year 1979. It has been the position of the committee that all reasonable steps should be taken to gain the full potential of practical space application at the earliest possible time. The committee continues to see a need to conduct studies and investigations to define systems for future missions that will exploit Space Shuttle capabilities in the 1980's. Therefore, the committee has added funds to augment definition efforts in the areas of space platform; space construction concepts; systems to erect large structures in orbit using the Shuttle; and definition of orbital transfer vehicles required for geosynchronous orbit. Within funds available, NASA is authorized to proceed with definition and development of a 25kW power module.

EXPENDABLE LAUNCH VEHICLE PROGRAM

The committee decreased NASA's expendable launch vehicle program budget request of $76,500,000 by $5 million in recognition of the low level of launch activities for NASA programs in fiscal year 1979 and the opportunities for reducing NASA costs during the phase out of the expendable launch vehicles program. Therefore, the committee recommends that a total of $71,500,000 be authorized for the expendable launch vehicle program in fiscal year 1979.

SPACE APPLICATIONS

NASA requested $274,300,000 for space applications programs in fiscal year 1979. Within this line item, the committee increased Earth resources detection and monitoring programs by $14 million resulting in a total recommended authorization of $288,300,000 for space applications programs in fiscal year 1979.

NASA requested $151,500,000 for Earth resources detection and monitoring programs in fiscal year 1979. Within this subline item, the Office of Management and Budget reduced NASA's request for application research and technology programs by $20,700,000. The committee believes there is a need to augment efforts to transfer this technology to State and private sector users and, therefore, the committee recommends an increase of $10 million for applications transfer and demonstration programs, augmentation of support to States, advanced crop prediction, and advanced data analysis techniques. The committee also recommends an increase of $4 million to initiate development of Stereosat, a remote sensing satellite that would provide greatly improved geological Earth resources data for mineral exploration. The committee insists that NASA establish such mechanisms as may be necessary whereby the industrial community will share in the costs of the Stereosat program. The committee recommends a total authorization of $165,500,000 for Earth resources detection and monitoring programs in fiscal year 1979.

TECHNOLOGY UTILIZATION PROGRAM

The committee increased the technology utilization program budget request of $9,100,000 for fiscal year 1979, by $5,500,000 in recognition of the technology utilization program's contributions and opportunities for further contributions to the national economy and human benefits.

Within the increase, $1,500,000 is restored to NASA's request deleted by the Office of Management and Budget (OMB) to offset inflation, increase the scope and effectiveness of industrial application centers and other technology dissemination mechanisms, and to continue evaluation of program benefits and appraisal of future opportunities. An additional $4 million is added to assure that aggressive programs are maintained for transferring NASA technology to bioengineering applications in the areas of materials, human factors engineering, and electronics. Therefore, the committee recommends a total of $14,600,000 be authorized for the technology utilization program for fiscal year 1979.

SPACE RESEARCH AND TECHNOLOGY

NASA requested $108,300,000 for space research and technology programs in fiscal year 1979. Within this line item, the committee increased the systems technology programs by $3 million for power conversion technology, microwave energy technology, and to augment large low density space structure fabrication concepts, fabrication technology, materials performance verification, and controls studies. Therefore, the committee recommends a total authorization of $111,300,000 for space research and technology programs in fiscal year 1979.

ENERGY TECHNOLOGY APPLICATIONS

NASA requested $3 million for energy technology applications activities in fiscal year 1979. Within this line item, the committee added $3 million for energy from space/solar power satellite activities resulting in a total recommended authorization of $6 million for energy technology applications in fiscal year 1979.

NASA stated that its efforts in support of energy from space would be funded by the Department of Energy in fiscal year 1979. However, the presently agreed on NASA/DOE solar power satellite plans do not include any space related technology effort. The committee feels strongly that space related technological effort is needed for power conversion technology to develop thin/lightweight, high efficiency, radiation resistant, solar cells of silicon, gallium arsenide, and alternative materials and for microwave energy technology in areas of direct current-to-microwave energy conversion, microwave beam forming, construction of receiving-and-rectifying antenna, radio frequency interference, and interactions of microwave beams with the ionosphere. Without this necessary space related technology, the economic and environmental issues will remtain unresolved.

CONSTRUCTION OF FACILITIES

NASA requested $152,500,000 for construction of facilities in fiscal year 1979. The committee reduced the request for the rehabilitation and modification of facilities program by $5 million, resulting in a total recommended authorization of $147,500,000 for construction of facilities in fiscal year 1979.

NASA requested $17,800,000 for rehabilitation and modification of facilities programs. The committee recognizes the

continuing need to maintain existing institutional and service facilities and to protect past investments in property. The committee also recognizes, however, that several projects requested by NASA do not appear to be high priority for fiscal year 1979 authorization. Therefore, the committee recommends a reduction of $5 million, resulting in a total recommended authorization of $12,800,000 for rehabilitation and modification of facilities programs in fiscal year 1979.

FUTURE SPACE PROGRAMS

The committee views with increasing concern the apparent lack of interest of the executive branch in consistent and continuing future planning for a strong national space program as reflected by the budget submission for fiscal year 1979. If our Nation is to realize the full potential of the abundant applications of space science and technology, the planning for future programs must necessarily receive consistent funding and NASA management's enthusiastic support. Such planning must then be followed with sufficient new NASA programs to sustain the space scientific and technological base while supporting those practical applications demonstrated to be significant to the needs of our society. The committee questions the basis for the current NASA "institutional review" as confusing the means with the ends, therefore, potentially lacking in an adequate evaluation of the benefits derived from our space program and consequently underestimating the size, nature, and structure of the future NASA institution best serving the broadest interests of the Nation. Therefore, the committee insists that NASA, during the next year, inform the committee at least quarterly as to what actions may be planned or underway to strengthen future peaceful space program planning and recommend a mechanism by which the executive branch will assure a full and adequate dialog before any actions are taken with respect to the current NASA "institutional review."

The committee further observes that in consonance with the National Aeronautics and Space Act of 1958, NASA should take the initiative in cooperation with other cognizant agencies of the executive branch, to promote, encourage, and otherwise strengthen the commitment of the signatory nations to the Outer Space Treaty.*

RESEARCH AND ANALYSIS

The committee is concerned with the level of support for research and analysis and the essentially constant level of university funding. The committee believes that NASA should continue a vigorous program in upper atmospheric research to study processes affecting the filtering of harmful solar radiation and coupling phenomena which may affect the ability to develop an understanding and prediction capability in the areas of weather and climate. In addition, the committee shares the view of the Space Science Board of the National Academy of Science that the lack of anticipatory concepts and instrumentation development will undermine future space science programs constraining NASA from studying all highly desirable options. The committee, therefore, recommends that NASA provide additional emphasis on research and analysis, seek ways to further broaden and strengthen its upper atmospheric research program, and assure universities an expanding role in these areas.

LUNAR EXPLORATION

The committee believes that further exploration of the Moon should be predicated on more than its relative scientific merit since the continued and detailed study of the Moon is of unique interest due to its proximity to Earth and potential for future applications providing opportunities to capitalize on our present data and understanding for relatively low additional cost. The committee urges NASA to again consider in subsequent budgets a polar orbiting mission to the Moon that will obtain global measurements of the Moon's chemistry and mineral distribution as well as other general properties and provide unique opportunities to correlate remote sensing and "ground truth" data for resource analysis and calibration of instrumentation to accommodate future planetary missions. Such consideration should not necessarily place the lunar polar orbiter mission in competition with only scientific satellites, but also should be evaluated as a program with the potential for long-term beneficial uses.

LAUNCH VEHICLE REIMBURSEMENT POLICY

NASA is the lead agency for the launching of civilian payloads into space. Cost reimbursement is required when launches are conducted for the benefit of other Government agencies, foreign countries, and commercial firms. The amount of reimbursement in each case depends on the kind of customer. When other Government agencies are involved, NASA seeks to recover only those costs that are over and above their costs for launching NASA payloads. For example, the salaries of NASA civil service employees who conduct a NOAA or DOD launch are not recovered. The underlying assumption in this approach is that NASA will have a sufficient in-house business base to justify a launch vehicle program. However, as the expendable vehicles are phased out, this assumption is becoming weaker.

Therefore, the committee requests NASA to reevaluate the reimbursement policy for expendable launch vehicles and to report their findings by June 1978.

LIFE SCIENCES SPACELAB MISSIONS

Life sciences flight experiments in biomedicine, biology, and life support in the near weightlessness of Earth orbit provide one of the major uses for the pressurized Spacelab flown on Space Shuttle missions. It is imperative that full advantage be taken of this new space transportation system in an aggressive, orderly, and coordinated life sciences flight experiment program involving broad participation from the scientific and industrial communities. NASA, therefore, should assure sufficient effort so that the life sciences program is consistent with maintaining commitments to an effective Spacelab/Space Shuttle launch schedule.

SPACE APPLICATIONS

The committee notes a reduction in the funds to support technology transfer and demonstration projects and an increased emphasis on the scientific content of the applications programs. While the committee recognizes the need for a sound science base for space applications, there is a need for more support for technology transfer and demonstration projects to increase the number of users and hasten the transition from experimental to operational programs. Therefore, the committee recommends that NASA evaluate what strategies and programs are necessary to strengthen user oriented progams at all levels and advise the committee pior to the next annual authorization what steps need to be taken to meet this objective.

SEASAT PROGRAM FOLLOW-ON

The committee is concerned that NASA did not request funds to initiate a follow-on SEASAT program in fiscal year 1979. The committee considers the follow-on SEASAT to be a high priority program. Therefore, the committee urges NASA to play a leadership role in resolving the institutional issues involved in a follow-on SEASAT program and to plan and propose a program for the next authorization which resolves current issues.

WEATHER OBSERVATION AND FORECASTING

The committee has been very supportive of this program and its general objectives. Society, since the beginning of mankind, has been at the mercy of natural weather phenomena. The space age technology has presented a new hope for being able to predict and even control many of these phenomena.

It is the view of the committee that progress in this program is being limited, because of a lack of well defined goals, both as to objectives and schedule which would allow for higher visibility and better opportunity to measure progress.

The committee does recognize, though, that NASA is taking action, such as moving overall program direction and coordination to headquarters, which will help to alleviate this situation. The committee also recognizes the significance of the global atmospheric research program and the impact it may have upon the overall program and its looking forward to seeing the results of that program and its influence on the total weather program during next years' authorization hearings.

SPACE COMMUNICATIONS RESEARCH AND DEVELOPMENT

The committee observes that the Nation's space telecommunications industry is facing increasing foreign competition. A major question exists as to whether the communications satellite industry can maintain the technical superiority of the United States without NASA as a source of research and development support in high risk areas of technology.

*Treaty on Principals Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies.

The committee urges NASA to carefully consider its future role in communications satellites research and development and make recommendations to the Congress as to the future role of NASA at the earliest possible time. Such recommendations should carefully evaluate how NASA perceives its role relative to other agencies of Government as well as the private sector.

* * * * *

BIOENGINEERING APPLICATIONS

NASA has challenged some of our Nation's best minds in meeting the demands of its space programs. These programs have produced unique achievements in technology at the cutting edge of understanding in human and machine relationships and interactions. It is the view of the committee that NASA should take every reasonable opportunity both unilaterally and in concert with other agencies to assure that this technology is not only made available for public access but is transformed into useful applications. This extra step in applying engineering principles to problems of biomedicine and rehabilitation affecting large numbers of people in this Nation provides a focus for compiling and coordinating the necessary technology for proof of concept development. NASA, therefore, should apply its technology utilization capabilities to assure a maximum return from these technologies most applicable to bioengineering.

ENERGY RESEARCH AND DEVELOPMENT

The committee observes that in the continuing energy crisis all potential energy sources should be thoroughly evaluated to determine their value to the Nation. The committee further observes that solar satellite power represents one of the potentialy most promising sources of energy and that NASA expertise and facilities need to be used to the fullest extent possible to assure that this technology is evaluated. The committee is encouraged by the joint Department of Energy/NASA program for solar power satellite studies related to system definition, environmental issues, and economic issues. However, there is continued concern over the lack of funds for the necessary technology development to resolve these issues. Therefore, the committee urges that the President and responsible energy authorities within the executive branch encourage the use of NASA expertise and facilities by—

First, allocating sufficient funds to the National Aeronautics and Space Administration for verification of the technology essential to solar satellite power demonstration, and

Second, reviewing the existing National Aeronautics and Space Administration facilities and equipments complement to assure that these National assets are employed in solution of our energy problems.

ENERGY TECHNOLOGY IDENTIFICATION AND VERIFICATION

The committee is pleased that the reimbursable energy technology responsibilities assigned to NASA continue to increase. The committee believes that the funds being devoted to this area are being effectively used and continue to be necessary to most effectively assure that the capabilities of the Agency are focused on energy problems in support of the Department of Energy. However, the committee notes a substantial opportunity exists to expand this activity and encourages the Department of Energy to do so.

CONSTRUCTION OF FACILITIES

The committee question of the contruction of facilities project for modification and additions for logistics and supply functions, Goddard Space Flight Center. Since the committee has previously authorized funds for converting a warehouse (building 16) to office space, there is concern about changing this facility back to a warehouse.

The committee recommends that NASA review the long-range needs for warehouse space and office space at Goddard Space Flight Center to assure the efficient use of funds.

TRACKING AND DATA ACQUISITION

The committee decreased the tracking and data acquisition program budget request of $305,400,000 for fiscal year 1979 by $1 million. The net reduction includes a $4 million increase for data processing implementation and a $5 million decrease for operations.

The $4 million addition provides funding to initiate development and equiping of a new data processing center for operation in the latter part of 1981 meeting requirements of Spacelab missions which exceed by a factor of 10 or more the data processing capability of existing facilities at the Goddard Space Flight Center. Additional funding will be required in subsequent authorizations to fully realize the total system. If partial funding were deferred to fiscal year 1980, th Center would not be available until the latter part of 1982, extending the severe data constraints imposed on the first three Spacelab missions for 2 years, impacting experiment selection, and compromising the effectiveness of Spacelab missions. The $5 million decrease for operations is in the committee's recognition of the need for NASA to take full advantage of cost reduction opportunities within projected workloads to offset worldwide escalation in operating costs. Therefore, the committee recommends that a total of $304,400,000 be authorized for tracking and data acquisition in fiscal year 1979.

PROJECT MANAGEMENT

The committee report on NASA program planning and control identified the development activity as the largest single user of financial and manpower resources. The report further found great variability among large development projects as to the number of "in-house" people required to manage them. Upon further investigation, the committee finds that there are a variety of factors that affect project manpower levels. Most obvious among these is whether a substantial portion of the work is done "in-house" or is contracted to a private firm. But other factors can contribute to management complexity. Some of these are: The involvement of several associate contractors, the involvement of principal investigators, the type of contract used, the existence of multiple external relationships and management philosophy.

Nevertheless, the committee is concerned that some NASA project offices perform tasks, involving detailed contractor oversight or recordkeeping, that are either redundant or actually unnecessary to effective project management. This concern is increased in the light of recent personnel reductions that have forced NASA to cut back or, in some cases, eliminate high value research and development programs.

Therefore, the committee requests the Administrator of NASA to review project management practices with an eye toward:

First. Streamlining the functions performed by current project offices, and

Second. Developing guidance for future projects.

Such findings and recommendations as are resultant from this review should be available for committee consideration during program review hearings in September 1978.

I urge passage of H.R. 11401.

I urge adoption of the bill as recommended by your committee.

Mr. WINN. Mr. Chairman, I yield myself such time as I may consume, and I take this time in order to have the opportunity to join the chairman of the subcommittee the gentleman from Florida (Mr. FUQUA) in his words of tribute paid to the distinguished chairman of the full committee, the gentleman from Texas (Mr. TEAGUE).

It has been my privilege to work very closely with the gentleman from Texas (Mr. TEAGUE) in the past 12 years that I have been in the Congress. He has been one of the greatest workers for and supporters of our space program—not only in the Congress but in the world. He has frequently visited facilities in this country and in other parts of the world to see that other countries shared and worked with us in the technological field of space science and of its applications. As I say, I take this time to pay my own tribute to the gentleman from Texas (Mr. TEAGUE).

I also wish to pay tribute to the chairman of the subcommittee the gentleman from Florida (Mr. FUQUA), who has done an outstanding job. He stays right on top of the problems and more fully understands than anyone else in Congress the problems of the space program.

At this time I would like to yield 5 minutes to the gentleman from California (Mr. GOLDWATER).

Mr. GOLDWATER. Mr. Chairman, I rise in support of this piece of legislation.

Mr. Chairman, I rise in support of H.R. 11401 authorizing appropriations for the National Aeronautics and Space Administration in fiscal year 1979.

There are many aspects of the authorization to be addressed; however, I am going to confine my rmarks to NASA work that is necessary in the STOL and Agricultural Aviation R. & D. areas.

The NASA STOL technology program for some time has been directed at providing, by the early 1980's, design and operational data for the U.S. aerospace industry to be able to establish appropriate certification standards. The need for such research was recognized more than a decade ago when public resistance to noise and increasing airport congestion warned of trouble ahead.

While the noise problem came on with a vengeance, airport congestion did not develop as expected. However, air traffic is picking up again, with a growth rate projected at about 6 percent annually for at least the next 10 years. Present terminals and ground handling systems will become overwhelmed at some future time unless new major airport facilities are developed—which is not very likely—or unless better use is made of existing under-utilized airports.

In order to cope with the expected congestion problem, we will need to take advantage of all existing airports, and we will need a new passenger airplane—one with shorter takeoff and landing capability and the performance capability to climb, descend and maneuver, while keeping most of the noise within airport boundaries.

NASA's STOL technology program addresses, with the aircraft industry, the key technologies such as noise reduction, improved propulsion and aerodynamic efficiencies, advanced flight controls and operational techniques through the use of analytical studies, wind tunnel and flight simulation investigations and aircraft flight research activities. The credibility of much of NASA's STOL program likes in the proof-of-concept flight tests of many of the technology concepts which have been developed.

Participation by NASA in the Air Force advanced medium STOL transport (AMST) prototype flight test program has provided technology needed for full-scale, mission-sized derivative civil vehicles. NASA's quiet, short-haul research aircraft (QSRA) program complements the AMST program in proof-of-concept and flight validation of noise reduction technology, alternative propulsive-lift concepts, and a wide range of operational techniques. The QSRA will provide technology that bridges the gap between the larger short-haul STOL transports and smaller commuter-type aircraft and will provide the FAA with criteria for development of airworthiness, certification, noise, and operational standards.

The rollout of the QSRA took place on March 31, 1978, at Boeing Field, Seattle, Wash. This research aircraft—which was built around the body of a deHavilland Buffalo—will not only possess unusually high lift and control power capabilities, but will be the quietest jet airplane ever flown. The predicted performance of the aircraft meets or exceeds all of NASA's goals. On a comparable basis, the QSRA noise footprint will be 30 times quieter than that of a Boeing 727 trijet. At this point in the $21 million Boeing contract, the aircraft is about on schedule and is about 15 percent under target cost, which clearly demonstrates that Government and industry teams working together toward common goals can perform in an outstanding manner.

The QSRA aircraft, scheduled for flight research by NASA in the fall of 1978, will be flying a workshop for advanced development in propulsive-lift for future STOL transport aircraft. The performance of this aircraft for research purposes should be outstanding. The airplane design is highly versatile, making it practical to explore a wide range of operating conditions including various field lengths for landing and takeoff.

The output of the NASA STOL program will provide the needed technology for decisions relating to future transportation options. It is also important to recognize that many of the technology components that will be developed in this program will spin off to benefit other elements of the air transportation system.

In regard to agricultural aviation R. & D., this committee added very modest funding of $1.5 million to the budget.

The role of general aviation in the production of food and fiber cannot be overemphasized.

In recent years the aerial application of seeds, fertilizer, and pesticides has become a vital part of our agricultural system. The 7,000-plus fleet of aircraft apply over $1 billion worth of chemicals to some 250 million acres each year. Mounting pressure for higher, more efficient food production foretells of continued growth in this very vital area. This is in spite of very real limits on the capability for accurate delivery and precise placement of chemicals with current aircraft and dispersal equipment.

The development of new technology to improve both the accuracy and efficiency of the aerial application of agricultural chemicals holds the promise of significant benefits, not only to the aircraft users and manufacturers, but to the farmer and the consumer as well. Increased precision of the application can result in an overall reduction in the volume of chemical drift outside the intended field reduces the adverse environmental impact and the potential for damage to adjacent crops.

Greater aircraft efficiency in terms of payload, ferry speed, turning performance, and short-field operation can lower the cost of aerial application even further.

NASA's efforts to provide technical improvements in each of these problem areas, properly coupled with supporting activities in the Department of Agriculture and the Environmental Protection Agency, should be aggressively pursued. The original proposal by NASA to allocate $500,000 to this effort in fiscal year 1979 permits a slow buildup of in-house activity. It, however, does not provide for the level of industry and university involvement that is absolutely vital to the rapid application of technology developments.

The subcommittee's action in amending the NASA request to provide an additional $1.5 million in fiscal year 1979 provides for both a more aggressive in-house effort by NASA and the resources to undertake joint activities with manufacturers and universities from the outset of the technology programs. I believe it is exceedingly important that NASA, industry, and the universities work together from the outset to develop the needed technology and the proposed NASA budget addition will provide for this joint activity.

Mr. WINN. At this time, Mr. Chairman, I yield such time as he may consume to the gentleman from New Jersey (Mr. HOLLENBECK).

Mr. HOLLENBECK. Mr. Chairman, I am honored to have the opportunity to express my views in support of this legislation, H.R. 11401, and to commend the gentleman from Florida (Mr. FUQUA) and the gentleman from Kansas (Mr. WINN) on their diligence and intelligence in preparing the bill. Also, the longtime efforts of Chairman TEAGUE must not be overlooked.

The public at large is generally supportive of the space program and when opportunities occur, the public has expressed great interest in space programs. One has only to look at the crowds visiting the National Air Space Museum or the visitors at the Kennedy Space Center or Johnson Space Centers. These are the major tourist attractions in their areas. In Washington, for example, the National Air and Space Museum draws more visitors than the White House or Capitol. Some 250,000 people created a massive traffic jam in Houston over the weekend of March 11, as they drove out to Ellington Air Force Base to see the Space Shuttle Orbiter.

Consumers now seem to be taking the space program for granted. Perhaps this is as it should be—they have seen men walk on the Moon on television and they have been able, along with scientists, to scan the horizons of Mars via the TV cameras on the Viking landers. They seem to expect great improvements in such down-to-earth things as telephones and pocket calculators as a matter of course. After all, "We've got to the Moon, we can do anything."

Consumers, that is to say the general public, have developed an increasing awareness in recent years of how the space program is making things better for them here on Earth. Responding to the increasing awareness, local, State, and Federal Government organizations are looking more and more to the space program for help either in the form of "spinoffs" or in direct benefits, such as using Landsat to help in land usage planning, mapping, and resource surveys.

Consumers are aware that it is easier to place a direct dialed phone call to Bermuda, or Europe, or Japan today, than it was to make a long distance call from one city to another in the United States 20 years ago. And it is cheaper, one of the pleasant exceptions to most of our living expenses which have been carried along by inflation.

Consumers credit the space program

for many other benefits which have made their daily lives better. They know that advances in medical equipment, weather predictions, food preparations, watchmaking, firefighting, electronics, among other things, were made possible or at least expedited, by the space program. They look on the space program as a worthwhile, although expensive, national program. Many think more is being spent on space than actually is being spent. They compare space budgets with budgets of other programs and many times express beliefs that we are spending more on space than on the Department of Health, Education, and Welfare. Despite these erroneous impressions, they think it is worth it.

I, too, think it is worth it. And I urge my colleagues to join me in supporting this legislation.

Mr. TEAGUE. Mr. Chairman, I wish to express my appreciation for the kind remarks of the gentleman from Kansas and the gentleman from Florida. No man could have a better committee to be the chairman of than I have had on the Committee on Science and Technology.

Mr. Chairman, I yield 3 minutes to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Chairman, as a freshman on the committee, I might say that it has been a pleasure to serve under the leadership of a man of the gentleman from Texas (Mr. TEAGUE'S) fairness and courtesy. I was somebody who came into this House with no previous legislative experience, and I say to the chairman, the gentleman from Texas (Mr. TEAGUE) in addition to all of the kudos that have been given to him on the space program as far as being a good chairman, he has been a friend of mine, and I appreciate it.

Mr. Chairman, I rise in support of H.R. 11401, authorizing appropriations for the National Aeronautics and Space Administration for fiscal year 1979.

Air transportation is a vital part of America's business and commerce. The demand for rapid and efficient delivery of people and goods is obvious at any of our large hub airports. But that is not all. While most people recognize the role of the large transport aircraft, they often overlook the important part general aviation plays in our transportation system.

One-third of all intercity air travelers use general aviation aircraft. A total of 100 million people each year travel between 13,200 airports, only 425 of which are served by the airlines. That service is particularly vital to rural areas. In many instances, general aviation air service provides the most effective, if not the only timely, link between rural communities and their closest urban neighbors.

And general aviation serves many needs. For example, 72 percent of all operations is for business and commercial purposes; 23 percent is for personal transportation and proficiency; and the remaining 5 percent is dedicated to sport.

The business aircraft has become an indispensable tool for the modern corporation. Of the top 1,000 industrial firms, 502 operate their own aircraft, while generating 83 percent of the total sales.

Air taxis and commuters provide demand air service to the entire country. Last year, the commuter segement carried seven million passengers, 215 million pounds of cargo, and 109 million pounds of mail. Nearly 86 percent of the commuter flights connect with scheduled airline service. Of the multitude of special purpose flying done, such as firefighting, pipeline patrol and law enforcement, one has been of extraordinary benefit: the use of aircraft in agriculture. Given the expense of America's arable soil, the use of the general aviation aircraft in agriculture is a natural. Over a billion dollars worth of materials is applied to the Nation's crop land each year by air. Eight thousand airplanes cover 200 million acres each season in seeding, fertilizing and protecting our food supply. The efficiency of that technology means lower prices for consumers and thereby helps to slow inflation.

General aviation is an industry composed mostly of small independent businesses. However the sum of their individual efforts adds up to an industry employing a quarter of a million people and producing a $5 billion share of the Nation's gross national product each year. A considerable portion of the industry is based in the Wichita area and I can tell you first hand that it makes a significant, positive contribution to the Kansas economy.

In addition, general aviation also contributes significantly to the U.S. balance of payments. For every general aviation aircraft imported into this country, U.S. manufacturers export 35. In 1976, 3,539 airplanes valued at $331 million were shippped to 100 countries. Historically, one quarter of our production is sold outside the United States. It is all too evident that we desperately need more industries of that nature.

NASA is playing an important cooperative role in development of the general aviation industry in this country. Early in this decade, NASA began to focus attention on the unique technological problems of general aviation. Recognizing that the technology base available to light aircraft builders and designers was nearly 30 years old, NASA undertook general aviation research across the spectrum of aeronautical disciplines.

In the 5 years since the NASA program began, significant results have been achieved—not only in terms of successful research, but also in the practical application of new technology. New trainers by Piper Aircraft Co. and Beech Aircraft utilize the new low-speed airfoils as does the Cessna prototype 303 light twin. One of the business jets, Foxjet, also uses a new NASA airfoil. The Gates Learjet model 28/29 is being equipped with winglets as one means of increasing efficiency. American Jet Industries will begin delivery in 1978 of the Hustler which incorporates flaps and spoilers demonstrated in the advanced technology light twin program.

And each of the manufacturers is utilizing data and test techniques developed by NASA. That NASA background work is helping in efforts to improve the stall/spin characteristics of aircraft, and to improve seat attachment, restraint systems, and energy-absorbing seat design.

NASA and the general aviation community have worked together well. The progress of recent years has been possible because of an effective partnership aimed at strengthening a vital link in our transportation system. I am proud that Kansas has been able to play a key part in that progress. I want to see that continue.

The rapid acceptance and application of the NASA technology provides confidence in the direction and relevance of the current programs and establishes a firm direction for future research. The bill before us will permit that research to move ahead to the benefit of all of us.

Mr. TEAGUE. Mr. Chairman, I yield such time as he may consume to the gentleman from Colorado (Mr. WIRTH).

Mr. WIRTH. Mr. Chairman, I would like to echo the remarks made by my colleague, the gentleman from Kansas (Mr. GLICKMAN), and thank our chairman, the gentleman from Texas (Mr. TEAGUE), and our subcommittee chairman, the gentleman from Florida (Mr. FUQUA).

Mr. Chairman, space research offers us the opportunities to go beyond the limitations imposed by our earthly perspective, to challenge our reasoning, feed our intellect and formulate concepts for addressing problems here on Earth. The NASA authorization bill, H.R. 11401 provides sound funding for this research with well directed and balanced space projects such as the space telescope. I believe space science deserves our continued support.

Last year, we initiated actions to provide the astronomers of the world a new "window on the heavens" to unlock secrets of the universe which will undoubtedly lead to additional technologies having importance to man's existence on Earth. The space telescope, as the large observatory above the veiling effects of the atmosphere, represents a very large step in capability above ground-based observatories and will allow large numbers of astronomers from all over the world to work truly on the forefront of science.

Astronomy has evolved to the point where most facilities capable of making significant advances can no longer be handled by individual investigators or institutions. Large telescopes are required to study distant astronomical objects, and modern-day astronomers have tended to pool the use of large instruments rather than distributing funding so that each could have his own much less capable instrument. In this way, one large telescope can enable at least 100 astronomers each year to pursue astronomical research at the forefront of science, as opposed to astronomers being able to conduct only the most routine observational research on a number of smaller, less capable instruments.

Throughout history, astronomy has been the basic forerunner of technology, and with the progress that is taking place today we can look to even more astonishing results in the future. Astronomical studies reveal the existence of stars that are as massive in weight as the Sun, but no bigger in size than the Earth. Yet, these objects turn on and off completely, 30 times a second. I cannot believe that incredible discoveries of this type will not act in time to change our concepts of physical processes in the universe and affect our lives in significant ways.

Astronomers are united in their view that the space telescope is the next logical and necessary step in the exploration of our universe. NASA has responded by getting off to a very rapid start on a very well conceived and planned program which will lead to the launch of the space telescope in 1983. The contractors are on board and working, and the science experiments have been selected. On launch in 1983, it will become the "Mt. Palomar" of space, insuring American preeminence in astronomy for the remainder of this century.

Mr. TEAGUE. Mr. Chairman, I yield such time as he may consume to the gentleman from Iowa (Mr. HARKIN).

Mr. HARKIN. I thank the chairman for yielding.

Mr. Chairman, I, too, want to rise in strong support of this authorization bill. I, for one, have been dismayed at some of the apparent—I say "apparent" because I do not think it is real but apparent—lack of support for an aggressive space program in this country. I think it is something that we have to move ahead on aggressively in the future, not only for outer space, the far outer reaches of space, but for near-term space, in developing what I think will be forces of energy to meet our energy needs in this country and, indeed, throughout the world.

I compliment the chairman of the committee, the gentleman from Texas (Mr. TEAGUE), and the chairman of the subcommittee, the gentleman from Florida (Mr. FUQUA), for bringing forth this authorization. I hope it has the full support of the House.

Mr. TEAGUE. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, I, too, want to express my appreciation to the distinguished chairman of the Committee on Science and Technology for the gentleman's graciousness and friendship in yielding to me at this time and to the gentleman from Florida (Mr. FUQUA), the chairman of the subcommittee as they have always been very generous, even though I have disagreed with some parts of the proposals they come before us with.

Mr. Chairman, I want to indicate at this time that I will be offering an amendment when we get to the 5-minute rule which will be a continuation of the effort that I started last year when almost by accident in going through the report of the committee I discovered that we seem to be on the way once again to planning for the development of a new civilian supersonic transport.

Mr. Chairman, the unhappy fact is that at the same time we cry about how desperately short we are of necessary funds for our necessary needs, we are on the path of committing ourselves to a project that will cost our Nation in 5 or 6 years as much as $1.7 billion.

Now, that is not my projection. That is NASA's projection. We have the report ready. Today the authorization for the SST is for $27.9 million. That will bring us to a total of almost $100 million, since in 1971 the Congress decided to scrap the SST program, which up to that point had cost the taxpayers of this country $1 billion. It seems to me, Mr. Chairman, that if we really are concerned about inflation, about the waste of the taxpayers' money, that before we proceed on this kind of program we would let the American people know exactly what it is we are up to, have them come in here, testify for and against, and after we have heard everybody, then make a judgment whether to proceed; but I am concerned that we are trying to do this very, very softly, and we are going down the path of a $1.7 billion expenditure before anyone knows we are halfway there.

Mr. WYDLER. Mr. Chairman, will the gentleman yield?

Mr. WEISS. I yield to the gentleman from New York.

Mr. WYDLER. Mr. Chairman, I would ask the gentleman to reconsider offering this motion again this year. Possibly the gentleman has already made the point that the gentleman wants to make, that is, trying to focus the attention of Congress and the attention of the Nation on the fact that we are trying to develop advanced aeronautical techniques. That is true. We cannot stop the development of just those particular parts of aeronautical techniques that might be useful in a supersonic transport.

The CHAIRMAN. The time of the gentleman from New York (Mr. WEISS) has expired.

Mr. TEAGUE. Mr. Chairman, I yield 2 additional minutes to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, I yield to the gentleman from New York.

Mr. WYDLER. Mr. Chairman, if the gentleman's desire was to focus attention on this, I think the gentleman really has accomplished that. The gentleman did it last year on this bill and has done it today on the floor of the House.

Mr. WEISS. Mr. Chairman, if the gentleman will permit, it took 10 years of effort to stop the SST the last time. It may take 10 more years to do it again. I fully intend to offer the amendment.

Mr. WYDLER. Mr. Chairman, if the gentleman will yield further, let me ask this question. I simply do not understand the gentleman. If we were able to develop an advanced supersonic transport that was environmentally sound and gave the United States the best airplane in the world, would the gentleman oppose that?

Mr. WEISS. I would oppose spending the kind of money we are talking about, when we are trying to get it through the backdoor. As far as I am concerned, after the action the Congress took some 7 years ago, it seems to me we have the obligation to come forth fully and openly and indicate clearly what we are about before we make the kind of commitment we are making.

Mr. WYDLER. Mr. Chairman, if the gentleman will yield further, that is exactly what we are doing. It is here on the floor of the House. We are debating it. Members present will hear it. The CONGRESSIONAL RECORD will contain it.

It is open; here it is. All we are trying to do, if the gentleman would think about this, is to develop a supersonic transport that does not have the problems of the current supersonic transport, one that is quite enough and one that does not do environmental damage.

If our country can do that and we can have a supersonic transport of that kind, would the gentleman not be in favor of our developing that type of a supersonic transport?

Mr. WEISS. Mr. Chairman, that was exactly the argument we heard the last time, and it raged and raged for some years. Finally the conclusion was that if we did that, we would just be throwing money down a sinkhole.

Mr. WYDLER. But would the gentleman be for that if we could do it? Could I just establish that one point with the gentleman, that he would be in favor of our doing that?

The CHAIRMAN. The time of the gentleman from New York (Mr. WEISS) has expired.

Mr. TEAGUE. Mr. Chairman, I yield 1 additional minute to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, in response to my good friend, the gentleman from New York (Mr. WYDLER), part of the problem is that it is really not possible to make even that kind of determination without the kind of full, open, and multi-sided inquiry into this legislation or this proposal which has not been had.

Mr. Chairman, last year we were told that no prototype was being funded by NASA for a new SST.

This year, however, we learn that NASA is contemplating a new SST prototype in the 75,000-pound class. This SST prototype according to NASA would be part of a complete effort to be ready for production of a new SST by 1983. If the prototype is approved as part of an integrated program to build a new SST the cost of the development program is expected to be between $900 million and $1.7 billion.

The participation of the Federal Government is highly questionable: As OMB commented last year—"Concerning a renewed attempt to initiate the full-scale development of a supersonic transport, we believe that the private sector is the appropriate arena for assessing the economic viability of an advanced supersonic transport." NASA itself acknowledged the inappropriateness of Federal involvement when it said in a letter to the Committee on Science and Technology: It "is not the proper agency to de-

velop a complete supersonic transport plan."

Why is the Federal Government still providing what amounts to a direct subsidy to commercial aircraft corporations for research and development of an SST or AST? Is this an appropriate expenditure for a project that was judged by Congress to be economically and environmentally benign? Why don't commercial carriers take the investment risks entailed in research and development of a supersonic transport plane?

Let private corporations achieve technological breakthroughs by investing their capital in prototypes, studies, testing, and eventually design and construction. I am confident that our free enterprise system is sufficiently resourceful to develop such an aircraft.

Another disconcerting fact about this relatively unknown R. & D. program for a new SST is that yearly we have seen it increase and we can anticipate greater increases as time goes on: This year's request for $27.9 million is nearly twice last year's authorization. In the overall program plan on technology readiness for an SST prepared by NASA for the committee in September 1977, NASA states that early technology readiness for a new SST or AST "could be reached in 1984–86 at a total cost of about $1.7 billion." So far, this backdoor program has cost $69.2 million; if this authorization passes nearly $100 million will be spent.

This projected 7-year advanced-technology project leading to production of a new SST certainly warrants full and careful congressional scrutiny. Indeed, over 10 years of debate took place in relation to the previous SST—why should we now be forced to run with another SST when we already decided to halt the one in 1971 because of its economic and health problems.

Experience with the Concorde already demonstrates the economic difficulties confronting us in making the SST worthwhile and the noise level of the Concorde is above that of normal subsonic planes.

The reason for Congress past decision to stop the SST has not been dispelled or diminished over the last 5 years since congressional action took place.

We must face up to the fact that a new SST may slip up on us before we have a chance to examine the issue fully and carefully—before we know whether this is safe and sound technology to pursue.

I urge my colleagues to act now and not to wait until later before confronting this issue—confronting the monetary costs and the opportunity costs. The opportunity costs concern me the most, because if next year we are spending twice what we are spending this coming year for the SST then we will be denying funding for much more important domestic programs in the field of education, employment, and other programs of necessary social benefit.

Mr. Chairman, I yield back the balance of my time.

Mr. TEAGUE. Mr. Chairman, do I understand the gentleman from Kansas (Mr. WINN) has no further requests for time?

Mr. WINN. Mr. Chairman, I do have further requests for time.

If I may, Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. GOLDWATER) so that he may pursue the subject matter brought up by the gentleman from New York (Mr. WEISS).

Mr. GOLDWATER. Mr. Chairman, I thank the gentleman for yielding this time to me.

Mr. Chairman, the gentleman from New York (Mr. WEISS) made a statement that I wish he would clarify, and that is that we are in this request for money going to be developing a supersonic transport. I believe the gentleman said something to that effect.

The question I must ask the gentleman is this: Where in the bill, where in the report, or where in the transcripts of our hearings is there any indication that these moneys are going to be used to develop a supersonic transport? Where is this language the gentleman is talking about?

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I will be glad to yield to the gentleman from New York.

Mr. WEISS. Mr. Chairman, in the fourth paragraph down on page 9 of the report, this language is found:

> The Committee has reviewed NASA's response to the request of last year for a program plan leading to technology readiness for an advanced supersonic transport and has found it unacceptable and unresponsive. Therefore, the Committee requests that NASA redo the plan in accordance with the specifics contained in the report on the Fiscal Year 1978 NASA Authorization bill. The plan should be available for Committee consideration prior to the program review hearings in September 1978.

Mr. Chairman, I have a copy of the report which NASA submitted to the committee. That report is dated September 1977, and it is entitled "Program Options for Achieving Advanced Supersonic Transport Technology Readiness."

I do not know what more we need beyond that. There is, of course, mention in the report of the subject matter, but there is not a detailing and there is not a clear-cut statement up front that that is the path we are taking.

Mr. GOLDWATER. Mr. Chairman, I would suggest to the gentleman that his amendment to delete these funds is not founded on any kind of actual facts establishing a Federal Government program in the development of a supersonic transport.

I want to point out to the gentleman that a great deal of this research that is being done in advanced flight is being done on behalf of the military. The military flies supersonic aircraft, and it flies hypersonic aircraft. If we are going to increase our military capability, this kind of basic research and development and testing is essential. This is necessary if we are going to maintain a strong military profile.

Oviously there may be some spinoffs as it pertains to commercial transportation, but I do not think the gentleman will find anywhere in this report or in this program an effort leading to commercialization of supersonic flight.

Mr. TEAGUE. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I would be happy to yield to the chairman of the committee.

Mr. TEAGUE. Mr. Chairman, I would like to ask the gentleman from New York (Mr. WEISS) if he would read the next paragraph in the report.

Mr. WEISS. I would be pleased to do that, Mr. Chairman, if the gentleman from California (Mr. GOLDWATER) will yield further.

The next paragraph says this:

> Although endorsing a modest increase in the research on the well-known problems of supersonic flight—
>
> And the modest increase is $12 million—the Committee wishes to stress that no funds are authorized to be appropriated for the construction of a prototype supersonic transport.

That is what is said here. I am not saying that, in fact, there is money in here for that purpose or that this $27.9 million is for the construction of a prototype.

What I am saying is that these funds are for research and development leading toward the construction of an advanced supersonic transport by, according to the NASA report, sometime between 1983 and 1992, depending on what options are utilized. That is spelled out so clearly that I assume the gentleman is not suggesting that none of this is intended to lead toward the technology readiness for the construction of a supersonic transport beginning sometime in the early to mid 1980's.

Is the gentleman suggesting tha*?

Mr. GOLDWATER. What I am suggesting is that this is one of many programs that NASA is involved with to research and develop the whole field of aeronautics. Flying at supersonic is nothing new and it is nothing unusual. As I had mentioned, our military does it all the time. We are researching subsonic, as well, supersonic, as well as hypersonic, so that we have better knowledge how to construct and build future aircraft.

The gentleman from New York (Mr. WYDLER), I think, pointed out one of our goals is to make aircraft environmentally and socially acceptable. We are not going to be able to do that unless we put the necessary research dollars into it, whether it be for subsonic, hypersonic, or supersonic. The decision point on whether the United States will build a future supersonic transport is way, way down the road, after we have better knowledge. And, in fact, I would suggest to the gentleman that a U.S. SST may not be an appropriate goal for the Federal Government to be involved in, that it should be a commercial type of effort and perhaps not a Federal effort.

Again I point out that nowhere in this bill, nowhere in this report, does it talk about building a supersonic transport. In fact, the gentleman from New York (Mr. WYDLER) has been very insistent upon this point that, yes, we try to seek knowledge but we do not commit this Government to building a supersonic transport. What the gentleman is doing by his amendment is deleting the fine efforts of the gentleman from New York to do what we should do.

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from New York.

Mr. WEISS. Mr. Chairman, can the gentleman assure me at this point, without any question or ambiguity, that in fact there is not a plan to spend down the path anywhere from $900 million to $1,700,000,000 for the development of the supersonic transport, as set forth in the NASA report to the committee?

Mr. GOLDWATER. I can assure the gentleman that there has been no plan endorsed or adopted by this committee, nor by this Congress, to build a supersonic transport. All that we are doing is providing money to study and evaluate supersonic and hypersonic flight in order to give us some kind of knowledge for decisionmaking purposes.

Mr. DORNAN. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from California (Mr. DORNAN).

Mr. DORNAN. I thank the gentleman for yielding.

Mr. Chairman, with all due respect to the gentleman from New York, I can easily picture the gentleman 73 years ago standing there in this very Chamber suggesting that for the Signal Corps to support the Wright brothers and their infernal flying machine will be an intolerable waste of public funds.

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from New York.

Mr. WEISS. Mr. Chairman, I will ask the gentleman: Did the Wright brothers get the research undertaken by the Federal Government?

Mr. DORNAN. Yes, they did after 1905.

Mr. WEISS. Or did they do it themselves?

Mr. DORNAN. During the early years, they did.

Mr. WEISS. After the first 3 years?

Mr. DORNAN. Without Government money Orville and Wilbur would not have been able to continue.

Mr. Chairman, January 21 I had the opportunity to fly back to this country from Europe on the Concorde supersonic transport. Last year I had asked our distinguished chairman, "If the opportunity should ever arise to fly aboard an SST, should I?" He answered, "By all means. A member of the Committee on Science and Technology should do that; we will be voting on SST research this Congress." So I did, without using Government funds I might add. As a matter of fact, I was returning with the Senator from Illinois, with whom, you, sir, had just traveled to Europe in January to return the Crown of St. Stephen to conquered Hungary. Senator STEVENSON is chairman of the Ethics Committee in the other body, so evidently it is ethical for Senators to fly that nasty Concorde. He and I were both deeply impressed with flying across the entire Atlantic at mach-2 speed. An awesome feat considering that this December 17 at Kitty Hawk, N.C., we celebrate only the 75th anniversary of powered flight.

What we are talking about here is defying a simple rule of life that "time is money." The supersonic transport is inevitable. You cannot stop it. No one can. It is already here in the uneconomical Concorde. For all of its beauty and the fact that it is a flying engineering marvel the Concorde is not the ultimate SST. We have here an opportunity for the United States of America to continue the much deserved lead it has in commercial aircraft development and production. And, yes, if this research turns into, as the gentleman from New York (Mr. WYDLER) has pointed out, to be an efficient, clean, and economic mode of hyperfast transport, so what? Great. But I do not think anyone, especially the three pilots who are standing on their feet here, the gentleman from California (Mr. GOLDWATER), the gentleman from Texas (Mr. MILFORD), and myself would ever vote for research on an aircraft that is unsafe, dirty, or uneconomical.

I represent one of the two major airports in this country, Los Angeles International, as the gentleman from New York (Mr. WYDLER) represents the other JFK International Airport.

Neither the citizens in his district nor the citizens in my district want the British-French Concorde over a better U.S. SST. Because of noise and other environmental concerns my constituents still are fighting landing rights for the Concorde. However, when we see sales being lost to a European consortium, the airbus from Europe purchased by Eastern Airlines, and when we see a dangerous encroachment on our leadership in this commercial transport field, why would you defy the truism that "time is money" and try to cut off this minimal scientific money to advance into research that is inevitable. I think this is as shortsighted as any amendment I have heard offered yet this year in the House.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from California.

Mr. DELLUMS. Mr. Chairman, I would just like to respond briefly to the gentleman's economic argument.

I have talked with several executives of the major airlines of the United States, and their statement was:

> We cannot make this comment public because of the politics, but don't give us this turkey, because once you develop the SST, you force each airline to purchase them. We have already bought the 747. To keep it on the ground costs us from $250,000 to $300,000.

From their standpoint, it does not make economic sense, and because of the competition, it is wiped out by the international airlines anyway. Yet, we still go out and purchase airplanes like the 747.

Mr. GOLDWATER. Mr. Chairman, I can only say to the gentleman that what he is saying may or may not be true. I am not sure that it has any bearing on the merits of the Weiss amendment, which is to delete funds for basic research and development in the supersonic and hypersonic flights.

What we are trying to do is to answer questions about economics and about environment.

Mr. DELLUMS. I am simply trying to answer the argument that has been posed.

Mr. GOLDWATER. Then we can make a decision or, as a matter of fact, the commercial operators can make a decision; but until we have those answers, we are nowhere close to flying, let alone building an SST.

What we are saying is that we should use these funds under the very strict guidelines proposed by the gentleman from New York (Mr. WYDLER). We are not trying to build a commercial airplane. What we are trying to find out is answers to the questions that have been raised by supersonic flight, such questions as: What does it to the ozone layers? What does it do to human beings? What does it do to aircraft structures and to fuel economy?

These are basic questions the answers to which we all need to know before we can make an intelligent judgment or decision on whether to fly commercially supersonically.

Mr. Chairman, I would suggest that by adopting the gentleman's amendment, we are just putting ourselves that much further back on finding out the truth.

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from New York.

Mr. WEISS. Mr. Chairman, I appreciate the gentleman's yielding.

The report which I quoted from at the gentleman's request indicated that the plan, the report of NASA to the committee for September 1977, had been rejected and was found not acceptable.

Mr. Chairman, one of the questions which I will ask the gentleman is whether he knows why, in fact, the committee found that report unacceptable. Secondly, I would like to point to the authorization report for fiscal year 1978, at page 18, in which it says as follows:

> The plan should describe the efforts needed in each of the major technology disciplines, the associated costs and the significant milestones.
>
> In addition, an analysis of the broader economic and policy questions should be prepared in conjunction with the program plan.
>
> Among the important factors to be addressed are:
>
> (1) Economic analysis covering investment/return aspects of development implementation.
>
> (2) Societal benefits of supersonic transportation, including trade and communications.
>
> (3) Societal, including environmental impacts from the operation of a fleet of supersonic transports.
>
> (4) Approaches for development financing.
>
> (5) Extent of Federal government participation in the development and alternatives for organizational arrangements.

My second question is this: Was it the failure of NASA, on the basis of a direction from the Office of Management and Budget, to respond to those societal and economic questions that the committee found the NASA report to be unacceptable?

Mr. GOLDWATER. Mr. Chairman, could the gentleman repeat the question?

Mr. WEISS. I would be pleased to.

Mr. WINN. Mr. Chairman, I do not yield any more of my time.

The CHAIRMAN. The Chair recognizes the gentleman from Kansas (Mr. WINN).

Mr. WINN. Mr. Chairman, I yield such time as he may consume to the gentleman from Arizona (Mr. RUDD), a member of the committee.

Mr. RUDD. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I wish to join my distinguished colleagues on the Committee on Science and Technology in support of H.R. 11401.

Despite the House's modest increases in NASA's aeronautical research and technology budget amounting to $28.2 million over the administration's submittal, the other body is recommending deletion of all our recommendations. Our purpose is to restore NASA's role in aeronautics to that approximating what existed prior to 1958 with the National Advisory Council on Aeronautics. The world-renowned success of aeronautics in the United States is directly attributable to the work of the NASA.

With the reorganization of NACA into NASA immediately after Sputnick in 1958, the momentum in air breathing technology was transferred to space activity. The whole world knows of the success of this transition.

Today, after 20 years, we are in the process of another transition. While, in real terms, the U.S. space program is not keeping up with inflation, aeronautics is not being expanded to meet the urgent needs for refilling the well of aeronautical technology needed to maintain our leadership in world markets.

Aeronautical products constitute by far the largest category of manufactured products exported by the United States each year. Other countries, notably our allies in Europe, have served notice that they are embarking upon nationally funded programs to produce aircraft and engines superior to U.S. products.

It is obvious, I think, that the surest way for the Congress to guarantee U.S. leadership in world aeronautics, both civil and military, is to restore to NASA the resources and incentive for aeronautics which it lost with the creation of the space program.

To put the matter into better perspective, in fiscal year 1978 NASA's aeronautical R. & T. budget equalled only 6 percent of its total budget. Notwithstanding the increasing recognition of both the immediate and continuing long-term importance of aeronautics, the OMB approved NASA budget for fiscal year 1978 raises this portion to something less than 7 percent of the total NASA budget.

I have the feeling the majority of this House would support a greatly enhanced NASA role in aeronautical development. Perhaps, we will need new legislation specifically designed to correct current NASA deficiencies in aeronautical work. Perhaps we must consider establishing a separate organization dividing aeronautical from space development.

Since the Senate Subcommittee on Science, Technology, and Space, meeting in markup, has deleted the House changes, I urge your support in sending to the other body the unmistakable message that we are insisting upon strengthening NASA's aeronautical research and technology.

Mr. WINN. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. LAGOMARSINO).

Mr. LAGOMARSINO. Mr. Chairman, I rise in support of H.R. 11401; NASA authorization act of 1979. I would like to commend the chairman, Mr. TEAGUE, and the committee for their thorough and responsible approach to this legislation.

As you know, I am a strong supporter of the Space Shuttle program, not only because the west coast launch site is in my district, at Vandenberg AFB. But because of the significant benefits to be derived from the program both technological and scientific. The Space Shuttle program will offer, for the first time, a versatile and economical space transportation system. Because the Shuttle is reusable it will provide substantial savings over the continued use of expendable launch vehicles to place scientific and military hardware into Earth orbit. Yet, perhaps more importantly, the shuttle can perform a myriad of duties that expendable launch vehicles cannot. The Shuttle can retrieve payloads from orbit for refurbishment and reuse, service, and repair satellites in space, transport to orbit, operate and return space laboratories, transport materials and equipment to orbit, perform rescue missions and experiments in space which can be conducted in zero gravity adding significantly to our scientific knowledge and our technical expertise. This Nation has a commitment and an obligation not only to ourselves but to all the nations of the world to continue with the exploration of space.

I am most pleased to note the committee has recommended the development of a five orbiter shuttle fleet. This will insure that the program will operate at maximum efficiency by insuring launch reliability and a fleet large enough to accommodate the heavy launch schedule now planned for the Shuttle program. When the Shuttle program is operational, it makes little sense to continue to use expendable launch vehicles to perform the tasks the Shuttle is capable of and at a lower cost simply because the Shuttle fleet cannot handle the launch volume. I believe a five orbiter fleet is justified and I am pleased to find the committee has agreed.

I am also pleased to note the bill before us is predicated on the use of the west coast launchsite at Vandenburg Air Force Base in California. As you know, there has been considerable discussion about the necessity of having a fully operational west coast launch facility. I believe Vandenburg is essential to the program for the following reasons.

Vandenburg Air Force Base is our national space port for all high inclination polar or near polar orbits. High inclination orbits are essential because they allow satellites maximum time for repetitive viewing of the Earth's entire surface. These trajectories are critical for sensing natural resources, monitoring crops and rangeland, mapping, and military surveillance, to name but a few applications. While some have argued that high inclination orbits can be conducted from the Kennedy Space Center in Florida, I must disagree because of the unacceptable risks and loss of efficiency incurred. High inclination launches cannot be conducted from the Kennedy Space Center without unacceptable overflights of highly populated areas during launch. While the so-called dogleg maneuver eliminates some of the problems such as sonic boom damage, it would still result in a flight pattern which would involve suborbital flights over highly populated areas in the Soviet Union, Canada, China, and the Eastern United States threatening not only the safety of those areas in the event of an abort but raising grave concern over Soviet and Chinese reactions to suborbital overflights of their territory; for example, this weekend's shooting down of a Korean civilian passenger plane. In addition, the "dogleg" trajectory would result in a payload reduction of about 10,000 pounds or 30 percent of the normal launch capability.

I believe the United States must maintain its capability to achieve these high inclination orbits with the Space Shuttle to obtain maximum efficiency from the Shuttle program. To do otherwise would result in higher costs, through the continued use of expendable launch vehicles, and seriously degrade the overall objectives of the Shuttle program. For example, 31 of the 39 Spacelab missions and 44 Shuttle launches critical to our national defense now scheduled for Vandenburg would be seriously affected.

In my opinion, too much time, money, and effort have already been invested in the Space Shuttle program to limit its usefulness by restricting operations to a single launch complex. I am most pleased to see the committee concur and I urge adoption of the legislation now before us.

This weekend the shooting down of the Korean passenger plane, I think, illustrates that very well.

I urge my colleagues to support and vote for this legislation.

Mr. WINN. Mr. Chairman, I yield 1 minute to the gentleman from California (Mr. DORNAN).

Mr. DORNAN. Mr. Chairman, I rise in support of the NASA authorization for fiscal year 1979, H.R. 11401. As a member of the Science and Technology Committee, I recognize the importance of this legislation on which rests the future of our U.S. Space Shuttle program.

There have recently been stories about alleged problems with Space Shuttle engine development. However, these reports have for the most the product of hearsay. I have talked with the managers and workers who are designing and constructing these beautiful machines, and I am confident that the

Space Shuttle program is making continuing progress. The Shuttle approach and landing test program was successfully completed last fall ahead of schedule. Every other aspect of the technical specification program is on target. Ground test firings of the solid rocket motors; assembly of flight-type hardware at NSTL for the main propulsion test including engines, external tank, orbiter equipment, are all nearing the last stretch of their developmental phase in construction. All in all, there is much news to tell about the Space Shuttle program, and it is all good.

As we meet here this afternoon, test activities are underway at the Marshall Space Flight Center. The great testing grounds of Marshall were the site last year of the successful Orbiter 101 flight which was piggy-backed on a 747. The other flight hardware which is required to support the first manned orbital flight in 1979 of the shuttle are also being built and tested.

It is difficult to demonstrate in mere words how dramatic, how revolutionary has been the progress of NASA and the aerospace companies involved in overcoming scientific mysteries which have plagued us since we first learned to fly. These mysteries have been overcome, and it has all happened during the life of this 95th Congress. NASA has overseen the completion of the shuttle craft which has been tested at 100 percent thrust.

Whatever technical problems may have arisen in the past due to the testing of an entirely new engine design, these problems have been and will continue to be overcome. In 1978 and 1979, The Space Shuttle program will be going through an extremely intense period of testing. The program progress is advanced to the stage that a large number of U.S. and foreign customers have already begun beating at our door to get launch services on the Space Shuttle in the 1980 to 1982 timeframe. These potential customers are not visionaries. They are hard businessmen who know a good thing when they see it; men who are in themselves the best indicator that the Space Shuttle program and the American companies involved in production are on the right track. They are an indicator that NASA will deliver on its commitment to Congress—that commitment being to develop a versatile and low cost space transportation system.

Let us not tire on the home stretch. Let us not be indecisive or impractically cautious at a time when we are in the final phase of developing for our Nation the program which will once again proclaim America's rightful status as No. 1 in space. Let us not vote to cripple our Nation's space program now that it has again been resurrected. I urge my colleagues to vote for this NASA authorization, and I thank the chairman for his consideration.

Mr. WINN. Mr. Chairman, I reserve the balance of my time.

Mr. TEAGUE. Mr. Chairman, it is the understanding of the chairman of this committee that has the responsibility of studying the future aviation of this country that no speed is over any other and it applies to every speed, and there is no money for construction of any aircraft in any way, form, or fashion.

Mr. Chairman, I yield 5 minutes to the gentleman from Texas (Mr. MILFORD).

Mr. MILFORD. Mr. Chairman, I thank the gentleman from Texas for yielding.

Mr. Chairman, I believe I can clear this up in a short period of time.

Mr. Chairman, I rise in support of H.R. 11401.

As chairman of the subcommittee that has jurisdiction over the aeronautics portion of this bill, I would like to clear up one or two apparent misconceptions.

We have no plans whatsoever to spend $1 billion, or any other amount close to that, in connection with the production of any type of supersonic craft.

Furthermore, the NASA report which has been waved around here today, has been specifically rejected by this committee and new instructions are contained in the bill report before us today.

Mr. Chairman, I urge the adoption of the fiscal year 1979 authorization bill and the rejections of any amendments which may be offered.

The Subcommittee on Transportation, Aviation and Weather conducted numerous field inspections and held extensive hearings here in Washington on the aeronautical part of the fiscal year 1979 NASA authorization. Testimony was taken from a variety of witnesses both inside and outside of NASA.

Members of the subcommittee worked long and hard in carefully reviewing the NASA aeronautical program and the 1979 budget request. We found that although the dollar amount for aeronautical R. & D. is small—$292 million this year—the pay-off is very large. This is true because NASA emphasizes the high-risk, long-term research and technology that industry is financially unable or unwilling to undertake. Such efforts provide the foundation for future aircraft and engines which return many times their initial investment to our economy.

Because of this the Committee on Science and Technology has repeatedly urged the administration and the Congress to increase the resources devoted to aeronautical R. & D. We have often pointed to the many long-term benefits of investment in this area, which are reflected in billions of dollars in sales of U.S. aircraft both here and abroad, and in millions of jobs for Americans. So I am very pleased to report that this year's request continues the trend, started last year, toward real growth. The amount this year is about 8 percent.

The fiscal year 1979 program in aeronautics represents a modest increase in NASA's efforts to advance technology across the board. Specifically, NASA is working in virtually all areas of aircraft technology including materials, structures, propulsion, aerodynamics and avionics. Of special note this year is a substantial amount for developing the technology needed for a new generation of fuel-efficient subsonic aircraft. This program, which was carefully worked out with the close involvement of industry, holds great promise for our continued worldwide leadership in aviation.

Finally, let me turn briefly to an issue about which many members are properly concerned. That issue relates to the committee's action in the area of advanced supersonic research. Notice that I said research. I cannot emphasize this too strongly. We are specifically not authorizing the construction of a prototype aircraft or any other flyable hardware. We are directing NASA to continue their experiments on potential solutions to the well known side-effects of supersonic flight. So please do not be misled by the misinformation being circulated today. We are talking only about research.

Mr. Chairman, that part of NASA's program having to do with aeronautics is broken down into three categories:

First. Research and program management.

Second. Research and technology.

Third. Construction of facilities.

RESEARCH AND PROGRAM MANAGEMENT

The research and program management funds related to aeronautics are requested to provide the civil service manpower for in-house research, planning, management. and support of R. & D., as well as the costs of operating, maintaining and supporting research center installations. The funds related to aeronautics are not identified separately in the budget request and have been discussed by others; therefore, I will not go into program details.

RESEARCH AND TECHNOLOGY

The amount requested by NASA for aeronautical research and technology for fiscal year 1979 is $264,100,000. The committee approved this amount and recommended an addition of $28,200,000 for a total $292,300,000. The additional amount consists of the following:

First. An increase of $26.7 million to restore the essential flight test phase of the composite primary aircraft structures program, that was cut by OMB;

Second. An increase of $8 million to accelerate the very promising variable cycle engine components program and an increase of $4 million to augment the supersonic cruise research program;

Third. A corresponding decrease of $12 million to be taken from those activities within the engine components improvement and energy efficient transport programs with near-term application; and

Fourth. An increase of $1.5 million to establish a new sub-line item for aerial applications systems technology.

The objectives of the R. & T. program are to advance technology to make possible safer, more economic, and environmentally acceptable air transportation systems which are responsive to current and future national needs; to maintain a strong competitive position of the United States in the international aviation marketplace; and to support the military in maintaining the superiority of the Nation's military aircraft. To meet these objectives, NASA is maintaining a strong research effort in the areas of materials, structure, avionics, propulsion, aerodynamics, and man-vehicle interactions.

The aeronautical program also includes a major effort aimed at reducing aircraft energy consumption and the undesirable environmental effects of noise and pollution. This effort is directed at providing the technology for quiet, clean, and efficient propulsion systems; the reduction of aerodynamic drag; the application of active control concepts, and advanced materials and structural concepts of aircraft to reduce weight and improve operating efficiency; and an examination of new types of fuel.

Another major area of emphasis is concerned with improving aircraft terminal operations and safety through development of technology in areas such as avionics systems, operation procedures, crash-worthy aircraft structures, and fire-resistant aircraft interior materials.

All of these technology efforts are integrated with various systems studies to provide the technical basis for future advanced long-haul and short-haul transportation aircraft—which, of course, is the ultimate reason for NASA engaging in aeronautical research and development.

The aeronautical research and technology program is divided into three major efforts. First, there is the research and technology base which is discipline-oriented and has the overall objective of establishing a solid foundation for the evaluation of advanced concepts. The second area—systems technology programs—contains technical demonstration and proof-of-concept activities which have matured to the point where they are ready for systems integration and demonstration, or the project definition phase of potential future experimental programs. Third, there are the experimental programs which involve multidisciplinary concept demonstration and major research vehicle development.

CONSTRUCTION OF FACILITIES

The construction of facilities request for aeronautics by NASA was $76,500,000 for fiscal year 1979. It is important to emphasize that the great bulk of our civil aviation research and development facilities were constructed in the 1940's. Such money as has been invested over the past 30 years has been largely devoted to modifications for upgrading capabilities.

But such extensions of capabilities can go only so far. To meet the requirements of doing R. & D. for future generations of aircraft—and for improving current aircraft—we must face the fact that the Nation will have to build some new aeronautical R. & D. facilities in order to maintain its leadership in aviation. I have already noted the major contributions to our trade balance with other nations made by the sale of aircraft and parts.

Between 75 and 80 percent of aircraft flying today in the non-Communist part of the world were built in this country. If we wish to retain this leadership—which also means hundreds of thousands of jobs—we must provide the kind of research and facilities necessary to maintain technical leadership.

For such reasons as these, the committee recommends approval of the requested amount which includes the third funding increment for the National Transonic Facility at Langley Research Center and the third increment for the 40-by-80-foot subsonic tunnel at Ames Research Center.

● Mr. GAMMAGE. Mr. Chairman, I rise in support of H.R. 11401 authorizing appropriations to the National Aeronautics and Space Administration for fiscal year 1979. I would like to congratulate the chairman of the Space Science and Applications Subcommittee, Mr. FUQUA, and the ranking minority member, Mr. WINN, for the fine work they did in getting this legislation ready for consideration. They have worked many hours in the past 2 months reviewing this budget request.

Mr. Chairman, I believe, and most of my colleagues would agree, that NASA is the best managed agency in the Federal Government. The NASA programs make a positive contribution to our everyday lives in helping to build a stronger economy, in helping to monitor and understand our environment, in helping to manage our natural resources, and in challenging our minds to a better understanding of the universe in which we live.

Perhaps as we look to our future space program, one of the most important development programs is the reuseable Space Shuttle, the key element of a versatile, economical transportation system to provide a wide variety of users with round-trip access to space.

Enthusiasm for the space program has been increasing greatly in the last few years. The Space Shuttle will give Americans a tangible return for these long years of investment. On March 10–12 of this year, the first model of the Space Shuttle, the "Enterprise," perched atop its 747, landed at Ellington Air Force Base. Ellington, located in my district just south of Houston, Tex., is the airfield used by the Johnson Space Center in its astronaut training mission. Close to a quarter of a million area citizens ventured out to Ellington to view the "Enterprise." Cars were backed up for miles with the largest crowd ever to visit the base. This outpouring is but a small demonstration of the intense interest of Americans in the space program and its future directions.

As we consider the NASA budget, I wish to express my strong support for the Space Shuttle program. The Space Shuttle is approaching its first orbital flight in 1979. It has reached its peak budget and its peak employment.

The national commitment to routine space exploitation is being implemented by NASA in their success, oriented Space Shuttle program. Their management system is a logical and objective way to proceed. It has lead to excellent progress in many areas. Some unforeseen problems have developed and schedule and/or budget flexibility must be exercised. However, I am sure NASA will solve their technical problems and provide us with an operational space transportation system in 1980 as planned.

As unemployment problems appear around the country, the Space Shuttle provides significant employment in many States. Almost every State in the Union has people working on some portion of the Space Shuttle. Employment this year will reach close to 50,000 and there are almost 200 industrial contracts which are over a million dollars each on this program. This country must continue its efforts to exploit space and provide an operational space transportation system to achieve those vast benefits which will be accessible with the Space Shuttle.

We must not lose sight of the advantages to be gained today and in the future from our continued investment in this exciting technological advance. Future application of thermal protection systems developed for the Space Shuttle may provide energy savings as the products make the transition to commercial use. Newly developed alloys and metal applications may provide stronger, lighter weight vehicles to save energy and resources spent on repairs. And the results of scientific experiments during flight may improve crop yield and thus feed more of the people on Earth for less.

Cost savings is a paramount feature of the Space Shuttle. For example, when multiple payloads are launched, up to 65 percent of today's boosters cost can be eliminated and by checking out the satellite prior to placement in orbit, far more successful spacecraft will become operational.

Starting in the 1980's, the Department of Defense has committed itself to use the Space Shuttle for all of its payloads. All expendable boosters for defense use will be phased out.

The Space Shuttle will allow the United States to make space available to provide benefits for everyone on Earth. If we continue our congressional support, we will soon operate routinely and economically from the weightless vacuum of space to obtain advances in Earth resources science, manufacturing, and international cooperation. I urge each of you to support this program.

We must also do a better job of defining and understanding what our future goals in space should be. For the past several years, we have felt funding requested for this important activity has been inadequate. The reduction of 50 percent in the fiscal year 1979 budget request over fiscal year 1978 is a serious mistake. This is the critical seed activity that germinates new space missions and opportunities. The ability of the Nation to exploit the capabilities and technological leadership the Shuttle will provide is very much dependent on the breadth and depth of the studies and engineering support done in the advanced programs area.

An aggressive advanced programs effort is required to define the new ideas and concepts required for the Nation to move forward in the critical areas of:

First. Space power augmentation to extend Shuttle usefulness, mission duration, and economy of operation;

Second. Large structures space engineering demonstrations to develop the techniques to build large space structures. This work is the keystone to fu-

ture giant steps in space power, communications, and Earth oriented sensing;

Third. Exploring the future potential of space industrialization; and

Fourth. Expanding man's capabilities to conduct complex space operations of the future.

By the mid-80's, the Shuttle will be fully operational. It is therefore important that the next several years be used to develop a wide range of new ideas and concepts that will lead to significant new mission and space benefits, since the development lead time is nominally 5 to 7 years from concept definition to flight.

The number of new mission options that can be defined as well as the quality and depth of definition is totally dependent on the level of funding provided for this activity. In the pre-shuttle development period—fiscal year 1968–70—approximately $20 million per year were effectively devoted to this activity.

For these reasons, I feel it is in the national interest to support the committee recommendation to add $7 million to the $5 million budget request for Advanced Programs. These funds should be used to proceed with definition and design of a power module and both deepen and expand activities related to definition of large structures engineering demonstrations, space platforms, orbit to orbit transportation concepts, as well as related required engineering support activities.

One of the most promising and attractive uses of large space structures is for solar power satellites. NASA and the Department of Energy are in the process of evaluating the practicability of the satellite power systems concept, by which electrical energy would be generated in space from sunlight and beamed to earth for distribution in the national electric power grid. The current assessment is primarily analytical and, accordingly, many assumptions have to be made concerning the performance of the system. Many of these assumptions are of a highly critical nature and need to be verified with experimental data as soon as possible. The funding provided by H.R. 11401 will enable NASA to begin the most critical of these experimental tests.

The issues here are too important to our country's future welfare to be allowed to remain as open questions for want of some small additional funding which will put the issues to rest.

Finally, I would like to turn my attention to the use of remote sensing for assisting in monitoring our world food supply. The U.S. Great Plains—our breadbasket—is providing the United States with the world's largest discretionary supply of food. We have been able to help feed the world's hungry millions, we have been able to reduce our balance of payments problems and we have been able to develop and maintain the world's highest standard of living. This is due, in large part, to the productivity of our farmers.

The Department of Agriculture serves the farmer and the Nation by providing information concerning agriculture. They are looking for ways of producing this information in a more timely, accurate and efficient maner. The development of the remote sensing technology that could provide valuable, global information about situations that would reduce a region's food supply or would accurately predict crop production in foreign areas is important to USDA and to the Nation. Monitoring changes in agricultural land use practices, the effectiveness of our soil conservation practices, the utilization of our renewable resources and the effects of pollution help insure that we continue to have the wealth of an abundant food supply.

NASA, NOAA and USDA are developing a research, development and testing activity. As the technology is proven, the information derived from satellite remote sensing data will be phased into the USDA existing information system. This will allow our farmers and our businessmen to be among the best informed people in the world.

Another area where remote sensing offers the potential for significant benefits is in helping to manage the natural resources which are finite and in limited supply. Most of the world's natural resources that are formed by geologic processes are finite in measure and, therefore, in limited supply. Many of these resources, especially some essential commodities such as fossil fuels, are being consumed faster than new discoveries are being made. It is apparent that to address these problems of dwindling resources, we must expand our geological knowledge of the earth.

A new and widely used tool in geological research and applications in the fields of oil, gas and mineral exploration, engineering geology, and environmental geology is remote sensing from space. This tool is essentially an extension of lower level, airborne remote sensing; and it offers many new advantages to assist in the geological and geophysical mapping of the earth.

The objective of NASA's nonrenewable resources program is to provide information useful for assessment of the resource potential of the major continental areas. These assessments provide the basis for future geophysical exploration and for evaluation of the global mineral and petroleum resource potential. An accurate assessment of the world's resource potential is of fundamental importance to the development of a national energy policy and to the economic well-being of both developed and undeveloped nations of the world. There are great uncertainties as to the magnitude of available nonrenewable resources, particularly minerals and petroleum. Recent discoveries of new petroleum sources in previous unexpected areas imply a limitation of current geophysical prospecting techniques.

The subcommittee's action in amending the NASA request to provide $4 million in fiscal year 1979 for Stereosat provides for the initiation of a satellite system dedicated to obtaining new information that can be readily supplied to mineral and resources exploration. This satellite system can be ready to fly in 1982. The global stereo imagery to be obtained by Stereosat will add a badly needed third dimension to the geological information for the exploration process. Significant information for mineral and petroleum exploration may be obtained with the use of a remote sensing imaging device capable of providing repetitive global stereo coverage. The uses of this data will also extend to many other practical areas such as water resources and hydrology, land use monitoring, and geologic mapping.

Mr. Chairman, I would like to again express my strong support for H.R. 11401, the fiscal year 1979 NASA authorization bill.●

● Mr. GORE. Mr. Chairman, space is an international forum for cooperation which offers unlimited opportunities for exceptional human achievements in concert with expanding peaceful activities for the benefit of all mankind. I support the National Aeronautics and Space Administration authorization bill, H.R. 11401, and NASA's continued commitment to the peaceful exploration and exploitation of space.

Although this commitment cannot be limited to planetary exploration alone, missions such as the Galileo, which was previously called the Jupiter Orbiter Probe, provide a framework for congealing mutual interests. One hundred and ten scientists have been selected to participate in this exploration of Jupiter including participants from Germany, the Netherlands, Canada, France, and Sweden, as well as the United States.

The Galileo mission plays an important role in meeting the objectives of planetary exploration to understand the origin, evolution and current state of the solar system, to understand past and present processes that affect the Earth's and man's environment by comparative study of the solar system, and to understand the relation of the chemical history of the solar system to the origin of life, here and possibly elsewhere. Exploration of Jupiter is particularly important because it is the largest planet in our solar system, with a diameter 10 times that of Earth and contains more matter than all other planets put together. Jupiter may include the original "star-matter" from which the Sun and all planets were formed and is itself a miniature solar system containing 13 known moons.

Congressional approval last year for the Galileo program provided NASA with the necessary lead-time to develop the instruments and spacecraft for a Space Shuttle launch in January 1982. This balanced continuation of planetary exploration assures that we will maintain the highly skilled NASA/industry/university team necessary for a strong technology base for future scientific activities.

The Galileo program involves combination probe spacecraft and orbiter spacecraft with the spacecraft propulsion system supplied by the Federal Republic of Germany, under a recent international agreement. The probe spacecraft will plunge deep into the planet's atmosphere, measuring the chemistry and structure as it descends. The orbiter spacecraft after releasing the probe will

continue to circle Jupiter for 20 months to explore the near-Jupiter space, to measure its magnetic field and radiation belts and to examine the huge satellites around it.

Mr. Chairman, we can be confident that the measurements from these spacecraft will be returned for analysis by som of the best scientific minds not only in the United States, but in the world. I believe that Galileo as well as other international space programs cannot help but bring this world closer together through mutual interest and understanding.●

● Mr. FLIPPO. Mr. Chairman, I fully support the recommendations of the Committee on Science and Technology, upon which I have the pleasure to serve and recommend passage of H.R. 11401 which authorizes appropriations to NASA for fiscal year 1979. I would like to congratulate Mr. FUQUA, chairman of the Subcommittee on Space Science and Applications, and Mr. WINN, the ranking minority member, for their efforts and the fine work they have done.

I would first like to focus my remarks on the Space Telescope which is now under development by NASA. The United States has a long record of excellence in astronomy. The fruits of private enterprise in the past were often turned to the general good, by farsighted businessmen, who donated considerable sums of money to establish astronomical observatories. The most outstanding example is the Mount Palomar telescope. These private businessmen felt that astronomy was so important to man's intellectual progress that they gave their dollars to build telescopes. The telescopes needed to continue this progress are now far too expensive to expect private philanthropy to play a significant role—the Federal Government must provide the funding if the progress is to continue.

In fiscal year 1979 NASA is continuing the development of the Space Telescope. The Space Telescope will be a national observatory in orbit around the Earth for 10 to 15 years. It will be placed in orbit, using the Space Shuttle, in 1983. The Space Telescope, by being outside the Earth's atmosphere, will enable astronomers to see images that are 10 times smaller than with ground-based telescopes. Additionally, the color-range over which we can "see" or photograph the universe will be increased by a factor of more than a thousand.

The Space Telescope is the logical and economical successor to the previous NASA program of short-lived individual space astronomy experiments. The availability of the Space Shuttle will enable NASA to maintain and update a single observatory in space for a period of many years at a fraction of the cost of sending up a series of duplicate spacecraft. There comes a time in the evolution of a scientific discipline when the individual experimenter cannot afford or manage the facilities necessary to make significant advances. As an analogy, high energy and particle physics have already gone through that evolution. The day of the one-man cyclotron is largely over and has been replaced by the advent of the large facility, that is, the Fermilab.

Space astronomy is now at the crossroad with the Space Telescope being the equivalent of the Fermilab. The reality of this big science is that it can create more opportunities for individual investigators than does an agglomeration of many small projects. NASA expects a minimum of 100 astronomers per year to use the Space Telescope and that over its lifetime of 10–15 years a major fraction of the world's astronomers will use the Space Telescope.

Finally, history has shown astronomy as a science that is at the cutting edge of new technology. The Space Telescope will certainly tell us much about the early stages of our universe and the formation of the galaxies. One powerful hint which we have already is the existence of quasars. Quasars are the most distant and most energetic objects known in the universe. No one knows for sure how quasars manage to produce such great amounts of energy. It is conceivable that an understanding of the way quasars produce energy could lead to improved laws of physics or even some practical applications. As an historical example, we recall that the inspiration for this country's controlled thermonuclear fusion program came from the realization, by astronomers and physicists working in pure research, that the sun shines on the basis of hydrogen fusion.

An additional potential application of the space telescope is a better understanding of weather and climate. This will be the first telescope that will be able to study the meteorology and the atmosphere of other planets. Just as if somehow, sometimes it is easier to understand your own children if you can look at how your friend's children are behaving; then it may also be easier to understand the Earth's weather if we have a chance to look frequently at the weather of other planets.

I would like to support the action of increasing the NASA budget request for advanced programs from $5 to $12 million.

Your committee believes the activity under this line item to be extremely important. Important to the Nation by insuring that the vital new concepts of bringing the benefits of space to mankind continue to be explored; important to the NASA by insuring that they have adequate "seed corn" resources to explore these new ideas and concepts; and important to the Congress by insuring we have timely information to make the proper decisions relative to the growth and continuation of our marvelous space achievements.

It is this budget activity that spawned dramatic and valuable space achievements for which we are all so proud. From early studies in this area came the Gemini, the Apollo, the Skylab, the Apollo-Soyuz, and the Space Shuttle. For the future, similar new concepts will emerge that will guarantee this Nation's leadership on this new frontier of space.

Our hearings this year have given us new insights on the potentials for growth in space. Space offers unusual possibilities for developing inexhaustible sources of energy; for creating new means of providing services to the man in the street such as electronic mail, personal navigation schemes and similar public service satellites; for new information systems for monitoring natural resources and the environment; and for means of exploiting the space environment for the benefit of all.

The potential for creating new industries in space for manufacturing, for erecting large structures, for building power stations, and numerous other objectives all emerge from studies and experimentation within the NASA advanced programs efforts.

As the Shuttle goes into service, its initial use will be essentially as a manned booster. We must early on, learn to use the Shuttle as a spacecraft more to do things in space as compared to only going to and from space. With this capability the promise of space industrialization can become a reality.

Finally, I would like to make some remarks concerning the solar satellite power system concepts.

Various alternative energy sources have been proposed in the last few years in response to the energy crisis. The recognition that not one of these energy sources will, by itself, meet all future power needs, together with the large uncertainties inherent in the achievement of full potential for each source, has led to what might appear the most daring proposal so far: large-scale solar-energy conversion in space with a satellite solar powered station located in synchronous orbit around Earth.

First proposed by Dr. Peter Glaser of Arthur D. Little, Inc., in 1968, the satellite power system (SPS) could use one or more of several methods to convert solar energy to electricity. This electricity would be fed to microwave generators incorporated in a transmitting antenna in the satellite, and the antenna would direct a microwave beam to a receiving antenna on Earth. There the microwave energy would be reconverted safely and efficiently to electricity and fed into conventional power-transmission networks. Technical and economic feasibility studies of such system already indicate that they may provide an economically viable, and environmentally and socially acceptable, option for power generation on a scale substantial enough to meet a significant portion of future energy demands.

Of the many uses for energy, the largest by far is for the production of electrical power. While projections vary, it is reasonable to expect that the U.S. electrical power demand will triple before the year 2000. Unfortunately, there is no single, obvious energy source to supply this demand. Thus, it appears prudent for us to investigate the potential benefits of a number of candidate approaches for increasing the energy available to our country.

A satellite power system which changes the Sun's energy to electricity in orbit and sends it to Earth for use has been suggested. It has been esti-

mated that as much as 25 percent of the additional U.S. power needs in the first part of the 21st century could be supplied by such systems.

NASA has only scratched the surface in its work to date to completely explore the system concept, but we do know that, as yet, no insurmountable problems have been identified, and it appears that the cost of power from such a system could well be competitive with other candidate energy sources for the future such as the solar energy available in space is approximately six times as great as that available on the surface of the Earth; that the Sun is an inexhaustable energy source; and that power generated in this manner will not pollute the air we breathe.

Additionally, this concept could supply great quantities of power for future industrial activities in space and for sale to energy hungry foreign nations. On the other hand, we know that development of such a system will be a very costly undertaking. Therefore, we must look, and look hard, before we leap.

We must examine the concept in detail to obtain a better understanding of the problems to be resolved, to determine the amount of risk which will be involved and to estimate the resource requirements which will be necessary to develop the system. Then, and only then, will we have adequate facts to make an enlightened decision concerning the potential worth of the system in comparison to other candidate concepts.

The Department of Energy and NASA have developed a plan to pursue this promising concept in a practicable and sensible manner.

However, the work to date has been mostly analytical. NASA is drawing heavily on its past experience in conducting its assessment but, in some instances, there is no hard data available to confirm or deny the assumptions which must be made. Some of these assumptions are so critical to the projected success of the concept that they must be verified at the earliest practicable time. One example of such an assumption is concerned with the effect which the power beam from space to Earth will have on the ionosphere. Some scientists predict that worldwide radio communications will be disrupted by the passage of the beam through the ionosphere. NASA's calculations indicate that the planned beam intensity will be below the threshold for such effects to occur. Fortunately, NASA has designed an experiment which will obtain the data to either confirm or eliminate this concern at a cost of few million dollars.

The potential effect of issues, such as the one which I have just described, is too vital to be allowed to remain as an unanswered question if we can reasonably put the question to rest. The funds provided by this authorization bill will permit NASA to start experiments which will resolve such issues in a timely manner.

I think that Congress would be remiss not to approve this program and provide the rather modest funding to develop the knowledge required to intelligently make those national decisions.

NASA has been and should continue to work with DOE in the effort. However, funding for the work has been provided in the NASA budget since that is where the capability resides to obtain the facts we need.●

● Mr. BROWN of California. Mr. Chairman, I support H.R. 11401 which authorizes appropriations to the National Aeronautics and Space Administration for fiscal year 1979. The Nation is very familiar with the NASA's excellent and extensive space programs. The funds authorized in H.R. 11401 will allow the NASA to continue moving ahead in this field. The agency, though, is also involved in areas which one might not readily associate with the NASA—such as remote sensing of Earth resources and dynamics and environmental quality detection and monitoring; climate research and the transfer of NASA technoloy to the State and local governments. I would like to discuss these topics first and then turn to some of the logical outgrowths of these programs which will undoubtedly consume considerable amounts of our time and thought in years to come—namely, the civilian use of satellite technologies including development of these technologies for the developing nations.

The NASA Landsat satellites are powerful new tools for researchers, resource managers, and others. The early pictures from space have allowed for substantial improvements in the detection of various resources, geologic hazards, such as earthquake faults, areas of diseased and damaged trees and crops and more. Perhaps more importantly, though, the development of these technologies gave us an idea of the great potential remote sensing has for the effective management of our resources. This legislation allows for NASA to reach this potential and set new goals for remote sensing applications. Without this effort it would be doubtful that we could conduct the type of environmental monitoring needed to effectively enforce environmental regulations and meet other environmental and resources challenges.

One activity of this environmental detection and monitoring effort of which I am interested, is directed toward increasing our understanding of the Earth climatic systems. The House recently passed and the Senate will soon consider the National Climate Act. The severe climatic fluctuations of the past few years—not only in the United States but worldwide—resulted in considerable hardship for millions of people.

The National Climate Act will seek to assess and enhance our understanding of the climate and our ability to predict its changes. Such understanding and predictive capability would permit better preparation which could reduce the amount of social and economic disruption. H.R. 11401 authorizes $35 million for NASA's weather observation and forecasting and climate research programs. These programs will certainly figure prominently in the success of the national climate program.

Mr. Chairman, the Science and Technology Committee believes many of the Nation's scientific and technological problems—such as air and water pollution, energy supply, and the presence of health hazards in the environment—are interdisciplinary. Further, the committee believes the solutions to these interdisciplinary problems are proper and vital missions at the Federal R. & D. facilities. The NASA has a commendable technology utilization program and seeks $14.6 million for fiscal year 1979. The funds include projects in industrial and in health technology applications. The latter includes $4 million for bioengineering applications. This program, coupled with $2 million just authorized by the House for a handicapped research program within the National Science Foundation, holds great promise in relaxing the barriers imposed by disabling physical handicaps. This effort within NASA holds great promise and deserves the support of this House.

The reception of Federal programs that transfer science and technology to State, county, and local governments has been excellent and enthusiasm for the programs has been growing rapidly. The imaginative yet practical uses these jurisdictions have found for this technology are astounding and have greatly assisted in such areas as transportation, highway and public safety, law enforcement, and rescue and lifesaving efforts. Further, it appears that soon this demand and need of the States, counties, and cities will exceed our present capabilities to transfer technology.

The present NASA efforts in these two areas—interdisciplinary research and intergovernmental technology transfer—are valuable and H.R. 11401 will authorize the agency to continue them. Future directions of NASA, however, should include a more aggressive coordination of research with other Federal R. & D. labs and a more aggressive or active outreach to State, county, and local governments to assist them, both in the solution to their technological problems and in the eventual development of their own technological capability. I, therefore, urge my colleague to support H.R. 11401 and support the further improvement of NASA's technology utilization program.

Mr. Chairman, there is little doubt that the United States will be improving our already impressive statellite technology capability. Earlier, I briefly mentioned this capability and some of its practical applications. My colleagues have described these capabilities and applications in more detail. Now, I wish to briefly outline what I see as some future needs and logical implications of the NASA programs in satellite technology.

As an outgrowth of NASA's continual improvement of its remote sensing and communication satellites, the civilian sector—both private industry and non-Federal jurisdictions—appear to be willing and capable of entering into these fields. These uses of satellite technology should be encouraged.

The confusion of the Syncon-4 program, which involved NASA, was perhaps inevitable—I certainly do not wish to debate this now. However, similar programs will certainly be attempted in the future and hopefully, NASA, and the Federal Government in general, will be more

positive and aggressive in cultivating these partnership programs.

I was pleased to note in the April 14 issue of the Washington Star that CIA Director Stansfield Turner wants to share intelligence information with the public. The article quotes Mr. Turner as saying:

> There is economic and political information that we can collect that would be of value to American businessmen.

To quote the article, he said that:

> Through satellites there are great amounts of information about potential oil and energy reserves, crop perspectives and industrial expansion, and that the CIA, as a public-funded agency, should share such information on a wider scale.

This change to a more open CIA is welcomed by many of the public. We in the Congress should assist both the CIA and the NASA in these efforts.

This brings me to my last point, Mr. Chairman. This satellite technology is, of course, global in character; and much of the information we collect is on foreign territory and international waters. As the innovator and presently the sole source of global resource data, the United States has an exceptional opportunity to give practical expression to its stated policy of sharing its science and technology with the developing countries to promote their development.

The Science and Technology Committee discusses this topic in its report for H.R. 11401. There the committee wisely notes that our preeminent position in satellite technology is a source of international responsibility, as well as national pride and that to passively respond to this responsibility would eventually lead to political difficulties with the developing nations similar to those experienced in the Law of the Sea controversy. The National Academy of Science report, "Resource Sensing From Space—Prospects for Developing Countries," sums up this responsibility nicely.

> If the operation of a global remote sensing activity is to be politically acceptable, some type of international framework would seem to be required. The need for this is supported by several factors: the global character of the technology; its capacity to serve transnational objectives; the desirability of allaying national fears and concerns; the advantages of a cooperative, participatory approach as opposed to one characterized by either dependence or potential rivalry; and the increasing sense—both in the United States and in the international community—that activities in the common domain of humanity, such as the oceans and space, require some form of accountability to an international entity.

The committee has requested NASA to prepare a preliminary plan of how it will move in this direction over the next 5 to 10 years. And, I urge my colleagues to consider the importance of such a program, and encourage its development.

Mr. Chairman, I have outlined some aspects of H.R. 11401 and what I view as some of the logical outgrowths and responsibilities that this legislation carries. On balance, the NASA, in the past and currently, functions well and in a responsible manner. H.R. 11401 and the programs you are asked to authorize would allow the agency to continue to develop needed technology, share this technology widely and continue to reasonably well fulfill its responsibilities. For these reasons I not only support the bill and urge my colleagues to do likewise, but I also urge the Members of Congress to support the NASA as it attempts to aggressively and equitably respond to the new and emerging responsibilities I have outlined.●

● Mr. DOWNEY. Mr. Chairman, I support the National Aeronautics and Space Administration Authorization bill, H.R. 11401. Our Nation's space program has had revolutionary effects on how we perceive the world around us and has opened up new understanding of natural phenomena which will undoubtedly have profound effects on our earthly future. We must continue to encourage NASA's far-reaching explorations which recognize our dependence and rather fragile place within the surrounding cosmos.

In particular, we must understand the vast dynamic processes of the Sun which interact with our planet as well as the other planets of the solar system and provide the origin of essentially all Earth's energy. Recent space observations have shown that recurrent geomagnetic storms and auroral activity are caused by high speed solar wind streams from so-called coronal holes. The ability to predict such storms from solar observations can have application to shortwave communications, navigation and geological exploration systems using magnetic detectors, power surges in Arctic power lines and terrestrial surveillance from space. Likewise, the magnetic sector boundaries of the solar wind have been shown to be statistically correlated with the cyclonic circulation in the Earth's upper atmosphere, at least in the Northern Hemisphere.

This year NASA proposes to initiate a new mission to explore the regions of the solar system above and below the Sun's polar caps. The Solar Polar Missions would involve two spacecraft sponsored jointly by NASA and the European Space Agency (ESA). Using gravitational swing-bys of Jupiter enables the two spacecrafts to travel perpendicular to the Earth's orbit around the Sun, entering regions of the Solar System never before reached.

A primary objective of the Solar Polar Mission is the three-dimensional study of the solar wind with the dual spacecraft providing "steroscopic" observations of solar, interplanetary and cosmic phenomena. Of special interest is the existence of high-speed solar wind streams that may originate from the large coronal holes known to dominate the Sun's polar caps before solar minimum. It is important to understand the complex impingement of the solar wind on the Earth and it is expected that the solar wind flow and composition from the caps should be much simpler, and thus more amenable to analysis and understanding, than the complicated wind usually measured by satellites in the ecliptic plane.

Also to be studied is the propagation of cosmic rays through our solar system from interstellar space. These energetic nuclei of heavy atoms are modulated by the complex solar wind in the Earth's orbital plane, but should stream easily along the simpler magnetic fields from the Sun's poles. These observations should help explain why more cosmic rays strike the Earth during minimum solar activity than maximum.

Combined observations from two spacecraft will help define the mechanism for X-rays from solar flares leading to an increased ability to predict major flares. Similar observations will help pinpoint the location of some of the most mysterious, and potentially highest energy, cosmic phenomena yet known, the gamma-ray burst objects. Finally, the Solar Polar Mission will make pioneering observations of the cosmic dust and gases that surround and pervade our solar system itself.

Mr. Chairman, Space Science is more than scientists talking and writing to each other. I believe that space explorations, such as the Solar Polar Mission, are our only way of unraveling secrets of the universe which can have substantial effect on life on Earth.●

Mr. TEAGUE. Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

H.R. 11401

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby authorized to be appropriated to the National Aeronautics and Space Administration to become available October 1, 1978:

(a) For "Research and development," for the following programs:

(1) Space shuttle, $1,443,300,000;

(2) Space flight operations, $308,900,000;

(3) Expendable launch vehicles, $71,500,000;

(4) Physics and astronomy, $285,500,000;

(5) Lunar and planetary exploration, $187,100,000;

(6) Life sciences, $40,600,000;

(7) Space applications, $288,300,000;

(8) Technology utilization, $14,600,000;

(9) Aeronautical research and technology, $292,300,000;

(10) Space research and technology, $111,300,000;

(11) Energy technology applications, $6,000,000;

(12) Tracking and data acquisitions, $304,400,000;

(b) For "Construction of facilities," including land acquisition, as follows:

(1) Modification of unitary plan wind tunnel, Ames Research Center, $5,390,000;

(2) Modification of 3.5-foot wind tunnel, Ames Research Center, $1,870,000;

(3) Modification of 12-foot pressure wind tunnel, Ames Research Center, $2,510,000;

(4) Modifications and additions for logistic and supply functions, Goddard Space Flight Center, $5,640,000;

(5) Modifications and additions to the space flight operations facility, Jet Propulsion Laboratory, $3,060,000;

(6) Modifications to various buildings for seismic protection, Jet Propulsion Laboratory, $1,570,000;

(7) Modifications for utility control system, Langley Research Center, $1,980,000;

(8) Rehabilitation of unitary plan wind tunnel, Langley Research Center, $4,520,000;

(9) Construction of research analysis center, Lewis Research Center $6,140,000;

(10) Large aeronautical facilities at various locations as follows:

(A) Construction of national transonic facility, Langley Research Center, $24,500,000;

(B) Modification of 40- by 80-foot subsonic wind tunnel, Ames Research Center, $31,600,000;

(11) Space Shuttle facilities at various locations as follows:

(A) Modifications to launch complex 39, John F. Kennedy Space Center, $13,570,000;

(B) Modication of manufacturing and final assembly facilities for external tanks, Michoud Assembly Facility, $13,980,000;

(C) Modifications to solid rocket motor manufacturing and assembly facilities, Thiokol Plant, Wasatch, Utah, $1,920,000;

(D) Minor Shuttle-unique projects, various locations, $1,600,000;

(12) Rehabilitation and modification of facilities at various locations, not in excess of $500,000 per project, $12,800,000;

(13) Minor construction of new facilities and additions to existing facilities at various locations, not in excess of $250,000 per project, $4,200,000;

(14) Facility planning and design not otherwise provided for, $10,650,000;

(c) For "Research and program management," $914,000,000, and such additional or supplemental amounts as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law.

(d) Notwithstanding the provisions of subsection 1(g), appropriations for "Research and development" may be used (1) for any items of a capital nature (other than acquisition of land) which may be required at locations other than installations of the Administration for the performance of research and development contracts, and (2) for grants to nonprofit institutions of higher education, or to nonprofit organizations whose primary purpose is the conduct of scientific research, for purchase or construction of additional research facilities; and title to such facilities shall be vested in the United States unless the Administrator determines that the national program of aeronautical and space activities will best be served by vesting title in any such grantee institution or organization. Each such grant shall be made under such conditions as the Administrator shall determine to be required to insure that the United States will receive therefrom benefit adequate to justify the making of that grant. None of the funds appropriated for "Research and development" pursuant to this Act may be used in accordance with this subsection for the construction of any major facility, the estimated cost of which, including collateral equipment, exceeds $250,000, unless the Administrator or his designee has notified the Speaker of the House of Representatives and the President of the Senate and the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate of the nature, location, and estimated cost of such facility.

(e) When so specified and to the extent provided in an appropriation Act (1) any amount appropriated for "Research and development" or for "Construction of facilities" may remain available without fiscal year limitation and (2) maintenance and operation of facilities and support services contracts may be entered into under the "Research and program management" appropriation for periods not in excess of twelve months beginning at any time during the fiscal year.

(f) Appropriations made pursuant to subsection 1(c) may be used, but not to exceed $25,000, for scientific consultations or extraordinary expenses upon the approval or authority of the Administrator and his determination shall be final and conclusive upon the accounting officers of the Government.

(g) Of the funds appropriated pursuant to subsections 1(a) and 1(c), not in excess of $25,000 for such project, including collateral equipment, may be used for construction of new facilities and additions to existing facilities, and not in excess of $50,000 for each project, including collateral equipment, may be used for rehabilitation or modification of facilities: *Provided*, That of the funds appropriated pursuant to subsection 1(a), not in excess of $250,000 for each project, including collateral equipment, may be used for any of the foregoing for unforeseen programmatic needs.

SEC. 2. Authorization is hereby granted whereby any of the amounts prescribed in paragraphs (1) through (13), inclusive, of subsection 1(b)—

(1) in the discretion of the Administrator or his designee, may be varied upward 10 per centum, or

(2) following a report by the Administrator or his designee to the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate on the circumstances of such action, may be varied upward 25 per centum.

to meet unusual cost variations, but the total cost of all work authorized under such paragraphs shall not exceed the total of the amounts specified in such paragraphs.
